under Coleman House.

THE POPULAR SCIENCE MONTHLY

FOR SEPTEMBER.

CONTENTS:

A STUDY FROM LIFE. By Olive Thorne Miller.
RECENT ECONOMIC CHANGES. By Hon. David A. Wells.
THE SURFACE TENSION OF LIQUIDS. By W. H. Larrabee. (Illustrated.)
THE VALUE OF WITNESS TO THE MIRACULOUS. By Prof. T. H. Huxley, F.R.S.
MUSEUMS OF HOUSEHOLD PRODUCTS. By Prof. Rudolf Virchow.
THE WASTES OF MODERN CIVILIZATION. II. By F. L. Oswald, M.D.
THE ETHICAL VIEW OF PROTECTION. By Huntington Smith.
SOME MODERN ASPECTS OF GEOLOGY. By Prof. G. H. Williams.
ANIMAL LIFE IN THE GULF STREAM. By Ralph S. Tarr. (Illustrated.)
HUXLEY AND PASTEUR ON THE PREVENTION OF HYDROPHOBIA.
ORIGIN OF THE RIGHTS OF PROPERTY. By Henry J. Philpot.
ARCTIC ICE AND ITS NAVIGATION. By Albert A. Ackerman.
A CORNER OF THE DUTCH EAST INDIES. By Capt. G. Langen.
SKETCH OF JOSEPH LOVERING. (With Portrait.)
EDITOR'S TABLE: Mr. Wallace on "Darwinism."—The Coach of Civilization.
LITERARY NOTICES, POPULAR MISCELLANY, NOTES.

Price, 50 cents Single Number; $5.00 per Annum.

D. APPLETON & CO., Publishers, New York.

THE SEPTEMBER ATLANTIC.

POLITICAL. Contains papers on The Isthmus Canal and American Control (*S. F. Weld*). La Nouvelle France. French Influence in Canada (*Eben G. Scott*).

FICTION. The Gold Heart (*H. P. Robinson*). Voodooism in Tennessee. (*S. M. P.*).

SERIALS. The Tragic Muse (*Henry James*). The Begum's Daughter (*Bynner*).

DESCRIPTION. The White Rose Road (*Miss Jewett*). Flowers and Folks (*B. Torrey*).

BIOGRAPHY. James Wilson (*F. G. Cooke*). Americans at the First Bastille Celebration (*J. G. Alger*).

Four other articles, three Poems, and Reviews.

$4.00 a year; 35 cents a number.

HOUGHTON, MIFFLIN & CO., BOSTON; 11 E. 17TH ST., NEW YORK.

HOLLAND TRUST CO.,

NO. 7 WALL ST., NEW YORK.

CAPITAL, $500,000. - - - SURPLUS, $560,213.

CORRESPONDENTS:
DE TWENTSCHE BANKVEREENIGING, AMSTERDAM, HOLLAND.
B. W. BLYDENSTEIN & CO., LONDON, ENGLAND.

Allows interest on deposits and interest on balances of active accounts of merchants and others.
Transacts a general banking business.
Lends money on promissory note with New York or Brooklyn appraised real estate first mortgage, with title guarantee policy as collateral security.
Acts as Executor, Trustee, and Guardian under wills for the fixed statutory charges; also, as registrar, trustee, transfer and financial agent for States, cities, railroads, towns, and other corporations, and for real-estate mortgages with coupon bonds in New York, Brooklyn, and elsewhere. Collects rents, coupons, and dividends.
Negotiates State, city, railway, and corporate loans.

TRUSTEES.

JOHN D. VERMEULE, Vice-President.
GEO. W. VAN SICLEN, Secretary.

THE FORUM

The September number begins Vol. VIII. The publishers beg to announce that every month since its establishment the patronage of the FORUM has increased, and that the increase has been much more rapid during the year which the last number completed than ever before.

Contents of the September Number.

THE LOST LEADER. Thomas Hughes. A criticism of Gladstone and an appeal to the American people apropos of the Anglo-Irish agitation.

CAN OUR SOCIAL ILLS BE REMEDIED? Washington Gladden. Individual economy as a remedy for the unequal distribution of wealth.

THE SPOILS OF OFFICE. Prof. Goldwin Smith. An on-looker's review of civil-service reform in the United States; Mr. Cleveland's record; can the reform be achieved?

HENRY GEORGE'S MISTAKES. Thomas G. Shearman. A criticism of George's critics, the Duke of Argyll, Edward Atkinson, and others.

THE OUTLOOK FOR INDUSTRIAL PEACE. Prof. A. T. Hadley of Yale.

FACTS ABOUT TRUSTS. By Chas. F. Beach, jr., of the New York Bar. A defense of trusts.

ROMANIZING THE PUBLIC SCHOOLS. Rev. Dr. J. R. Kendrick.

THE LUXURY OF PITY. James Sully.

CAUSES OF BELIEF IN IMMORTALITY. Prof. Lester F. Ward.

THE HOUSEKEEPING OF THE FUTURE. Mrs. Helen E. Starrett, Principal of the Kenwood Institute, Chicago.

Bound Vol. VII. (March–August, 1889) now ready. Price $3 (postpaid). Contents sent on application. 50 cents a number. $5 a year, cut or uncut.

The Forum Publishing Co.,

253 Fifth Avenue, New York City.

Bishop, Gorham & Van Kleeck

EDWARD F. BISHOP, } *DENVER,*

INVESTMENTS AND LOANS.

Money loaned, interest collected, investments made and taken care of for Eastern investors in Colorado and the West.
References: Robert M. Morse, Jr., and Edward C. Perkins, Boston; James M. McLean, Pres. Man. Life Ins. Co. Amos Cotting, New York, and the banks of Denver.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.

NO. 59 WALL STREET, NEW YORK.

The Nation.

NEW YORK, THURSDAY, AUGUST 29, 1889.

The Week.

THE petition which has been circulating for some weeks among New England iron-manufacturers, asking for a repeal of the duties on iron ore, coal, and coke, and a reduction of the duty on pig-iron to 24 per cent. ad valorem, has not engaged the attention of the Boston Home Market Club to the extent that might have been expected. Nor have we seen any allusion to it in the columns of any of the special organs of protection. Neither the *Tariff League Bulletin*, nor the *Manufacturer*, nor the *Iron World* has had a whisper about it. Seeing how closely the movement comes home to them, one would have supposed that they would ere this have examined it with the greatest care, and subjected it to the most refined analysis. Such treatment was due to it on grounds of friendship if on no other, because these New England iron-manufacturers are mostly Republicans and protectionists. They are headed by the Governor of the State, himself an iron-manufacturer on a large scale. They might fairly have asked for more respectful treatment at the hands of their political friends. As they have not received it, we shall "lend a hand," and make it our business from time to time to enable them to gain the public ear.

The manufacturers need only say, through their Senators and Representatives in Congress, what they have said in their petition, to secure all that they have asked for, namely, a complete removal of the duties on coal and iron ore and a reduction of the tax on pig-iron to 24 per cent.—*i. e.*, to about $3 per ton, instead of $6.72, the present rate. If Senators Hoar and Dawes will each make one speech from this text, and if Senator Blair will make one even as brief as his interview in the Boston *Herald* the other day, those needless and crushing taxes will come off—not instantaneously, perhaps, but before the end of the Fifty-first Congress. There will be squirming and squealing in Pennsylvania, Maryland, and the two Virginias, and perhaps in a few other places, but the custom-house levies on raw coal and iron will come to an end, and New England will once more be free to buy the coal and ores of Canada in exchange for her own products. Of course the movement for free raw materials will not stop with coal and ore. The movement for freer trade will not end with a reduction of the duty on pig-iron to 24 per cent. The tariff fanatics and the framers of the Chicago platform are quite right in saying that this will be the entering wedge that will before long cleave the whole system in twain.

There is a judge of the United States Circuit Court in Boston who will bear watching by the Home Market Club. He has lately decided that iron beams, angles, girders, and columns punched and fitted together for a particular building are, in contemplation of the tariff law, "manufactures not specially enumerated or provided for, composed wholly or in part of iron," and, therefore, dutiable at 45 per cent., instead of 1¼ cents per pound, which is the duty on structural iron not punched and fitted according to an architect's drawings. The duty of 1¼ cents per pound is equivalent to 102.75 per cent. We shall expect to see the ruined manufacturers of structural iron, such as Carnegie, Phipps & Co., asking Congress to cure this defect in the law at the earliest possible moment. If Judge Colt were a Collector of Customs instead of a member of the Federal Judiciary, his official head would not remain on his shoulders very long, we think.

New tariff oddities are cropping up all the time. In the modern furniture of expensive pleasure carriages there is a simple contrivance of wood, covered with leather, and having a metal hook, used as a holder of a watch or clock. It is not described by name in the tariff. When these contrivances were imported at Boston in March last, the owners said they were taxable at 35 per cent. under the phrase "coach furniture of *all* kinds." The question of classification and rate was carried to that extraordinary tribunal called "a conference of appraisers," which, by a majority vote, decided that the article was "an *unusual* covering" of a clock, and should pay 100 per cent. The Boston and New York appraisers, having seen many such things, voted them "*usual*" and exempt from tax. The Boston Collector (a Democrat) levied 100 per cent. after Harrison's inauguration. The importer protested and appealed, on the ground that the article was taxable as carriage furniture at 35 per cent. The Treasury decided that the article was the "USUAL adjunct" of a carriage clock, to attach it to a carriage, and, although made of wood and leather, should pay a clock tax. There had been four opinions—one for freedom from tax, one for 35 per cent., one for 100 per cent., and one for the clock tax. The Treasury finally said the Boston Collector had exacted more than twice as much as he ought to have exacted. The Treasury could not, in decency, any more keep the excess than if the Collector had filched it out of the importer's pocket. But did the Treasury order the excess to be returned? Not at all. And why? Because the importer, in protesting against 100 per cent., had said the tax should have been 35, as for carriage furniture; the Treasury had said it should have been the clock tax, and, therefore, as the importer had given a wrong reason, the Treasury would retain the money which the Collector had no right to exact.

Of course the protection organs are in distress over the accumulation of failures of mills and firms who "enjoy" protection. Thus, the Philadelphia *Press* of Thursday last, grasping at a straw, said: "The failure of a large cotton mill in Rhode Island yesterday will no doubt be good news for the free-traders. They relish this sort of thing. But it will trouble them to make use of this failure as an argument for free raw materials." Oh, no trouble at all. We need only quote Mr. John Lee of the *Press's* own city, a cotton-manufacturer who assigned the week before. In explaining the embarrassment of his firm he said: "Our failure is due directly to an overstocked market, but I must admit that it is indirectly due to the tariff on raw materials. Before Congress reduced the tariff on dyestuffs we paid fifteen cents a pound for dyeing yarn, and to-day we pay only five cents. After noticing what effect that had on the business in general, I have come to the conclusion that the only salvation for the manufacturing industries of this country must be found in free raw materials. With the raw materials free we could have reached out in other directions, and I am fully convinced there would be a general diversification of industries. Unless Congress removes the tariff on wool, it won't be long before some of the largest factories in this country will be compelled to close their doors." Doubtless the New England concerns could make similar explanations of the business situation.

The so-called Republican State Convention of Virginia which met in Norfolk on Thursday, was nothing but a gathering of William Mahone's tools. Through his control of the party machinery throughout the Commonwealth, he prevented the election as delegates of any men but those who were entirely subservient to him. Speculation as to whom the Convention would nominate for Governor, or what it would say in its platform, was transparently absurd. The only question was as to what Mahone would say, and as to whether or not he would conclude to take the nomination himself. It is on every ground well that he decided to do so. The issue of the campaign is whether Mahoneism shall control the State, and the true representative of Mahoneism is its creator. With him as the titular chief, there is no chance for the slightest confusion of ideas on the part of any voter, such as sometimes arises when the disreputable boss of a party puts forward a respectable figurehead as the nominal leader.

There is one good thing about the action of the Virginia Republicans in nominating a "rebel" for Governor, and other "rebels" for his associates on the State ticket, and in adopting a resolution in favor of pensions for "rebel" soldiers. It will make even the Forakers infermit, for this campaign, their tiresome rant about "the danger of the rebels capturing the Government." Mahoneism may thus do the country a little service. It deserves to be remarked, also, that on Thursday morning the Boston *Journal* published an editorial article on the movement for unlimited coinage of silver, declar-

ing that "such a policy would be equivalent to inviting disaster and panic," and concluding that "the country must look now, as it has before, to the Republican party as a whole to maintain the principles of sound finance." On Thursday evening the Republican party in Virginia adopted a platform which demands "full and unlimited coinage of silver."

A shocking picture of society is presented in the despatches which tell of the latest developments in the Howard-Turner feud in Harlan County, Kentucky. This county is among the mountains in the southeastern part of the State, and contains an exceedingly illiterate population, almost exclusively white. Wilson Howard, who has murdered several men, the last on the list being George Turner, was said to be hiding in the mountains about fifteen miles from the Court-house, and Judge Lewis set out to capture him. The Sheriff would render no assistance, and the Judge organized his own force, upon hearing of which the Howard faction tried to kill him by inveigling him into ambush. Failing in this, the outlaws and the Judge's force had a battle, in which the latter lost three men, and at last accounts Howard was threatening to come in and burn the county-seat. It will doubtless surprise many Northern Republicans who are wont to ascribe all wickedness to Democrats, to learn that Harlan County is overwhelmingly Republican in politics, having cast 837 votes for Harrison last fall, against only 211 for Cleveland.

The most interesting feature of the recent election in Kentucky was the loss of the Republicans in the eastern counties, which have been the stronghold of the party. In this mountain region coal and iron mines are finding great development, and the Republicans expected, in consequence, to make a better showing in that part of the State than ever before. Instead of this anticipated gain, however, they lost in most of the counties, the falling off of their majority in the home county of their candidate for Treasurer being about one-third from the record of two years ago, and Harlan County being one of the few where they did better than in 1887. The Louisville *Courier-Journal* finds one reason for the change in the growth of educational facilities under the more liberal policy adopted by the State towards public schools of late years. The *Courier-Journal* is making a vigorous fight for still further progress in this direction, urging the agitation of the subject in every county, with a view to supplementing the State fund by local taxation, after the example set in Winchester by Judge Beckner, one of the most prominent Democrats in the State.

The St. Johnsbury *Caledonian*, one of the best weekly journals in New England, does not feel much confidence in the scheme for repeopling Vermont by Swedish immigrants. It sees two serious practical difficulties in the way. One is the fact that the non-occupied lands are not owned by the Government, the State, or any great corporation, which might sell them at a fixed price, but by private individuals, so that anything like a concerted movement to occupy them would at once create a boom in real estate that would discourage if not defeat the scheme altogether. The other obstacle is the fact that Vermont, as well as the rest of northern New England, "is in effect already mortgaged to another nationality"—the French Canadians. The *Caledonian* says that these people "are coming into Vermont in great numbers. They already own a good share of the farms in the northern tier of counties, and are filling the manufacturing towns with operatives of both sexes and laborers in all departments of industry and trade. When it is known that in a place no larger than St. Johnsbury [which had but 5,800 inhabitants in 1880] the parish priest numbers his parish at between 1,900 and 2,000 souls foreign-born or born of foreign parentage, the increase of the Canadian element in Vermont begins to be appreciated." Considering that the Roman Catholic authorities in Canada look upon New England as their future country and the home of their religion, that they are bending every energy to make it so, and that statistics show the French Canadian to be the most prolific race on the globe, the St. Johnsbury paper "feels warranted in saying that Vermont has a mortgage upon it that will be hard to 'lift.'"

The St. Louis *Republic* is thoroughly convinced that "the Democratic party must change its leadership if it wishes to win," and set out under Western leadership to win Western States from the Republicans. The Nashville *American* having asserted that the Republicanism of that region is due to "sectional prejudice," the *Republic* replies that "it is more largely due to Democratic abandonment." It points out that not so long ago Ohio was a very doubtful State, but was surrendered; that Michigan, although abandoned by the national Democracy, inclined strongly towards that party until the fatal blunder was made last year of nominating for Governor a great salt-manufacturer; and that the Illinois Democrats get no help whatever from the national Democracy in the hopeful fight which they have already begun for the control of that State next year and the election of ex-Gov. Palmer to the United States Senate; while "Indiana alone has been fought for, and that fight has been continually made by the Democrats under Northeastern leadership against the Republicans under Western leadership." So far as sectional prejudice operates in the matter at all, it is, in the *Republic's* opinion, only "the natural Western prejudice in favor of the West"; and while it admits that "there is a certain amount of civil-war prejudice which the Republicans know how to play on," it insists that "they cannot use it against the South when the South changes the Northeastern alliance for alliance with the West." Added force is lent to these views by the fact that the editor of the *Republic* not only was born in the South, but also conducted for years in Florida a representative Southern journal.

A few days ago the whites of Atlanta, Ga., were burning in effigy the Postmaster for his appointment of a negro to a place in the office where he would be brought into association with a white woman. Now the negroes have been burning in effigy at Charlotte, N. C., the Postmaster of that city, the Federal Superintendent of Public Buildings in the same city, and the Collector of Revenue for Western North Carolina, as a sort of side-show to a convention of colored Republicans from all parts of the State, who are disgusted because the white Republicans got all but $1,000 of the $30,000 boodle sent down by Boss Quay last fall, and are getting nearly all the offices now. Thus far the Administration has been singularly unfortunate in the matter of the race issue down South, having appointed enough illiterate and incompetent negroes to disgust the whites, but not nearly enough to satisfy the blacks.

A glance at the quarterly report of the Juror Commissioner of New York seems to be all that is necessary to show the farcical nature of the system of jury selection in this city. There were cast here last autumn 277,739 votes. On only 76,624 of these voters was any notice of enrolment as jurors ever served. Of these, 6,860 ignored the notices entirely, 67,403 put in pleas of exemption, and the names of 8,230 got into the wheel. But even of this small number the courts did not secure the services: 3,612 were excused by them, 1,112 ignored their summonses, and finally 2,402 was the number of jurors who actually served, or one out of every 116 voters. The fining of delinquent jurors is quite as much a farce as the drawing. There was due the city in such fines during the quarter $193,675. The amount that actually went into the city treasury was $375. Of the remainder, $138,500 was remitted, $54,500 is still in controversy, and some minor sums have been kept out of the treasury in different ways. The evils suggested by this report are many and serious. It is alarming to think how many "professional jurors" must sit in our jury-boxes when the total number of serving jurors is so few. There has been some investigation of this subject in the last year, but the practical result seems imperceptible.

The last quarterly report of the Bureau of Statistics shows that the per-capita consumption of wines in this country, and still more that of malt liquors, continues to increase steadily, while the proportion of distilled spirits used remains almost stationary of late years and is far below what it used to be. The figures for 1888, as compared with 1870, were: distilled spirits, 1.23 gallons, against 2.07; wines, .59, against .32; and malt liquors 12.48, against 5.30. *Bonfort's Wine and Spirit Circular*, an ably conducted trade journal, ascribes the very heavy increase in the consumption of malt liquors almost wholly to the discriminating effects of the high tax on spirits as against the very low tax on beer and ale. It considers this an exhi-

bition of "governmental favoritism," which there would be some room for tolerating if the beer were growing better; "but unhappily," it says, "the quality of American beer is steadily deteriorating, and already there are thousands of well-informed people who scrupulously refuse to touch it on account of its injurious effects." The *Circular* of course considers the increased consumption of wines a hopeful sign of the times, "for a people's advance in civilization and refinement is always marked by an increased consumption of pure wines." It attributes the increase in large measure to the fact that domestic wines are free of tax, while the excise levied on foreign wines is not only exorbitant, but in large measure prohibitive, and finds here the reason why so many of our domestic wines are sold under foreign labels. "When," it adds, "our domestic producers rise to a full appreciation of the fact that it is genuine merit, far more than price, that popularizes wines, they will invite rather than fear competition from every quarter."

The seizures of our *Rush* in Behring Sea are getting so numerous that the rage in Canada over the apathy of the home Government begins at last to find an echo in London. The London *Times* now demands that something be done promptly to stop the operations of our cruisers. There is nothing very serious in the situation, however, because we hear from Washington that our Government has not as yet taken up any position whatever with regard to Behring Sea. Indeed, it is said that the President and Cabinet have not yet had time to look into the matter at all, owing to the demands made on them by the office-seekers. As soon as all the claims are satisfied, and "harmony" established in all parts of the country, the President will turn his attention to this international complication.

Harper's Weekly, commenting on the Maybrick case, assumes that Judge Stephen on the trial "appeared as counsel"—a practice, it justly says, "very foreign to the American sense of fitness and justice"; and that he "sat virtually as a juryman, answered the arguments of counsel with whom he disagreed, and urged upon the jury, with all the necessary prestige of his position, the conclusion he had reached." Our contemporary can hardly have read Judge Stephen's charge when it passed this very severe judgment on him. We have done so carefully, and can testify that, beyond some little "digs" at pet aversions of his, such as experts, the charge was, in method, such as every English judge and every American judge who tries to do his duty delivers on all serious occasions. It was a careful summing up of the evidence, with special attention to the more important points on both sides, and with great care and emphasis for everything which made for the prisoner. What made the Liverpool mob angry with him was that any careful summing up of the testimony bore inevitably against the prisoner, and that he dwelt somewhat strongly on her adultery as a sufficient motive for the attempt on the husband's life, because the law requires a motive for every crime; a crime without motive being evidence of lunacy. Our judges do not often charge in this way, partly because they are more afraid of responsibility than the English judges, and partly because every sentence in a judge's charge may here be excepted to and made the basis of an appeal, to say nothing of the fact that our lawyers are allowed to make any number of "requests to charge" anything that comes into their heads, and appeal if the judge refuses. These "requests," which in nine cases out of ten are rigmarole, the poor jury is allowed to listen to and be bewildered by.

Mr. George Lewis, the well-known English lawyer, has been interviewed on the Maybrick case by the *Pall Mall Gazette*, and declares himself unqualifiedly in favor of a Court of Criminal Appeal, composed of two judges with power to order a new trial "in case they were of opinion that the verdict [of the jury] was wrong." But this would not meet the Maybrick case. What was demanded in the Maybrick case was not that the prisoner should be tried over again by another jury, but that the judgment of large public meetings and of crowds in the streets should be accepted by the Government in place of the verdict. There would have been just the same uproar if the two Judges of Criminal Appeal had confirmed the verdict, for the crowd would have said that the judges were all wrong, just as Judge Stephen was, and that they were prejudiced against her because she was pretty and had committed adultery. No court can take the place of a promiscuous assemblage of excited sentimentalists.

The great strike in London has undoubtedly been organized and set agoing by Hyndman, Cunningham, Burns, and other Socialistic leaders who have been working now for two or three years, with more or less success, to array the east end of London in hostility to the west. The attempts to hold meetings in Trafalgar Square, which ended in riots, were the first result of these efforts, and gave a considerable stimulus to the Socialistic propaganda. The present strike would probably have occurred sooner but for the prolonged business depression, which, however, has now passed away. Business of all kinds, except agriculture, has not been so brisk in England since 1873. This last season has been the best that London shopkeepers have ever known, and the Socialistic leaders have, therefore, not unnaturally concluded that the time had come to strike their blow. They are trying for the first time in England a general or sympathetic strike—that is, a strike of several trades in aid of one, with the view of producing widespread public inconvenience, and thus bringing pressure of every kind to bear on the employers. When this sort of strike was first talked of in this country, it seemed very formidable, and the inventors thought that if they could bring it about, they would soon have "society" on its knees begging for pardon and reconciliation—a delusion produced by the habit of considering manual laborers as a class apart, engaged in supplying food and clothing and means of locomotion to the people who work with their heads or live on their capital. The bubble was burst very speedily here by the discovery that every strike on a large scale not only rapidly exhausts the resources of the strikers, but bears hardest on the poor. The strikers have to be supported by somebody while on strike. When only one trade strikes, it is maintained in part at least by those who remain at work; but if all strike, of course there is nobody to draw on for the relief fund, and the wider the area the strike covers, the shorter must the struggle be. What is worse still, any rise in the price of provisions or in the cost of transportation begins at once to threaten the very lives of the poor, while it only subjects the well-to-do to easily borne inconvenience.

One of the charges of which Gen. Boulanger has been recently convicted was having shared in an "epaulette job," and the epaulette job was this: Gen. Lewal, the then Minister of War, had issued an order abolishing epaulettes in the French army. Gen. Boulanger was then in command at Tunis, and he had for jackal, or "heeler," a rascally journalist named Buret. When the order was issued, a certain contractor named Dupuy was left with a very large stock of epaulettes on hand. It was, therefore, of the last importance to him to get the order rescinded or postponed. So he applied to Buret, and promised him two cents a pair on all his (Dupuy's) stock if he got the order cancelled. Buret undertook the job, and went to Boulanger, but Boulanger was apparently cautious, and wanted a guarantee, or "anchor to windward," so Dupuy wrote Buret the following letter:

"I am sure you personally have complete confidence in my word, but possibly *your friend* may not have that confidence, and I accordingly meet all doubts by telling you that I am ready to write you a letter making a positive engagement in any terms you please."

In another letter to Buret he said: "Come and see me after your visit to the great chief [*le grand chef*]"; and in still another, "You know there will be twenty centimes a pair for you." Then Gen. Boulanger went to work to show he would be "no deadhead in the enterprise." He telegraphed from Tunis introducing Buret to the War Department, and to Buret, "I am sure Gen. Mensier will receive you with his usual kindness." In a second despatch he said: "I have received your telegram. I am writing about the Dupuy matter [*pour ce qui concerne M. Dupuy*], not to the Minister, but to some one who has the ear of the Minister. You may rely on me. *Burn this.*" One more letter to Buret said plumply: "I have written about Dupuy's epaulettes. Your devoted friend, Général Boulanger." One half expected to find at the foot, "Mille choses de ma part à Mme. Buret," or "Hommages respectueux à Madame," or some equivalent of "Kind regards to Mrs. Fisher," so close is the parallel in many other respects.

A CURIOUS ADMISSION.

THE Dayton (Ohio) *Journal* is a Republican paper in excellent standing in the party, and speaks on party questions with a certain authority. It recently took occasion to denounce another Republican paper, the Cincinnati *Times-Star*, for the following utterances:

"The petty clerkships covered by the Civil-Service Law are not connected with the party organization, for the Federal service cannot be looked upon in the light of a party machine, and, in any event, the incumbents of these places can exercise little more influence upon the Administration or on politics than do Kansas grasshoppers upon the Government of Nova Scotia. So long as their work is well done, under the direction of responsible superiors, it matters not, either to the Administration or the party, whether they are Republicans, Democrats, or Prohibitionists."

This the Dayton *Journal* considers "Mugwump gabble," which, the editor says, "makes a man of common sense sick," and he then substitutes for it the following statement as true party doctrine:

"Let it be once understood that no Republican who desires a clerical appointment is to be considered in the distribution of Federal clerkships, and the party will disintegrate at once. Not that the ordinary voter is a Republican or a Democrat for office only, but because human nature is so organized that the rewards for party service stimulate to action."

This is an absolutely new definition of a political party. Webster's definition is: "A number of persons united in opinion, as opposed to the rest of the community or association, and aiming to influence or control the general action." Burke and all other leading writers on government or politics with whom we have any acquaintance take the same view. According to the Dayton *Journal*, however, the correct definition is something of this kind: "A number of persons united in the opinion that persons desiring clerical appointments are to be considered in the distribution of party offices." For, if the Republican party would "disintegrate"—that is, disappear—if it were settled that clerical appointments would no longer be considered part of the discretionary patronage of the Government, it is proof positive that the distribution of clerical appointments for party services is the sole or main object for which the Republican party exists. This is very important if true. We do not remember a similar confession on the part of any political organization—not even of the Tammany Society. Of course "clerical appointments" are simply a euphemism for money. Nobody desires a clerical appointment simply that he may do clerical work. He can practise writing and arithmetic in his own home to his heart's content. What an office-seeker means by a clerical appointment is a certain sum of money paid in monthly instalments. He would take this money for any kind of work equally light. He does not insist on doing clerical duty. He would just as soon do political work—that is, organize ward associations or "fix" primaries. As a matter of fact he often does no work of any kind.

Clerical appointments, then, mean salaries, but not salaries for the whole party. The whole Republican party consists, say, of the 5,440,551 who cast their votes for President Harrison at the last election, while the clerical appointments included in the classified service which the Dayton publicist has in his eye, and about which the Mugwumps "gabble," amount to about 16,000. The whole number of Federal appointments is estimated at 120,000, and we will, in order to make our case as strong as possible, assume that all Federal appointments are "clerical appointments." The proper definition of the Republican party, then, according to our Ohio friend, will be this: "Five millions and a half of persons united in the opinion that 120,000 persons ought to receive small salaries in the Federal service for doing electioneering work." Rather a funny definition when one sees it in print, and evidently not one that could be put into a text-book on government for schools and colleges. In fact, it looks to us very like one calculated to make intelligent men sick in any part of the civilized world, and which any man outside a circle of bar-room loafers ought to be ashamed to "gabble" about. We fear, indeed, that it is the composition of a "youngster" who, like Mr. Wilder of Kansas, will be saying twenty years hence that he ought to have been "kicked" for writing it.

We do not admire the Republican party as at present managed, but we do not believe its *raison d'être* is the parcelling out of a few thousand small clerical offices among a small band of needy adventurers. It ought to make an American blush to give any such account to the world as this of either of the great political organizations. Both the Republican and Democratic parties, with all their faults and whatever the managers may feel or think, exist for the propagation and expression in legislation of certain ideas on great lines of public policy. If the sole concern of the voters in either when they went to the polls was the distribution of the smaller salaries, it would show that the Government was a hideous failure, and that the days of the Republic were numbered. An organization which exists only to get money must be either a purely commercial or a criminal organization. There is no place for it in modern politics.

Another difficulty about the Ohio definition is, that it fails to account for the existence and activity of the Democratic party for the twenty-five years following the outbreak of the war, when it had neither office nor hope of office. What kept it together? Why did it not "disintegrate"? Why was it able to elect a President in 1876, and again in 1884? And how is it that popular government has been carried on in England for fifty years, with a popular interest in politics such as we have not seen here since the days of the war, when there is not a single clerkship or post-office or custom-house place to be had by any worker in consequence of an electoral victory? These questions have often been put to spoilsmen within the last twenty years. So far as we know, not only have they not been answered, but no attempt has been made to answer them. Human nature, in fact, is not so degraded in any free country as they would have us believe.

THE NEW SILVER CAMPAIGN.

THE campaign of Senators Stewart and Reagan in the new Northwest, ostensibly in the interest of Irrigation, but really in favor of Silver, has rightly attracted the attention of the country. There is no room to doubt that the silver-men will drop all disguises and all half-measures when Congress meets, and make a push for "free coinage," and all that that implies. In the last Congress, it will be remembered, when the bill was pending in the Senate to authorize the Secretary of the Treasury to purchase bonds in his discretion with the surplus in his hands, Senator Stewart offered an amendment providing that any holder of gold or silver bullion might present it at the Treasury and receive coin certificates therefor at the rate of one dollar for 25 8-10 grains of gold (the present coining rate), and at a rate for silver to be fixed and advertised fortnightly by the Secretary, such coin certificates to be legal tender for all debts, public and private, except on contracts otherwise made previously to the passage of the bill.

Simultaneously with this, Senator Reagan offered an amendment directing the Secretary to apply forthwith the $100,000,000 of gold now held in reserve for greenback redemption to the purchase and cancellation of bonds of the United States, *i. e.*, to suspend specie payments. Other amendments equally inappropriate to the pending bill and equally destructive of business interests were offered, and it seemed at one time as though all of them would be adopted. Finally, Senator Beck offered one which was accepted by the silver-men as a compromise. It provided that whenever any national-bank notes should be surrendered by retiring banks and not taken up by others within thirty days, the Secretary should buy silver bullion to a corresponding amount and coin the same, in addition to the monthly coinage now provided by law. This was adopted by a vote of 31 to 20, and the bill so amended was sent back to the House, where it was quietly smothered.

It is not likely that the silver-men will now be content with anything less than free coinage. It is needful, therefore, to inquire what free coinage means. So much time has passed since the subject was submitted to popular discussion that most people have forgotten that it was hotly debated eleven years ago, and that an adverse decision was then reached, the present law providing for a limited coinage having been passed as a compromise. Free coinage means that all persons, in all parts of the world, shall have the right to take silver to the mints of the United States and have it coined into dollars of 412½ grains each for their account, and that these dollars shall be legal tender for all debts not made specifically payable in gold. Free coinage applies to the silver of Mexico, Germany, India, and every other country, as well as to that of the United States, since otherwise it would not be free but limited coinage.

What is implied by the phrase legal tender in this case? It means that every man, corporation, bank, and institution, public and

private, including the national and State Governments, may discharge their existing obligations with 412½ grains of silver for each dollar, unless the same are specifically payable in gold. As 412½ grains of silver are worth only seventy cents or thereabouts, it means that everybody may cheat his creditors out of 30 per cent. of their dues. The only drawback upon this swindling operation would be the present inability of the mints to coin silver dollars fast enough. This difficulty might be surmounted by making silver certificates legal tender, and providing for the issue of certificates on the bullion deposited, as Senator Stewart proposed in the last Congress. It should be mentioned here that Congress has never made silver certificates or gold certificates legal tender between individuals. The only legal-tender instruments are gold coin, standard silver dollars, and greenbacks. A silver certificate is simply a certificate of deposit, like a warehouse receipt. Whether the Supreme Court, in a pinch, would hold that Government-warehouse receipts may be made legal tender between individuals under the Constitution, would be a question of much importance if Mr. Stewart's ideas should prevail in Congress.

It should be borne in mind that legal-tender acts have no economical effect except upon contracts already made. They exhaust themselves upon what is past. They may compel a man who has made his bargain in good money to take in payment money worth 30 per cent. less. But they cannot compel him to make another bargain, or to sell his property or services for any less value than he conceives them to be worth. There are some exceptions to this general rule arising from custom. The rate of wages, for example, when once fixed, is not easily changed. If the standard of value should be depreciated 30 per cent., wages would not instantly rise to correspond. The price of commodities would rise, however, immediately and universally. The presumption is that goods are now sold as low as they can be on the gold basis. If the basis is changed to silver, the goods must still be sold so as to return to the producer as much gold value as he received before. He cannot continue his business on any other terms. The advance in the nominal prices of commodities would eventually cause an advance in wages, but it would be after a dispute and a strike, and very likely the full amount of the advance would not be gained for a long time.

Again, some articles are habitually sold at a fixed price which cannot be easily changed, as, for example, newspapers. The cost of producing white paper and ink might rise 30 per cent.—and certainly would so rise if the silver standard were adopted—but the publishers could not advance the prices of their papers in a corresponding ratio, because there is no coin which exactly represents it. The difficulty of advancing it at all can be best appreciated by those who are in the business. The impossibility of advancing it in the exact ratio of the increased cost of making newspapers is apparent to every one. This difficulty would extend to other branches of trade in the proportion that each is restricted and hampered by custom to a fixed price for the articles sold.

It is scarcely necessary to say that all deposits in banks, savings institutions, trust companies, and all policies of life insurance payable in dollars would be payable in money 30 per cent. less valuable than the existing currency, unless these institutions should refuse to take advantage of the opportunity to swindle their customers which the law would offer to them. They might not be able to do otherwise, seeing that their own funds (except the gold coin and gold certificates in their possession) would be liable to the general depreciation. About eleven years ago the clearing-houses of New York and Boston passed a resolution that they would not receive silver on deposit except from customers who would agree in writing to receive silver in payment of their checks. These resolutions have never been rescinded, although there has been no occasion for putting them in force, the parity of silver and gold having been maintained by the Government. Such parity cannot be maintained after the passage of a free coinage bill admitting all the silver on the globe to our mints. In such a case the clearing-house resolution would undoubtedly be enforced, and would undoubtedly be adopted by the other banks throughout the country. Since no act of Congress can add anything to the value of silver or detract anything from the value of gold, we should have two kinds of money inevitably, just as we had two kinds during the war. The banks would simply recognize that fact, and adapt their business to it.

SPECULATING JUDGES.

The Albany *Law Journal* has directed attention to one of the evils of modern life which is often whispered about, but seldom mentioned above a whisper. It appears that a judge of one of our higher courts was sued by a stockbroker to recover money lost by the judge in stock speculation, and that a debt was established of about $14,000. It is immaterial what were the merits of the particular transaction, the only matter of importance to the public being the fact that the court was interested pecuniarily in the movement of stocks, and, therefore, had a bias in business controversies which might come before it for decision. The mere statement of the case is sufficient for all the purposes of comment. "It stands recorded," says the *Law Journal*, "that a magistrate of high authority and large jurisdiction, who is called to pass upon property rights of great magnitude, even stock transactions, is himself a stock gambler in Wall Street. Perhaps he will try to justify himself by saying that such transactions are not now illegal. So it is of pool-selling within certain limits. But what high-minded citizen does not shrink from the picture?"

Public opinion does not need any instruction upon the unhappy consequences of stock gambling on the bench, but there are degrees even here, and it is easy to see that if the practice is tolerated at all, it will go from bad to worse, and eventually corrupt the fountain of justice altogether. For if a judge may "take a flyer" in a particular stock, soothing his conscience with the thought that the property concerned is not in litigation before him, and probably never will be, the fact that he is "in it" will be known to a greater or less number of brokers and litigants. Usually and almost necessarily some law firm has charge of the judge's stock ventures. Brokers and litigants become impressed with the idea that this law firm is the one to employ in cases where the interests of corporations are involved. When they have, or expect to have, law-suits of considerable magnitude, they retain the lawyers who are supposed to have charge of the judge's interests. Perhaps they put them in the way of making some money. Perhaps the original suggestion comes from the lawyers that it would be well to "cast an anchor to windward" by letting the judge have an interest in the "deal," or in some deal sufficiently identified with the plaintiff or defendant to enable him to know who his friends are. This means swift demoralization of the bench, for the judge who will allow pecuniary favors to be thrown in his way will soon become an active seeker of them, and when he gets in this state of mind he is a blackmailer whose power of extorting money is limited only by his fear of exposure. That the mind of the speculating judge is absorbed by the turning of the wheel of fortune to such an extent that he cannot address himself properly to his ordinary duties, is a complaint not unfrequently heard among members of the bar.

We will not dwell longer on these painful features. It is worth inquiry whether there is any remedy for such a state of things short of impeachment, whether there is any profounder cause of this evil than the natural heart of man. There are no speculating judges in the United States courts. Yet these judges are of the same clay as those of the State courts. If it were said of Judge Blatchford, or Judge Brown, or Judge Lacombe, that anybody was carrying stocks for him, with or without margins, such a story would not be believed for a moment. But why not? Are not these men of the same race and blood, the same training and education, held by the same social ties, braced against temptation by the same environment? Not quite. These men are not dependent upon party conventions. They are not amenable to bosses, or "halls," or popularity of any sort. They are in an atmosphere of independence. Nobody can throw them down. Nobody can turn them out of office penniless at the end of a certain term. Moreover, the close of life for them is darkened by no shadow of poverty. When their natural strength is abated, they are still provided for. The evening of their days is a period of grateful repose, to be welcomed rather than dreaded.

How different from this vista is that of the State judge who sees at the end of his service, which may come after the expiration of a few years, the best years of his life, the necessity of returning to the bar and beginning life anew, his old clients having disappeared, and he compelled to fight for a liv-

ing among more vigorous and experienced practitioners. It is not true, therefore, that the Federal judges are subjected to the same temptations as the State judges. There is all the difference that one can imagine. Doubtless it was the intention of the people to put the salaries of the State judges high enough to enable them to save money for their declining years, but this benevolent intention has been and generally will be frustrated by the hopefulness of human nature. The judge will always expect to be reëlected. He will say to himself that to-morrow shall be as this day and still more abundant. His outgo will correspond with his income, and eventually he will be stranded. The $6,000 per year, with pension annexed, that the United States Circuit judges receive, is more satisfying in every way and far more conducive to the public interest than the $15,000 that the judges of our Supreme Court receive, with the prospect of being turned out to grass at the end of their respective terms. These facts do not excuse the speculating judge, but they are facts which society may well ponder.

A CROP OF OATHS.

When the barbarous "tax on knowledge," the duty on books, was incorporated in the Tariff Law, an exception was made in favor of schools, seminaries, colleges, and learned societies, which, under certain restrictions, could import, duty free, two copies of any one book at a time. The poor professor has to pay $1.25 for the book which costs his college $1. The wisdom of the measure seems doubtful; as it is the law, however, the institutions thus favored have availed themselves of it under the liberal rulings of former secretaries, tinkered and modified about a dozen times in as many years. The importer, at first, made oath that certain books in his invoice were imported for certain colleges; then the librarian's written order was required in addition to the importer's oath; then the librarian's sworn order had to be filed, backed up by the importer's oath, and such books as did not come in the first invoice could be extracted from the sworn order, and the extract, certified by the Collector, would admit them duty free at any subsequent time. Serial publications, such as the 'Encyclopædia Britannica' and similar books, were admitted free on a single oath, filed with the entry of the first volume; the importer, on entering subsequent ones, referring to date and vessel of the first importation—under oath, of course. Then the librarian's oath had to be made after the date of the entry, and the importer could give bond for its production, or pay the duty and await its refunding after filing the oath.

Though swearing had thus already become a fine art, the present Administration was still not satisfied. As the consul in London divides the fees for oaths with his notary, our officials here apparently formed partnerships with our notaries, for since the first of July a new oath form has been prescribed, to be sworn to both by librarian and importer, for not only each book or number of books, but also for each new part, volume, number, or sheet of serial publications. Proctor's 'New Astronomy,' for instance, in twelve parts at seventy cents each, will now require twelve double oaths at thirteen cents each, with two cents postage which the importer pays for sending the blank, and two cents postage which the library pays for its return—all to save seventeen cents duty. It appears that the liquidating clerk at the Custom-house found it too irksome to verify the importer's sworn statement that the librarian's oath, covering the whole issue of certain serials, was on file with a certain entry. It appears, too, that some dealer, to oblige a customer, had from his shelves sent a certain book at duty-free rates to some library, and replaced it with an identical copy afterwards imported free on the librarian's oath. Instead of having the individual offender punished for his possibly not entirely legal proceeding, the special agent's instincts, or Mr. Tichenor's early training (which had not taught him that some people were honest), preferred to smite hip and thigh all the librarians and book importers of the country for one man's evasion of the law. A new iron-clad form of double oath was prescribed at a few days' notice, all the accommodations of former orders regulating the free-of-duty importation of books were at once stopped, and the importer's business seriously and wantonly interfered with by this "Government for the people." It is, for the importer, impossible promptly to procure the required oaths from distant places, and during the summer vacation—the time most judiciously chosen for the enforcement of the new regulations—some librarians cannot be communicated with at all. But unless the oath is filed with the entry, duty is assessed and no refunding made. Thus the $1 book will cost the college either $1.25, duty paid, or at best $1.15, to say nothing of the annoyance and loss of time to both librarian and importer.

A petition, signed by the most prominent importers of English, French, and German books, setting forth in detail these hardships and the bringing into contempt of so sacred a thing as an oath, was addressed to the Secretary of the Treasury, but without avail. Importers, in such matters, are always snubbed by Treasury officials. It now remains for the American Library Association, and the principals of schools and presidents of colleges and seminaries, to take up the matter, and bring such influence to bear on officialdom as to modify this latest scheme of increasing the revenue by Treasury orders. A great number of our librarians are clergymen, and their voices ought to be heard in a matter of this kind, and President Harrison and his Cabinet—reputed to be pious Christian men—ought to heed them; otherwise the smaller libraries, the very ones most needing it, will be debarred by unreasonable exactions from enjoying the benefits of the statute allowing them to import their books duty free, and the crop of oaths will be enormous, our notaries become millionaires, and swearing—in more senses than one—will become the importer's and librarian's daily occupation.

ROADS AND STREETS.

It looks a little as if there would be a serious movement made by the present municipal administration for the provision of better street pavements. Some money has been provided for it, and there is apparently a greater disposition on the part of the men in power to consider what is the best kind of pavement. Moreover, the movement is supported by the perennial readiness of our city authorities to undertake great public works involving the handling of large sums of money and the employment of a great deal of labor. It is a hopeful sign, too, that both the Commissioner of Public Works and the Comptroller should be making an attack on the gas companies, with a view to compelling them to replace in a proper manner the pavements they tear up. The street railroads are nearly as great offenders as the gas companies. They neglect their duty in the matter of repaving just as grossly. If Commissioner Gilroy desires fame as a reformer, he cannot win it more easily than by making an onslaught on them also. But the real test of efficiency and good faith on the part of anybody who undertakes to make New York streets decent or convenient will be found in the way the garbage and ash nuisance and the wagon nuisance are dealt with. No man who, having the power to prevent it, allows the streets to be occupied and obstructed by 30,000 business wagons and trucks, or who fails to struggle for their removal, can claim the credit of being a street reformer. Good pavements will be of comparatively little use if a large body of private citizens are allowed to use the streets for purposes of stabling or storage. There is no more reason in allowing a man to save rent by keeping his wagons in the street than in allowing him to put up a hut in it for the accommodation of his family or the storage of his goods. Nothing of the kind has ever been seen before in any large civilized city. It is not over forty years since pigs were allowed to run loose in the streets—a practice which now seems monstrous, but it was really not as monstrous as the use of the streets as repositories for wagons and carts.

Another good sign of the times is the issue of an excellent pamphlet by the League of American Wheelmen on the "Improvement of Highways," both town and country. It cannot be too widely circulated, for it contains articles on the making and care of good roads and on city pavements by experts, who not only urge the saving and the comfort of good roads, but show in detail how they are to be made and maintained. Every farmer in the country ought to have a copy put into his hands.

The editors very naturally refuse to accept the suggestion that "the degree of a nation's civilization may be gauged by the condition of its roads," because "this would be a mortifying test to apply to our own country, for it would place it not only below France, where all the country roads are said to be actually swept every morning, and Germany and England, but even below some of the States of Asia and northern Africa." The

excuse for the badness of American roads is that railroads were made here, as nowhere else, when the country was too thinly settled to make good highways attainable, and have ever since absorbed the attention of nearly everybody who was interested in the questions of transportation either for goods or passengers. But the country along nearly every line of railroad is now so thickly settled that the question of reaching the railroad has become one of paramount importance. In several of the Western States, and in many parts of this State, the traffic receipts of the railroads fall off heavily in spring, simply because the cartage of goods to the stations is made impossible by the badness of the roads, and there is hardly a road in the country in which the work of the American, as compared to that of the European, draught-horse is not nearly doubled by the condition of the road-bed, even in the best weather, to say nothing of the increased wear and tear of vehicles and harness.

There is another excuse for the badness of American roads which the Wheelmen's pamphlet does not mention, but which ought not to pass without notice, and that is the invention of the light wagon as a substitute for the saddle and the pillion, as a means of locomotion over short distances. The comparative ease with which this vehicle can be drawn over rough or boggy roads has for half a century greatly aided the railroads in concealing from the American public the extraordinary badness of their highways. And then the strength of tradition among the farmers to whose care the country roads have been left, and the length of the winter in many of the Northern and Northwestern States, must also be taken into account in inquiring why road-making has not kept pace with the other arts in the United States. We believe it is strictly true that the farmers' mode of repairing the roads in spring has come down without change from the early colonial time, when a highway meant simply an open bridle-path through the woods, free from dangerous holes and passable in the dark by a mounted man. The scraping up of the mud from the ditch to raise the centre of the roadbed, and level it, clearly dates from this period, when there was no need to provide for wheeled traffic.

SUMMER BOARD AS A BUSINESS.

Our remarks on the future of the Summer Boarder have attracted a considerable amount of attention from other journals, most of which seem to sympathize, more or less keenly, with him over his expulsion from the more attractive points on the Atlantic shore. But only one—the Boston *Herald*—has offered the slightest remedial suggestion. The writer confirms fully the accuracy of our account of the way in which the Boarder has been treated by the Cottager. He says:

> "The fact stares one in the face that at the present time nearly every part of the New England coast which is most attractive to the pleasure-seeking public is in private hands, and cannot be trodden upon by the stranger, except through the courtesy of the owner. The same process is going on at the most desirable retreats in the country and at the mountains. Wherever the best society has colonized for the summer, the language is, 'Procul, procul este profani.'"

The consolation he offers the Boarder, however, strikes us as rather empty. He simply remarks that the Cottager cannot "deprive him [the Boarder] of the simplest things in nature, or of the joyful surprises and delights which come everywhere to the observant man and the contented heart." "Beauty in nature," he adds, "is a relative term, and there are thousands of places where it can be found all over this country, beautiful beyond the power of any words to describe, on which society has not yet set the seal of approval and exclusive appropriation."

The non-observant men, however, and the discontented hearts have their right to the pursuit of happiness, as well as their betters; and it is of some importance to them, when their summer vacation comes round, to know where to find beauty in nature without having to search the continent for it in every direction. It seems to us, therefore, that a few plain, practical truths may be worth a good deal more to the Boarder than any quantity of encouragement to pursue the beautiful all over the country. Let us, then, say frankly that in our opinion all the very attractive spots on the seacoast are virtually lost to him for ever. The Cottager has either got them securely now, or will have them before long. The reason of this is, that our seacoast, and especially the northeastern portion, has not only to supply the people of our own seaboard States with sea air and sea bathing, but has to meet the wants of the well-to-do of the whole Mississippi Valley, who rush for the Atlantic every year in increasing numbers with a passionate eagerness which scorns expense, and will have the best purchasable sites. Everything of the kind from Cape May to Eastport has been already bought up, or is held for a rise. Any hotel or boarding-house which occupies an attractive position is, we may rely on it, destined to disappear before long before the Cottagers' consuming thirst for seclusion and fine scenery. The Boarder who does not see this, or, seeing it, ignores it, is simply blind. To the old Boarder it may make but little difference, but it warns his children in unmistakable terms that the saving of money for a cottage cannot begin a day too soon. The mere craving for "sea food" which one witnesses on the part of Western people now in our seaboard hotels, is of itself a significant indication of what is coming in the near future.

The Boarder who means to remain a Boarder, and who never intends to rise into the condition of a Cottager, must, it seems to us, make up his mind to live in the mountains. It is there that he, for the present at least, is likely to be most secure. Mountains on this continent are a practically unlimited quantity. They cover vast areas. They abound in beautiful scenery, and they produce mountain air in great abundance. In them, we are persuaded, the true home of the Boarder—if the poor fellow can have a home on this continent at all—will hereafter be found. But it is absolutely necessary to his continued peace that he should try in some manner to improve the summer-boarding-house keeper, for it is the imperfections and shortcomings of this personage which, almost as much as anything else, drive people into cottage life. A cottage in a large percentage of cases is a refuge from boarding-house fare and noise and discomfort. Improvement is probably attainable, because fully nine-tenths of the present boarding-house keepers are really farmers or fishermen by training, and have begun to take boarders simply because the boarders forced themselves upon them, or because they thought they could make a little money by it. These pioneers in a new industry—for such it may be called—have had two great and, in many cases, insurmountable difficulties to get over. One is complete ignorance about the habits and diet of "city folk," and the other is unwillingness to admit that one American can or ought to have more reasonable wants of a personal nature than another. It always goes against the grain of the summer-boarding-house keeper to admit that what was good enough for himself and his wife is not good enough for these "citified" people who descend on him once a year. When they demand food or sleeping arrangements with which he is not familiar, he hates to comply, because he thinks they are merely giving themselves airs, or putting on "frills," or making a fuss about trifles. If, under the pressure of popular agitation, he does comply, he complies with a bad grace and without zeal, or interest, or disposition to learn, and consequently with but little chance of improvement. He does not give his mind to the amelioration of his cookery, which he finds is good enough. He will not warm the plates, because he has himself eaten off cold plates all his life. He will not take any trouble to provide baths, because he never bathes; or give more towels, because he has always found a little one enough for his own use. He consequently is apt to receive his boarders in a spirit of hostility. He meets them as aggressors who have come to find fault with his house and his table, and wear his wife's life out, and need to be repelled with energy, especially when they ask him to make any provision for individual peculiarities. We once saw an elderly gentleman treated like an impudent ruffian in the White Mountains because he asked modestly for two horses for himself and his wife to ascend Mt. Washington alone, and not in the general caravan of forty which was being made up.

We presume the Swiss, who are now the greatest hotel and boarding-house keepers in the world, and have brought the art to the highest perfection, and make immense sums out of it every year, passed, when their mountains first began to be a summer resort, through a stage of feeling somewhat similar to that in which our summer-boarding-house keepers now live. But they very soon got over it, and reduced the entertainment of tourists to a business conducted on what may be almost called scientific principles. The Swiss hotel-keeper studies boarders' tastes as coldly and commercially as a manufacturer

studies the quality of raw material, and eliminates his own feelings completely from the problem he has to solve of making money by attracting people to his house. In fact, his sons and daughters now serve an apprenticeship to the trade of finding out what boarders like and supplying it. We have little doubt that in the next generation our mountaineers will exhibit in a similar way their appreciation of the immense sums that may be made by providing comfortable accommodation in the country for the vast crowds of sedentary people which the American community now contains.

MICHELE AMARI.

WHO that loves the history of right against might, of the oppressed against their oppressors, but has read the 'Sicilian Vespers,' written by Michele Amari during the darkest days of despotism; and, reading, has not marvelled at the mighty power of a people, outraged by bitter injuries and insults harder still to bear, uprising in spontaneous unanimity, without previous conspiracy, without organization, without a chosen leader? This patriot and true historian died on the 15th of July, "suddenly," at the age of eighty-three. The thought that occupied his last days was the erection of a monument to Alto Vannucci, the historian of Italian martyrs in Rome. "If the Commission is to meet at once," he wrote, "I will come without my family," and on the 14th he rose, as was his wont, at five A. M., made his coffee, took leave of his family, and, with the proofs of his last work, "on a period of the Middle Ages wherein he had discovered the germ of the idea of Italian nationality," he went to the National Library in Florence to compare his text with a document discovered there, then to the Superior Institute, of which he had been one of the founders, and was ever one of the most active members. At the foot of the great staircase, feeling dizzy, he asked for a chair, sat down and died. "To-day," said Senator Massarani, "one of the most glorious of our old veterans has passed into the realms of history; the youngest heart in Italy has ceased to beat."

A complete biography in a couple of words: Michele Amari was a typical Sicilian. With robust constitution, iron frame, strengthened by toil and tempered by frugality, with active brain and passionate heart, he was a true son of the soil. Born in 1806, he obtained employment in the municipality of Palermo, spending his leisure hours and nights in the study of old documents and forgotten books. His first work, 'The Foundation of the Monarchy of the Normans in Sicily,' published when he was twenty-eight years of age, was welcomed as the promise of a rich harvest. Then followed an entirely new version of the Sicilian Vespers, drawn from original and unpublished documents. Conscious that the Bourbon King Ferdinand would not look favorably on a work calculated to inflame the passions of the islanders and revive their memories of departed liberty, Amari called his work 'A Period of Sicilian History in the XIII. Century.' It was published in Palermo. One of the earliest copies lies before us.

The book created a deep, widespread sensation. The infamous Del Carretto incensed the King by assuring him that in the person of Charles d'Anjou the author had intended to portray himself. The copies were sequestrated, the publisher thrown into prison, where he died; the author summoned to Naples. Conscious of what his fate would be if he walked into the trap, Amari preferred exile, went to Paris, and there, under its true title, republished the 'Sicilian Vespers.' It had a "clamorous" success among the Italian exiles of all provinces and parties gathered there, was translated into English (by Lord Ellesmere) and into German. Naturally, it was not satisfactory to the Chauvinists, and two Frenchmen "rendered it" in a fashion of their own, falsifying the documents and giving a quite other version of the tragedy, while Michelet, Thiers, Lenormant, and Longpérier rendered full justice to the historian in their reviews, and welcomed the exile as a prized member of their literary circles. Mazzini hailed the work as an "event," even as Guerrazzi's 'Siege of Florence,' "a book written by a man who could not fight a battle." The special novelty and value of the work lay in the proofs that the Vespers were not the result of a long-laid plot, of a conspiracy, but the outburst of popular indignation, the overflowing of the cup slowly filled to the brim by the insolence of the foreign usurpers.

Amari's tale of bygone days was addressed to the Italian slaves of the Bourbons in 1842. Six years later, it was the people of his own Palermo who flung down the gauntlet to the same Bourbon King on the 12th of January, 1848, who fought and won their mortal duel. Who can say how many hearts the author of the 'Vespers' had inspired, what swords he had sharpened? In the intervening years, from 1842 to 1848, Amari devoted himself to the study of Eastern languages, specially of the Arabic. His book had brought *fama*, not relieved *fame*, so, to satisfy hunger, he compiled catalogues for five francs per day, then commenced his history of the 'Mussulmans in Sicily,' a work even more highly esteemed by literati pure and simple than the 'Sicilian Vespers.' Step by step the author traces the Mussulman from the "great land" to the Italian peninsula, and seeks for every trace of Italian courage and virtue, putting his finger on the plague-spot of all Italy, the cause of her falling such an easy prey to thieves and bandits, adventurers, and usurpers—namely, that each State preferred the triumph of its enemies to the prosperity of another State. So Benevento fought against Salerno, Naples against Capua, and the garments of all were divided among the spoilers. When the Revolution broke out in 1848, as deputy and minister of his native island, Amari struggled to the last, then, after the bombardment of Messina, returned to Paris and his studies, with the half suspicion that Mazzini, from whom he had held aloof as "too exclusively unitarian," might after all be right in asserting that Sicily could never be free while any province of Italy remained enslaved.

In 1860 Amari, one of the most energetic promoters of the expedition of the Thousand, and created Minister of Public Instruction by Garibaldi at Palermo, acknowledged that Mazzini was right after all. In the preface to his great work, only completed in 1872, he writes:

"I began this arduous task with the heart of a Sicilian who longed for the liberty of one little State, desiring the unity of Italy without a hope that it was so near its accomplishment. I finish it with the fervent hope that the Italians will fraternize ever more among themselves, seeing that in their unity and liberty lies the safety, the honor of each and of all; that the country may grow in knowledge, wisdom, power, and wealth; that the new Rome may atone for the armed oppression of ancient Rome; and that the evil arts of the after times may yield to true liberty in worth, unlimited freedom of thought."

On the twentieth anniversary of Garibaldi's entry into Palermo, to his fellow-citizens in festival Amari wrote from Rome:

"Now that the ambition of abnegation and of combat has yielded to the thirst for wealth and ease, remember, oh citizens! what you once were, and what you became in May, 1860; remember the tyranny of the Bourbons dispersed by a breath; remember the Thousand and their Duce who grasped the hand of Victor Emanuel. Sicily, united in deed and by law as she already was by nature to the great Italian fatherland, is placed as the guardian of the southern frontiers."

Though a pure-blooded Sicilian, Michele Amari was a favorite throughout Italy. As soon as Florence was free in 1859 he was named Professor of the Arabic Language and Literature in Pisa, was among the first Italian Senators of Turin. Minister of Public Instruction in 1862, to him the country owes the first serious, uniform direction given to the higher branches of study, the collection of scientific material, the selection of the right men for the right places, to the exclusion of the elements hostile to liberty of thought and freedom of research. But political strife was alien to his nature, and when in 1864 he quitted the Ministry, he never again accepted a portfolio. Numberless are his contributions to French historical and philological reviews, to the *Archivio Storico*, the *Rivista Europea*, the *Nuova Antologia*. The Istituto di Studi Superiori of Florence was to him as the apple of his eye, Florence his second home. A member of all the scientific institutes of Europe, of the Institute of France, the Oriental Society of Germany, the Asiatic Society of London, the Historical Society of Utrecht, the Imperial Academies of Petersburg and Vienna, in 1876 he presided over the fourth Congress of the Orientalists in Florence; his bright, genial face, his cordial vivacity, warming the hearts of all who had long spoken his name with reverence. Late in life he married, and in his wife and children enjoyed for the first time the happiness of a peaceful home. Illness, weakness, the ailments of old age, kept away from him. "Only a few months since," says Professor Villari, "I found him in the Paris Library, delving with boyish eagerness among ancient documents and old chronicles for his latest work, writing to Italians, to foreigners, for dates and facts, passing from library to library with hastening steps, as though fearing to arrive too late."

A purist from his earliest years, the Italian language owes not a little to Amari. As edition after edition of his 'Vespers' was issued, in the latest (1886) he still found fresh sentences to revise, fresh words to correct.

"Let it not be forgotten," he wrote, in the last preface, "what toilsome labor was bestowed on the Italian language by the generation passing, nay, almost passed away, leaving Italy a free and great nation. Without recording the facts that relate to myself, or to the vicissitudes of my own studies, the thorns that have beset my path from boyhood to old age, I must bear witness how *down there in Sicily*, even as on the peninsula, political aspirations led us to react, among other things, *against that sort of Italian* commonly written; poor, base, weak, full of foreign words and idioms. Our zeal in waging war against the intruder may be guessed from the long list of proscribed words [foreign idioms to be discarded by Italian speakers and writers] compiled by three civil servants (poor Gaetano Darta, who is dead, Francisco Perez, and myself) of the Ministry of State in Palermo in 1835."

Among his unpublished works is a glossary of the words of Arabic origin in the Sicilian dialect.

He was a life-long adversary of popes, priests, and the Roman hierarchy. Hence, true to his convictions, he enjoined on his family to bury him with purely civic rites, and he was obeyed literally. The Syndic of Palermo, having

telegraphed the desire of the city that the body should be restored to them to rest in the Pantheon of S. Dominico, and the family consenting, the remains were embalmed on the ground floor of the Istituto Superiore, where he died, and followed to their temporary resting-place under Michael Angelo's watch-tower, on San Miniato, by the Minister of Public Instruction, representatives of Senate and Chamber of Deputies, by Ubaldino Peruzzi, who first appointed the Sicilian exile professor at Pisa; by the Syndic of Florence; by Prof. Villari, President of the Faculty of Philosophy and Philology; by the professors of all the educational establishments of Florence, and by his eldest son and throngs of Florentines, who looked upon Amari as their fellow-citizen.

A SUMMARY OF BALLOT REFORM.

BOSTON, September 1, 1889.

THE demand for ballot reform has now passed the stage of local and casual effort, and has reached the importance and dignity of a popular movement. In the coming winter its activity will be vigorously renewed, and the present seems a not unsuitable time to take account of progress made, and to note some of the characteristics of the movement. The term "ballot reform" will be used to mean any measure adopting the two principles of compulsory secret voting and official ballots.

The stage of this reform reached in the various districts of the nation may be summarized as follows: (A) Legislation enacted: Connecticut, Indiana, Kentucky (1888), Massachusetts (1888), Michigan, Minnesota, Montana, Missouri, Rhode Island, Tennessee, Wisconsin; (B) bills passed, but not signed by the Governors: New York, Dakota; (C) bills rejected (*a*) in the House where first offered: California, Delaware, Illinois, Maine, New Hampshire, Ohio, Pennsylvania; (*b*) in the second House, after passing the first: Arkansas, Nebraska; (D) bills introduced, but not reached on the calendar (*a*) in the House where offered: Kansas, Oregon, Texas; (*b*) in the second House, after passing the first: Colorado, New Jersey; (E) the subject more or less discussed, but no bills introduced: Iowa, Louisiana, Maryland, Vermont, West Virginia; (F) no attention given to the subject: North Carolina, South Carolina, Virginia. No news has been received from Arizona, Florida, Georgia, Idaho, Mississippi, Nevada, Wyoming, Washington.

The laws of Connecticut and Michigan embody ballot reform very incompletely, but their enactment signified a substantial victory for the friends of reform. The Tennessee law will probably be pronounced unconstitutional, as it fails to provide for voting by illiterates, and, in addition, defies the rule against special legislation in applying to certain fixed districts only. The Kentucky statute has been held constitutional (Rogers vs. Jacob, 11 S. W. Rep. 513) in every respect except its failure to provide for illiterate voters. It applies only to Louisville, as the State Constitution requires *viva-voce* voting for State elections. In Montana a special election for aldermen has already been held in Miles City (July 26) under the new law, and the Miles City *Yellowstone Journal* says of it (July 27): "The first trial of elections under the new system has certainly proved a success." In Dakota the perpetration of a crime became necessary to defeat the movement, and the bill was stolen after passage and while on its way to the Governor. The first regular elections under the new laws will take place as follows: Montana, October 1, 1889; Connecticut, October, 1889 (municipal); Massachusetts, November 5, 1889; Tennessee, January, 1890; Minnesota, March, 1890 (municipal); Rhode Island, April 2, 1890; Wisconsin, April, 1890 (municipal); Missouri and Indiana, November 4, 1890.

Taking up the States in which the reform was directly rejected, the opinion may be ventured that the absence of a defined public opinion was responsible for the failure. In neither Arkansas, California, Delaware, Illinois, New Hampshire, nor Pennsylvania, was there an organized agitation or any considerable discussion. In Maine, where public sentiment declared itself with singular distinctness in favor of the reform, the interests of the Republican Machine, powerful enough to withstand this first shock, account for the large adverse vote. In Ohio, where there was an evident public approval of the measure, the bill failed by only three votes. It is true that in Kentucky, Minnesota, Montana, and Tennessee, the persistent efforts of a single legislator were immediately responsible for the creation of a more or less powerful public opinion; but in Connecticut, Indiana, Massachusetts, Michigan, Missouri, New York, Rhode Island, and Wisconsin, the Legislature simply yielded to an irresistible popular pressure. If we note one more fact, that in no case where organized effort was made on behalf of such a measure did the people fail to appreciate and approve it, and to give pronounced support, we shall have indicated the proper course of action for friends of the reform in the future. It is, Organize, and create a public opinion. "When bad men combine," said Burke, "the good must associate; else they will fall, one by one, in a contemptible struggle." Opinion, in this country, says Mr. Bryce, prevails "more swiftly and more completely" than in any other. The moral of the past year has been, Educate the people, popularize this popular reform, and proceed to cultivate a public opinion in its favor. Then legislation must follow as speech follows thought. Ballot Leagues have been formed in Massachusetts, Rhode Island, New Jersey, and West Virginia, and are among the possibilities in Kentucky, Missouri, and Wisconsin. Their function may be to bring about legislation, or, as in Massachusetts, to secure a fair trial for the system when adopted. There is no reason why there should not be a national association of these leagues.

In cultivating a public opinion, as in everything, there may be method, and we may notice how successfully popular petitions were employed in formulating public sentiment and in focussing it upon the legislatures. In Connecticut, Maine, Massachusetts, Montana, and Rhode Island, petitions signed by thousands poured in upon the legislators, and served to indicate the drift of opinion in constituencies. In Indiana the Indianapolis *Sentinel* attained the same object by opening a special column for letters on the subject from all parts of the State. In the ideal popular government, as both Mr. Bryce and Prof. Sumner agree, we shall probably have discarded "those formal but occasional deliverances made at the elections of representatives"; and when once the will of the majority is made manifest, our public servants will proceed to carry it out as spontaneously and immediately as the needle responds to the magnetic influence. It is the electric effect upon legislators of numerously signed petitions (as instanced in the present movement) which forecasts the advent of this ultimate stage of democracy.

It would be interesting if we could ascertain (as in South Australia we point to Dutton, in Victoria to Nicholson, and, probably, in Rome to Gabinius) whose should be the credit of having first proposed the adoption of the Australian or the English system in this country. The first to call public attention to it seems to have been a member of the Philadelphia Civil-Service Reform Association, in 1882, in a pamphlet on "English Elections," and Mr. Henry George, in the *North American Review* for March, 1883. It is also claimed by Mr. Robert Schilling, editor of the Milwaukee *National Reformer*, that he advocated the system in his journal in 1881. However this may be, the first assault directly upon legislative ranks appears to have been made by Mr. George W. Walthew of Lansing, Mich., who, in January, 1885, introduced in the State Legislature (without success in that session) a bill founded upon the Canadian system. It was, however, the passage of the New York and Massachusetts bills in 1888 that gave the moving impulse to the present successful agitation. One of the noticeable facts in its rapid diffusion is the number of bills that were brought before the same Legislature by various persons without preconcert. In Indiana a dozen or more bills were introduced, in Connecticut nine, in California and Massachusetts four, in Illinois, Michigan, New York, and Ohio three, in Minnesota, Missouri, Pennsylvania, and Wisconsin two, and in most instances the various authors of these bills had acted independently and unaware of each other's undertaking.

In many cases the bills were prepared and supported by bodies representing definite political ideas (the Civil-Service Reform Association, Single Tax League, etc.), and an analysis of the objects in each case aimed at, and the various grounds upon which the cause received support in different quarters, would be profitable study if it were obtainable. A brief general indication of these objects and causes would include: (1) the purposes of the single-tax and labor associations throughout the country, and the necessity, in order to carry them out, of secret voting for evading the control of capital; (2) in the Southern and Southwestern States, partly a desire to disfranchise indirectly the illiterate negro, and partly a (more praiseworthy) desire to relieve the negro from the intimidation which, it is claimed, prevents him from deserting the Republican party; (3) in the Eastern, Central, and Northwestern States a reaction against the various forms of corruption, and a wish to root it out, beginning indirectly with ballot reform, and ending, perhaps, with a corrupt-practices act; (4) the condition of things in those States where public opinion is less active and effective (California, Kansas, Maryland, etc.), and the era of ballot-box stuffing and false returns has not yet passed away; here ballot reform is as yet less pressing than other measures, and, if adopted, will come rather as a part of a general reform based on, *e. g.*, a registration law; (5) a general desire to throw off the yoke of the machine politicians and destroy the power of the bosses; but this feeling has as yet very little strength in the West; (6) among thoughtful men everywhere a desire to see elections free from even the most subtle intimidating influences, and a satisfaction at the prospect of greater independence of thought, a lessening of party subserviency, and, in consequence, an improvement in the quality of our politics.

The two leading political parties, as may be supposed, are seen not always to have taken the same position as to this reform; their attitude has usually been determined by the local strength and inter-relations of the influences above mentioned. To give to

each its due would require a complete table of the votes of the various legislatures; but the debit and credit account of the two parties may be roughly stated thus: (*a*) in six States opposite sides were taken by the parties; in five of these the Democrats were the supporters, in one the Republicans; (*b*) in seventeen States no party lines were clearly apparent, but the party having the majority should receive the responsibility and the credit as follows: The credit for legislation belongs in six States to the Republicans, in two States to the Democrats. The responsibility for non-legislation belongs in seven States to the Republicans, in three States to the Democrats. Total score, crediting each with opponent's failures: Democrats, fourteen points, Republicans, ten points. The whole record shows how irrational it is to carry national party lines into local reforms; and doubtless, too, a new illustration for your correspondent "G. B." is somewhere hidden here.

Attention may be called, in conclusion, to two defects in our legislative systems which have been especially emphasized in the course of this agitation. One is the need of a legislative rule, as in Massachusetts, requiring every committee before the close of the session to report in some shape upon every subject referred to it. The art of infanticide as applied in committee to bills of urgent public importance is a notorious feature of Congressional practice; and in the course of the past six months was more than once applied to ballot-reform bills. What is needed is a rule such as is enforced in Massachusetts, fixing the responsibility of rejection clearly upon the members of the Legislature, enabling a measure to be brought at least once to a hearing before one branch, and lessening the temptation to "fix" a committee. The other defect is the brevity of the legislative session. In Kansas, Colorado, and Texas, where the sessions last forty, ninety, and ninety days respectively, and occur only once in two years, ballot-reform bills perished for lack of time. A desirable reform, in Legislatures thus limited, has every chance against it. Bills backed by powerful private interests, or important to this or that legislator for personal reasons, are given precedence (usually by a series of tradings) upon the calendar, and thus the brief time is exhausted. It would seem that the best working principle is: Pay the legislator an entire sum for the session, and give him sufficient time to legislate properly.

JOHN H. WIGMORE.

THE FINE ARTS AT THE PARIS EXHIBITION.

III. — DAGNAN-BOUVERET — AIMÉ MOROT AND ROLL—GERVEX.

PARIS, August 5, 1889.

SCARCELY any painter of the day has received greater praise or attained to higher honors than Dagnan-Bouveret. Definitively posed before the public as a young master when his now well-known picture, "The Accident," won him a medal of the first class at the Salon of 1880, he has produced in the past decade a series of pictures of incontestable excellence, all of them easel pictures (none over five or six feet long, it may be noted), and he has received as the crowning glory of a brilliant career the Medal of Honor at the Salon of this year for his picture "Breton Women at the Pardon." The international jury has also awarded him a medal of honor at the present exhibition, and it is universally conceded to be well deserved. The "Breton Women at the Pardon" cannot now be seen in Paris, for it was purchased at the Salon and has gone to Mulhouse, in Alsace, where its owner resides; but "Le Pain Bénit" (painted in 1885) and the "Horses at the Watering-Place" (painted in 1880) are to be seen at the Luxembourg gallery. "The Accident," which belongs to Mr. W. T. Walters of Baltimore, is so well known that one can call it to mind perfectly, and in the Champ de Mars are two of the painter's principal works, "La Bénédiction" (painted in 1882), for which the best English title is "The Paternal Blessing," the "Vaccination" (painted in 1883), and a picture called "The Pardon" (painted in 1887), which in subject and in general color scheme is very much like the famous picture of this year.

"Vaccination" is a work which resembles "The Accident" in subject, though it is much less sombre in color. The scene is a large room, one of the *salles* of the municipal building in a provincial town, probably, wherein are grouped—some standing, others seated on the chairs and benches against the wall—a number of mothers with their children in their arms. At the left of the picture before a window is the doctor, the personification of the traditions of the *médecin de province*, and a mother and a child, whose turn it is to submit to the dreaded operation. The picture is painted with all of Dagnan's knowledge. The sure drawing, the frank, firm modelling, the agreeable, quiet color, the exact values of tones—all are here. Were it not that the other picture, "La Bénédiction," hangs on the wall near by, we should find it entirely satisfying. Of "La Bénédiction" I can hardly say too much in praise. The scene is one of those taken from the life of the French peasantry, the blessing by the parents of a newly married couple before they leave the father's house—a simple custom, in the presentation of which the artist found a subject with a charm from the point of view of sentiment lacking in the "Vaccination" and "The Accident," and admirably suited to his talent as a painter from the plain, every-day sort of picturesqueness which exists for those who know, like him, how to bring it out without affectation or appeal to the literary sense. But, quite apart from whatever pleasure we may derive from the poetical view of this work, it is certain that Dagnan has never been more happy in the choice of a *milieu;* never has so admirably rendered, with such delicate appreciation, the subtle values of an interior lighted up, as this one is, by the full sunlight of out-of-doors, tempered by the white curtains drawn over the windows; never has conceived a more natural and at the same time effective composition; and never, in every respect, painted more truthfully or handled his material more artistically than in this admirable canvas. The young man is kneeling on the floor at the left of the picture in profile to the spectator, his bride with her veil falling over her shoulders at his right hand and a trifle in advance. The father and mother, who are standing before them still further to the left, are dressed in their Sunday black clothes, and at the back of the room, behind the long white-draped table where the wedding feast has been spread, are grouped the friends who have assisted at the ceremony—young girls in white with here and there a colored ribbon, sturdy-looking men, sunburned and brown in contrast with their white linen, and, around and about all, the warm glow of the daylight coloring the plastered walls and the wooden rafters of the ceiling with a wealth of tints of amber, opal, and blue.

There is not, I think, in the exhibition a picture by a living painter on which to found so much hope for the future of the French school as this. It is in such a picture, as in some of Bastien's work, that we must look for worthy rivals of Millet. We have here not a special talent, of which it is impossible to say what may be its worth, nor an unknown quantity like Besnard or Rafaelli, nor an eccentricity of genius like Rodin in sculpture, but something which it is possible to judge by comparison with other work, and to estimate pretty closely at its just value. If "La Bénédiction" does not prove to be one of the works of our day most held in esteem thirty years hence, it will only be because all canons of taste will have been reversed, and all appreciation of the true and the beautiful have ceased.

If I were asked to say who are the two *strongest* men among the young French painters of to-day, I should unhesitatingly name Aimé Morot and Roll. Both may be called young, though each has behind him a brilliant list of honors; Morot having begun as the Prix de Rome in 1874, with a third-class medal at the Salon of 1875, and the Medal of Honor at the Salon of 1880, and Roll, first recompensed by a third-class medal at the Salon in 1875, having gained a first-class medal in 1877. At this exhibition he receives a medal of honor. Morot is represented by five pictures. "The Good Samaritan" is, no doubt, a fine piece of painting, the nude torso of the man on the donkey supported by the Samaritan being solidly modelled and luminous to the point of brilliancy; and though in the *procédés* we are reminded of Bonnat, it is sufficiently original, and is of the very best of academic work. He appears, however, as a painter of the greatest vigor and individuality in a large picture called "Reichshofen," representing the famous charge of the Eighth and Ninth Regiments of Cuirassiers at that battle in the war of 1870-'71. It is impossible to describe the terrible rush and mad whirl of horsemen tearing over the ground in a perfect cyclone of movement. There is a foreground of steep slopes, strewn with the dead and wounded; the wild, irregular mass of cavalry, with horses leaping and men standing in the stirrups or bent forward, sabre in hand, on the horses' necks, fills the middle of the canvas; and beyond, for miles away, swathed in the smoke of battle, stretches the bare, hilly country to the horizon, with a narrow strip of sky at the very top of the picture. There is no suggestion of the academy in this; all conventions as to composition are thrown aside; there is no central group, no concentration of light, no figures posing in heroic attitudes. It is reality as far as it can be produced on canvas, and beside it even De Neuville's stirring battle-pictures seem tame. Taken in detail, it is exceedingly well done, abounding in good *morceaux*, broadly and vigorously painted throughout.

In "Toro Colante," a picture of medium size, we find an equally individual treatment of a different subject. A bull in the amphitheatre stands square in the middle of the canvas, his great neck curved and his head lowered under the weight of a horse he bears on his horns. Behind is indicated a mob of Spaniards yelling from the benches of the ring. This picture is a composition, and a handsome one. There is only the one group, the bull and the horse; the rest serves simply as a background. It is full and deep in color, without over-richness. The bull forms a mass of warm dun color, with purplish tone in the shadows, the horse a contrasting one of warm gray and white. The ensemble is harmonious, sombre, and impressive by a certain reserved sobriety of tone. In these powerful works Morot evinces a perfect knowledge of the means of art. Such knowledge is shown, without much else, in "The

Good Samaritan," where what can be learned at the École is shown by a man who has learned it all and is able to express it forcibly. In the "Reichshofen" and the "Toro Colante" he has made use of all his knowledge, but, rejecting the formulas of the schools, has applied it to the expression of action, according to a conception which, different in each picture, is as original and personal in the one as in the other.

Roll is possessed of less science, but has more the temperament of a painter, and more robustness and vigor in the painting of a *morceau*. In his "Festival of Silenus," where a half-dozen women, holding hands, are dancing under the trees in a ring around the ruddy god, there is an intense feeling for nature, and the nude bodies are painted with a full, swinging brush that does not stop to correct slight inaccuracies of form and outline. In the "Woman and Bull," a picture which has been seen in New York, there is remarkable strength, and the same ample modelling as in the women in the "Festival of Silenus," with a truer look of out-of-doors in the grayer tones of the flesh in shadow. In the "Femme Assise," a simple study of a female figure in back view, there is again a slight uncertainty of modelling in parts, but great truthfulness in the rendering of flesh and blood. In quite a different field is his "Portrait of M. Alphand," the Director-General of Works at the Exposition. A man is painted, full-length and life-size, in the strong daylight, standing in the street or road, with white walls and scaffolding behind him. It is a solid, rugged figure, well planted, and in strong relief against the light background. It is not forced nor exaggerated in values, nor is it painted with that subtle delicacy which characterizes Bastien's work, or the portrait of Mme. Toulmouche by Delaunay, which I mentioned in a former letter; but it is amazingly real. The impression is seized and fixed without hesitation. In "The Stone-yard at Suresnes," a vast canvas with many figures clad in workingmen's blue and gray and white, there is the same impression of reality, and the same vigorous, hurrying, and powerful swing of the brush. In so far as boldness and vigor may be counted as first qualities in draughtsmanship, strength and robustness as prime qualities in painting, so far Roll may be considered without a superior. He is one of those men whose individuality predominates in their work, and who could never have remained tied down to set theories and rules. Like Morot, he struck out in the open, and each, having found out his way, has pursued it with acknowledged success. They are two of the most striking figures in French art.

Henri Gervex is a man of finer mould than either of these. Thoroughly educated in the schools, he is a competent draughtsman and skilful technician. He has never been, even at his début, identified with classicism or historical painting, but plunged boldly into the modern field, the depiction of the life of to-day, at the outset. He contributes nine pictures, of which five are portraits. "Doctor Péan," a large picture, representing a scene in a hospital ward, with a young woman on the operating table, and the professor, with his assistants and students grouped about him, is one of those exceedingly clever canvases to be found in the Salon every year—a genre subject, magnified to life-size proportions; and, while a good exposition of an artist's ability to solve difficult problems in the representation on canvas of figures in light and air, and remarkable for justness of values and a look of reality, it is without interest in color or that harmony of tones to be found in smaller pictures, in Dagnan's "La Bénédiction," for example. "The Members of the Salon Jury," a portrait group of thirty or more life-size figures, is a work of the same sort, but of less interest.

What entitles Gervex to be picked out for special mention as one of the leading French painters are his two remaining pictures, "Rolla" and "La Femme au Masque." "Rolla," the subject being taken from Alfred de Musset's poem, represents Jacques Rolla standing at dawn at the open window, his head turned to look at the young girl sleeping on the white bed in the foreground of the picture. It was painted for the Salon of 1878, but the administration refused to hang it, on moral grounds. It was then exhibited in a gallery in the Chaussée-d'Antin, and attracted much attention in the world of art. Its merits were warmly discussed at the time. Ten years having passed, and the administration being, happily, more liberal (for, except the poem itself be kept in mind and the picture be looked at purely as an illustration and not as a piece of painting of the nude, there is nothing in the least objectionable about it even for the ultra-prudish), we are able to compare it with the best painting of the nude figure the decade has produced, and to form a definite judgment of its merits. I think it no more than the picture deserves to say it is the best thing in its class in the entire exhibition. This is true, too, in spite of the fact that there are details in the drawing which may be found fault with. The hypercritical insist on this point, but the drawing is very good as a whole, and sufficient. As painting it is a marvel. Nothing could be simpler in modelling; the passages from the half-tints to the full light (for there is no part of the figure actually in shadow) are delicately felt, the flesh is admirable in color, the *pâte* full and even, the ensemble pure and luminous. Not much more praise can be given to the best painting of the nude in existence, but this beautiful figure charms us, by its subtle grace and tender color, as we are charmed before the work of the masters.

Though Gervex is still a young man and in his full development, we may well doubt whether he will ever again produce a work equal to this. If we look at the "Femme au Masque," painted several years later, we shall be strengthened in our doubts, for though it is a gracious figure and one of the best pieces of painting of the nude we shall find here, it has not the subtlety of the other, and in color it is far from being so fine. It is, withal, refined in type, and as to drawing it is quite up to the best; but the flesh tones incline to pinkishness, and it is less luminous and just a trifle "painty." Be that as it may, we shall have to go to the Retrospective Exhibition to find anything to compare to Gervex in painting the nude.

WILLIAM A. COFFIN.

A COLONEL OF THE FRENCH REVOLUTION.

PARIS, August 9, 1889.

THERE is quite a large literature of works on the wars of the Revolution and of the Empire, and this literature is increasing every day. It was natural that the chiefs of the army should appear at the head of this military literature: such are the memoirs of Napoleon, of Marmont, of Gouvion St.-Cyr, of Jomini. In our day we have a curiosity to know the impressions of those who were at the other end of the hierarchy, and I have noticed in their time the memoirs of Captain Coignet, who was the type of the soldier of the First Empire. These memoirs have had so much success that they have been illustrated, which is always a mark of great popularity.

I have now before me the memoirs of a colonel of artillery, Pion des Loches, just published by Firmin-Didot, under the title, 'My Campaigns.' Pion was born in Pontarlier, in Franche-Comté, on February 20, 1770; he was one of seven children, and was destined for the Church. He was tonsured at the age of thirteen, and entered in 1789 the Seminary of Besançon. The French Revolution upset all his projects; he was obliged to take the oath to what was called the civil constitution of the clergy and to leave off the ecclesiastical costume. Fortunately for him, he had only taken the minor orders; three times he escaped the requisitions which called the French young men to the army by paying for substitutes, but finally he was drafted in the *levée en masse* and placed in one of the battalions of his countrymen. The clerical education which he had received had little prepared him for military life; it had, however, given him a strong sense of duty, a love of virtue, a sense of humanity, and a certain habit of public speaking which never left him; and it was with him as with Renan, who says that he has never lost what he received in his education at Saint-Sulpice.

In November, 1793, we find Pion in a village on the Rhine. "I don't look very military in a great fur cap with a fox's tail, long moustachios, a pipe in my mouth, a fifteen days' beard, a coat called carmagnole—such is my costume. I don't know myself." On the Swiss frontier, where he was a little later, "our service consisted in patrolling on Sundays so as to hinder the inhabitants from going to mass in the territory of Soleure. We had orders to take them before the administration, as liable to the penalty reserved for the émigrés—that is to say, the pain of death. Such a service revolted us, but we were in connivance with our hosts, and we only began to patrol in the morning after they had left, and in the evening after they had come back."

Disgusted with this life, Pion tried to enter the school of artillery at Châlons-sur-Marne, but he arrived there too late for the examination, and he was allowed to enter the Fifth Artillery, a well-organized and disciplined regiment. He took part soon afterwards in some military operations, and left the regiment for the school at Châlons, where he learned all that was necessary to become an officer of artillery. He obtained his brevet and was sent to Strasbourg. He immediately made his début at Kehl, which was then besieged. Every other day new men were sent from Strasbourg to Kehl.

"'Here I was free to fire for forty-eight hours with eight guns. I went up the parapet to see the batteries of the enemy, but the fog was so thick that I did not even see the covered way. Nevertheless, besieged and besiegers fired without interruption; it was the habit. We did not receive a single shell, and I concluded that my bastion was not in the front of the attack.' On the 1st of January, 1797, at twelve, Pion was relieved, after having burnt, probably in vain, 1,400 pounds of powder, and made more noise than he accomplished work."

I cite these lines, as they show the manner of Pion, his sincerity and candor. He does not pretend to be a hero, he performs his duty wherever he is placed.

In his new capacity of lieutenant he went to Switzerland and Italy. We cannot follow him at Berne, Zofingen, Mt. Saint Bernard, Milan, Cremona, in the retreat through Turin to Grenoble. During this retreat he says of himself: "I must have been born under a happy star. I walked almost alone through a country in which the French army was destroyed in detail.

I saw more than one corpse of an assassinated soldier."

Napoleon, then First Consul, avenged the defeat of the French arms in Italy, and made his famous winter expedition via the Saint Bernard. Pion entered Italy by way of Mt. Genèvre. This time his service took him to Genoa, to Alexandria, before Peschiera, which was besieged and taken. On his return to France he was sent to Metz. We find a note written in this town on the Concordat on the 10th of April, 1802:

"I am sure the Concordat will not please everybody. It is consoling for pious souls, and it is a very clever political move on the part of the First Consul, who will find in religion the most solid basis of his authority. To-day, Easter Day, we have buried the *décade;* we have had enough of it. Though the law which substitutes Sunday for it is not yet published, the Commandant has given the regiment complete rest. I do not know whether they will reëstablish the *aumôniers* in the regiments; my comrades laugh at me and want me to become theirs."

Pion was made captain in 1803. He was at the camp of Boulogne when Bonaparte threatened to invade England, and his impression was that the artillery never succeeded in doing any harm to the English navy; it was always firing at too great a distance: "I saw thousands of shells thrown, and not two happy hits." He received the cross of the Legion of Honor at the great ceremony which Napoleon, now become Emperor, celebrated in the camp. "The united army amounted to more than 60,000 men. The Emperor, in the uniform of his Guard, was on a throne round which were the flags which he had taken from the enemy in Italy and in Egypt. Round him were the princes, the great dignitaries, and the marshals. The Bishops of Cambrai, Arras, and Ghent, as well as 20,000 officers, received the decoration from the hand of the Emperor."

The army of Boulogne soon took the road for Germany, and the rapidity of its march was much admired. It seems that the soldiers were delighted to turn their backs on England:

"There was not one who would not have preferred to go to the end of Siberia rather than undertake the English expedition. The march in Germany was like the moving of a tornado. One day Marshal Soult, with whom Pion was marching, stopped two merchants of Augsburg, travelling in a postchaise. 'When did you leave Augsburg?' 'This morning.' 'Were there any Austrians in your city? have their scouts entered it?' 'No, sir.' 'Well, I am going there. If I find a single Austrian, I will have you shot at the gate of the town.' The postchaise turns round, the two Augsburgers are made to march bare-headed in the rain at the head of the corps d'armée, and all the officers of the staff find much justice in the decision of his Excellency [the Emperor's marshals were styled Excellencies and addressed as Monseigneur], who speaks of shooting these two men as if an Austrian troop could not have entered Augsburg since their departure."

To do justice to Pion, he was humane, and such proceedings inspired him with horror; he never inflicted any unnecessary punishment on anybody, never allowed any act of cruelty or wanton destruction, but his diary gives us too ample proofs of the horrors of war and of invasion. Gen. Vandamme tried in vain to hinder pillage. "In going through Ems, I saw Gen. Vandamme, one of our division generals, in a great fury; he had a man shot, at the head of the division, who had his knapsack full of stolen silver. Had he exercised as much severity towards all the men of his division, he would not have had men enough left to form his escort." Some generals set the worst example, and their carriages were full of stolen effects; they made unnecessary requisitions, and accepted composition in money from the local authorities.

Pion was at Austerlitz.

"After eighty-six days' marching here we are in the centre of Moravia; we have Hungary on our right, Bohemia on the left, and if we go forward we shall arrive at Austrian Silesia and Galicia. All these countries are barbarous; those among us who know German are not understood; the populations want even the necessaries of life. . . . I have sometimes been on horseback from six o'clock in the morning until night without any other nourishment than a little bread and a little brandy, which I had in my pockets. My corps d'armée had to fight five times. Are we approaching the end?"

Every army is a mixture of virtue and vice. Pion cannot speak well enough of his general, La Riboisière, who always shared everything with his officers and men, who always slept on straw, and "who set an example of all the virtues." He is very irate with many others.

"Bavaria," he says, "which we were said to be delivering from the Austrians, has suffered more than Austria. Everywhere the unfortunate peasants left their houses, the soldiers broke the furniture and took it to the camp, where you could see beds, mattresses, mirrors; they burned the houses; the number of *traînards* [stragglers] was immense. I don't know how the corps d'armée could live where other troops had already passed. The first destroyed everything—wine was flowing in the cellars, flour was spread about in the houses; the officers could not hinder it. It was a horrible disorder. An honest and tender-hearted man is not made for the profession of arms in the present century."

If such are the complaints of Pion in the Austrian campaign, and afterwards in the campaign in Prussia, you can easily imagine what they became in the famous Russian campaign and in the retreat of the French army from Moscow. His account of this terrible drama constantly recalled to me Tolstoi's famous novel 'War and Peace.' We find in it the same precision in the details, we see what military glory is made of, we see ambition at war not only with men, but with the natural elements, with destiny. The impression is very powerful, and what we find besides in Pion's journal is the spectacle of human selfishness—men reduced to the state of brutal savages by hunger and cold, lying for a crust of bread, concealing a little liquor from those who yesterday were their best friends, debased by misfortune, with the exception of a few heroes—more saints than heroes—who, in the worst of times, never forgot the divine precept: "Love thy neighbor as thyself."

Pion's military career ended after this terrible campaign in Russia. He became a Colonel in the Imperial Guard; he had no enthusiasm or affection for the Emperor, and had always remained a Royalist at heart. In 1814, after having fired his guns for the defence of the Empire, he accepted with pleasure the new régime, and took Napoleon at his word when he said, in his adieu at Fontainebleau, "Be faithful to the new King whom France has chosen." He would certainly have become a General under the Bourbons, but his Russian campaign had much impaired his health, and he died prematurely with the rank of Colonel at the age of forty-nine years, on the 27th of April, 1819.

Correspondence.

THE GRAND RAPIDS POST-OFFICE.

To the Editor of The Nation:

Sir: There appeared in the *Nation* of August 1 a letter from Mr. F. W. Ball, editor of the *Democrat* of this city, criticising the report of the Civil-Service Commission on the Grand Rapids Post-office and the remarks of the *Nation* on the report. We have nothing to do with Postmaster Blair's contention with the Commission except in so far as Mr. Ball, in his zeal to defend Mr. Blair and make him out a civil-service reformer, has left the impression that there have been no changes in the force of the office on account of politics, but that all changes were made either for cause or by voluntary resignation. This casts a direct reflection on us, and on this we desire a hearing.

Mr. Ball, in his letter, says: "Not a single change has been made in the personnel of the office for political reasons. I do not believe any post-office in the country can give a better record from a civil-service-reform standpoint than can the Grand Rapids Post-office under the management of Mr. Blair."

The facts are, that every one of the subscribers to this letter was notified by Mr. Blair, either personally or by his assistant, that his resignation would be accepted, and every one of us assured by Mr. Blair personally that our work was entirely satisfactory. Furthermore, he said to some of us plainly, and to others he just as plainly intimated, that our politics was the sole reason for asking us to resign. He spoke in every instance of party pressure as compelling the step.

Mr. Ball is a warm personal friend of Mr. Blair, and his zeal for Mr. Blair's retention has led him to do us an injustice.

We subscribe after our names the positions formerly held.

PRESIDENT HARRISON AND THE NEW-MEXICO SURVEYOR-GENERALSHIP.

To the Editor of The Nation:

Sir: New Mexico has for years been the theatre of the most outrageous "land steals" that ever disgraced a government. The numerous Spanish and Mexican grants with which the Territory was encumbered, and the difficulty of ascertaining their true limits, have made it a place shunned by honest settlers and a perfect paradise for thieves. Men like Elkins and Dorsey, who had made immense fortunes here, saw in the former Republican administrations no check put to their operations, and naturally looked forward to a long reign of plunder and rapine.

In May, 1885, President Cleveland sent Geo. W. Julian of Indiana to New Mexico as Surveyor-General. Since the final abolition of slavery the one question of absorbing interest to Mr. Julian had been the land question, and his speeches and review articles had made his name familiar in this connection. His early championship of the homestead policy was also known, and his appointment was hailed with delight by the masses here, and regarded by the land-grabbers as a direct slap in the face. They at once resolved to defeat his confirmation by the Senate, and were so far successful that he was not confirmed till March, 1887, nearly two years after his appointment. For this, Democrats and Republicans were perhaps equally to blame, for the rogues are assuredly not all of one party.

In March, 1887, therefore, Mr. Julian was commissioned to serve as Surveyor-General of New Mexico for four years. Immediately

after General Harrison's election, however, the old clamor against an officer who refused to be used was revived, and the new President was scarcely inaugurated when strong pressure was brought to bear on him to remove Mr. Julian. No charges of any kind were filed, but it was urged that he was not a resident of the Territory and not interested in its advancement and settlement. He had examined and reported on hundreds of grant cases, and pointed out the way to recover millions of acres of land for the people; but if his policy should be carried out, the Dorseyites and Elkinsites would lose much of their ill-gotten gains. Hence the demand for his official scalp. Time wore on, however, and no change was made. It looked as if President Harrison would stand by his pledges in one instance at least. But on the 5th of August Mr. Julian was removed, and a Mr. Hobart of Las Vegas, N. M., was appointed to succeed him. No one knows who Mr. Hobart is except that he is a dealer in ice. The general belief is that he is somebody's man. Mr. Julian wrote at once to a superior officer in Washington, inquiring the cause for his removal, and was informed that it was "for political reasons." H. W.

Santa Fé, August 20, 1889.

WOMAN-BURNING IN ENGLAND.

To the Editor of The Nation:

Sir: If "E. W. H." will be content with but a single case of English woman-burning, he need go no further than the familiar one of the Witch of Eye, Margery Jourdemayn (or Jordeine, Jordan, as Holinshed and Shakespeare write her name), in 1441. The most explicit of the contemporary accounts of her fate, however—as that in the chronicle ascribed to William Gregory, Mayor of London, "On Syn Simon and Jude ys eve was the wycche be syde Westemyster brent in Smethefylde," or that in the "English Chronicle written before 1471" edited by Davies for the Camden Society, "Wherfore, and also for cause of relaps, the same wicche was brend in Smythfeld, in the vigily of Saint Simon and Jude"—are scarcely more full than Shakespeare's "The Witch in Smithfield shall be burnt to ashes." And, if he wishes to revel in such horrors, he has but to trace the work of the statute *De hæretico comburendo* and its post-Reformation substitutes, as recounted by Fox and the rest of the martyrologists. From many instances like that of old Joan Boughton, in 1494, who, "in the midst of the fire, cried to God," it is clear that the victims, women and men alike, were burned alive.

But all these cases were of ecclesiastical cognizance; that of the Witch of Eye not less than those of the heretics—for, as I pointed out in a former letter, Henry IV. in 1407 committed the crime of sorcery to the care of the bishops, and theirs it remained till in 1541 the statute of Henry VIII. restored it to the civil courts.

> "I come before the spiritualité:
> Two cardynals and byshoppis fyve,"

mourns the accomplice of Margery Jordan, Dame Eleanor, Duchess of Gloucester, in the lament which a contemporary verse-writer has put in her mouth. It is hardly fair, therefore, to say without explanation, as do some authorities (*e. g.*, Du Boys), that the English common law punished witchcraft by the stake. With nearly as much justice, indeed, might the trial of Joan of Arc, in 1431, be laid at the door of English law; for, though the tribunal which judged her was a French ecclesiastical one, it was only in pursuance of the English provision that the clergy had jurisdiction at all, the Parlement of Paris having in 1390 taken all French cases of witchcraft into secular hands. It is true that a marginal note on a Cambridge manuscript of Britton declares that, though the investigation of cases of sorcery belongs to "the inquirers of Holy Church," yet, "if the king by inquest find any persons guilty of such horrible sin, he may put them to death, as a good marshal of Christendom"; and there is record, before the fifteenth century, of several cases at common law. But all of which we have mention seem to have resulted in acquittal. Only when they had been convicted, like heretics, under the canon law, do we know the common law to have actually burned them.

But "E. W. H." need not put up with such equivocal instances: I have dwelt on them only to show that burning for witchcraft was never properly English. Woman-burning, alas, was common enough under the criminal law of England. Burning was a penalty for many crimes—for treason, including husband-murder and what not, as well as for arson; and that "ghastly gallantry" which has struck several of your correspondents in the procedure of the New England courts began very early in English history. One tenth-century law even went so far as to prescribe not only that the female offender—the crime in this case was theft by a slave—should be burned, while the male was only stoned, but that the penalty should be inflicted by women, eighty of whom should attend, each bearing a log for the fire. The punishment of a woman for treason (and this included so-called treason to the master or to the husband) continued to be burning long after that penalty had been abolished for other crimes, even for heresy. The latest case known to Pike is that of Mary Bayley, who, for killing her husband, was burned at Portsmouth on Monday, March 8, 1784. The origin of this strange discrimination between the sexes is hard to guess. Pike thinks it a relic of the subjection of women, and instances as analogous the Roman treatment of slaves, who, in like manner, were burned for crimes which brought lighter punishment to the freeman.

But in all these cases under the secular law it seems to have been the custom, as "E. W. H." points out, to inflict death before burning. On the Continent this mercy lay often in the discretion of the court; and a condition of its granting was not seldom the confession of the crime. In this case, and in case there had been no aggravating circumstances, the prisoner was suffered, after sentence had been pronounced, to fall on his knees before the court and humbly crave its forbearance; whereupon the court of its mercy instructed the executioner to strangle or behead before burning. "Geduldig und christlich strangulirt, und der Corper zu Eschen verbrent," is the phrasing of a German sixteenth-century record that lies before me. And this hope was one of the most powerful levers in producing those "voluntary" confessions which still puzzle so many honest folk.

Had not the printer improved upon the manuscript of my former letter by the omission of a comma, it would not have been possible for your correspondent Mr. Weston-Smith to so far misunderstand me as to suppose I meant to ascribe to the Puritans of New England the invention of that retaliation-in-kind for arson which is perhaps older than criminal legislation itself. Certainly this "kind of *lex talionis*" antedates the time of Edward I., when Blackstone first discovers it in operation, by far more than that epoch does the Puritan one. I spoke of arson in general, and of its time-honored penalty. It is notable that, for this particular crime, English law, so late as Britton's time at least, made no distinction between the sexes. The changed usage followed by our Massachusetts forefathers was perhaps due to the strange law of Henry VI., in 1429, by which, to discourage blackmailing threats, arson was made high treason.

After writing thus far, I discover that Dr. George H. Moore has discussed, with his usual conscientious scholarship, the question of witch-punishment at the hands of English law in his 'Notes on the History of Witchcraft in Massachusetts.' G. L. B.

The White Library, Cornell University,
August 17, 1889.

A LAST WORD ON THE EXCAVATIONS AT DELPHI.

To the Editor of The Nation:

Sir: As some misconceptions seem to exist in regard to the relations and action of the various parties interested to promote the exploration of Delphi, and as many inquiries have been addressed to me, since the publication in the *Nation* of August 1 of the letter of Mr. Stillman, as to the weight of his assertions that he could "state facts which would show that the American School has really no chance of getting the concession under circumstances which would permit us in common decency to accept it, if at all," and that "scientific morality absolutely forbids us to move any further in this matter until the French are out of the way," I request you to allow me to lay before your readers a statement of the facts which have determined the Archæological Institute to endeavor to secure the concession. I do this reluctantly, for even a seeming controversy is to be regretted in a matter in which the interests of knowledge only should be concerned, and in which national jealousies and personal considerations should have no part.

In order to make the whole affair clear, the narrative must begin at some distance back. For some years past the Greek Government have been endeavoring to negotiate a commercial treaty with France, and as, under this treaty, certain important advantages would be secured for Greece, the Administration coupled with it as a makeweight a convention conceding to the French the right to investigate the site of Delphi. The two instruments were ratified by the Greek Chamber. In France the treaty was rejected by the Senate, and, for the time, much to the disappointment of the Greeks, the matter fell to the ground.

In 1887 it was again taken up; a new treaty was negotiated with some modifications, but with the convention in regard to Delphi attached to it. It was brought before the French Senate, and in its turn was rejected. This rejection took place near the end of last year.

At this time our able and excellent Minister at Athens, Mr. Fearn, understanding that the arrangement with the French had failed, asked the Prime Minister of Greece, Mr. Tricoupis, whether the concession of the right to excavate at Delphi was now open. Mr. Tricoupis assured him that it was, but added that the expense attending the expropriation of the village of Castri, which stands upon the site of the ancient city, would be very heavy, and might prove an obstacle to the undertaking of the work. At the time when the treaty was being discussed, the French School at Athens had placed its estimate of the cost of buying out the village at 40,000 drachmai. The Greek Government, regarding this estimate as much less than the actual cost would prove to be, promised, as another inducement to secure the adoption of the treaty, to pay the expense of dispossession up to 60,000 drachmai, the remainder, whatever it might be, to be met by

the French. It further employed an engineer to make a survey of the site and an estimate of the cost of expropriation. The probable cost was fixed by him at 500,000 drachmai. Not satisfied, however, with this, the Government then had the whole survey and estimates revised by a commission of French engineers in their service. The probable cost was set by them at 430,000 drachmai. The aim of the Government was to learn the facts as exactly as possible, in order to secure a basis for arbitration between the investigators and the proprietors at Delphi.

Mr. Fearn reported what he had learned, in letters to persons in this country whom he knew to be interested in promoting the study of antiquity, and who would recognize the splendor of the work to be done at Delphi. Moved by his statements, a committee was appointed at a meeting that had been summoned by Bishop Potter, and charged with the duty of endeavoring to obtain means to provide a permanent fund for the support of the school at Athens, and to secure for it the privilege of making excavations at Delphi. This committee, composed of gentlemen of the highest distinction in New York, was actively engaged in its work when a letter from Mr. Stillman appeared in your columns (the *Nation*, March 28), asserting (I have not the letter at hand to refer to, but I believe I do not misrepresent its purport) that if the promoters of the undertaking on the part of America understood correctly the position of affairs, they could not pursue the work; that the claims of the French were still morally valid; and that our interference in the business was unjustifiable. This letter, coming from a person who might be supposed to be not only well informed, but likely to be well disposed to the undertaking of any honorable task by his countrymen, naturally awakened public doubt in regard to the propriety of the enterprise, and impeded the work of the Committee.

It happened that when this letter reached Athens, Prof. Hale of Cornell University and Prof. Palmer of Harvard were there. It led them to make inquiries at headquarters regarding the foundation of its assertions, and at the end of April Prof. Hale addressed to me a letter, approved by Prof. Palmer, containing the result of their careful investigations and of conversations with Mr. Tricoupis. In a subsequent letter Prof. Palmer summed up their conclusions as follows:

"The French are now entirely out of account. They will not obtain the concession even if we refuse it. The Greeks, whether wisely or unwisely, saw fit to try to obtain a certain commercial treaty by coupling with it an archæological privilege. The treaty has been twice rejected, and the whole temper of French legislation is against it. The Greeks cannot now with self-respect grant as a free privilege what they before treated as a condition.

"By any sum we pay for the expropriation of the peasant village at Delphi the Greek Government will gain nothing, and cannot therefore be supposed to be dealing with us in a jockeying spirit. That the amount suggested by Mr. Tricoupis as probable is not excessive, is evident from this, that it is the estimate of French engineers who have carefully surveyed the ground.

"The Greek Government look with a favorable eye on the introduction of Americans in this way into the land. It will be more for her advantage to have us do the work at Delphi than to do it herself.

"These considerations seemed to Mr. Hale and me entirely to set aside the reasonings of Mr. Stillman."

In the *Nation* of May 9 appeared a letter from Dr. Waldstein, one of the directors of the school, presenting other considerations in reply to Mr. Stillman.

In view of all the circumstances of the case, the Council of the Institute, at its annual meeting on the 12th of May, resolved to proceed with the work, provided the means for doing so could be obtained. They appointed a committee to prepare an appeal to the public, and to take other requisite steps. The Committee have done so, and the appeal will shortly be issued.

I believe that this bare statement of facts affords a sufficient answer to the main assertions of Mr. Stillman in the letter published in the *Nation* of August 1. It is not necessary to deal with his insinuations of bad faith on the part of the Greek Government, but it may perhaps be desirable to point out that there is no ground for his assumption that any discourtesy has been shown to the French School, or any lack of consideration for its just claims.

It is natural that the French should feel not merely regret, but irritation also, at the loss of the opportunity to perform the most splendid piece of exploration on classical ground that remains to be accomplished. But they have no right to play the part of the dog in the manger. They have no preëmption on the soil of Delphi. The Germans, if it comes to a question of priority, have the earliest claim. Karl Otfried Müller, with his pupil Ernst Curtius, were the first to do good work on the ground. Such work as has been done there since by individual members of the French School has been fragmentary and open to serious criticism. Moreover, in the year 1876, long before the proposal of a concession to France, our Minister to Athens, Gen. John Meredith Read, was asked to sound the Greek Government as to whether the privilege of excavating Delphi would be granted to Americans. He received a wholly favorable reply. The means for the work could not then be obtained. There was no organization for the purpose, and the matter was allowed to drop. But this was one of the motives that led to the foundation of the Archæological Institute in 1879, and the hope to be able finally to do this great work has never ceased to be cherished by it.

Your obedient servant,

CHARLES ELIOT NORTON,

President of the Archæological Institute of America.

ASHFIELD, MASS., August 16, 1889.

Notes.

THE Rev. A. K. Glover, B.Sc., Ph.D., will shortly publish a small volume entitled 'The Jews of the Far East, or the Jews of the Extreme Eastern Diaspora,' with the original Chinese texts of the inscriptions discovered at Kai-fung-fû.

A. C. McClurg & Co., Chicago, will shortly publish 'Fact, Fancy, and Fable,' a cyclopædic work by H. F. Reddall; and 'Opening the Oyster,' a story of adventure, by Chas. L. Marsh.

A new, revised and enlarged edition of Anne Ayres's 'Life of Dr. Muhlenberg' will be brought out directly by Thomas Whittaker.

In a late issue of their "Nuggets Series," called 'The Ideals of the Republic,' the Messrs. Putnam grouped the Declaration of Independence, the Constitution, Washington's two Inaugurals and Farewell Address, and Lincoln's two and his Gettysburg Address. Perhaps a demand for this handy compilation in a less dainty and costly form has led the publishers to issue 'Great Words from Great Americans' (the sub-title of the former volume), using the same plates with a bold typography, but inserting Washington's circular letter of congratulation and advice to the Governors of the thirteen States. In all respects except the elaborateness of the binding, the new and slightly larger edition is equal to the old. With the foregoing we receive a fresh Nuggets volume, an excellent selection of four of Heinrich Zschökke's 'Tales.' The last, "Walpurgis Night," we are told, has never been published in English before.

Mr. S. G. Owen's critical edition of Ovid's 'Tristia' (Oxford: Clarendon Press; New York: Macmillan) is the most complete and valuable "apparatus" for the study of this work that has ever appeared. The editor has personally collated twenty-eight manuscripts, and has had the good fortune to discover, in the Bodleian, Politian's copy of the Parma edition of 1477, with his marginal collations—a volume long supposed to be lost. The book is illustrated with facsimile pages of the Marcianus and Turonensis manuscripts.

In the second edition of Dr. Robinson Ellis's 'Commentary on Catullus' (Clarendon Press), especial stress is laid on our obligations to the scholars of the Renaissance for their work towards restoring the true Catullian text. Although Dr. Ellis thinks that disappointingly little has been effected in this direction since that period, he by no means neglects to consider the work of modern scholars, while his own services as an expositor of the poet are too well recognized to call for further mention here.

Several distinctly medical books have found their rather inappropriate way to our table. Of these the seventh volume of the 'International Medical Annual,' 1889 (E. B. Treat & Co.), is a really good summary of recent medical progress—progress meaning apparent advance in some directions and the burial of new hopes in others. The most interesting of its papers to general readers, and one of considerable intrinsic importance, is that on "Diseases of Women in Relation to Dress," by J. W. Taylor of Birmingham. In it he not merely points the old moral as to insufficient airspace from tight lacing, but assigns to the unnatural compression by the clothes of the civilized woman such consequences, more or less remote, as anæmia or deficiency of good blood, gastric ulcer, gall stones, and that very curious affection, movable kidney. Unlike some critics, he does not destroy without presenting a practicable remedy, for which the essay should be consulted.

As good an example as one could wish of the purely academic work produced in France under the influence of the French Academy and its elaborate system of prize essays is M. David Sauvageot's 'Le Réalisme et le Naturalisme dans la littérature et dans l'art' (Paris: Calmann Lévy; New York: F. W. Christern), which is a good, honest, solid specimen of journeyman work without a particle of inspiration or a flash of insight. Perhaps its chief use to us here is that its abundant footnotes constitute a sort of bibliography to the frequent French essays on the subject. At bottom M. David Sauvageot's conclusions seem to us thoroughly sound.

The promised pamphlet, 'Inscriptions on Tombstones in Milford, Conn., erected prior to 1800,' has been published, and is obtainable of Mr. Dwight E. Bowers, Box 595, New Haven. Mr. Nathan G. Pond has transcribed the epitaphs line for line, and added brief genealogical notes concerning the persons thus commemorated on 470 stones. Some of the stones are pictured from photographs. The publication is in every way creditable, except that an index has been forgotten—a strange oversight.

The Rev. Edmund F. Slafter of Boston has printed privately his curious paper on 'Royal Arms and Other Regal Emblems and Memorials in Use in the Colonies before the American Revolution,' read last January before the Massachusetts Historical Society. It deals with geographical names, names of streets and inns, newspaper vignettes, etc. Mr. Slafter has discovered extant only six of the royal arms in use before the Revolution, and is able to picture five of these, including two that have been transferred to churches in New Brunswick. The first figured is at once the crudest and most interesting of them all, for it remains *in situ* in St. James's Church, Goose Creek, near Charleston, S. C. It was in plaster, fastened by leaden bands, and escaped all the ravages of war, foreign and civil; but the earthquake of August 31, 1886, quite destroyed it, and its restoration depended on a copy in oil made for Mr. Slafter before that event. It is now booked for another century.

With the recurrence of August in the calendar appears the pamphlet Proceedings of the American Association for the Advancement of Science in the preceding year—viz., those of the thirty-seventh meeting held last August at Cleveland. The most significant paper printed in full is President Langley's address, a summary sketch of the growth of the doctrine of radiant heat. Peculiar to this issue is a list of deceased (active) members from the beginning, with dates of birth and death.

The eighth annual report of the Dante Society announces that "a number of gentlemen connected in various ways with Harvard University, stimulated by the appearance of Prof. Fay's work ['Concordance of the Divina Commedia']," have undertaken a concordance of the 'Vita Nuova' and the "Canzoniere." This is likely to be accomplished within a year, and hope is held out of publication through the Society. The pamphlet contains the usual Dante bibliography, for the year 1888, by William C. Lane; and a prize essay, by George R. Carpenter, on "The Episode of the Donna Pietosa," an attempted harmony of the 'Vita Nuova' and the 'Convito.'

The editors of the new *American Amateur Photographer* (Brunswick, Me.), Messrs. F. C. Beach and W. H. Burbank, are quite right in offering their "provincial" publication for comparison with any of their "contemporaries published under seemingly more favorable conditions." In fact, the two numbers before us (July, August) are distinguished by tastefulness and accuracy of typography and by excellence of make-up. There is nothing amateurish about either. The book reviews, and the criticism of commercial supplies after practical tests, are capital features. The reports of societies, special correspondence, contributed papers, etc., are full and valuable. Illustrations by process and photogravure are given. It marks the growth of amateur photography that a number of hotels keep "dark-rooms" for the use of tourist amateurs, some "with running water." The journal makes a very promising beginning. For convenience' sake, a New York office has been opened at 22 Burling Slip.

The *English Historical Review* for July is an interesting number. The first article is by Judge William O'Connor Morris, "The War of 1870-1: After Sedan"—the sequel to a previous article. Its aim appears to be to do justice to "the extraordinary powers of which Chanzy gave proof, the remarkable skill shown by Faidherbe, and the energy, misplaced as it often was, of Gambetta"—qualities too much ignored by the German writers. "Recent Criticisms upon the Life of Savonarola," by E. Armstrong, expresses the opinion that, with all the high merit of Villari's work, "the life of the friar as a figure in secular history has yet to be written." Prof. Cyril Ransome, author of one of the best of the short histories of England, gives a lucid account of the battle of Towton, with a plan, the fruit of studies upon the spot. "The Lords of Chios," the subject of an article by J. Theodore Bent, were a company of Genoese merchants who, having advanced a *mahone*, or special loan, to the republic, ruled the island under the authority of Genoa from 1346 to 1566. The closing article is by Rev. W. A. B. Coolidge, "The Republic of Gersau." Travellers in Switzerland will perhaps remember the village, at the foot of the Rigi, which was once an independent republic —"probably the smallest state which has ever had such extensive rights." During the existence of the Swiss Confederacy, before its overthrow in 1798, Gersau was "an acknowledged and independent ally of the four districts which formed the inner circle and nucleus of the Everlasting League"; and at present, although annexed to the canton of Schwyz, it still preserves its communal autonomy. The "Notes and Documents" and "Reviews of Books" contain, as usual, much very valuable matter.

The place of honor in the Royal Geographical Society's Proceedings, as well as in the *Scottish Geographical Magazine*, for August is given to Dr. Nansen's spirited account of his adventurous journey across Greenland. The former also publishes the interesting discussion which took place after the reading of the paper before the society by such Arctic veterans as Admirals McClintock and Ommanney, Sir Allen Young, and Dr. Rae. This is followed by a paper, with a map, showing the distribution of the mountain tribes in northern Morocco, by W. B. Harris. This gentleman, having established friendly relations with the Sherif of Wazan, has been able to travel with safety in regions where Europeans have rarely, if ever, penetrated. The mountaineers are better off than the lowland Moors, as they are practically independent of the Sultan. There is also an account of a successful attempt to establish communication between the rich mining regions of northern Bolivia and Peru with the Amazons, other than by the Madeira, by a Brazilian named Labre. The route taken appears to have been through a region almost wholly unexplored. At one point they came upon a tribe whose "men wear their hair long, plaited like the Chinese," and have on "girdles and petticoats." In another tribe "some of the women are light-colored and have traces of beauty: none are allowed to enter a temple or to take part in the religious or fetish ceremonies, and it is forbidden to them to know the names or the forms of the idols. The idols are not of human form, but are geometrical figures made of wood and polished." The second article in the *Scottish Geographical Magazine* is by Dr. John Murray, of the *Challenger*, on the marine deposits in the Indian and adjacent oceans, accompanied by a colored map showing their distribution. This magazine also gives an excellent portrait of Dr. Nansen, who is a young man of twenty-seven, with a strongly-marked face.

Parts 23-28 of the 'Geschichte der Deutschen Kunst' (Berlin: G. Grote; New York: Westermann) conclude the division Industrial Art, and contain instalments of Painting and of Etching and Wood-Engraving. There are many illustrations of German painting, and a special chapter is devoted to the Age of Dürer and Holbein, wherein we remark two interesting pen-drawings by Dürer, one as a boy of fourteen and the other a youth of twenty-three. Dr. von Lützow's discourse on engraving is accompanied by some very fine copies of early etchings. Some of the colored plates of these instalments are noticeably good, as those which illustrate color-work in glass.

—The September *Atlantic* is most notable for its articles upon public questions. The reasons against the assumption of exclusive American control over the Isthmus Canal are stated with great vigor by Stuart F. Weld, in a paper which reviews the diplomatic negotiations with the Colombian Government and the action of the Senate in regard to the matter, and brings this episode of recent Republican history into comparison with the political ideal involved in the Clayton-Bulwer treaty. The author holds that exclusive American control is a new and retrogressive doctrine, which would result in a wrongful aggression upon the sovereignty of Colombia, inconsistent with the practice of nations in this half-century, and which would, furthermore, afford less stable security for ourselves than would be gained by the neutralization of the waterway. His argument is both moral and utilitarian. A second important paper is that by E. G. Scott upon the history and present power of the French Canadians in Quebec and the adjoining provinces. He shows the high probability of the overthrow of the English in Canada by the natural increase of the French, exhibits the extraordinary pertinacity and conservatism of the French character, ideas, and institutions, and foresees the question of annexation taking on the simple phase of the English race in Canada trying merely to preserve its integrity and national characteristics by joining with us. The duty of the State in preserving the Sabbath as a day of rest is very temperately and instructively discussed by C. W. Clark from an entirely secular point of view, and the paper carries great weight in consequence. We notice, also, an admirable sketch of James Wilson of Pennsylvania and his part in founding the Government.

—*Harper's* gives its readers a large selection from the works of American artists at the Paris Exhibition in twenty engravings, most of which are full-page and highly finished. The text is by Theodore Child, and abounds in the vocabulary of the impressionist and in eulogy of an unrestrained kind. There is certainly great reason to congratulate ourselves that the work of American-born artists in Paris and London shows so great an improvement over what it was twenty years ago; and if Mr. Child had said only half as much in praise of it as he has done, our satisfaction need not have been less. The more important part of his article is devoted to Whistler, whom he appreciates like a disciple and loads with every phrase of æsthetic refinement, and to Dannat, of one of whose portraits he says: "There is no old master of the days when men knew how to paint who can show a finer or a more complete piece of work than this girl's head." Other American artists are received by the critic in the same royal way. One turns from a text of this nature, surfeited and cloyed, to the engravings, which needed no such comment, and which of themselves do more than pages of such writing to instruct the reader in the growth of American art abroad in the last decade. Mr. Child also contributes an illustrated paper upon Moscow in his usual manner. M. Edmond de Pressensé gives a clear bird's-eye view of the condition of the religious sects of France, in which the influence of the decree of Papal infallibility on the old Gallican spirit in the Church of France is instructively brought out,

and the decay of prelates of the old liberal type is lamented. "London Mock Parliaments" and "Kentucky Fairs" are topics that lighten the number with a semi-humorous interest, and there is the usual fiction.

—The *Andover Review* for August may be called a very good number indeed. It contains three articles each of which is distinctly above the average of magazine work. Prof. Shaler, in his "Chance or Design," unfolds as well as may be in comparatively brief space the newer views of teleology; and, while he admits that no argument that he knows of is absolutely destructive of the hypothesis of Chance, gives in his adhesion to the theory of Design in nature. It need not be said that this is not a revived Paleyism, though in it science seems to be giving back to religious thought some of her spoils from dogmatism. Another article which is both valuable and significant is that of Prof. George T. Ladd, on "The Psychology of the Modern Novel." Neither romanticists nor naturalists are likely to read it with entire approval, but it expresses almost exactly, we should think, the feeling of that newest school in literature whose pronunciamiento was the Academy address of M. Melchior de Vogüé. Perhaps the most scholarly article in the number is Mr. L. N. Dembitz's "The Ten Lost Tribes," in which he attacks with much learning and puts to rout the popular notion that the ten tribes have continued to exist. This notion, he says, is still commonly received. We should not have thought so; but the fact matters little, since Mr. Dembitz's article has an historical and critical value quite apart from its polemics. The rest of the number consists of the usual notices of books and events, and of a "Study" of Buddhism, the author of which does not appear to go very far wrong—partly, perhaps, because he does not go very far.

— It is rather remarkable that, although the last ten years have been the most notable in the advanced study of American ornithology, no one book, among the many that have appeared during that time, has in any way supplanted Audubon, with all his mistakes and inaccuracies, as the popular historian of the American bird. Mr. H. Nehrling now attempts this task in a subscription work which shall combine the most modern research with affectionate and sympathetic treatment of bird-life ('North American Birds.' In twelve parts. Part I. Milwaukee: George Brumder). Mr. Nehrling is an independent student and observer; his work is based on first-hand knowledge, and not, like that of the many plagiarists of Audubon and Wilson, on the labor and (often mistaken) conclusions of others. Consequently, he is at once an authority speaking *ex cathedra*, and a man who knows and loves birds personally. Mr. Nehrling writes good English, and, apart from a certain amount of rather maudlin verse which he has an apparent fondness for, his work is pleasant reading. The typography of the book is excellent—clear of print and wide of margin. The illustrations, prepared by Prof. Ridgway and others, are accurate, and, in many cases, of birds whose portraits have hitherto been unknown to ornithological galleries — which atones for their immense inferiority as works of art to the yet unrivalled masterpieces of the pioneers.

—M. André Theuriet is one of the later recruits of the large and increasing army of writers of memoirs and recollections. His "Souvenirs" have been flowing in a gentle and not unpleasing stream through the *Revue Bleue* during the last six months. They possess a certain quiet charm, a quality of pleasantness which carries the reader easily through them, and yet, if the reader be also a reviewer, he finds not very much to say about them when he has come to the end. The instalment, however, which appeared on July 6, is in some regards noteworthy. It contains Theuriet's memories and impressions of the Coup d'État of the 2d of December, 1851. Theuriet was at that time a clerk in the civil service, attached to the Registrar's Office of Bar-le-Duc. He had joined not more than a couple of months before, and was just becoming used to the daily routine of his work, when he saw Louis Napoleon's placard one morning announcing his dissolution of the Assembly, and his appeal to a plébiscite. Beside it was posted a circular from the prefect, threatening in tone, serving as a sort of commentary. These fell upon the ardent youth like a blow, and he hurried to the office to free his mind to his colleagues. They all agreed with him; the Registrar himself, an old man and an old soldier, marching up and down the office and denouncing the usurper. Just at this moment the figure of a man in uniform passed the window and a heavy step was heard in the corridor. Order was instantly restored, and work hurriedly taken up again. Theuriet felt sure in his own mind that it was he who was to be arrested and carried off on account of a little secret society that he and his friend Laguerre had founded, and he suffered a good deal of anguish before the purpose of the gendarme's visit—which was to buy a stamp—was disclosed. Apparently there was no further or more active resistance in that public office. And so it was, unhappily, all over France.

—To the humiliations and degradation that followed the Coup d'État M. Theuriet attributes the pessimism of the generation that is now passing out of active life. After recounting some of these he says:

"It is good to recall these things at a moment when certain people are threatening us with beginning over again the adventure of the Second of December. It is good to tell the present generation into what a lamentable state of soul the régime inaugurated in 1851 cast the generation which then came to its twentieth year. The young pessimists of to-day maintain that their sadness and discouragement have their roots in the unhappy disasters of 1871. But after that fatal war the losses were in some sort only material. We were well beaten, and honor was safe. There was nothing comparable to the moral disarray that followed the cruel date of the Second of December."

The youth of France that had been brought up under the influence of the liberal ideas of the reign of Louis Philippe, and were still effervescent with the feelings of 1848, "were roused in full dream by a brutal awakening. Their idols of the evening before lay in the mud, the parliamentary tribune was destroyed, the newspapers suppressed or enslaved." A silence of thought and a general flattening out of character followed, and no activity was left save among business men and speculators. "Young people, utterly cast down, asked themselves whether they had not been dupes of a dream, whether the true path, after all, did not lie in the search for money or pleasure. Then some let themselves slide gently down the slope, and thought no more of anything but amusement; while others, few in number, disabused, steeped in disgust to the lips, plunged in silence into a hateful despair." M. Theuriet closes his chapter by a reference to the just mentioned address of M. de Vogüé at the Academy, which was so much in the tone of the young man rejoicing in his youth, having only hopes for the future, and no fears, and ends with an aspiration: "My earnest wish for these new generations that are 'en travail d'une poésie et d'une foi' is, that they may not meet on the threshold of their youth a defeat like that of 1851; that they may not undergo any moral break-up such as that of which their elders still feel in themselves the bitterness and the rancor."

— The death of Félix Pyat, which occurred at St. Gratien on August 3, recalls a part of his life which many had forgotten. The man whom most people have known only as a fiery red republican was, in his earlier days, a journalist and dramatic writer, one of whose plays, at least, still holds the stage, and a romanticist and dandy of the times of the *gilet rouge*. He was the friend and companion of Alfred de Musset and his set, the ardent disciple of Hugo, the not less ardent and quarrelsome enemy of Jules Janin. But 1848 put an end to his literary work, and since then he has been a sort of stormy petrel in French politics, always busiest in a gale of wind. Among his political triumphs he could boast that he had been condemned in fines amounting to 212,000 francs; to twenty-nine years and five months in prison; to five years of surveillance and ten of interdiction; once he was sentenced to transportation, and once—after the Commune, a crowning mercy—to death. The general amnesty brought him back from exile to France again, where he lived quietly till last spring, when he was elected to the Chamber. His time, however, was past, and, though he has sometimes spoken, his influence has not been great. He was in his eightieth year.

—Mr. Stillman writes us from Italy under date of August 6:

"'N. J. B.,' in the *Nation*, No. 1252, replies to my assertion as to Greek temples and their location, but is singularly unfortunate in his choice of the material on which to contest my conclusion. The great temple of early Akragas was the treasury, and was the upper point of the citadel. It still remains, and is enclosed in the church which succeeded it in the worship of the place. There are the remains of two temples in the citadel. The question of the relation of the 'Rupe Atenea' to the ancient citadel is still an open one, and I do not believe there ever was an important temple on the former. The line of temples which now remain, from the so-called Temple of Juno to that of Jupiter, were placed along the wall, which was made by cutting down the rock on which the lower part of the city was built so as to leave a perpendicular face; and along this ran a road connecting the whole, back of which is the line of temples. Seen from the sea, they would have been more or less lost against the town rising in its splendid amphitheatre behind them, while they would have served as depots of arms and ammunition to the defenders of the walls. The Olympieum at Syracuse was the key of the strategical position from that side, and was fortified as such, while the temple of Diana was lost in the midst of the town in a position of no conspicuousness. The temple of Segesta was certainly in the enclosure of the walls, and was defended from the rear by an impassable ravine, while the soil of the hill on which it stands is full of débris of constructions. 'N. J. B.' must be singularly unobservant of the character of ancient sites if he expects to see house-walls on them, or find evidence of their having ever existed, without excavation. If he will read his Thucydides carefully in reference to this point, he will see how important were the temples in military operations; and it is matter of common knowledge that they were the city treasuries. But it was not so much as a part of the city defences that the temples were so placed as because, as sanctuaries and treasuries, they must have a defensible site. I have, unlike 'N. J. B.,' visited all the Greek temples with, I believe, one exception; and of all that I know, those of Agrigentum instanced by him are those which least support his view. He considers the wall in question of no strength, but it was not so considered by the Carthaginians or Romans, who preferred the attack from the southwest, where the hill was much higher, and the city was always taken from that side. The ancient scarp

has been eaten away by the sea air ages ago, but traces of the road are still to be seen, and there is indication that it was originally surmounted by a wall which was, in fact, indispensable for the protection of the defenders from the hostile missiles. The 'Castor and Pollux' was in a depression, and would not have been seen from the sea, which, by the way, is several miles off."

HERNDON'S LINCOLN.

Herndon's Lincoln: The True Story of a Great Life. By William H. Herndon, for twenty years his friend and law-partner, and Jesse William Weik, A.M. 3 vols., pp. 638, 12mo. Belford, Clarke & Co.

MR. HERNDON'S personal recollections of Lincoln will doubtless remain the most authentic and trustworthy source of information concerning the great man in the period prior to his election to the Presidency. His real subject is the growth and development of Lincoln's powers and character. From many other sources we may get fuller material for the part of Lincoln's career which properly belongs to history; but Herndon's narrative gives, as nothing else is likely to give, the material from which we may form a true picture of the man from infancy to maturity. The sincerity and honesty of the biographer appear on every page. It is impossible to doubt that he has meant to tell us candidly what he knows about Lincoln. His long and intimate association with his hero gave him unequalled opportunity of knowing and estimating the man. He does not look at Lincoln's career in the light of the great events and great responsibilities of his Presidency, but interprets these in view of the known character and the familiar qualities he had watched in their growth for twenty years.

The reader of these memoirs must not look for an adequate estimate of Lincoln's place in history, or for an authoritative judgment of his conduct of national affairs during the great civil war. He must expect, rather, to be helped to understand how Abraham Lincoln became the man he was, and what manner of man he was when the election of 1860 threw upon him a burden of responsibility hardly paralleled in history. The book is not such a one as a trained writer would have produced. It is more valuable because it is not. Facts are not selected with art to compose a predetermined picture; but we feel that an honest chronicler, who thoroughly knew his subject, has collected nearly everything authentic which can be known of Lincoln before his great elevation. We have much that is trivial, some things which are in bad taste, but we are made to feel, after all, that we are looking upon Lincoln's life as he actually lived it. It depends upon ourselves whether he is belittled by the revelation of things ordinarily kept behind a curtain. We have the opportunity to know him as the valet would know him, and if we are of the valet's make-up, the proverbial result may happen, and he will be no hero to us. The judicious reader will know how to put things in their proper perspective, and will form a truer picture of the man by the help of many little things which go to indicate character, though grotesque or even repulsive when taken by themselves.

Herndon's book will probably settle beyond controversy some things in Lincoln's mental structure and character. It becomes plain that his strength of intellect was a native sagacity, an inborn clearness of logical perception, that made fallacies transparent to him after a proper amount of reflection. He was neither quick nor ready in the common meaning of the words; but he was under a necessity of nature to form perfectly clear ideas of the subjects of his thoughts. He pondered them, therefore, till his notions of them became distinctly defined and they were put in harmony with the rest of his knowledge and his convictions. It does not appear that he was original in discovery or inventive in thought; but he was systematic, and made thoroughly his own what he learned or accepted.

While he was an industrious and laborious thinker, he was indolent as a reader. Indeed, this is only one phase of a physical indolence which was evidently a marked characteristic of the man. He assimilated his mental food slowly, and found his thinking powers so fully occupied and interested in studying out his own conclusions from few and simple data, that he did very little reading at any time in his life. In his profession as a lawyer as well as in general literature, he was a man of few books. It would not be far wrong to say he was a man of no books at all; for the practical affairs of life and his daily intercourse with men seem to have furnished him nearly all the material upon which his logic and his wit were employed. He was a Socratic philosopher, in his way, applying a rugged power of reasoning and a humorous faculty of illustration to all sorts of questions in debate as they arose along the street, in the tavern, anywhere and everywhere. Men and their affairs were his books, and he was incessantly studying and criticising them. He practised upon every audience his power of interesting and convincing. It mattered little whether it was before a knot of listeners in a country store, or the more formal gathering of plain people to listen to a stump speech. To carry his argument home by a logic which seemed like the inevitable conclusion from familiar truths in homely garb, and to tell his stories so that the "nub" should be irresistible, had been as constant a practical study with him as with Socrates himself, and the skill acquired was, in its way, no less.

Behind these intellectual traits was a moral nature which was essentially sound. A love for fair play, a dislike for meanness, an honesty so true that its opposite did not seem to tempt him, were characteristics which marked his whole practical life. His sympathy would be quick at the sight of suffering and his indignation at the sight of wrong. His sobriquet of "Honest Abe Lincoln" was fairly won by a simple, every-day adherence to sound principles of morals, and by constant reference of points in debate to these principles. When tempted into sophisms before a jury or elsewhere, the form of his argument would be an appeal from the technical or legal right, to the practical rectitude of plain men. By dint of constant study how to control the minds of unlettered people, he had acquired a habit of clear statement and simple but cogent reasoning which has been rarely matched. He had cured himself of a turgid rhetoric with which he began in imitation of the Orator Phillips vein, till he had formed a sharp antithetic style of great and simple force, the traces in it of his earlier method being noticeable as quaintnesses only, or but rarely as blemishes.

He was ambitious to be a politician from his early manhood. His wish to influence and to lead his neighbors naturally took that form, and it may fairly be said to have become the passion of his life. The triumphs of the political campaign, of the convention, of the legislative body, were to him the most desirable of earthly enjoyments. He accepted the tenets of his party, and became, to the full extent of his sphere of activity, its advocate and servant. His general honesty of character led him to play the game fairly, according to the accepted standard of fairness; but he does not seem to have carried any high ideal of morality into his politics. Prior to 1856 the old issues between Whigs and Democrats were in the main those of power and place. Lincoln was not averse to management and to "trading," and was familiar with the methods by which politicians in his day gained their ends. He sought the official places to which he was elected by open candidacy, and did not spare effort to secure favorable delegations in nominating conventions.

When the organization of the Republican party made resistance to the extension of slavery the central issue in politics, Lincoln was quick to see the strong moral grounds on which the debate would turn. He welcomed a contest in which he instinctively felt that his own qualities and methods might give him eminence, and in which his real love of justice and of right were in accord with the side which he espoused. He had not been an Abolitionist, nor even a Free-Soiler. He had done nothing to hasten the dissolution of the Whig party; but when it came, he showed that he was glad that political activity was now consistent with the advocacy of great measures in favor of human liberty and progress.

In accordance with his mental habit, he reduced the questions at issue to the simplest terms, and referred the solution of them to fundamental principles by logic so close and advocacy so persuasive, that his hearers seemed to themselves to be listening only to the voice of conscience. Yet his political prudence limited him to positions which the party had already taken, or which his sagacious judgment foresaw to be the next necessary step in party action. He did not compromise his party's success or his personal chances of election by outrunning the reform sentiment of his political associates. In his great debate with Douglas, when both were aspirants to the Senate of the United States, he proved himself an ideal party candidate by the power with which he urged the moral arguments in favor of his cause without adopting anything so advanced that his opponent could successfully make him out an extremist. He showed a marvellous shrewdness in formulating embarrassing dilemmas for Douglas, and an equal skill in turning those prepared for himself. His art of popular expression of doctrinal truths enabled him to reach the popular heart as a "plain, blunt man" who disclaimed being an "orator, as Brutus is." His highest powers, his greatest ambitions, and the country's good were all in happiest accord. His availability as a candidate was recognized by the whole country, and when the Chicago Convention assembled in 1860, the "hour and the man" had come. Yet Lincoln did not omit any means that seemed feasible to secure delegations and to have able managers on the floor of the Convention. Herndon's unsparing honesty has preserved the record of things which cannot be defended, and the recognized value to a candidate of organized enthusiasm in the galleries dates from that time.

While such things cannot be ignored in any historical estimate of Lincoln, they must not blind us to the sincerity of his belief in the principles which he advocated. They only show his human limitations. He was not the self-sacrificing reformer, but he was a public man with a large mixture of love for liberty and right. His sense of right was not always nice when the question was one of personal and party success, though he heartily loved and incomparably presented the right which his party had adopted as its platform. Thus representing the average sentiment of the peo-

ple, his faults, his oddities, and even his sins against good taste and refinement made him a figure at once distinguished and familiar, a leader who did not seem too far above the masses, a statesman and a jovial companion.

Such is the man presented truthfully in Herndon's pages. The narrative extends over the years of Lincoln's Presidency as well, but the narrator becomes only a compiler when Lincoln passed from his intimate personal association. The value of the book is found in its presentation of the Lincoln of the time before the war. It is another task to show how such a man met the responsibilities of the national Government in a great crisis; how his powers were developed and the good that was in him became great; how his weaknesses still existed, limiting his powers and interfering with the best coöperation with others; how political methods and a politician's habits still clung to him, and forbade him to reach the highest walks of statesmanship; but how, also, his sagacious comprehension of the advance of public opinion, and his faithful interpretation of it in action, made him, in that opinion, the embodiment of the cause he served and its martyr when he died for it.

Dragon's Teeth. From the Portuguese of Eca de Queiros. By Mary J. Serrano. Boston: Ticknor & Co.

An Alien from the Commonwealth. By Robert Timsol. Boston: Cupples & Hurd.

It was said that Mr. McCarthy and Mrs. Campbell-Praed wrote their former joint story, 'The Right Honorable,' to prove that the literary feat of partnership in fiction-writing is possible. While we are not prepared to say, after reading their second venture, "Would to heaven it were impossible," we think they have yet to demonstrate their ability to produce a novel of the first class. Nor would we insinuate that the Member of Parliament invented the heroine, while his woman-collaborator wrote the scenes in the House of Commons. We will say, however, that there is disappointingly little about the Ladies' Gallery. Some of the Orient, some of the Occident, much of the "situation," might have been omitted, and a more valuable book made, by freer use of the material specially at Mr. McCarthy's command. The hero is assuredly born of woman, by reason of his exaggerated masculinity and of his impossible angelhood. Compounded of a Berserker and a Daniel Deronda (purged of dross), he does not even crush the serpent with his heel. He cherishes and reforms it and converts it into a useful draught amimal. Being impossibly good, he becomes impossibly foolish.

We wonder if the presentation of such artificial virtue may not be less harmless than is often supposed. Ideals, or what are beyond nature, are wholesome, and lend wings to the mind of a generous reader. Artificialities, or what are opposed to nature, may have a very different effect in giving distorted views as to the potency and permanency of the weak and the transient. Such a presentment as Richard Ransom may well foster in any young woman's mind the false hope of finding in man a being akin to Southey's Glendoveer. Binbian Jo, the sub-hero, and cause of all the trouble, is a purely factitious character, although his rôle of sinner turned saint is old enough to have evolved by sheer persistence a real class of such. Berenice, the wife of one of these men, the lover of the other—by the exercise of more than mortal heroism, shall we say? or of impartiality?—is represented as true to both positions. The situations of all three are as false and displeasing as anything meant to be upright and crystalline can be. The secondary personages are cheap and tiresome, though elaborately presented. Each has his trick meant to do duty for characterization. It is hardly right, perhaps, to find fault with philanthropy and socialism as constituents in a London novel, since they are as well established there as the taper fingers belonging to every well-constructed heroine; but their presence in this book has a labored effect, coming with so much else that is manufactured. It seems particularly striking that both Berenice's lovers should have made a specialty of reform—yet providential, since the disconsolate widow is thus enabled to continue the business, if not under the old firm name. It remains to say, and must in fairness be said, that the style of the book is clear and fluent; that, given the difficult situations, the leading characters talk exceedingly well and even naturally, and that the story is absorbing.

In 'Esther Denison,' except that the problem is bigamous instead of biandrous, the situations are equally embarrassing, and, we maintain, too strained for profitable contemplation. In other respects this latest novel of Adeline Sergeant's seems to us a book betokening unusual insight and observation. The characters are, to be sure, unequally drawn, some of them betraying perfunctoriness on the author's part, some, on the other hand, showing an unreasonable partiality. Upon the central figure, however, has been lavished a wealth of interest and ability, resulting in character-history rare in the modern novel. The incidents in Esther Denison's life are now trivial, now exaggerated; but the chronicle of the interior processes by which the timid, self-conscious child of the Methodist preacher becomes a woman capable of the grandest sacrifice, is an unusually faithful and intimate one, and, more than anything else in it, makes the book well worth reading. There are also other points of interest: the character of Mrs. La Touche, the worldling of the plot, is well done, and so are those of various of the Methodist Church dignitaries among whom Esther's youth is passed. Small wonder that the child who was always expecting miracles to happen, and who, when she was naughty, hid in the raspberry bushes, thinking of Adam and Eve, and expecting a voice to come from the sky, saying, "Esther, where art thou?" should pass through more than one spiritual reaction. With her mother, one feels reassured when she follows up an emotional outbreak with, "Oh mother, I wish the Circuit hadn't given us such a cross cat!"

The popularity of Maxwell Grey's former novel, 'The Silence of Dean Maitland,' will doubtless rouse the interest of summer reading circles in his second one, 'The Reproach of Annesley.' The faults of the earlier book will be found in this—its endlessness, and its intrusive landscape drawing; while the dignity of the moral struggle which constituted the power there, is hardly equalled here. On the other hand, the rustic element which was the one thing in 'The Silence of Dean Maitland' of which it was possible to wish there had been more, here makes one of the best features of the story. Maxwell Grey's peasants, while far below Hardy's (which are second only to Shakspere's), are perhaps next best to those, and are better than anything else in his novels except the landscape, and of that the quality is almost forgotten in the irritating quantity. The interest of the plot is to a certain degree absorbing while one is reading, yet it hardly stands the highest test of merit, that of being strong in retrospect. The attention is held and the curiosity excited, yet there is a want of inevitableness, of march in the incidents, which keeps the reader always on the outside, critically watching the straining of gnats and the swallowing of camels. The title has a goodly sound, and it is not till the book is closed that its awkwardness is appreciated.

'The Sphinx in Aubrey Parish' is a Priest and Pagan story, of some ideas, but more crudity, as is apt to be the case when a sermon goes masquerading as a novel. The agnosticism, waywardness, and unseemly flirtations of Edward Vaughn are offset, and as it were chaperoned, by the High Churchism, polemics, and lover's constancy of Frederic Ardenne. Frederic is of English birth, of military and ecclesiastic affiliations. He is a person of such importance that his father's epitaph is reproduced in capital letters for the reader, from the nave of Chester Cathedral. Frederic loves Helen de Vere—in manners, her namesake Clara's equal; in morals, her superior. When Frederic is with her, he calls her "my child," and she calls him "sir." Whenever they part, he says, "Pax tecum," and she replies, "Et cum spiritu tuo." Helen's uncle and guardian, the tyrant of the tale, has no repose of manner whatever; yet the author, seeming to fear that the reader may mistake the creation for a gentleman, is constantly implying the contrary with fine irony, sharpening, as Felix Holt's mother did, strong powers of argument upon the file of an imagined contradiction. Edward the Agnostic appears to have been a redoubtable lady-killer. Abraham Cowley's famous calendar is hardly longer than the list of Edward's conquests, some darkly hinted at, others enacted before us in thrilling tableaux, such as a rejected lady bowed down over a red-flecked granite sarcophagus, containing the ashes of her mummied Egyptian sister; another drowning herself for his sweet sake, while a third, rescued by him from an icy grave, marries him in triumph. In the parish where these stirring events occur, live some very slightly amusing country folk. The best parts of the book, however, and the most free from the author's turgidity and painful consciousness of his reader, are the theological discussions, into which, spite of their sacerdotalism, something like earnestness enters. The author dedicates the book "to my memories." For his own sake, let us hope that for portions of it he may have drawn also upon his imagination.

Prof. Boyesen's 'Vagabond Tales' consist in part of idyls written with no little charm of style, and no little observation of nature, men, and manners. The greater number of the tales, however, are accounts of young Norwegians who migrate to America in pursuit of fortune or of liberty, and who come to conspicuous grief. In passing we may say that there is a certain analogy between this and Prof. Boyesen's own fate when he cruises into the waters of what is technically known as American humor. As keen note-taker, satirist, and poet he is everywhere at home, and bestows his cheer with free hand; but his hu-

mor is sectional and flourishes best on Norwegian soil. The realism he preaches so strenuously, we must agree with his friend Turgeneff in finding less becoming to him than his charming poetic vein. He has emphatically the story-teller's art. Whatever his theme, the recital flags not, and only stops to pick a flower, or sing a song, or shoot an arrow into some human foible. In a word, his stories are highly readable. His heroes are tender and true. His heroines are fresh and fair; they are pretty and dress well; they may or must visit the poor, milk cows, sail a boat, and catch salmon; but woe to them if they read 'Theophrastus Such' or discuss "nightmarish literary topics."

'Dragon's Teeth' is aptly described in the translator's preface as a "graphic picture of Lisbon life." There is a double fitness in this characterization, since the story of sin and sorrow which is here set down with coarse, unrelenting minuteness leaves one impressed rather with the description of life and manners in modern Lisbon than with the profoundness of the tragedy. One involuntarily compares the novel with 'Anna Karénina,' where the leading motive is the same, but where the book is closed with a supreme sense of the moral aspect of the story, in spite of there being, as in the Portuguese version, so much to divert the mind of the American reader into a survey of foreign ways of living and thinking. In 'Dragon's Teeth' the march of fate is no less terrible, nor is there anything more impressive in either book than the grim flippancy of the final chapter; but the dignity as well as the scope of the Russian novel are wanting.

The crudity of civilization in the Portuguese capital and the low tone of middle-class society make a dreary and repulsive picture, in truth. There is but one character in the book for whom anything like admiration can be felt—Sebastian, the friend of the betrayed husband. The rest are admirably drawn types, but types of ignorance, weakness, or depravity. A pompous counsellor is excellently presented; so, too, is the real heroine of the story, the serving woman Juliana, a malignant and revengeful fiend, described with an unsparing pen that might have been dipped in Balzac's inkstand. The empire of this woman over the mistress whose secret she holds, forms the subject of the cleverest and most original scenes in the book. That the whole is the work of an artist in realism is easily conceded. It is another question whether as disagreeable realism as this is the best friend of truth, and not rather of that pessimism which, according to Jules Lemaitre, is "perhaps a fact, but which is none the less in the wrong, and which besides becomes disagreeable and common."

In 'An Alien from the Commonwealth' we have the experiences of a journalist, idealist, and aristocrat, who, having been born on the eastern shore of Maryland, has fallen heir to a strong race feeling and a fine sensibility, which make it impossible for him to be comfortable in dining with persons richer than himself. His friends bolster and prod him from one occupation to another, through long chapters of wearisome exhorting and debate, till at last his estranged Maryland estates return to him, and he is enabled to hold up his head and invite all his wealthy friends to dinner. A chapter on salmon fishing, without which no romance now is complete, and some farcical sketches of Western prairie characters, are thrown in as incidental divertisement. That there is a vast amount of noble sentiment in the book, is not to be denied, but high thinking is not enough to make a successful romance. A few such trifles as style and form deserve attention. Long harangues about Marcus Aurelius, the duties of high-souled lawyers, the tariff, and the rules of rhetoric, make hard the way of the novel-reader.

LEAF'S ILIAD.

The Iliad. Edited, with English Notes and Introduction, by Walter Leaf, Litt.D., late Fellow of Trinity College, Cambridge. Vol. I, Books I–XII. Vol. II, Books XIII–XXIV. Macmillan & Co.

Soon after the publication of the first volume of Mr. Leaf's edition of the 'Iliad,' we commended it in a Note to the attention of classical scholars. A brief account of the origin and general character of the work was given, but the more detailed consideration which it deserved was postponed until its completion by the publication of a second volume. Both volumes are now before us. In outward appearance they are in all respects companion volumes to Mr. Archer-Hind's beautiful edition of the 'Timæus' of Plato published by the same house.

Mr. Leaf is an Englishman, educated at one of the great English universities; his elaborate introductions and notes are in the English language, but his scholarship is thoroughly German. Nearly, perhaps quite, every proposition of Mr. Leaf from which we may dissent in the course of our review, is supported by some Greek specialist in Germany; but we may affirm that our views are also, in great part, supported by German scholars. His work is, so far as we know, the most elaborate and detailed attempt yet made by any English scholar to establish the theory, an especially German theory, that the 'Iliad,' in the form in which we have it, is the product of many authors.

The doctrine that the 'Iliad' is a single poem, composed by a single poet named Homer, comes down to us from the earliest period of authentic Greek history, and was never disputed until within one hundred years. It is true that Eustathius—quoted by Mr. Leaf in his introduction to the tenth book—writing in the twelfth century A. D., tells us: "The ancients say that this rhapsody was placed by Homer by itself, and was not inserted among the parts of the 'Iliad,' but was put into the poem by Peisistratus." Still, it was not disputed that Homer was its author. Extending back, perhaps, to a time before the first Olympiad, this tradition remained undisputed for more than twenty-five hundred years. In 1795 it was attacked by Wolf, and what has been the result? In all human probability, by 1895 the number of those who believe in it will be so small that first-class scholars will not consider it worth while to waste time in endeavoring to convince them of its untenableness.

Mr. Leaf, while showing us comparatively little that had not been pointed out by some one before, is yet a very independent scholar. He has gone through the 'Iliad,' microscope in hand, and, though most frequently looking where he has been told to look and seeing what he has been told he would see, yet he seems never to have stated the most minute and unimportant detail until he had verified it by his own observation. After making all due allowance for the assistance Mr. Leaf has been afforded by the labors of German scholars, his own work in verifying, comparing, analyzing, and combining the facts which they have gathered and the opinions they have expressed, is something wonderful. The opinions of the Greeks themselves in regard to the text of the 'Iliad,' so far as those opinions can now be ascertained, from Antimachus, the "diaskeuast," or, as we should now say, "editor," of an edition of the poem in the fifth century before the Christian era, down to the huge variorum commentary of Eustathius, are given with great minuteness. We think most classical scholars who have not made the textual criticism of the 'Iliad' a special study, will be surprised at the number of "various readings" which were in existence even as early as the second century before the Christian era.

Mr. Leaf's theory of the origin and growth of the 'Iliad' is as follows: The subject of the poem, in the form in which it has come down to us, is announced in the invocation to the Muse contained in the first seven lines. It is the "wrath of Achilles" and its direful consequences to the Greeks. Accordingly, Mr. Leaf starts with the assumption that there was originally an epic poem, which he calls a 'Menis Achilleos,' or simply 'The Menis.' This, "the first and greatest of epic poems," was "the work of 'Homer' himself." The 'Menis' contains "a little more than 3,400 lines." The whole 'Iliad,' as exhibited in Mr. Leaf's edition, contains 15,688 lines; so the 'Menis' is a little more than one-fifth of the whole. The remaining four-fifths is composed of subsequent expansions and interpolations. The expansions he subdivides into earlier and later; the interpolations, into longer and shorter. In the introduction to his second volume he gives a table in which the "whole Iliad" is arranged under these various heads. The table, however, leaves about 200 lines unaccounted for. These, we suppose, are the lines to which he refers in the remark, "Brief interpolations which do not affect the character of the passage as a whole are passed over in silence." In constructing his table Mr. Leaf has not succeeded in carrying out his own plan with strict accuracy. Thus, he says, "An asterisk indicates that a few of the lines contained in the passage to which it is affixed are an addition, and will therefore be found in a later column." But lines 1–404 of book xxii are assigned to the original 'Menis,' and they have no asterisk affixed, although lines 381–90 appear in the column which contains the latest interpolations. These small errors are of no consequence.

We have endeavored to analyze the table correctly, so far as it is possible, and to present Mr. Leaf's results as he intended. They are as follows: (1.) The original 'Menis,' containing 3,423 lines. It is made up of 26 passages taken from 12 different books, viz., i, ii, xi, xiii, and xv to xxii. The other 12 books are not represented at all in the original poem. The passages thus taken out and put together to form "the first and greatest of epic poems" vary in length from 2 lines to 610, but a majority of them are less than 100 lines in length. There is one passage of 2 lines, one of 3, and one of 4. We proceed with Mr. Leaf's classification. (2.) The earlier expansions. These contain 4,256 lines. Mr. Leaf says "these may be roughly divided into three strata," as he has done in his table, not "roughly," but exactly. His reasons for the subdivisions are too many, and often too vague and unsatisfactory, to permit of notice here, neither is it necessary for our purposes. In his first volume he expresses the opinion that many of these early expansions may be by the same author as the 'Menis,' viz., "Homer himself." But in his second volume he says: "I now feel much more doubt as to this." (3.) The later expansions. These again are subdivided in a manner which we need not stop to explain. They amount to 3,931 lines. In 2,559 of these lines Mr. Leaf thinks "the approximation in style to the 'Odyssey' is very marked," and "the question as to whether these are all by the same hand" is not pre-

judged. (4.) The greater interpolations. These embrace 2,951 lines. (5.) The shorter interpolations, "by which the transitions from one piece to another of different age were managed." They sum up 906 lines. The total of all these divisions is 15,467 lines, leaving 221 lines "passed over in silence," with which the reader can do as he pleases. Their number is too small and, according to Mr. Leaf, they are of too little importance, to require further attention.

In order to criticise this theory of the origin and development of the 'Iliad' in a perfectly satisfactory manner, it would be necessary for the reviewer to oppose to it what he believed to be the true theory and to compare the two. To this course there are two insurmountable objections. In the first place, the subject is altogether too large to be treated in the space at our disposal, and in the second place we do not think the time has yet come for the formation of a detailed theory. There are too many unsolved problems in what may be called the natural history of epic poetry, and their solution depends upon researches of an entirely different character from those of Mr. Leaf. The "Homeric Question" will never be satisfactorily answered by Greek specialists. The study of the 'Iliad' itself, even though it were more microscopic than Mr. Leaf's, if that be possible, will not unravel the mystery of its origin. The materials gathered by the Greek specialists must be illumined by the light which may be thrown upon them by what we know or may hope to know of the origin and development of the 'Mahābhārata' of the Hindus, the 'Nibelungen Lied' of the Germans, the 'Chanson de Roland' of the French, the 'Kalevala' of the Finns, and a score of other epics. Above all, the light which may be derived from investigations into the nature and characteristics of folk-poetry in general, must be brought to bear upon the Greek epics. In fact, the Homeric Question is not so much a question of philology as of psychology—not the psychology of the individual, but a subsequent and higher branch of the science, the psychology of races and nations. We think that if Mr. Leaf will read the essay of Jacob Grimm, "Über das finnische Epos," in Hoefer's *Zeitschrift für die Wissenschaft der Sprache* (b. i, s. 13 *seq.*) and the following three articles in the *Zeitschrift für Völkerpsychologie*, viz., Paul Heyse, "Ueber Italiänische Volkspoesie" (b. i, s. 181); Adolf Tobler, "Ueber das volksthümliche Epos der Franzosen" (b. iv, s. 139), and especially H. Steinthal, "Das Epos" (b. v, s. i), he will begin to suspect that the Homeric Question is not to be answered by ingenious experiments as to how a coherent and consistent short poem can be dug out of a long one by picking out a passage here and a passage there, piecing them together, and then dumping four-fifths of the poem into bins labelled "Expansions" and "Interpolations."

And here it is not out of place to remark that in the four-fifths of the 'Iliad' which, Mr. Leaf decides, formed no part of the original poem, are included much the larger part of those passages which the unanimous judgment of all the generations of more than twenty centuries has classed among the most beautiful, not only of this poem, but of all poetry. The scene at the tower near the Scæan gate, where Priam, his aged nobles, and Helen herself had assembled to witness the duel between her husband and her paramour; the parting of Hector and Andromache, where the relations and emotions of husband and wife, of father, mother, and child, even the humble offices of the nurse, are described with matchless beauty; the ransoming of the body of the slain Hector, where the stern Achilles relents though he does not repent, and the poet with a sublime pathos so marvellously blends in the aged Priam the sorrow of the father with the dignity of the king—all these scenes and many others, in which the poetic imagination soars in its loftiest flights, are among the later "accretions" of the original 'Menis.' We do not mention these facts as tending to disprove the manifold origin of the 'Iliad.' We are perfectly convinced that it is the work of many poets. What we do not believe is, that far back in prehistoric antiquity there arose a transcendent genius who created the "first and greatest of epic poems," and that in and around and upon this other poets fitted other poems, until the mass had swelled to five times its original size, and that this has been handed down through the ages for the torment of scholars and the delight of mankind.

One of the arguments which Mr. Leaf most frequently uses to justify the rejection of any portion of the 'Iliad' which he wishes to get rid of is that it *can* be struck out without destroying the connection of the narrative. There is one general objection to this method of procedure which would perhaps be sufficient to excuse us from entering into details. It can be applied with equal facility to poems which we know, as matter of history, are the product of a single author, for example, 'Paradise Lost.'

We will endeavor to illustrate by one or two examples what seem to us inconsistencies in Mr. Leaf's method. In the first book of the 'Iliad,' Achilles, prompted by the goddess Hera, calls an assembly of the Grecian warriors to consider what is to be done in regard to the pestilence which is ravaging the Grecian host. In the assembly a fierce quarrel arises between him and Agamemnon. Achilles, maddened by the threats of Agamemnon, is about to attack him, and is drawing his sword from the scabbard when Hera, who, from the heights of Olympus, is watching the assembly, sends the goddess Athena to restrain Achilles. Athena does this, and, after preventing the quarrel from coming to blows, she returns to her place on Olympus "among the other divinities." The assembly breaks up, and Agamemnon carries out his threats by sending two men to the tent (hut) of Achilles to carry off the maiden Briseis, who had been awarded to Achilles by the Greeks as his share of the plunder of a captured city. Achilles, following the directions of Athena, makes no resistance; but he goes along the beach alone and calls upon his mother, the goddess Thetis, who comes to him "from the depths of the sea." He begs her to go to Olympus and intercede with Zeus in his behalf. Thetis promises to do so, but tells him that Zeus and all the other divinities went "yesterday," that is, before any of the above events happened, to a feast among the Ethiopians. They will return on the twelfth day from their departure, and then she will go to Olympus to intercede with Zeus.

Here at one point the poet represents Hera, the wife, Athena, the daughter, and "the other divinities" as being on Olympus, and at another point as having gone from Olympus the day before. The contradiction is complete, and in consequence Lachmann rejected the last 264 lines (more than one-third) of the book as composed of additions by poets later than the author of the first 347 lines. But Mr. Leaf wants to save the greater part of the 264 lines for his 'Menis,' and how does he explain the inconsistency? He says:

"The consistency with which the epic poet is concerned is the consistency of the picture of the moment; the consistency of details in different scenes—so far as they do not touch the story itself as given by the legend on which he works—is of minor importance."

Now this is very sensible, but let us see how he treats another case where his 'Menis' theory leads in another direction. In the latter part of the fourth book of the 'Iliad' a great battle begins between the Greeks and the Trojans, and continues through the fifth, sixth, and the larger part of the seventh book. The narrative is interrupted at various points by the description of side scenes which, however, all have an intimate connection with the main action. In this battle, in which several of the divinities take part, Diomedes is the prominent figure. In the early part of the fifth book, Athena tells Diomedes that she has taken away from his sight the cloud which prevented him from distinguishing a divinity from a mortal. She warns him not to attack a divinity unless the goddess Aphrodite mixes in the fight; he may wound her with the spear. Afterwards, when the Greeks are hard pressed by the Trojans assisted by the god Ares, Athena gives Diomedes permission to attack Ares or any other of the gods, and with her assistance Diomedes wounds Ares, who flees to Olympus. The other divinities also leave the battle-field, and both Greeks and Trojans are left to fight it out alone. In the sixth book the battle still continues, but it is now an entirely human battle. The divinities have gone to Olympus, and for the present they have no part or lot in the contest. Diomedes, after having slain two more Trojan warriors, encounters Glaucus, one of the Trojan allies. They are about to rush upon each other, when Diomedes pauses, and cries out, "Who of mortal men are you? I never saw you before in battle, and now you seem to be bravest of all." He doubts whether Glaucus is a man or a divinity descended from heaven. If a divinity, he will not fight with him; if a man, he is ready.

Mr. Leaf considers this "one of the most glaring inconsistencies in the Homeric poems." In the fifth book, "Diomedes has power given him to know god from man," while here the poet represents him as doubting whether Glaucus is divine or human. Mr. Leaf says: "Such an anomaly cannot be accounted for unless by the assumption that the two episodes of the wounding of the gods are a later addition." On the contrary, we do not think there is any anomaly or inconsistency at all. The poet does not say, and does not in any way imply, that Athena gave this power to Diomedes as a permanent endowment. In the fifth book, she and other divinities were engaged in the fight. She gave him the power of distinguishing between gods and men, and still further assisted him by taking the place of his charioteer and driving his horses in his encounter with Ares. But, after the wounding of Ares, all the divinities, she among them, left the field. There was no longer any occasion for the use of the supernatural gift, or any reason for supposing that Diomedes continued to possess it when there were no longer any divinities taking part in the battle.

The eighth book is one of those which Mr. Leaf rejects from his 'Menis.' One of his principal arguments to prove its later origin is "the fact that so large a number of lines is found in other passages as to give to considerable portions all the appearance of centos made up from the other books previously existing." And yet Mr. Leaf says in different places in his introduction to the book: "The plan of this book is simple." . . . "The narrative is clear and consistent with itself." . . . "It has undoubtedly great spirit and movement." The problem presented to the reader, and

which we leave him to solve, is this: Which of two alternatives is the more probable, that this, that, and the other poet borrowed from a simple, clear, consistent, spirited poem, full of movement, or, that this brilliant poem was a piece of patch-work, made up in great part of lines taken from this, that, and the other poet? The truth is, these repetitions of themselves prove nothing. They are characteristic of the folk-poetry of all nations. In the absence of other evidence, no one can tell which is original and which is copy, and, when other evidence is attainable, they add nothing to its force.

We cannot help regarding Mr. Leaf's theory of the origin and development of the 'Iliad' as simply a survival of the old tradition to which English scholars have clung with such tenacity.

Transactions of the National Association for the Advancement of Art and Its Application to Industry. Liverpool Meeting, 1888. London: 22 Albemarle Street, Piccadilly. Pp. 407.

THIS is a handsome octavo volume, containing a series of papers read at the first annual congress of a newly formed British national society. The meeting was of course preliminary in character; the addresses delivered were naturally prefatory, and explanatory of the objects and aspirations of the leaders. The next meeting is announced for Edinburgh, and for December of this year. A brief note, headed "Objects of the Association," but not signed by any officer or committee, speaks of the necessity of retaining the commercial superiority of England. "In the face of hostile tariffs," it says, "and narrowing margins of profit all over the world, it is by excellence of make and superiority of artistic design that the products of manufacture of any country will henceforward attain prestige and command markets." The business of the Association is declared to be the attainment of such excellence in manufactured articles. The constantly increasing demand for pictures is commented on, and is said to have produced an over-supply of painters. The final assumption is that artists, such as sculptors and painters, should be assisted in finding work in the decoration of buildings, and that architects should be encouraged to find employment for painters and sculptors in connection with their building operations.

The society appears to be divided into six sections. Section A, painting, was represented at the Congress by an address from the President of the section, Mr. Alma-Tadema, and by a number of papers. Of these we can only mention Mr. John Brett's on "The Relation of the Pictorial to the Decorative Arts," in which the artist points out the necessity of putting decoration into the hands of highly trained artists, of lofty aims, as the only way of escape from the lifelessness of mechanism; and Mr. Francis Bate's paper on "The Tendencies of Modern Art," in which the Royal Academy is taken up and sharply catechised as to the use it has made of its great opportunities. Section B has to do with sculpture, and this section furnishes to the first Congress an address by the President of the section, Mr. Alfred Gilbert, and five papers, dealing respectively with architectural carving; with advanced sculpture, as the decoration of buildings and public places; with design in art metal work; with the modern revival of interest in sculpture; and with the influence which sculpture has had and may have again upon paintings. The slight and perfunctory character of these papers is oddly characteristic of sculptureless modern England. The other sections are: C, Architecture, with Prof. Aitchison for President; D, Applied Art, with Mr. Walter Crane for President; E, Art History and Museums, under the Presidency of Mr. Sidney Colvin, who, however, was absent, and was represented by the Honorary Secretary, Mr. Lionel Cust; and finally, Section F, National and Municipal Encouragement of Art.

Besides the meetings of the several sections there were "combined meetings" of two or three sections, at which papers on the joint action or the mutual interdependence of these arts were considered. This seems an excellent plan, which may result in much good in future years. Some outside appeals to the public were carried on in connection with this first congress, and the whole was introduced by an elaborate "Presidential Address" by the President of the whole Association, Sir Frederick Leighton, and a sermon by Archdeacon Farrar.

We have gone into these details to show how elaborate is the structure and how extensive the reach of this new organization. The actual result of the first year's congress, so far as the book represents it, is slight. But few of the papers are very original, very forcible, or very interesting. That they do not offer a very coherent scheme for future work is not to be wondered at; that will be the business of future congresses. But there is one notable thing about these essays, the evidence contained in them that some thinkers at least have discovered the special need of modern times, namely, a frank abandonment of decoration to men who are artists in the highest sense of that term, and the cessation of all attempts to rival barbaric and therefore unconscious designers. The complete failure of every attempt among modern European peoples to decorate as savages and semi-savages and nomad tribes and ignorant, low-caste Hindus decorate, ought to have demonstrated this truth; and the failure of the sincere and energetic attempt to revive mediæval methods in architecture ought to have helped in the demonstration. Now, at last, after years of vain effort, it begins to be seen that the lost art of making designs for ornament can be restored only by artists of the highest intellectual force, both original and acquired.

Labour and Life of the People. Volume I. East London. Edited by Charles Booth. London: Williams & Norgate; New York: G. P. Putnam's Sons. 1889.

THE merits of this book are so great that it is no easy task to set them forth in moderate terms. In the first place, it is a thoroughly scientific piece of statistical investigation. The facts are collected and verified with such care, and in such numbers, as to furnish a sufficient basis for induction, and the deductions are in the main indisputable. Then the work is characterized throughout by a sobriety of judgment and a conscientiousness of statement that dispose the reader to accept the opinions of the authors in the few instances where they offer suggestions of their own. The descriptive portions are really interesting social studies, and are evidently the work of observers well acquainted with their subjects. And, finally, the result of the whole investigation is to show the groundlessness of most social alarms, the falsity of many of the representations of sentimentalists, and the folly of the schemes of professional agitators. In short, we have here a solid mass of facts and conclusions which must be reckoned with by every one who hereafter threatens the dissolution or proposes the reconstruction of the present social order, if he would have serious audience.

But, apart from being a stumbling-block in the way of weak-minded benevolence, the work has the very positive merit of pointing out clearly to the charitable the lines upon which they must labor, and of furnishing them good reasons for hoping that their labor may be made productive. We have no doubt that many good people are suffering from a permanent depression of spirits on account of what they suppose to be the gloom over the future of society. They are not only saddened by the thought of the deepening misery of vast numbers of their fellow-creatures, but they believe that—

> "Nearer comes a hungry people, as a lion, creeping nigher,
> Glares at one that nods and winks before a slowly dying fire."

Not many persons are capable of the philosophy of Hezekiah and Louis XV. Certainly not a few wise men are troubled for what the future may have in store for their children, and we might almost say that educated women as a class cannot take their pleasures with a clear conscience, from a vague sense of responsibility for the unfairness with which pleasures are apportioned. As a cure for all such feeling, so far as it is morbid, this book may be heartily recommended. We know from it that matters are not growing worse, but better; we learn that they are not so bad as they were said to be; and we see that it is within human power to improve them very greatly.

So far as the danger of anarchy is concerned, Mr. Booth, after reviewing the evidence, declares: "The hordes of barbarians of whom we have heard, who, issuing from their slums, will one day overwhelm modern civilization, do not exist. There are barbarians, but they are a handful, a small and decreasing percentage; a disgrace but not a danger." As to the distribution of happiness in general, we think the testimony of those who have had experience among the poor will coincide with Mr. Booth's. Among his humble friends he found not uncommonly "wholesome, pleasant family life, very simple food, very regular habits, healthy bodies and healthy minds, affectionate relations of husbands and wives, mothers and sons, of elders with children, of friend with friend." As what he has to say concerning children particularly conveys a double lesson, we quote his opinion at some length:

"The children in class E, and still more in class D, have when young less chance of surviving than those of the rich; but I certainly think their lives are happier, free from the paraphernalia of servants, nurses, and governesses, always provided they have decent parents. They are more likely to suffer from spoiling than from harshness, for they are made much of, being commonly the pride of their mother, who will sacrifice much to see them prettily dressed, and the delight of their father's heart. This makes the home and the happiness of the parents; but it is not this, it is the constant occupation, which makes the children's lives so happy. They have their regular school hours, and when at home, as soon as they are old enough, there is 'mother' to help, and they have numbers of little friends. In class E they have for playground the back yard, in class D the even greater delights of the street. With really bad parents the story would be different, but men and women may be very bad, and yet love their children and make them happy. . . . I perhaps build too much on my slight experience, but I see nothing improbable in the general view that the simple, natural lives of working-class people tend to their own and their children's happiness more than the artificial, complicated existence of the rich."

The method of classification adopted is as follows: East London contains about 900,000 inhabitants, distributed according to their in-

comes roughly into eight grades: Class A, containing the lowest order of semi-criminals, loafers, and occasional workers; B, the "very poor," dependent upon casual earnings; C and D, the "poor," with intermittent and small regular earnings; E, those above the line of poverty, with regular standard earnings; F, G, and H, higher-class labor and lower and upper middle class. The divisions are, of course, to some extent arbitrary, but when a family has a sufficiently regular though bare income, such as 18s. to 21s. per week for a moderate number of members, it is called "poor," and "very poor" if it falls much below this standard. The census was taken in a very ingenious and thorough manner, but the details are too complicated for explanation here, nor can we even glance at the very skilful characterizations of the different classes. Their numbers are, for A, about 11,000, or one-fortieth of the population; B, 11.22 per cent.; C, 8.33; D, 14.46; E, 42.28; F, 13.60; G, 3.86; H, 5.02.

We are limited to a bare presentation of figures, but they are accompanied in the report with an enormous amount of information concerning East London as a whole, and its several parishes, the varieties of occupation, modes of life, details of expenditure, and habits and customs of the inhabitants. There are chapters upon the clubs and burial societies of the workingmen, the relations of the classes, "sweating," the Jewish community, the influx of population, and there is a series of chapters upon the different trades. Not the least valuable part of the book consists of the comments that are made incidentally by these experienced workers among the poor upon the causes of poverty, the change of feeling in regard to indiscriminate alms-giving, the effect of machinery in making employment constant, the migratory habits of the poor, the cessation of outdoor relief, and similar matters. We are embarrassed by the riches of information which is poured out before us, and can only urge all those who are interested in any form of charity to possess themselves of this book.

As to the "limited socialism" which Mr. Booth suggests as a possible remedy for the worst of the evils which he describes, it is free from the objectionable features of Socialism, and would be opposed, we think, only by professed Socialists. It is nothing more than the extension of the poor-law, or rather its application, upon scientific principles, to the miserable class of the "very poor." Of these it is generally true that they are out of work because they will not work and cannot work. They are "a selection of the unfit." The members of this class are constantly ground out of existence, but their place is taken by those who drop from other classes. If they could be brought under State regulation, they might be improved, and their children might be better started in life. Those who could not maintain the standard of living fixed by authority might be planted in "industrial groups," fed, taught, and worked by Government officers, and sent to the workhouse if they proved incorrigible.

As Mr. Booth declares that he rejects "any form of compulsion save the gradual pressure of a rising standard of life," it is not very clear how the subjects of this treatment are to be induced to undergo it; but as he is evidently a practical man, we suppose that he sees how the difficulty may be surmounted. His views are certainly moderate enough: "To open a little the portals of the poor-law or its administration, making within its courts a working guild under suitable discipline; to check charitable gifts, except to those who from age or infirmity are unfit for any work; to insist upon sanitation and to suppress overcrowding; to await and watch the results, ready to push forward as occasion served—this is all that could be done."

We have given a very inadequate account of a remarkable book. Its appearance will, we are confident, mark an era in the conception and the treatment of the evil of poverty in London, and it should cause a general concentration of charitable effort upon the lines that it indicates. The city of New York offers a field for similar investigation, less varied in interest, perhaps, but equally important; and it may be hoped that the work will be presently undertaken. The harvest is ripe, the laborers are plentiful, and all that is required is guidance of the intelligent character displayed by the editor of this volume.

The Military Annals of Lancaster, Mass., 1740-1865. By Henry S. Nourse, A.M. Lancaster. 1889.

AFTER five years' labor, Mr. Nourse has produced a companion volume to his 'Early Records of Lancaster,' and again demonstrated his eminent fitness to write a town history. As his aim was, in part, to procure and preserve lists of soldiers in the several wars under review, the 'Annals' are not adapted for continuous reading, like the 'Records.' Nevertheless, they are interspersed with passages and chapters which light up the past in a very entertaining manner. Such are the special "statistical and social annals" of the Revolutionary period, the account of the town's Loyalists, and the pleasant picture of Lancaster's golden age following the disastrous and unpopular war of 1812. In an appendix, too, the author returns to John Prescott, founder of the settlement, and head of a famous family. Of necessity, Mr. Nourse gives a general outline of the colonial wars in which New England was implicated, and colors his statistics with military reports and letters which breathe the spirit of the time. Such, for example, is Capt. Abijah Willard's narration of the way in which he executed sealed orders requiring him, in the Acadian expedition, "to burn all the houses that I found on the Road to the Bay of Verts." "This afternoon," he says, "I ordered the whole to be Drawed up in a Bodey and bid the french men march of, and sott fire to their Buildings and Left the women and children to Tack Care of themselues with grate Lamentation which I must Confess itt seemed to be sumthing shoking."

In the war of independence "almost every male citizen [of Lancaster] must have served at some period, either personally or by substitute"; and "fully one-fourth of the whole male population above the age of sixteen were kept constantly in the army during the most trying years of the conflict." Nevertheless, the town had its Loyalists in the most respectable classes, including the Capt. Willard who so reluctantly depopulated Acadia. He was riding on horseback to visit his farm in Beverly on the fateful morning of April 19,1775, when "he was turned from his course by the swarming out of minute-men at the summons of the couriers bringing the alarm from Lexington, and we find him next with the British in Boston. He never saw Lancaster again." From the heights of Boston, two months later, he stood by Gen. Gage as they watched the engagement at Bunker Hill, and recognized with the glass his brother-in-law, Col. William Prescott, in command of the rebels. He ultimately sought refuge in Nova Scotia, and there died in exile.

In 1765 there were more male than female children in the fighting town of Lancaster, though the proportion of sexes was reversed with the adult population. Families then averaged more than six individuals; in 1885, but four and a half—from which we must not infer too much as to longevity or rate of increase. Farming has of course fallen off; the town no longer has a large surplus of food for sale. In the distress caused by the depreciation of paper money during the Revolution, the town made vain efforts to fix prices of commodities, down to "Flip made of New England rum, Half a pint of rum in a mugg, 9d. a mugg," and of services, down to "Doctor's fees. Vomitt, 1s," etc. On June 28, 1779, the town "Voted that the price of the comodityes of the farmer and any other article do Not Rise any hier than at this time." Canute's tide was not less obedient. The town was somewhat remarkable for skilful craftsmen, and a Quaker cordwainer named Holder made ladies' shoes that were in great demand. Customers who went abroad still sent him their orders, and their French acquaintances also became his patrons, in preference to the handiwork of Paris. It is sad to think that this benighted shoemaker never knew what it was to need protection.

The genealogical value of this volume, as of its predecessor, is very considerable, and few can estimate the pains which have gone to the making of it. Mr. Nourse is humorous as an antiquarian should be, and his work throughout gives evidence of a cultivated and humane spirit. The book is faultlessly printed, and is adorned with several portraits.

The Beginnings of New England; or, The Puritan Theocracy in its Relation to Civil and Religious Liberty. By John Fiske. Boston: Houghton, Mifflin & Co. 1889. 16mo, pp. 296.

A BORROWED and adapted title leads the observant reader to anticipate little originality in the volume thus heralded. In Mr. Fiske's case we have the further caution that this was a course of lectures, delivered at various places, and now put in print. Mr. Fiske is by no means devoid of learning—in fact, he has studied his subject carefully; but he has sought a popular method of stating results. As opposed to the reverent researches of Palfrey, Ellis, and Dexter, he poses as the "candid friend" of our Puritan ancestor, and with the proverbial result. He is not as thorough as Peter Oliver, or even Brooks Adams, but his aim is the same—to present the defects of our ancestors as a correction to past excessive praise.

The first chapter is wholly unconnected with New England by any reasonable link, except in the sense that all the past has affected the present. The remaining chapters contain a sketch of New England history, showing all the evidences of a practised pen, and very easy and pleasant reading it is. Mr. Fiske starts off with the proposition that "among the significant events which prophesied the final triumph of the English over the Roman idea, perhaps the most significant—the one which marks most incisively the dawning of a new era—was the migration of English Puritans across the Atlantic to repeat in a new environment and on a far grander scale the work which their forefathers had wrought in Britain." This reappears in various forms at various points, but is never wrought out, and is curiously suggestive of the methods of the lecturer. That our nation to-day is different from what it was a century ago, is a truism. But as every man has a right to give his own explanation of the chief cause, and as the influential causes are so

numerous, we must deny that Mr. Fiske can settle the question authoritatively. We may say that the Louisiana purchase was the real turning-point; another man may prefer to attribute everything to steam and electricity. Certainly most people will give little force to the fact that the Massachusetts Great and General Court was a more truly representative body than the British Parliament, or consider it the main cause of the present condition of the world.

Mr. Fiske, for a specialist, has been very unfortunate in his few personal touches. Genealogy is evidently a mystery to him. His few attempts to give precision to his pictures are unluckily all wrong. On p. 103 he says of Gov. Thomas Dudley, that "he represented the elder branch of that Norman family, to the younger branch of which belonged the unfortunate husband of Lady Jane Grey and the unscrupulous husband of Amy Robsart." On p. 258 he calls Gov. Joseph Dudley a kinsman of the Earl of Leicester. The fact is that we know the name of the father of Thomas Dudley, but nothing else of his pedigree; and in genealogy an unproved claim is absolutely worthless. There were many Dudleys in England not allied to the ennobled line. On p. 193, Mr. Fiske says "it is interesting to observe that the Royalist commander who surrendered to him was Sir Henry Washington, own cousin to the grandfather of George Washington." It is very much more "interesting to observe" that Mr. Fiske is ignorant of Col. Chester's complete refutation of that particular Washington pedigree. On p. 114 he speaks of the "pugnacious Welshman, Roger Williams." For this ascription of nationality he can plead tradition, and the fact that he wrote before the publication of the latest researches of Mr. Waters, which, as our readers already know, render it almost certain that Williams was a London boy.

Its defects notwithstanding, we trust Mr. Fiske's book will have a wide circulation. It is attractive, its facts mainly correct, and its intense Americanism will do no harm as a foundation for a young student, or even as the entire supply for a casual reader.

Gleanings from Japan. By W. G. Dickson. Edinburgh: William Blackwood & Sons.

Dr. Dickson's book possesses unusual interest, because it is the record of a well-equipped traveller who has seen both old and new Japan. The opportunity is not often given to behold twice in its differing phases a people that has as completely changed its outward forms of life as the snake that has cast its skin, or the deer that has shed its horns. It is very evident, despite his many cheery pages, that our author still looks upon the process as but half complete, and that to him the new skin is yet very thin, and the new horns still "in the velvet." He does not seem able to conceal either his admiration for the ancient forms of political and social life, or his scepticism as to the results of the growth whose final outcome is not yet apparent.

In 1862, after several years of study of life in China, Dr. Dickson came to Japan for a stay of some months. Not content with the usual observations of foreigners, he began a systematic study of the Government handbooks and such political literature as was then available. The fruits of his study were seen in his sketch of 'Japan,' which in size and mechanical outfit is a twin volume to the present handsome book. Only one who has used the work on the soil of Japan can fully appreciate its many merits, despite the uncouth spelling of native names, which so mars the pages as to make it repulsive to many would-be readers. It is much to be regretted that Dr. Dickson should, in the volume now before us, perpetuate such a barbarous transliteration. To do this when dictionaries, grammars, and a whole library of transactions of learned societies and writings of popular authors conform to a standard natural system, is to invite neglect and dust for a highly meritorious work to which there are only too few companions.

Though Dr. Dickson helped, as he tells us, to "surreptitiously huddle out of the country" the four pioneers of the army of young students who have since invaded America and Europe, yet he does not seem to comprehend clearly the true causes of the recent revolutions, or rather reformations. He left the country long before the epochal year of 1868, and, despite his study of the Government blue-books, the Jesuit fathers and foreign authors, and even with the help of Japanese friends who could speak imperfect English, his view of the recent political history of Japan is rather that of the hong and club at Yokohama, than of the student who has lived long inside the country among natives. The four young gentlemen whom he rowed off to the English steamer, and for whose sake he hoodwinked the official spies, are now the highest officers of the Government, and, as the impartial student, we think, will declare, statesmen of no mean order. Yet, notwithstanding what the author has himself seen within a quarter of a century, we find him in one of several passages of similar import saying, on page 86, after a tribute to the constructive genius of Iyéyasu, "It requires a man to build a house, but rats may bring a house down, and the spirit of the age is with the rats." Now, without going into a controversy with the author as to his opinions thus frequently asserted, are we unfair in suggesting that this thought is rather that of his "fountain of information," Otomo Sadaijiro, a most loving admirer of old feudal Japan, than of an impartial student who knows the history of ancient as well as of modern Japan?

The unusual merit of Dr. Dickson's volume makes his opinions and judgments worth noticing. Although he travelled much, in his journeys made in 1883-'84, and saw many things of interest in unbeaten tracks, yet it is not as a transcript of a tourist's ephemeral jottings that the book will be read. It belongs rather to the few solid and enduring works of value on Japan that deserve a permanent place in the library. It is a rich sheaf of the best grain not found in other men's bundles. Familiar with the local history and the best native guide-books, having withal the assistance of a scholarly Japanese gentleman, and himself a man of literary and scientific culture, Dr. Dickson's second volume, like his first, will outweigh in permanent worth about a dozen of the average books made by people who have peeped at the country. The volume contains an index which ends on the four hundredth page, and is illustrated with outline drawings from photographs.

The Story of Phœnicia. By George Rawlinson, M.A. [The Story of the Nations.] G. P. Putnam's Sons.

A strip of land, 200 miles long and with an average width of less than thirty miles, was the advance guard of Asia for the civilization of Europe—such is, in brief, the "story" of Phœnicia. Shut off by mountain ranges from hostile armies, situated on the sea, with inexhaustible supplies of timber fit for ships and oars near by, supplied by the sea with the materials for the richest dye ever known, it would have been strange indeed had this nation not become the chief manufacturing, and more especially trading, community of the ancient world. The Phœnicians were a Semitic tribe who migrated to a strip of the Syrian seaboard. Judged by their literary remains, they would be esteemed the least of their family, yet their contributions to civilization can hardly be overestimated. They built the ships of Egypt, Palestine, Persia, and Greece in turn. As Gen. Cesnola's discoveries showed, they indelibly left their impress upon Cyprus. They sent a colony to England, and in all probability worked the tin mines of Cornwall. They built the temple of Solomon and circumnavigated Africa. It was from them that Carthage sprang, at once the enemy and instructor of Rome. They were the one people of antiquity with whom foreign intercourse and war were not synonyms. They were the discoverers of glass, their metal-workers were the best of the time, their engravings on ivory have been found in every capital of western Asia. Their alphabetic writing is the parent of every alphabetic system now in use, our own included.

Though a small country, or rather aggregation of cities (for they never formed a real kingdom, but only a confederacy of independent cities, which, as a rule, but not always, acted together in case of an emergency), they retained their independence longer than any of the smaller western Asiatic countries. Phœnicia became tributary to Assyria in the ninth century B. C., recovered her independence two hundred years later, submitted after a long siege to Nebuchadnezzar, became part of the Persian Empire when Cyrus conquered Babylonia, assisted Xerxes in his disastrous war with Greece, baffled for a time but finally succumbed to Alexander, became a Roman province—and died.

Of this fascinating story Canon Rawlinson has made the most possible. Unfortunately, Phœnician remains are scanty. A few sepulchral inscriptions, and some fragmentary remains in Greek literature, with scattered notices in the Bible, furnish the chief materials for the history of Phœnicia. There is plenty of room for play of the imagination, but in the main our author's pictures are sober. The great find at Sidon in 1887 lends the hope that Phœnicia, like Assyria and Egypt, may yet yield her secrets to us.

One can hardly avoid the suspicion that the book was written up to an established size, since it might well have been shorter. The necessity for the use of Hebrew types in a popular book of this sort is not apparent, but, the determination having been reached, the proof-reading should have been done with a little more care (*e. g.*, pp. 32 and 36); and the query as to the identity of *Baal* and *Bel* should have been omitted. Any one familiar with the discoveries in Semitic phonetics during the last ten or fifteen years could have given Canon Rawlinson a satisfactory explanation of the apparent difference in the number of "root letters," as he calls them.

Le Livre du Centenaire du Journal des Débats, 1789-1889. Paris: E. Plon, Nourrit & Cie.; New York: F. W. Christern.

Founded within a few months of each other, the *Times* of London and the *Journal des Débats* of Paris have recently celebrated each its centenary; and it is, perhaps, characteristic of the finer literary and artistic taste of the French journal that it chose to commemorate the hundredth anniversary of its first number by the production of one of the most sumptuous volumes issued of late years from the French

press. A broad and noble page, abundant facsimiles, frequent etched portraits, with many other illustrations, manifest a desire to produce a work worthy of the occasion. It is hardly disputable that the *Times* is the typical English newspaper, the journal which most of its rivals seek to copy and to equal. In like manner, although without the same indisputable preeminence, the *Journal des Débats* is a typical French paper. A brief comparison of the *Times* with the *Débats* brings out the essential difference between the newspapers of London and of Paris, revealing distinctly that the prime object of the former is to get the news, while the aim of the latter is to have the best opinions. It is the difference between mere information and skilled criticism—criticism of politics, of law, of economy, of science, of literature, and of art. Most of the writers for the *Times*, in so far as they are known, have been Englishmen of education, capable of expressing an every-day judgment in a dignified manner; it is, perhaps, too much to say that they were mostly mediocrities, but, of a certainty, they were commonplace. Great men have often written *to* the *Times*, but they have very rarely written *for* it. The *Débats*, on the other hand, has a list of constant contributors which includes very many of the very foremost names in the history of French literature and politics during the past hundred years. A note in this 'Livre du Centenaire' tells us that of the 700 known contributors to the *Débats* during its first century, 48 have been members of the French Academy, and 132 (or nearly a fifth) have been members of one class or another of the Institute. Among the best known writers for the *Débats* during its hundred years of life are Chateaubriand, Benjamin Constant, Saint-Marc Girardin, Berlioz, Jules Janin, Prévost-Paradol, Laboulaye, Michel Chevalier, Littré, Renan, Taine, John Lemoinne, Paul Bourget, J. J. Weiss, and Jules Lemaitre. Among those who contributed to this 'Livre du Centenaire,' as a testimony of their regard for the *Débats*, are the Duc d'Aumale, Alexandre Dumas *fils*, E. Legouvé, Victor Cherbuliez, Ludovic Halévy, and Paul Leroy-Beaulieu.

Although the *Débats* is no longer emphatically the first of French newspapers, its position is still most honorable; and as we look down the pages of the 'Livre du Centenaire,' we can see how strong its influence has been on its fellows and on the development of the Parisian press generally. The serial story, for example, which now occupies the ground-floor of every French daily, was early received by the *Débats*, which published Soulié's 'Mémoires du Diable,' Sue's 'Mystères de Paris,' and Dumas's 'Comte de Monte-Cristo.' It was the *Débats* which first reported in full the proceedings of the Academy and of the other learned bodies, and which first began to pay regular attention to science. After the war of 1870 the *Débats* was the paper which led the way in the attention it paid to foreign literatures. M. de Vogüé, for example, keeps it informed about Russian literature, and in the list of contributors we find the names of Mr. T. B. Aldrich and of Mr. Marion Crawford, because French translations of novels of theirs have appeared in the *Débats* as serials. In this attention to science and to foreign literatures the *Temps* has vied with the *Débats*, and in the value of its correspondence, artistic criticism, and editorial writing generally, the *Temps* now seems to us to surpass the *Débats*. Indeed, all things considered, we hold the *Temps* to be distinctly the best of Parisian newspapers, and to represent what is best in the French character. It is the *Figaro* which has won a wider popularity by not representing what is best in the French character, by pandering to the taste for the sensational in ways not unlike those of the London *Telegraph* and the New York *World*.

Readers of Mr. Brownell's acute essays on 'French Traits,' desiring to see ample manifestations of the intelligence which the American critic finds at the bottom of French character, cannot do better than to read, for example, M. Renan's essay on M. de Sacy's management of the *Débats* during the Second Empire, and M. Jules Simon's account of the *Débats* during the Restoration; or, perhaps better yet, M. Halévy's description of the old house in which the *Débats* has found shelter for a century, or M. Jules Lemaitre's analysis of his chief predecessors as the dramatic critic of the paper, Geoffroy, Janin, Weiss. It is in the criticism of the arts, literary, pictorial, and dramatic, that we must admit the enormous superiority of the *Journal des Débats* over the London *Times*. Upon all artistic subjects the judgments of the *Times* are likely to be dull and dignified, commonplace and conventional, empty at bottom, but eminently respectable in form. An American visitor in London, after reading a rather platitudinous article on the Royal Academy in the London *Times*, ventured to suggest to an American artist who had lived long in France, but who exhibited frequently in England, that the art critic of the *Times* didn't apparently know much about art. "Know anything about art?" the artist returned cynically; "why, he knows less than my coachman—and I don't keep one!" This is a hard saying, and it probably goes beyond strict justice; but no one could ever say a thing of this sort about a specialist who wrote for the *Débats*.

Father Damien; A Journey from Cashmere to his Home in Hawaii. By Edward Clifford. Macmillan & Co. 1889.

THIS little book hardly adds to our knowledge of Father Damien. Most people who read the newspapers know already that the name of the heroic priest and servant of God and man was Joseph Damien de Veuster; that he was a Belgian by birth, who went young into missionary work in the Pacific, and from the year 1873 to his death last spring devoted himself to the care of the leper settlement at Molokai. Most people, too, have enough general acquaintance with his life of labor and sacrifice to admire and love him. If they desire to add to their information some slight notion of how the good father looked, and, besides, some scanty knowledge of the disease of which he was the victim, they may read Mr. Clifford's little volume. But the only really valuable thing that they will find, we think, is the statement that, saint and lover of men as F. Damien was, he did not escape calumny. "Scorpio still follows Libra in the zodiac," even in the South Seas.

But, if we see not much of F. Damien in these pages, we see a good deal of Mr. Clifford, who is not always happy in his autobiographic essays. There is a portrait at the beginning of the volume. It represents a young, resolute face with an expression on it of pity mixed with pain.

Our Journey to the Hebrides. By Joseph Pennell and Elizabeth Robins Pennell. Harper & Bros. 1889.

IT appears that Mr. and Mrs. Pennell did not wish to take a tramp in Scotland, but editorial necessities overcame their distaste; they started thus with clouded countenances, and went upon their way, only to be more and more sure that Scottish travelling was not to their liking. The prettily bound volume into which their magazine articles have been bound is consequently rather dreary reading. It is one long complaint, devoted to the woes of the weather, of walking with knapsacks, and of the varied unpleasantness possible to the Hebrides and other places Scottish. Only the woes of the crofters exceeded their own, and afford a black background for their misfortunes by the roadside. It is not strange that papers written in so inhospitable and fault-finding a vein should have met with not very tolerant criticism from lovers of the Highlands and the West Coast. It was well to tell the story of the crofters and to awaken sympathy for them; but if a traveller has found only weariness, wet, and hunger on his journey, and has come back in so discontented a frame of mind as to find Scott's novels stupid reading after just visiting their scenes, he may be sure that he has missed seeing what the country had to show, and he ought not to expect the public to be interested in mere discomforts.

BOOKS OF THE WEEK.

Diamond Hams.

S. DAVIS, JR., Cincinnati.

The Centennial Commission in 1876 reported an award to these Hams. "First the excellent flavor of the meat." "Second, its good keeping quality, demonstrat[illegible] fre[illegible]hness of hams cured in 1873." [illegible] Grocers.

NEW ISSUE of Books in good condition [illegible] Books purchased. W. JOHNSON, 1336 Broadway.

The Nation

VOL. XLIX.—NO. 1262. THURSDAY, SEPTEMBER 5, 1889. PRICE 10 CENTS.

New Text-Books and New Editions.

Metcalf's Spelling and Language Book.

By Robert C. Metcalf, Supervisor of Schools in Boston. For introduction, 20 cents.

Metcalf's Language Exercises.

By Robert C. Metcalf, Supervisor of Schools, Boston, Mass., and Orville T. Bright, Superintendent of Schools, Englewood, Ill. Cloth, 12mo, 230 pages. Illustrated. For introduction, 42 cents.

These are new language books by two of the foremost educationists in the United States, and are attracting much attention.

Harper's Inductive Greek Method.

By Prof. Wm. R. Harper, Ph.D., Yale University, and William E. Waters, Ph.D., Cincinnati, Ohio. For introduction, $1.00.

Harper's Inductive Latin Method.

By Prof. Wm. R. Harper, Ph.D., Yale University, and Isaac B. Burgess, A.M., Latin Master Rogers High School, Newport, R. I. For introduction, $1.00.

From Professor J. L. Lincoln, Brown University: "I am satisfied yours is the only practical method of learning a language thoroughly; the only one for mastering the language for use, whether literary or scientific. I have been trying for several years past to get my pupils to read and study their Latin in this way. If teachers would only patiently use your method from the very start and persistently keep it up, if only for your twenty Cæsar chapters, I venture to say that their pupils would find but little difficulty after that in reading Cæsar anywhere. Then, too, they would *read* Cæsar or be well on the way to reading without stopping to translate."

Strikingly new methods for beginners in the study of Greek and Latin: based on the author's long and successful experience. These books have met with very great favor and are well worth the attention of teachers. Full descriptive circulars sent on application.

Spencerian Copy Books.

Revised. Edition of 1888.

NOW READY:

Common School Series, Nos. 1, 2, 3, 4, 5, 6, 7.

Shorter Course, Nos. 1, 2, 3, 4, 5, 6, 7.

Tracing Course, Nos. 1, 2, 3, 4.

The Spencerian Copy Books, in their various editions, have long been recognized as the National Standard. Keeping pace with the general improvement in methods of teaching, the publishers, after several years of careful and painstaking preparation, now have ready the edition of 1888, which they feel confident will be recognized at once as the highest type of work ever reached in this department, both from an educational and artistic standpoint.

White's Industrial Drawing.

Revised. "The Alphabet of Manual Training."

The simplest, the most practical, the most complete, the most easily taught. Complete in 18 books. Samples and circulars on application.

Lockwood's Popular Readings in Natural History.

ANIMAL MEMOIRS. By Samuel Lockwood, Ph.D. Part I.—MAMMALS. Cloth, 12mo, 317 pages. Part II.—BIRDS. Cloth, 12mo, 397 pages. For introduction, 60 cents each.

The New York *Tribune* has said that "these books of Dr. Lockwood's are really fascinating, and that they will not only delight children, but will teach the most valuable lessons of loving-kindness."

Gastineau's Conversation Method with the French.

The Conversation Method for Speaking and Writing French. Intended for self-study, or use in schools. System of pronunciation based on Websterian equivalents. Entirely new devices for obtaining a correct pronunciation. By [illegible] Gastineau, A.M., Graduate of the Université, Paris, and Principal of the Conversation School, New York. For Introduction, $2.00.

HAVE NOW READY:

THE STORY OF THE HANSA TOWNS. By Helen Zimmern. Being Volume XXV of the STORY OF THE NATIONS series. Large 12mo, fully illustrated, cloth extra, $1.50.

"There is scarcely a more remarkable chapter in history than that which deals with the trading alliance or association known as the Hanseatic League. . . . Though the League has disappeared, the beneficial results of its work survive to Europe, but they have become so completely a part of our daily life that we accept them as matters of course, and do not stop to inquire into their origin."—*Extract from Author's Preface.*

"Unique in the series and unique in itself. . . . Miss Zimmern's work is admirably done, . . . of unusual interest and value. . . . The first English work covering the ground."—*Scotsman.*

KOREAN TALES. Compiled and Translated by Horace N. Allen, M.D., Secretary of the Legation of Korea. 12mo.

"My object in writing this book was to correct the erroneous impressions I have found somewhat prevalent—that the Koreans were a semi-savage people. And believing that the object could best be accomplished in displaying the thought, life, and habits of the people as portrayed in their native lore, I have made these translations, which, while they are so chosen as to cover various phases of life, are not to be considered as especially selected."—*Extract from Author's Preface.*

THE LAND OF THE VIKING AND THE EMPIRE OF THE CZAR. Sketches of Travel in Scandinavia and Russia. By E. Fraser Blackstock. 16mo, illustrated, $1.25.

CHRISTIAN THEISM: ITS CLAIMS AND SANCTIONS. By D. B. Purinton, LL.D., Vice-President of West Virginia University, and Professor of Metaphysics. 12mo, $1.75.

CONTENTS.—General Outline of the Subject—I. Intelligence in Nature; or, The Eutaxiological Argument—II. Volition in Nature; or, The Teleological Argument—III. Personality of God; or, The Intuitive Argument—IV. The Goodness of God; or, the Historical Argument—V. The Unity of God; or, the Monistic Argument—VI. The Infinity of God; or, The Causal Argument—VII. Anti-Theistic Errors—VIII. Evolution and Christian Theism—IX. Immortality.

MONOPOLIES AND THE PEO- PLE. By Charles Whiting Baker. No. 59 in the series of "Questions of the Day." 12mo, cloth, $1.25.

CHIEF CONTENTS.—I. The Problem Presented—II. Trusts and Monopolies in Manufacturing Industries—III. Monopolies of Mineral Wealth—IV. Monopolies of Transportation and Communication—V. Municipal Monopolies—VI. Monopolies in Trade—VII. Monopolies Depending on the Government—VIII. Monopolies in the Labor Market—IX. Monopolies and Competition in other Industries—X. The Theory of Universal Competition—XI. The Law of Modern Competition.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 5, 1889.

The Week.

THE public-debt statement for August, just made public, shows another increase, and a large one. What Republican "spell-binder" of former campaigns can have forgotten how constantly useful were the public-debt statements of other Republican administrations to him, and how he clinched his argument in behalf of the honesty and economy of those administrations by citing the millions of dollars of decrease in the public debt month by month? Under Harrison there has come a change. That this change is not due to any causes regularly operating at this time of year becomes evident from the following comparison of debt changes for July and August under Presidents Cleveland and Harrison:

	UNDER CLEVELAND.	
July, 1885.	Decrease	$8,662,790
Aug., 1885.	Decrease	2,879,052
July, 1886.	Decrease	9,049,103
Aug., 1886.	Decrease	1,910,699
July, 1887.	Decrease	4,844,896
Aug., 1887.	Decrease	4,809,475
July, 1888.	Decrease	4,137,299
Aug., 1888.	Decrease	7,324,675
	UNDER HARRISON.	
July, 1889.	Increase	1,317,312
Aug., 1889.	Increase	6,076,692

Much as the average Republican may admire Tanner and his policy towards the Treasury, there is in these figures matter to give him pause. Over $7,000,000 *increase* in the public debt under the Republican President during the two months in which, during each year of President Cleveland's Administration, there was an average *decrease* of about $10,000,000! How will this sound on the hustings if it is kept up? It is death to the surplus, surely, but what is it to the taxpayer?

Commissioner Tanner's policy of rerating pensions has got a member of the Indiana Legislature named Wilson into serious trouble. Wilson has been devoting himself for several months past to having rerated the pensions of soldiers' widows who had been deprived of them by remarrying. His plan was very simple. He hunted up widows whose second husbands had died, induced them to swear that their second marriages had not been legally made, and then brought suit to have the marriages annulled. When he had won these suits, he applied to Tanner for rerating and back pay. He succeeded in getting this for no less than sixteen widows, the back pay amounting in some cases to $1,200. Something suspicious about one of the cases led to an investigation, and the result is, that Wilson and one of his sixteen widows are now awaiting examination by the Grand Jury on the charge of conspiring to defraud the Government. It has been shown that this widow was married a second time in 1873, and had three children by her second husband. The latter died a few years ago, and Wilson induced her to swear that she was never legally married to him, had the marriage annulled, got her pension rerated, with back pay from 1873 amounting to over $1,000. The other cases are similar to this. Wilson, of course, got a handsome commission in each case. It would be interesting to know in how many other States Tanner's "liberal to the boys" policy has led to similar frauds.

The Grand Army of the Republic discussed Tanner on Thursday, and showed a degree of moderation in the matter which was not expected. A Kansas delegate led off with a resolution "heartily endorsing his conduct of the Pension Bureau," and "denouncing the bitter and malignant criticisms of the press upon his official conduct." The resolution was of the same order as Tanner's recent interview in which he denounced his critics as "whelps"; and, judging from the tone of most Grand Army deliverances, its prompt passage was to have been anticipated. There were delegates, however, who appeared to have some conception of the proprieties, and they objected to such action. "Who knows anything about Tanner's administration of the Pension Bureau?" asked one of these delegates, adding such sound doctrine as this:

"We should not try to force the Administration to suspend this investigation. I was in Washington last week, and I heard it charged upon the streets and everywhere else that men employed in the bureau were all getting their cases made special and taken up immediately and rerated much higher, while the poor devils of the rank and file have to stand back and wait. I told them that it was a lie; but if he has done that and we pass the resolution, we endorse such action on his part. This encampment knows nothing of the details of Tanner's work and cannot pass judgment upon it. We may believe it is all right, but we do not know it. If we pass the resolution and the Committee of Investigation should exonerate him, the opposition press would say that the Administration dare not oppose the G. A. R., and they would have good reason to say it."

The upshot of it all was the adoption of a substitute resolution declaring "that we thank President Harrison for the appointment of our comrade, James Tanner, as Commissioner of Pensions, and that, notwithstanding the assault made on him, we declare our complete confidence in his integrity, and our approval of his endeavors to do all that can be done, under the laws, for the veterans of the war; and in connection with him we ask a full investigation of his administration of the affairs of the Pension Bureau." Except for the assertion that there has been an "assault" on him, there is little to criticise in this resolution, while the demand for "a full investigation of his administration" is most fortunate. The necessity for a thoroughgoing investigation is made more plain by the revelation, through the Washington correspondence of the *World*, that Tanner has resumed the practice of rerating pensions for his cronies and giving them great sums of money in the shape of back pay. When the rerating scandals were brought to light a few weeks ago, Secretary Windom became alarmed lest the surplus should be exhausted and the Government run into debt unless a halt were called in this business of handing around such sums as $5,000 and $6,000. A halt was called, but it appears that Tanner has resumed operations on the same line. The *World's* correspondent gives the names and amounts in eleven cases where pensioners have been rerated and granted back pay in sums aggregating $72,622.92—or about $6,600 apiece. The most offensive case is that of Hiram Smith, Deputy Commissioner of Pensions, who draws a salary of $3,600 a year in that capacity, and yet has been granted a large pension, with $6,035.72 in the shape of back pay.

We should think that genuine army veterans, proud of their record, would look with great suspicion on the announcement made at Milwaukee last week, that the Grand Army organization has increased 21,431 members during the last year. The war ended twenty-five years ago, and, in the natural course of events, the number of surviving veterans should show a yearly decrease. The Grand Army, too, is no novel scheme, but has been gathering soldiers into its membership for many years, and it ought to feel the effects of the soldiers' death-list. The rush to enroll as members now can have but one explanation. The high-tariff Republicans have found in this organization of soldiers a possible means of so depleting the Federal Treasury that a curb may be put on the demand for decreased taxation; and the organization, in lending itself to the scheme to make every reputed soldier the recipient of Government alms, and in condemning every effort at Washington to sift the honest from the dishonest applicants for pensions, is attracting to itself every needy person in the land who can make out any ground of eligibility. Speaking of the Grand Army the other day, the Philadelphia *Telegraph* said: "As every one knows, there is a very considerable portion of the organization made up of men who only saw, as it were, the edge of the great conflict, who went into service almost at the close of the war, but who now indiscriminately share the honors of an organization which should command the very highest respect of all patriotic men." It seems strange that among the whole number of genuine soldiers who attend the Grand Army meetings, there is not one to raise his voice in protest against the present uses to which the organization is put.

The fight which the Republican Boys have been making to gain possession of the Surveyor's office in the Custom-house has met with another check, but it is evident that

they are pretty certain to win it in the near future, probably before the work of the fall campaign opens. The history of the fight is an interesting one. When Surveyor Beattie came into office, he abolished the system of employing weighers' and gaugers' laborers and other like assistants by the hour, and employed them at $2.50 a day. The change is said to have been an improvement in many ways. Since the Republicans "came into their own again" there has been great anxiety to have the old system restored in order to get places for the ward workers of the Republican Machine. As there are about three hundred and fifty men employed, it will be seen that the fight is worth making. In July last an order was received from the Treasury Department abolishing the $2.50 a day system, and authorizing the employment of laborers at thirty cents an hour. This was scarcely issued before it was suspended till September 1. Many reasons have been given for the suspension, but one of the most powerful was a protest from the 'Longshoremen's Union, which had fixed the rate of wages for such work at forty cents an hour. It was known by the Government that thirty cents an hour would largely increase the expenditures of the office, because in times of political activity excuses could be found for employing almost any number of men. To raise the rate to forty cents would simply make matters worse, while to leave it at thirty cents would bring upon the party the wrath of organized labor. The problem appears to be a perplexing one to the Treasury Department, for on Thursday an order came to continue the suspension till September 30. The appetite of the Boys long since passed the limits of control, and their present condition is pitiable. The party is likely to lose the services of many of its best workers on election day if the change is not made soon, and for that reason we think it will be made.

An early demand is made in the leading journals of both political parties in this State for the selection of "good men" to the next Legislature. We are glad to see it, and hope it will be heeded by the nominating conventions in all parts of the State, and especially in this city. Unless there is a change for the better, the city will be worse off than usual at Albany next winter. The President has deprived us of the services of Mr. Crosby by giving him an appointment in Egypt, and the only other member upon whom we were able formerly to depend for honest legislation, Mr. Hamilton, has put an end to his public career by the shocking performances which are now set forth daily at such great length in the newspapers. In the last session, both these young men, who had previously been faithful to the interests of the city, faltered at critical moments, and even gave their support to notoriously vicious measures. The cause of Mr. Crosby's change of front was afterwards revealed by his appointment from the President through "Tom" Platt. He was obliged to refrain from opposing bad legislation in order to gain Platt's approval, but he went beyond what was required of him when he sought to defend his course by writing abusive letters to the press for criticising him. Aside from Messrs. Crosby and Hamilton, the last New York delegation to the Assembly was of very little service to the city, and if the next one is to be an improvement upon this, there will have to be a great change in the character of the nominations.

That civil-service reform amounted to something under Mr. Cleveland is illustrated by a list which the Washington correspondent of the Louisville *Courier-Journal* furnishes that paper, of the dates when the terms of postmasters in Kentucky appointed by the President expire. Of about forty such officials, two hold commissions signed by Mr. Cleveland in February, 1889, two during the year 1888, nine during 1887, and nine during 1886, their Republican predecessors having been allowed to serve out their terms. So far from having made a "clean sweep," therefore, Mr. Cleveland made scarcely any changes in the chief post-offices of Kentucky until the four years for which Mr. Arthur had commissioned postmasters ran out. The Washington correspondent of the St. Paul *Pioneer-Press* recently showed that the same rule was applied in Minnesota, where there are nearly sixty Presidential postmasters, twelve of whom were appointed during Mr. Cleveland's last year, nineteen in 1887, and fifteen in 1886.

The sudden rise into a sort of eminence of an obscure and somewhat ridiculous young man, simply because he happens to be the son of a gentleman elected to the Presidency, and his progress in foreign countries as somebody whom Americans are apparently proud of and like strangers to see, is one of the disagreeable phenomena of the day. There would be some excuse or palliation for it if we in any way recognized the heredity principle in our system of government, or even in our social arrangements. Nobody's son but the President's is a bit the better in the eyes of the public for being his father's son. On no point of social ethics do Americans generally insist more firmly than that every man shall stand on his feet and make his own position. It is, as a rule, only at dinner-parties that it does a man any good to have had an eminent father or grandfather. And the rule would be strictly applied to a President's son, to the great advantage of public morals and manners, but for the spoils system. It is because he stands near to the dispenser of patronage, the lavish and not over-particular bestower of post-offices and things "equally as good," that the country is afflicted with the itinerant professional Presidential son, who figures to foreigners as a sort of chromo "heir apparent," the fine flower of American society, as if the people, when they voted for Gen. Harrison, meant to royalize the whole family. If offices were distributed as they were meant to be when the Government was established, either in fear of God or with a decent regard for the opinion of mankind, this new plague could never have come upon us. It is because he is supposed to be an "inflooence" that we have to follow the movements of youths like Mr. Russell Harrison round the world with the national eye, and receive him on his return, with flowers, in our best tug. But it is a process which perverts the public judgment and lowers the public standards both about men and things.

Republican newspapers at the North which want to understand the situation in Virginia will do well to put the *Valley Virginian* of Staunton on their exchange lists. It is an ably edited journal, which, in its own words, "has maintained its consistency and its integrity as a Republican journal in defiance of persecution, proscription, and ostracism that few editors of papers have been called upon to endure." It declares that it will not support Mahone for Governor, because the body that nominated him was not a Republican Convention, representing the sentiment of the party in the State; because "his election would be a calamity to the commonwealth, in that it would paralyze industrial progress, arrest the inflow of capital and enterprise, and inaugurate a reign of hate and revenge that would disturb and aggravate every relation of business, and every influence that contemplates the material progress of the State"; and because "it would be a menace to the Republican party of the nation, in that it would be an endorsement of bossism." It therefore advises all self-respecting Republicans to vote against him, and predicts that he will be beaten by from 25,000 to 50,000 majority.

The *Virginian* addresses an earnest appeal to the New York *Tribune*, which applies equally to all the Northern Republican organs which have followed the *Tribune's* lead, to cease lending countenance to Mahone, on the ground that they know nothing about the internal workings of Mahone's machine, which is characterized as "the most cruel and relentless political despotism ever known in this country," and that the influence which it represents, if successful in Virginia, "will wreck the Republican party of the country." The difficulty about this sort of an appeal, however, is that the Republican press is generally committed to bossism. Mahone only represents in the South what Quay represents in the North, and there is hardly a Republican paper of any prominence in the North which protests against the dominance of Quay.

The *Manufacturer* of Philadelphia has joined hands with the *American*, temporarily, in decrying the tariff-protected Trusts. Like the *American*, it considers their existence a menace to the protective system. "The protective system," it says, "cannot continue in existence unless it commends itself to the sound judgment and the self-interest of the mass of the people. If they perceive that it will promote the general interests of their

country, while in the long run it gives them low prices, they will maintain it; but beyond doubt they will not vote for a tariff to exclude them from low European prices if American manufacturers, behind the tariff shelter, are going to combine to shut them out from low American prices. *A community composed of men willing year after year to vote to let somebody rob them is hardly fit for free government, and men of that class are scarce in this country.*" That the support which the *Manufacturer* gives to the *American* is likely to be only temporary and fitful, we infer from another article in the same issue (September 2), urging that the right way to discomfit the Sugar Trust is not to reduce the duties on sugar, but to "stimulate the production of beet and sorghum sugar." Can anybody tell us how long we have been working at the beet and sorghum problems? More than twenty years on beet and nearly thirty on sorghum, and all this time we have had the "stimulus" of tariff duties of two and a half to five cents per pound.

Mr. Simeon E. Baldwin, in discussing, before the Bar Association at Chicago on Thursday, the growth of journalism, seems to have somewhat overrated what has been done within the last century by way of putting "a new limitation on the suffrage" in the shape of minority representation. He speaks of its adoption "twenty years ago by the British Parliament for the election of its own members from some of the larger constituencies," as well as its adoption in Illinois at elections of members of the Legislature, and in Pennsylvania for the government of her private corporations. As a matter of fact, the system has declined in popular favor in England, and was definitively abandoned in the election of members of Parliament under the Distribution Bill of 1885. The large "three-cornered constituencies," as they were called, in which the minority had a member of their own, were cut up into small "one-member districts," in each of which the majority has its own way as of old. In fact, the theory of minority representation owed much of its vogue twenty years ago to the powerful advocacy of John Stuart Mill, then in the zenith of his fame and influence. Since his death it has lost ground, in large part through the excessive zeal of its advocates, of whom the ablest and most prominent was Mr. Courtney, the present Chairman of Committees of the House of Commons. They claimed more for it than they were ever able to get ordinary men to see in it, and asked sacrifices and labors in its behalf which were too much for human nature in its present stage.

The *Tribune* will have it that the London strike is all along of free trade. But we should think the sapient originator of this idea would hesitate to produce it in the presence of such occurrences as the Louisiana riot on Sunday, the like of which has never been seen in a free-trade country. An excursion train filled with women and children is deliberately fired upon by persons waiting for it at the station, and the passengers have to "fly in all directions, shouting and screaming and leaving dishes, baskets, and hats and shoes behind them." A similar conflict was reported to be imminent at Shell Mound in Tennessee, as well as in New River Valley, Fayette County, W. Va. We hope our protectionist friends enjoy these spectacles. It is idle to say the high tariff has nothing to do with them. We answer by asking whether anything of the kind occurs in England or in the colony of Victoria. Are trains full of colored men and women ever fired on even in any country where the duties on imports are low—say Turkey, for instance?

The London dock companies have a responsibility put upon them in the present crisis such as no commercial body in England has ever before had to face, for if they yield to the huge combination now made against them, it will be the same thing as transferring the control of their business to the Socialist leaders—namely, Burns, Hyndman, Cunningham & Co.—and a repetition of the attack on some other trade or industry would be sure to occur before long. The present leaders are men superior in every way to those who engineer strikes in New York, but they are as unfit as any men in the world for the power of making organized attacks on trade, or industry, or capital. The London dock laborers now on strike are, perhaps, the lowest class of labor in England. They are the drift from the country, who hang around the docks for jobs by the hour, and live literally from hand to mouth. Anybody with strong arms can do their work. Their sole trouble is that there are twice too many of them where they are. The only effective remedy for their distress is to send half of them away. Giving them what they ask—sixpence instead of fivepence per hour, and engagements for not less than four hours—would have only a momentary effect on their condition. It would draw thousands more from the country districts to compete for the work, and London would then have more discontented laborers than ever.

The Tories are apparently making one of their old-fashioned attempts to "dish the Liberals" by offering to endow a Catholic university in Ireland—an offer which the Parnellites are said to be disposed to accept—of course as an instalment of their just rights. The object of this is to mollify the Catholic clergy and detach them from the home-rule cause, and also to make a split between the Parnellites and the Liberals. The Liberals count on the Parnellites refusing to make any compromise with the common enemy, and especially a compromise of this sort, which is sure to offend the English Nonconformists, who compose the bone and sinew of the Liberal party. Although the Nonconformists' hatred of "Popery" has softened into hostility to "Romanism" since the great fight of forty years ago against the grant to Maynooth, the well-known Catholic divinity college, they are not yet ready for the establishment, with British Government funds, of a denominational university which would inevitably be, as all Catholic institutions of learning are, governed by the clergy. The disgust of the English Nonconformists, however, would be nothing compared to the disgust of the "loyal Orangemen" of Ulster, for whose future and welfare the Tories have thus far shown the greatest tenderness. It is true they do not constitute a very formidable voting force, as they only send ten or twelve members to the House of Commons, but they almost make up for their numerical weakness by their ardor and vociferousness. The Tories can cite plenty of Liberal arguments in favor of the establishment of a university of this sort in Ireland, as the gratification of a legitimate popular desire. But it is certain, on the other hand, that there is not a Catholic university in the world whose influence is not hostile to popular government.

The demand which Mr. Washburn has made on the Swiss Government for compensation for the arrest and false imprisonment of four American tourists, raises seriously a question which has often been raised jocosely: What can be done to enforce a demand against Switzerland by a Power which has no adjoining territory? France, Italy, Austria, and Germany could all bring armed pressure to bear on Switzerland, but what could England and America do if Switzerland chose to snap her fingers at them? She has no ports, no maritime trade, no foreign possessions, and, in fact, is absolutely unassailable by any but border nations. It would seem as if the only mode for us to get satisfaction, in case the Swiss sense of honor and fair play failed us, would be to capture a leading hotel-keeper when on his travels in winter, and hold him for a ransom.

The Comte de Paris's alliance with Boulanger, or at all events his willingness to use Boulanger, and get his friends to take the adventurer seriously, has been a sad disappointment to many of his admirers, and is, it is understood, greatly disapproved by his uncle, the Duc d'Aumale. It will probably do more than anything that has happened since the death of the Comte de Chambord to make the royalist cause seem hopeless. Boulanger, in the meantime, far from answering any of the disgraceful charges against him, has issued another manifesto denouncing his enemies, and has nominated forty candidates to represent his cause in the coming election, about the end of September. He is relying on the plan with which we are so familiar here of "vindication" by the vote of some constituency. He cannot since his condemnation be himself legally voted for anywhere, but, if his candidates are elected, he will claim that this disposes of the charges of peculation and corruption. He is a sorry charlatan, and the probabilities now seem to be that he will end by keeping a café and billiard-room for shady characters in London or Brussels.

OHIO'S QUEER POLITICS.

THERE is little in the political campaign which is about to open in Ohio in which a non-partisan adult observer can take serious interest. The Republicans have renominated for Governor the absurd Foraker, and the Democrats have put up against him ex-Congressman James E. Campbell, a politician of much the same type. Gov. Foraker is in the field for a third term, and he stands upon a platform which is thoroughly suited to him and what he represents in politics—that is, extreme demagogic views upon the tariff, pensions, and all other leading questions of the time. Mr. Campbell's platform is much better than his personal record. It stands squarely upon the national Democratic platform of last year in demanding "reduction of tariff taxes," and pledges the party to "continue the battle for tariff reform until the cause of the people is triumphant." Mr. Campbell is said to be thoroughly in accord with this declaration now, though he was, during the greater part of his service in Congress, one of the small squad of "Randall Democrats," who would more properly have been styled "Protection Democrats." He voted against the Morrison bills for revising the tariff, but refused to act in opposition to President Cleveland's message, and voted, under protest, in favor of the Mills bill. In a recent interview he declared his belief that the Democratic party would in the long run gain by advocating tariff reform.

Aside from the declarations of the platforms, the tariff will be likely to play little part in the campaign. The Democrats declare their intention of making the fight solely upon State issues, attacking the shortcomings of the Foraker Administration, and making all the capital they can out of the fact that he is the first candidate in the history of the State to seek and obtain a nomination for a third term. They say very truly that the tariff has nothing to do with the contest, since it can in no way be affected by the result; and that all that they could be expected to do was to keep the party straight on the record by defining their views in the platform. The Republicans, on the other hand, are disposed to use the tariff as far as possible both as a shield for Foraker's shortcomings and as a means for raising "fat" from outside sources to swell their campaign funds. It looks now as if it would be hard work to accomplish much in the latter direction, as the protected interests are still feeling poor because of their heavy contributions in the national campaign of last year.

If the Democrats had selected a man of more ability and character for their candidate, there would have been more reason to take interest in their efforts to rescue the State from the control of Foraker; but it is impossible to see any reform in the possible substitution of Campbell for Foraker. The two bear different party names, but there is little difference in their political methods. Mr. Campbell is universally known as "Jimmy," and belongs to the class known as the Boys in the politics of every State. If he were to be elected, he would supplant the "Foraker crowd" with the "Campbell gang," and the State would be no better and probably no worse off than before. As for the chances of such substitution, it is far too early to speculate. The Democrats profess to be very confident of success, chiefly because of the alleged popular prejudice against a third term; but it is never safe to count much upon the influence of a rational idea in Ohio politics. Foraker is unquestionably a popular hero in the State, and comes nearer to being the idol of his party than any Governor that the State has had in recent years. A party of which this can be said is not one to be easily shaken in its allegiance.

It is entirely probable that Mr. Campbell's nomination may prove to be much stronger than that of a man with higher political principles and aims might have been. Ohio politics must not be estimated by the standards applied to most other States. No one who reads the leading political organs of the State can fail to realize this fact. Their discussions of political principles do not seem to be intended for the consideration of adults, but rather for children or persons of undeveloped minds. As this style of discussion has prevailed for many years, and as the newspapers practising it are prosperous, it must be that the people of the State like it. If they do like it, Messrs. Foraker and Campbell are candidates after their own hearts, and the approaching campaign will be one of the most warmly contested since Gov. Foraker appeared as a leader. The Democrats have not carried the State for Governor since 1883, when they elected Judge Hoadly by a plurality of over 12,000 and a clear majority of about 1,300. Two years later Foraker carried the State by a plurality of 17,000, and was reëlected in 1887 by a plurality of 23,000, but in neither election did he have a majority over all, or anything like it. He was, in fact, 13,000 short of a majority in 1885, and 31,000 short of it in 1887.

WHY NOT WEAR OUR FLAG?

THE brief history and the present condition *in law* of the steamship *City of Paris*, which has by her conduct on the ocean secured, if we may use the Hibernianism of Sir Boyle Roche, "such a footing in the public ear," make a good object lesson for Harrison protectionists to study. Precisely how she is owned, whether by a corporation, or a joint-stock company, or a partnership, is immaterial. Her owner is said to be the Inman Company, whose residence and citizenship, the seat of whose affairs, may be English or may be American, for all that we know. Whether a majority of the shareowners, or partners, and of the capital is English or American, we are unable to say. Mr. Andrew Carnegie is reported to be a large owner. To an assemblage of the passengers on her recent voyage, Mr. Medill of the Chicago *Tribune* is reported to have explained that "the ship and the results attained by it were due to American enterprise backed by American capital. He knew that the application of American inventions to the machinery of the steamship had increased her speed one knot an hour, and that *nine-tenths of the capital of the Inman Line was American money.*" A State Senator of New Jersey, Mr. Warwick, confirmed what Mr. Medill had said of her ownership. He regretted the fact that the British flag had to fly over the *City of Paris* when she was practically owned by Americans. He said that the American flag ought to fly over the product of American enterprise and American pluck.

If Americans are the majority owners of the capital embarked in the Inman Line, and those majority owners are fairly patriotic, it must be annoying not to be able to fly the American flag, but to be compelled to wear the British flag, on their vessels. To be sure, the building of the *City of Paris* was by foreigners in a foreign country; her model, machinery, officers, and seamen are foreign. Nothing is American about her, excepting some of the money expended on her, and one of the ports to and from which she sails. But assuming her ownership to be as entirely and intensely American as if in the hands of Harrison, Blaine, Wanamaker, Platt, and Warner Miller, even then, if foreign-built, she could not be navigated under the American flag or take part in our coastwise business. She must, although American-owned, be a part of a foreign country and under a foreign jurisdiction. And why? Simply because born abroad. She can never be naturalized, under our existing laws, so that she can wear our starry flag and be commanded by Americans. Why is such legislation permitted to encumber the Federal statute book? To protect our own shipbuilders, it will be said, by thus excluding a foreign-built vessel. But we do not and cannot build and navigate ocean steamers in competition with Englishmen, Frenchmen, Germans, and Italians, even when aided by the exclusion of foreign-built vessels from naturalization, and even although (what is not fully appreciated) the taxes on all imported materials used in American vessels have been taken off to aid the late John Roach and our domestic shipbuilders. And if we could cheaply and safely build ocean steamers, we probably have not now officers and seamen to navigate them—so long have we, thanks to protection, been without ocean steamers trading swiftly with European ports.

It is to the credit of President Grant that, when war began between France and Germany in 1870, and, owing to various causes, foreign vessels could be cheaply bought, he personally, and on the solicitation of Secretary Fish, urged Congressmen to repeal the exclusion, and enable our countrymen to naturalize foreign-built vessels; but the partisans of John Roach were too powerful, and the repeal was defeated in committee. At the end of nearly twenty years, what is our condition? Some seven years ago Mr. Gladstone made a speech at Leeds, and may we not ask our protectionist readers to ponder this part of his utterances in 1882?

"On the occasion of the repeal of the Navigation Laws, the whole protectionist party of the country went into the deepest mourning. They told us that the repeal of the Navigation Laws was the destruction of the wooden walls of old England, and meant neither more nor less than her reduction to the rank of a third-rate Power. The tonnage of Great Britain in 1840 was

6,490,000 tons. In 1880 it had risen to 41,348,000 tons.

"Now, what is the state of shipping in protected countries? What has become of the shipping of the United States in its competition with British shipping? My boyhood was spent at the mouth of the Mersey, and in those days I used to see those beautiful American liners, the packets between New York and Liverpool, which then conducted the bulk and the pick of the trade between the two countries. The Americans were deemed to be so entirely superior to us in shipbuilding and navigation that they had four-fifths of the whole trade between the two countries in their hands, and that four-fifths was the best of the trade. What is the case now, when free trade has operated and has applied its stimulus to the intelligence of England, and when, on the other hand, the action of the Americans has been restrained by the enactment, the enhancement, and the tightening of the protective system? The scales are exactly reversed, and instead of America doing four-fifths, and that the best, we do four-fifths of the business, and that the best, and the Americans pick up the leavings of the British and transact the residue of the trade. Not because they are inferior to us in anything—it would be a fatal error to suppose it; not because they have less intelligence or less perseverance. They are your descendants; they are your kinsmen; and they are fully equal to you in all that goes to make human energy and power; but they are laboring under the delusion from which you yourselves have but recently escaped, and in which some misguided fellow-citizens seek again to entangle you.

"I am reminded that I was guilty on a certain occasion of stating in an article—not a political article—that, in my opinion, it was far from improbable that as the volume of the future was unrolled, America, with its vast population and its wonderful resources, and not less with that severe education which, from the high price of labor, America is receiving in the strong necessity of resorting to every description of labor-saving contrivances, and consequent development, not only on a large scale, but down to the smallest scale of the mechanical genius of the country—on that account, the day may come when that country may claim to possess the commercial primacy of the world. I gave sad offence to many. . . . I at present will say this, that as long as America adheres to the protective system your commercial primacy is secure. Nothing in the world can wrest it from you while America continues to fetter her own strong hands and arms, and with these fettered arms is content to compete with you, who are free, in neutral markets. And as long as America follows the doctrine of protection, or the doctrines now known as those of fair trade, you are perfectly safe, and you need not allow, any of you, even your slightest slumbers to be disturbed by the fear that America will take from you your commercial primacy."

Will not Irish-Americans meditate on these things?

A FEDERAL ELECTION LAW.

THE Constitution provides that "the times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators." The reason for inserting this clause, as is made plain by the discussion of the subject in the *Federalist*, was the fear, which was entertained by many people, that if the control of these elections were left exclusively to the States, "they could at any moment annihilate the Union, by neglecting to provide for the choice of persons to administer its affairs"—a risk which, slight as it now seems, may well have been considered grave enough to demand consideration by men who were trying so novel an experiment in government.

That this clause of the Constitution gives Congress full power over the election of its members, with the unimportant qualification that it cannot interfere with the State's choice of the place where its Senators shall be chosen, is obvious. If any shadow of doubt remained, it was removed by the decision of the Supreme Court in what is known as the Maryland election case, rendered ten years ago, which says in express terms: "The power of Congress over the subject is paramount. It may be exercised as and when Congress sees fit to exercise it."

Hitherto Congress has been slow to avail itself of this latent power, and has confined its interference to comparatively minor details. Thus in 1842 it passed a law providing that Representatives must be elected by separate districts. Later it was provided that such elections should be by ballot. A few years ago the day for such elections was made uniform throughout the country—"the Tuesday next after the first Monday in November," except where special acts enable three or four commonwealths which hold their State elections earlier in the year to choose Representatives in Congress at the same time. In like manner, by the act of July 25, 1866, provision was made for the method which should be followed by the two branches of the Legislature in electing a Senator.

Beyond these matters of detail, Congress has never gone except in the provision which was made by the act of February 28, 1871, for the appointment, by United States Circuit Courts, of supervisors of election whose duties are to attend at the registration of voters for the detection and exposure of any attempted fraud, and on election day to challenge any doubtful voter and scrutinize the counting of the votes. But as such appointments are to be made only upon written application to a circuit court, and as such application has seldom, if ever, been made in many of the States, anything like complete control of Congressional elections by Federal authority has never been known throughout the country.

A serious attempt is now making to organize sentiment in the Republican party in favor of a scheme to have the Fifty-first Congress assert to the fullest extent its latent power in this matter, take the election of Congressmen away from the State authorities, in whose hands it has rested during the first century of our history, and give entire control of the voting arrangements to officials of the Federal Government. In an article in the *North American Review* upon the duties of the new Congress, Henry Cabot Lodge declares that it "will fall far short of its duty and of the expectations of the people if it fails to pass an effective election law." Many Republican organs endorse this position.

Mr. Lodge notes with apparent commendation the bill to regulate elections introduced by Senator Sherman in the last Congress, the main features of which it is therefore well to recall. This bill authorizes the President to appoint in each Congressional district three voters as an electoral board, all to hold office during good behavior—in other words, for life—subject to impeachment for misdemeanor. The electoral board of each Congressional district is to appoint a registrar and three judges for each election district or precinct, and to increase the number of voting precincts whenever deemed necessary to secure a free and fair ballot; these officials to hold office for six years, subject to removal for misconduct. These Federal officials are to register the voters, count the ballots, correct irregularities, and declare whatever result seems to them best. In short, to take Vermont as an illustration, the entire control of all the steps connected with the choice of its Representatives in Congress would be taken away absolutely from those officials, appointed under State laws, who have for a hundred years had charge of such elections, and given to officials of the Federal Government over whom the people of Vermont have no power whatever.

We take Vermont as an illustration because of course a Federal election law must apply alike to every State in the Union, and because the real meaning of such a law is more clearly comprehended when applied to a commonwealth with so strong a sentiment of State pride as is entertained by the Green Mountain State. The motive of the proposed law is the supposed advantage which the Republican party would derive under such a system in certain Southern States where the elections are alleged not to be fair; but it must always be kept in mind that under the Constitution Federal laws must apply uniformly to all the States. If, therefore, the Government at Washington is to control Congressional elections in South Carolina and Mississippi, it must in like manner control such elections in Vermont and Iowa.

We do not believe that the people of the Northern States will ever consent thus to surrender control over their elections, and for this reason we think that the Sherman-Lodge scheme will fall through. The Republican majority in the House will be narrow at best, and a number of its members have already manifested their repugnance to the scheme. There is hardly anything to which the people cling more stoutly than to local control over their elections. Fancy, for a moment, the feeling in Vermont if there had been four years ago a Federal law under which Mr. Cleveland was to appoint three men in each Congressional district, who were to appoint subordinates in every town, these subordinates to control all the arrangements connected with the registration of voters, the casting of the ballots, and the counting of the ballots which they received. Imagine the feelings of the Republicans in the close Congressional districts of Connecticut last year if they had contemplated the possession of such power by Democratic officials.

"What are we here for?" is the question with Federal officials appointed under our present methods. The election officials appointed under the Sherman-Lodge plan would be "here" for the purpose of returning Republicans as elected to Congress—or Democrats, if the conditions of their appointment were changed. So long as we have political bosses like Quay and Mahone, on

the one hand, or Gorman and Voorhees on the other, nobody can contemplate with composure the idea of having the control of elections turned over to their tools. The plain truth is, that the people of the North will not stand it, and because they will not stand it, the people of the South will escape the infliction.

MR. BEACH ON TRUSTS.

THE article of Mr. Charles F. Beach, jr., in defence of Trusts, in the September *Forum*, is, perhaps, the best thing that has been said on that side of the question. Certainly it embraces in brief compass and distinct phrase all that has been said by others. On the legal branch, Mr. Beach comes near to giving himself away by saying that "Gen. Pryor's masterly argument in the sugar-refineries case is, from the standpoint of the law reports, conclusive and unanswerable." Notwithstanding this sweeping admission, Mr. Beach asks whether we cannot concede all that Gen. Pryor claims and yet ask for a verdict on the other side. Why? Because, when the reason of the rule fails, the rule fails also. To show that the reason of the rule has failed, Mr. Beach examines present economic conditions. The law cannot say yes and no at the same time. If it said no on Monday, it cannot say yes on Tuesday, unless conditions have altered in a decided and unquestionable sense.

Has there been any change of economic conditions of such a fundamental sort as would warrant us in saying that the reason of the rule has failed, and therefore that the rule itself must fail? Several facts are adduced to sustain the affirmative. The one of most gravity, and upon which the most stress is laid, is "overproduction." In consequence of overproduction, prices have fallen, profits have reached the vanishing-point, and producers have been driven to combine. The Trust is only a larger and more perfect combination than has hitherto been attainable. Such combination is not an evil to society, because "competition as business is now conducted costs the public a million of dollars, where monopoly, such as is possible under modern conditions, can extort a penny." "The slightest reflection," Mr. Beach continues, "enables the most unthinking man among us to understand that when two men employ themselves in doing what one man can do alone, there is a waste of energy for which, unless it vanish in the air, at last the consumers of those products must in some way or another pay."

Mr. Beach should have told us at the outset what he means by "overproduction." He means overproduction of refined sugar, white lead, and other particular things that have been or may be combined in the form of Trusts, but his language implies general overproduction. Now, general overproduction is a flat absurdity and an impossibility. If general overproduction existed, and if all persons accordingly could and should organize themselves into Trusts, the net result would be exactly the same as before any Trust was organized. As everybody would get the same advantage in disposing of his services and products, nobody would get any advantage. Advantage means getting something that somebody else does not get. We are naturally moved to alarm by the thought of general overproduction. It is a monster of such hideous mien as to be hated needs but to be mentioned in a hasty way in a magazine article. But if it is only overproduction of sugar or salt, and we are not sellers of those things, we can put up with it. The buyers are not responsible for the overproduction of sugar and salt; therefore, it does not rest on their consciences any more than the overproduction of railways in the Granger States.

How does competition cost the public millions of dollars where monopoly costs a penny? The answer is suggested by Mr. Beach in the example of two men doing what one man can do alone, the result being "a waste of energy for which, unless it vanish in the air, at last the consumers of those products must in some way or another pay." It would have been helpful if Mr. Beach had cited one case by way of illustration. We have sought to find one in everyday life, but have not been able to, or even to imagine one. Suppose that two sugar-refiners are at work where one can produce all the sugar required. Here is a waste of energy undoubtedly, and this waste will be just the same whether they compete or whether they combine. In the former case (that of competition) the cost will fall upon themselves, because they will be selling at the lowest possible rate. In the latter case (that of combination) it will fall upon the consumers, because the producers will sell at the highest possible rate.

Mr. Beach allows that "it is not proposed as any part of the Trust scheme that it share its economies with the public, and it ought not therefore to be judged of as an eleemosynary institution." We will add what every business man knows, that it is competition and not combination that produces and enforces economies. When money comes in easy, the producer takes things easy. When it is hard to make ends meet, he studies how to save his pennies. It was competition among railways that made the great saving in the cost of transportation during the past twenty years. It was competition in the sugar trade that reduced the cost of refining to one-sixteenth of a cent a pound. We hear a great deal about the economies introduced by the Standard Oil Trust, but as that is not "an eleemosynary institution" any more than the others, we need not dwell upon them. It is safe to say that its economies have gone wholly into its own treasury. What its economies would have been if it had had effective competition, it is impossible to say; but it is certain that, in that case, the public would have shared them.

If further testimony were needed to show the efficiency of competition to produce economies and to enable the public to share them, Mr. Beach himself is a first-rate witness, for he says that since 1880 "the selling price of almost every one of the staple articles of commerce manufactured in this country has declined from 16 2-3 to 50 per cent." It is this very decline, he tells us, which has caused the Trusts. It was during this period that competition, according to the text, was costing *the public* millions where monopoly, "such as is possible under modern conditions" (*i. e.*, Trusts), could extort a penny. It was during this period that two men were doing what one man could do alone, thus wasting energy and making the consumers pay for the waste by getting their goods 16 to 50 per cent. cheaper. And this is something which "the slightest reflection enables the most unthinking man among us to understand." Perhaps so, but to a thinking man it is something of a puzzle.

Another supposed change in economic conditions which causes the reason of the rule to fail and carries the rule overboard with it, is found in the "organized and aggressive combinations of laboring men." This is described as "a potent factor." "It ought not to be overlooked," says Mr. Beach, "that a potent factor in inducing Trusts has undoubtedly been the aggressive combinations or Trusts of laboring men which now exist, and the concerted attempt on the part of labor to dictate how the factories are to be run, who are to be employed, and what wages are to be paid. The manufacturer finds himself verily 'between the devil and the deep sea'; between all sorts of embarrassments incident to competition with insolvent rivals and a bear market on the one hand, and the labor organizations on the other." Hence Trusts.

Are organized and aggressive combinations of laboring men such a new thing in the world that they become a potent factor to upset the otherwise "conclusive and unanswerable" law arguments of Gen. Pryor? It is rather an odd coincidence that the article next preceding Mr. Beach's in the *Forum* is one by Prof. Hadley, entitled "The Outlook for Industrial Peace," and that its first proposition is that aggressive combinations of laboring men are not new things at all; that they are not confined to the present age nor to the present state of industry; that they are not as bad now as they have been in some former periods (*e. g.*, 1877); that they are found in every progressive age, and that, "if they are especially prominent in the United States, it is because the United States is a most progressive nation." Back in 1835, according to Prof. Hadley, labor combinations were just as aggressive as they were in 1885, and their methods were the same, including trade-unions, federations of labor, strikes, and boycotts, although the word boycott was not then used.

If labor combinations are not new, what shall we say of "competition with insolvent rivals"? We have heard much about this kind of competition which seems to be more provocative of Trusts than either labor combinations or ordinary overproduction. "Examples are familiar," says Mr. David A. Wells, in the *Popular Science Monthly* (September), "of joint-stock companies that have made no profit and paid no dividends for years, and yet continue active operations. The shareholders are content if the plant is kept up and the working capital kept intact; and even when this is not done, they prefer to submit to assessments, or issue preference shares and take them up themselves, rather

than go into liquidation, with the chance of losing their whole capital."

What are you to do if you are a shoemaker and one of your competitors in business sells shoes at less than cost? In the first place, you cannot prevent it. You can only let him go on till his capital runs out or he changes his mind. What ought society to do? Society will certainly accept shoes at less than cost and think that it has a good bargain. Will society be profited by all the shoemakers combining and putting up the price? Certainly not. Here Mr. Wells loses his footing. He says:

> "Society has practically abandoned — and from the very necessity of the case has got to abandon, unless it proposes to war against progress and civilization—the prohibition of industrial concentrations and *combinations*. The world demands abundance of commodities, and demands them cheaply, and experience shows that it can have them only by the employment of great capital on the most extensive scale."

Concentrations and combinations of capital are not the same thing, but they are here spoken of as though they were. There may be a dozen concentrations of capital for producing a certain article, but only one combination. Two combinations would not answer the purpose, while three would be worse than none. Mr. Wells's brief article reads like an apology for Trusts, but he would hardly contend that, in a case where so much capital is already embarked in a particular line of trade that "overproduction" exists, a combination to close a part of the works and pay them more money than they could make if they were running would be a gain to the public. It strikes us that instead of this being the employment of "great capital on the most extensive scale," it is the withdrawal of capital previously employed, and that it runs counter to the world's demand for abundance of commodities cheaply produced.

It is not necessary to berate the Trusts, or to impute any blame to them for taking all the trade advantages open to them. That is human nature, of which we all have our share. But the public will be to blame if they lend any countenance to them, or put up with them any longer than they are obliged to. Especially will they be to blame if they allow themselves to be hoodwinked by fallacies like those which Mr. Beach advances in the *Forum*, and which he evidently believes in firmly. Not more than one man in a hundred can by any possibility get his business, his calling, his daily labor, under the shield of a Trust. Ninety-nine per cent. of the population are therefore committed in the strongest manner to oppose the Trusts in every lawful way.

AN UNSEASONABLE JOKE.

"The National Editorial Association," which professes to represent the editorial profession throughout the United States, met at Detroit last week in convention. The occasion was considered so important that the delegates were, we believe, the guests of the city, and received an address of welcome from the Mayor. Its object was ostensibly, and we presume really, not only the improvement and elevation of the journalistic calling by the interchange of views between its members touching their common interests and aims, but its presentation to the public as one of the most powerful and valuable social and political influences of the day. One would naturally expect that on such an occasion, if there were either *esprit de corps* among the members, or any proper sense of the gravity of the functions which they claimed for themselves, an effort would have been made to put the best men of the profession into the foreground, and to give the proceedings a serious character; to make good, in such ways as the case would permit, the claims of journalism to be considered a safe and respectable commentator on all the great interests of American society; and to satisfy people that the reproach so often made, that American newspapers are comic publications, compiled for the amusement of big boys, was unfounded.

What happened, however, was this: The fundamental topic of the occasion was "Editorial Philosophy," a term which, if used seriously, means the spirit and aims which an editor brings or ought to bring to his work, the view he takes of its nature and responsibility. The subject is a large and weighty one. When one considers what the part is which the press plays in modern life, in educating the young, and moulding the opinions and cultivating the tastes of the old, it is not too much to say that the ablest and most experienced thinker and observer in any calling in the United States could hardly do justice to it. At all events, for such an essay every effort should have been made to secure the services of some representative journalist, whose experience, and judgment, and high personal character, and serious view of his calling would have secured him the ear not only of the Convention, but of the whole country. Instead of getting such a man, however, or, as far as we know, trying to get him, the managers turned the whole performance into a farce by inviting a man who is not a journalist at all, having simply bought the plant and good will of a newspaper a few months ago, and whose utterances through its columns during that short interval have been so grotesque as to create serious doubts in many quarters as to his sanity.

The result was what might have been expected. He treated the Convention to two or three columns of buffoonery, which could not have appeared appropriately anywhere but in the *Bloomingdale Weekly Chronicle*. We can recall nothing in the history of the newspaper press which would do so much as this incident to justify the abuse and contempt which a portion of the public is in the habit of heaping on it. We do not believe any organization representing an honest calling has ever before so deliberately offered itself and its constituency to the ridicule of civilized man. If the Shepard address was meant to be a joke, it ought to have been delivered after the proceedings were over, as a separate and distinct entertainment. But even then it would have been open to the criticism that it was too long and elaborate even for a farce, and that, as the public exhibition of the owner of a newspaper, it would tend to degrade the press generally in the popular eye. If, on the other hand, it was seriously offered and seriously received, what are we to think of the intelligence and general equipment of the conductors of the daily press? If this stuff passes as "editorial philosophy," people will naturally say, can anything be more preposterous than the claim of editors to be considered in any sense public instructors? What function have they to which a child or a lunatic is not equal?

The Shepard joke was a legitimate one enough as long as it was kept within proper limits. Nobody can prevent a rich fool or ignoramus from buying a newspaper and playing the buffoon in it, and it would be unfair, and perhaps unwise, even if it were possible, to keep his contemporaries from getting all the fun they can out of him. But if he is deliberately selected as the mouthpiece of the profession on a serious occasion, in order that the members may have a laugh over his folly and incoherence, the legitimate bounds of humor are transgressed, and we get into the region of unseemly and mischievous bouffe.

LONDON LABOR.

The London strike, which, as we write, has not yet been settled, promises to be a serious affair for London, whichever way it ends. If the dock companies give in and continue to employ the same number of men, they must recoup themselves by raising their charges, and to raise their charges is to drive away shipping from the port. At this moment the stock of all the dock companies except the Millwall pays no dividends, and the price is correspondingly low. The Alexandra sells at 17, the East and West India at 22, the London and St. Katharine's at 42, the Millwall at 85. All are laboring under heavy debts in the shape of preferred stock and debentures, or mortgage bonds, as we call them. Even before the strike occurred the outlook for them was becoming very serious, owing to the fact that London has been for some time declining as what is called a "distributing centre." The last great strike, which took place there eight years ago, and was the first blow to its commercial supremacy, was that of the shipwrights, and was quite as senseless as this one, but was supported by the same amount of sentimental palaver from philanthropists and clergymen. It took place on the eve of a great decline in the demand for shipping, and was persisted in in spite of the fullest explanations as to its probable results, until it absolutely killed shipbuilding on the Thames. When it was over, the trade was extinct, and some of the greatest ship-yards in the world were closed for good. The business had gone to the Clyde, where it has remained almost ever since.

The telegraph and the tramp steamers and the great extension of railroads have been sapping London's strength as a

seaport, as, indeed, that of all the great entrepôts of the world. Constantinople, which has, ever since its capture by the Turks, been the great market in which the traders of Persia, Asia Minor, Syria and Palestine, and Arabia bought their goods, is fast losing this position. The distribution, thanks to steam and the telegraph, is now more and more made from a dozen little ports in the Black Sea, the Mediterranean, and the Persian Gulf. Venice, in spite of the Suez Canal, can, for the same reason, never get back the trade which the capture of Constantinople took from her; nor can Trieste or any other port in the Mediterranean take her place. Vienna, which once supplied Hungary and all the countries on the Lower Danube with most of their western comforts and luxuries, is ceasing to do so, and is, in many respects, a declining city, less and less frequented by strangers. In other words, all over the world the producer is coming into more direct contact with the consumer, to the destruction of the vast commission business of the last six centuries.

The consequence of all this is, that the London strike is really a demand that a very large body of men shall be supported in comfort by an impoverished concern. It very much resembles the strike of the Belgian and French coal-miners a few years ago against coal companies which had not for years paid any dividends, and is indeed based on the theory, which we have frequently exposed here, that any one who is once hired by an individual or firm has a valid claim for employment, at wages fixed by himself, on that individual or firm for an indefinite period, whether the employer can afford it or not. It comes, too, as the direct result of the drift of population away from the land which is to-day one of the most striking phenomena of English economy. Go where one will in England to-day, one is met by the scarcity of farm laborers. The young men will not stay on the farms and bear the monotony of agricultural life. They go to London to seek their fortunes, their imagination filled with the cheap-literature stories of city doings, and, when they get there, join the great army who live by "odd jobs," and soon have their heads filled with the new gospel that a capitalist who employs anybody is bound to maintain him in decent circumstances as long as he requires it. The encouragement given to such theories by men like Canon Liddon and Cardinal Manning is one of the most deplorable features of these crises, because it is difficult for the unlettered man to believe that stark, staring absurdity can find refuge in the heads of doctors of divinity; and yet, in economical matters, it is too often true. The more the dock companies agree to do for the "odd-job" men, the more of them will come to compete for the business; and the more resulting suffering there is among them, the more heartless and tyrannical will the companies appear.

THE FUTURE OF SOUTHERN CALIFORNIA.—I.

OREGON, August, 1889.

Two years ago, when I visited Southern California for the first time, it was in the midst of its extraordinary real-estate and business boom. All the hotels in Los Angeles were overcrowded, the post-office almost unable to get through with its business, the city growing like an asparagus stalk after an April shower, and the demand for labor so great that the workmen could practically dictate their own terms. The smaller towns and would-be towns had also caught the infection, and were building huge hotels, cement sidewalks, and street-car lines; not because it was supposed that towns of 2,000 inhabitants needed such things, but in order to be able to advertise in Eastern papers and in real-estate circulars that the place had street-car lines, cement sidewalks, and hotels "with all the modern conveniences." Each town printed a special illustrated pamphlet in which its unique attractions as compared with all rivals were set forth, culminating in the claim that its township was the "Italy of America," or of the West; while San Diego brought maters to a climax by styling itself "the Italy of Southern California."

On returning to Los Angeles County last January, I found everywhere evidences that the boom had collapsed. The street-car lines in the small towns barely paid expenses, though it was regarded as an act of local patriotism to ride on them; and the cement sidewalks, which had been prolonged far into the fields, had failed to charm into existence the rows of houses that had been looked for. In the metropolis itself workmen were grumbling at insufficient employment, merchants clamored that their rents were 50 per cent. too high, many store windows were pasted with closing-out notices, real-estate offices were no longer as abundant as saloons, and the book-stores, more wretchedly supplied than those of any town of 10,000 in the United States, were even selling the twenty-cent paper novels at "cut rates." The newspapers of Northern California, of Oregon, Washington, and other Western States as far east as Kansas, which had long been jealous of the prosperity of Southern California, and desired a boom of their own, crowed loudly over the "busted boom" of Los Angeles, while the papers of that city, no longer compelled by the pressure of real-estate advertisements to add two or four extra pages to their issues, had daily editorials to disprove the allegations of their envious rivals.

An unprejudiced observer, interested only in the climate and the scenery, and not in the real estate, of Southern California, could not but admit, from the signs just noted, that these "envious rivals" were right in insisting that the boom had collapsed; but the inferences drawn from this fact, that Southern California had been overpraised and that its road was to be down hill in the future, were absurd. Southern California cannot be overpraised, and, in my humble opinion, its future prospects are brighter than those of any other portion of the United States. To a large extent the late boom was nothing but a huge gambling scheme, an epidemic of wild land-speculation, which carried along in its rush thousands of thoughtless victims, like the mad stampede for Oklahoma. Southern Californians knew better than others that the sudden rise in their land prices was artificially stimulated and would be followed by a reaction, but they were bound to make hay while the sun shone, and found to their delight that the sun shone longer in California than elsewhere, in the metaphorical sense as well as in reality. At last the storm came and swept away many of the "tenderfeet," or late comers, and their new buildings, whose débris is now lying about, so to speak, and is pointed at as a terrible warning and lesson; but the only lesson it does teach is that people should avoid real-estate gambling. The fragments of the ruins will soon be cleared away, and then it will be found that, although many individuals have suffered during the storm, the country as a whole has been benefited by it.

In many cases the large, useless hotels built in the small towns have already been secured at a bargain for school buildings, and in the larger cities many public works have been provided which, without the artificial stimulus of the boom, would have been postponed to the indefinite future, as, for instance, the long flume, costing almost a million of dollars, which now provides San Diego and vicinity with abundant pure water, and will do more to develop the resources of the country than the discovery of several gold mines. Los Angeles made the great mistake of not building a sewer to the sea during flush times, and now suffers under the disadvantage of vitiated air, which, if not speedily remedied, will destroy its reputation as a health resort. In other respects Los Angeles is already recovering from the effects of the collapse. Fine new buildings are again going up, the streets are always animated, and the cable-car tracks have been lately prolonged into the picturesque hilly region behind the city, which affords the finest imaginable sites for suburban cottages, with superb views of the mountains and a glimpse of the Pacific Ocean, fourteen miles away. Though founded in 1781, Los Angeles had less than 5,000 inhabitants in 1860, and only 13,000 in 1880, while to-day it has 75,000 or more. Thirteen years ago no railroad connected it with other parts of the world, while to-day it is one of the greatest railroad centres in the West. And as it still remains, what it always was, unsurpassed by any city in the world for climatic and scenic advantages, it has every reason to look forward to a prosperous and brilliant future—provided that a sewer is built at once.

Southern California includes five counties—Los Angeles, Santa Barbara, Ventura, San Bernardino, and San Diego—embracing, as General N. A. Miles points out, "a territory nearly the size of the State of New York, and with natural resources of ten times its value." This seems a big statement, but its truth can be realized, without the use of figures, by considering that these five counties are capable of supplying the United States with all the figs, raisins, prunes, wine, olives and olive oil, oranges, lemons, nuts, and canned fruits that are now imported from France, Italy, and Spain; most of them, with proper care, equal in quality if not superior to the imported articles. Although large quantities of all these fruits are already raised, they are a mere trifle compared to what the soil is capable of yielding to a larger population. It has been proved over and over again that ten to twenty acres of good irrigable land are all that is needed to support a family, and there is therefore room for hundreds of thousands of immigrants. However, it is candidly admitted that Southern California is a land of more promise to the farmer who has at his disposal a capital of a few thousand dollars than to the emigrant who brings with him little but a team and a pair of muscular arms; for improved land, with bearing vines and fruit trees, costs from $100 to $500 an acre, while unimproved land, though it may be had for one-fifth those prices ($20 to $100), yields no return for several years, unless grain is raised; for all of the semi-tropical fruits above named require from three or four to ten years before a profitable crop is yielded.

And yet personal observation has led me to believe that there are special opportunities in this region precisely for the farmer with limited means, if he is willing to curb his ambition and content himself with dairy farming and the raising of poultry on a large scale for the market. The farmers now settled in Southern California are so ambitious to become orange, olive, or vineyard kings that they entirely neglect the farmyard, and have hardly enough milk and butter and vegetables for home consumption. It is almost impossible in any part of Southern California to get a good piece of beef or mutton, and chickens are imported by the car-load from Kansas and other "Eastern" States, and sold at absurdly high prices at Los Angeles, although in this mild climate it is easy to raise chickens all the year round, and I have myself seen splendid broods of young ones grow up in about half the time they need in the East to reach a marketable size, the simple precaution being taken of providing them with dry housing during rainy nights. If this is not done, their growth is remarkably retarded, and many of them become diseased, and, if not killed or isolated, will infect a whole yardful of poultry. Cattle raising, too, must prove profitable in a region where the animals can feed on the green foothills and valleys all the "winter," and in summer eat the sun-dried grass or clover which covers the whole country. The wild, clover-like alfileria, which furnishes most of this natural hay, grows in profusion along the roadsides and in the meadows, and even fills up the empty patches in the cactus fields. After the spring rains it attains a height of ten to fifteen inches, with a dozen plants to the square inch, and is so juicy and tender that one can mow it down with a cane or with the hands; and a week later it is as high as if it had never been cut. It looks so luscious and sweet as to almost make one long to be a cow or a sheep in order to be really "in clover" for once. Again, the cultivated clover, or Chilian alfalfa, if sufficiently irrigated, yields half-a-dozen or more crops of hay a year, which makes the sweetest butter and meat in the world. Yet the Southern Californians, as I have just said, import most of their butter and meat; consequently, if any farmers should undertake to supply the local market with home-made products, fresher and cheaper, because with no freight charges on them, they would have a sure source of prosperity before them. It is probable that the drought of 1863–64 discouraged the cattle business; but there has been none since that time, and, with the present railway facilities and a reasonable foresight in storing hay, no disaster need be feared in the future. Moreover, one of the best and cheapest kinds of cattle food, pumpkins, as large as beer-barrels, can be raised here by the thousand with hardly any trouble and expense. Sometimes they lie in a field so densely that one might almost walk over it without touching the ground; and I saw several fields in which hundreds of fine pumpkins, for which the farmers had no use, owing to the scarcity of cattle, were left to rot on the ground.

Before purchasing land in California of the South, it is well that the investor should have made up his mind in regard to what branch of agriculture he wishes to devote himself to. For although it is one of the chief advantages of this soil that it can be made to produce most of the fruits of the temperate and semi-tropical, and some of the tropical zones, yet each township or locality has its special adaptedness for this or that product, and to ignore this is to labor under disadvantages. Thus, Riverside and vicinity has been found most favorable to the culture of the orange, because the destructive scale-bug does not flourish here as it does nearer to the coast. Of lemons the finest specimens are grown near the Mexican border, in San Diego County, which also furnishes some of the best raisins and olives. Santa Barbara County yields the finest pampas plumes and the best walnuts, and Los Angeles County is still the wine centre of the South, notwithstanding the ravages of the mysterious vine disease. The conclusion, too, is being gradually reached that for vineyards the foothills are the best localities, since in Europe all the best vines are raised on the hillsides. Plants of a distinctly tropical type also, like tea, bananas, etc., might perhaps be successfully raised on the lower foothills, which have an immunity from the light frost that occasionally, in winter and spring, visits the lowlands near the ocean. And besides these facts, it is well to know that in the same locality the soil often presents great differences, so that in a twenty-acre field one-half may be well adapted for the orange or olive, while the other half needs a different crop. Above all things, "tenderfeet" should beware of buying land immediately after the spring rains, for then the whole face of the country is covered with a rich carpet of grass and flowers, so that it is difficult to distinguish the good land from the sand-bottomed site of a former river bed, useless for anything but cactus.

Finally comes the most important of all questions—the facilities for irrigation. Grain, if sown in winter or early spring, ordinarily needs only the regular rains of the season to reach maturity, and there are localities where many other crops can be raised without irrigation; but these are the exception, and as a general thing the semi-tropical fruits which constitute the specialty of Southern California, need water for profitable culture. So well is this now understood that it is a favorite joke of the natives to say that if you pay for the air and water, they will throw in the land gratis. Fortunately there are no fewer than six sources from which crops are supplied with water, if we include rain. For small vegetable or flower gardens sufficient water can be raised by means of windmills, which are kept in brisk motion every afternoon by the sea-breeze in the whole region within twenty or thirty miles of the ocean, except during two or three of the "rainy months," when they are not needed. These mills also supply the kitchen, and it is curious to note how cold the water remains in the large tanks exposed all day long to a semi-tropical sun. Much of the water used in town and orchard is supplied by artesian wells, which, however, occur only in certain belts, especially in Los Angeles and San Bernardino Counties, although none of these, I believe, equal one dug in Sonoma County last winter, which is 115 feet deep, cost only $200, and yields almost half a million gallons every day. Rivers of the size of the Sacramento, or those of Oregon, Southern California has none, but there are some smaller rivers and a large number of creeks, fed by the mountain snows, which are tapped in two ways for irrigating purposes—on the surface and below the bed. The surface water is often carried many miles in ditches, and wise is the community which lines its ditch at once with cement, else in summer it loses almost two-thirds of its water supply by absorption on the way. The Santa Ana River, which is quite a respectable stream in winter, and after rains becomes a formidable torrent, liable to overflow its banks and change its channel (thereby causing boundary disputes), is in summer tapped so freely that its bed becomes dry, and not a drop reaches the ocean.

Much more curious than this surface tapping, however, is the tunnelling, by means of which the water which has buried itself beneath the sandy river-bed, as if to escape the merciless pillaging of the hot sun and the greedy farmers, is brought to the surface again and utilized. It is in this way that the Santa Ana River is despoiled of its last drop, and the value of this procedure may be estimated from the statement made by the San Bernardino *Times*, that "the Ontario Land Company has driven a tunnel in under San Antonio Creek, a distance of nearly 1,800 feet, at a cost of about $52,000, and they have about 250 inches of water worth a quarter of a million of dollars." As it hardly ever rains during the summer, all the water thus drawn off the rivers in the irrigating season comes from the springs and the melting snows in the mountains. This is just about sufficient for the present needs of the population, but no fears need be entertained for the future, since, as the rural population increases, it will become profitable to expend large sums in building reservoirs in the cañons to store the abundant winter water which now runs to waste in the ocean. In this way the mountains can be made to yield an absolutely unlimited amount of water, sufficient to support tens of millions; and the lesson taught by the Johnstown disaster will prevent the dams from being carelessly constructed.

HENRY T. FINCK.

A CREMATION AT PÈRE-LACHAISE.

PARIS, August 17, 1889.

THE *crematoire* which the Municipal Council has presented to the city of Paris is situated in the new part of Père-Lachaise, not distant from the famous plot visited by Communists on revolutionary anniversaries. It is conceived in the pure mausoleum style—a noble façade with pillars, cupolas, and dome, a frieze composed of myrtle leaves, with funeral urns of most classic pattern capping all the angles of the building. The architect even anticipated in the plan of ensemble a delicate point—that of concealing behind the dome and frontal of the portico the indispensable chimneys, which, in spite of their delicate carving, must needs look lugubrious. The temple comprises a vast rotunda under the dome, with aisles to receive the public during the ceremony of incineration. At the back, occupying the whole width of the building, are the three furnaces, with anterooms provided with elevators which bring the caskets from the ground floor.

While the edifice is not yet completed, the three cupolas at the back under which are the three ovens are finished. Those at the right and left only are in use. The space intended for the middle one is reserved as a reception-room for the mourners during the ceremony. The Paris crematoire has in this a great advantage over that of Milan, the second one in Europe, inasmuch as the latter includes no reception-room, and the family and friends are brought face to face with the operation—a trying ordeal—and have to remain to the end in sight of the oven.

Since the law authorizing "la liberté des funerailles" was passed, the partisans of cremation have scored but a few obscure cases. The first one on record in Paris was entered January 30, 1889. It is only during the last two months that anything like statistics exists. Thirty incinerations were recorded during that period—a small figure in comparison with the 8,000 burials representing the average of mortality in Paris for eight weeks. Last Monday the cremation of M. Gagneur, Representative

for the Department of Jura, added the most distinguished French name to the record; his example has attracted some attention, and is considered a step in favor of this funeral rite.

The first impression as one approaches the crematoire is a not unpleasant one. The well-kept lawn and crimson geranium hedges that surround it relieve the depression one may have felt on the way. Such a sad ceremony could not be begun under better auspices, I thought, as the cortège following the late Deputy passed between the double file of the sky-blue-coated keepers of Père-Lachaise that kept watch at the gates. The procession halted at the foot of the high stairs. The family of the deceased ascended the steps and passed into the reception-hall. Those of the friends who wished to be present as the body was committed to the flames, repaired to the room in front of the furnace chamber, where the elevator would deposit the casket. This part of the ceremony of cremation can be mitigated. The room in itself is forbidding, with its sable hangings, and suggests the mediæval torture-chamber. The iron truck on wheels standing in the middle looks, indeed, very like the old rack upon which the Inquisition made converts. The truck bears a long iron tray covered with a sheet of asbestos. Upon it is placed the coffin, made of light pine wood in order to offer the least resistance to the flames. All is ready: a black curtain is drawn aside and reveals the oven, a simple brick structure with double doors. These are opened, and the truck briskly pushed into the mouth of the furnace, whence it is withdrawn by a crank, leaving tray and coffin within. The black curtain is closed, and the superintendent of the crematoire marks the time.

A gust of hot air had filled the room, and the friends who had paid the last farewell returned to the waiting-hall bathed with perspiration. One of them mounted the tribune to pronounce a eulogy on the deceased, absent from the catafalque heaped with wreaths. Several speeches followed, but what was uttered from the dolorous rostrum was of personal interest. The last speaker alone, a member of the Municipal Council, discoursed on cremation from a hygienic and philosophic standpoint. Some audible assents encouraged him, but sympathy was not unanimous. The truth is, many were impressed with a sense that we were listening to the advocate of a school whose creed is annihilation, rather than witnessing a funeral rite renewed after eighteen centuries of Christianity.

The ceremony of cremation as celebrated to-day has one great drawback—its duration. During the interval that elapses between the committing of the body to the flames and the collecting of the ashes, time hangs heavy on the hands of the mourners. If prayers are dispensed with, funeral eloquence is taxed to fill the space of an hour and more to the exclusion of ennui. There is bound to be a hiatus extremely restless, uncomfortable, and awkward to say the least. For my own part, I do not think the recourse suggested by one of the apostles of cremation on the occasion in question—to smoke a cigarette behind the building—the last word of correctness at a funeral. Undoubtedly this assumption of stoicism finds its explanation in a hidden desire to react against sentimentality.

Close upon an hour had elapsed since the corpse was placed in the furnace, when the mysterious curtain was again drawn aside. In turn we advanced, and, armed with a small pane of glass to protect the eyes from the glare, looked through the holes of the furnace. In the vortex of flames the remains appeared like a burning heap of vine branches. The superintendent announced that the operation would soon be at an end. In the interim we went down stairs. What we saw was simply the arrangement of a high furnace in a foundry, fed from the bottom. The fire never goes out—not from constant need of it, as has already been explained, but on account of the time required to get the proper degree of caloric. Four or five hours of active firing are necessary to bring it to the proper pitch, 600° to 800°. In the beginning wood was employed at the crematoire—light, very well seasoned wood, the same as used at the factory at Sèvres. It was found too expensive and too slow; it required for one cremation five hundred kilogrammes of wood. Now the heating is done with coke, which is much cheaper, and reduces the cost of the ceremony to about $20, while the conflagration of the gases shortens the duration of the time.

The formation of a columbarium has been begun in the crypt. There are already a half-score of tiers, including each some twenty-five partitions, into which can be deposited the diminutive sarcophagi—0.45 by 0.15 centimetres—oblong earthenware boxes that have nothing in common with that triumph of the potter's art, the funeral urn of the ancients. Shall we add that the fashion of 1889 has ordained no shelves to hold the lachrymatory vases? I noticed only two partitions occupied, closed with marble slabs bearing the names and dates. Such is the dream of the enthusiastic cremationist—to file and store away in a comparatively moderate space the remains of a great city. For an idea how easily it can be realized, let the reader reckon the thousands of letter-boxes that could be accommodated on both sides of the corridor in the New York post-office.

Our meditations were interrupted by a whistle from up stairs notifying the firemen on duty to slacken the fire by closing the valves that act as bellows. We ascended to find the iron tray back on its movable truck in the middle of the room. The asbestos covering was rosy, as if still bearing the reflection of the flames. A small heap of bones, rosy too, bore witness that the work of destruction was accomplished. Where the feet had rested, smouldered a few scraps of charcoal, which some one explained had been placed in the casket as a disinfectant. These scraps had resisted the fire longer than the body, and were still burning after an hour and twenty-five minutes had elapsed. The diminished remains gave rise to an exclamation from one of the spectators: "What, not even the skull preserved, witness of the fine intelligence that can act no more!"

The iron tray was fast being cooled by a current of water that passed along the sides. A couple of silver tongs, a silver shovel, and a small broom made of bristly wires served to clear the remains from the sheet of asbestos growing less rosy every moment. It yielded less dust than was expected; in fact, there was very little to gather, and the employees gave their attention chiefly to collecting the remnants of bone, which they did very respectfully in spite of the almost unbearable heat. The small quantity of dust seemed to disappoint some of the spectators. The same one who had already raised his voice remarked harshly that the Romans gathered all the residue without any reservation; that in the present instance the waste was indecent. His neighbor, an old man and a great savant—one, no doubt, who shared with Cuvier the belief that one bone alone is sufficient to reconstruct the entire frame of poor humanity—responded, as if having but half caught his meaning: "With acids this dust would be very profitable to agriculture." What followed was lost to me in a biting rejoinder from another source, that cremation had still to find the mathematician who could regulate it properly.

Is there not something more lacking? It was only when the small oblong sarcophagus was enclosed in an oaken casket a trifle larger, and borne by carriers to the vault where it was deposited, that the ceremony seemed to lack solemnity, even sacredness. One lost sight, as it were, of the fact that we were following the remains of a fellow-creature to their last resting-place—which proves, after all, how much depends upon forms. Sentiment, in such matters, is and always will be the sovereign master. Mankind has developed in a familiar poetry the idea of the symbolic rest in the bosom of mother earth, and too many pilgrims cherish this image to accept a scientific disposal of the mortal casing that begins by curtailing the length of the last bed.

LeCocq de Lautreppe.

THE FINE ARTS AT THE PARIS EXPOSITION.

IV.—JULES BRETON, LHERMITTE, JULIEN DUPRÉ, BENJAMIN-CONSTANT — LANDSCAPE PAINTING—CAZIN.

Paris, August 9, 1889.

Jules Breton, the oldest of the painters of peasant life, is represented in the exhibition of works of living artists by ten canvases. One of these is a portrait, another, "The Miner's Daughter," a head of a girl painted in out-door light; the rest are pictures of the farm and the village—two being sketches rather than finished pictures. One of these last is the sketch for his "Twilight in a Hamlet of Finistère," and seems more full and rich in color than the picture sold in New York at the Seney sale. "Young Girls Going to the Procession," a picture of considerable size and similar in subject and in composition to the "First Communicants," which brought such a fantastic price at the Morgan sale, is not a remarkable work. Breton is best seen here in a smaller picture with a single figure, a peasant woman returning from the fields at evening, called "L'Étoile du Berger," a picture recalling his earlier and better manner when this undeniably talented artist thought more of his art for its own sake than he has seemed to do of late.

The influence of the annual Salon is transforming landscape painting in France into the painting of panoramas. With a glorious past, including Corot and Daubigny, Rousseau and Diaz (and even Harpignies and Jules Dupré, though still alive), many of the landscape painters of to-day apparently have no other object in view in their work than to spread out a motive on ten feet of canvas, and draw and model it in monochrome. The drawing is in general excellent, and in this direction there is marked progress in the average of the work; the modelling leaves little to be desired in the way of breadth and solidity. But though the values at first glance look studied, and the pictures have a specious air of truth to nature, we find that it is not truth at all; that there is no air in the pictures, and for the ever-varying modifications of the local color under atmospheric conditions—the influence of sunlight on the hills and trees in the distance, the red and yellow in the lights, the blue in the shadows, for example—there is substituted an unchanging local tint, say a green, which, approaching truth in the foreground, is attenuated in the middle distance, but still remains the same green, is further diluted with a little white and blue fur-

ther off; and if then there remain other parts of the motive that cannot be made to conform to this miserable means for simulating values, there are at hand on the palette convenient mixtures of weak gray or wishy-washy purple. With these the parts are filled in, and swiped together with a facile brush into a semblance of light and air. It is deplorable. I do not believe that it has come to pass from any shirking of difficulties in the beginning, for there is too much honesty in the work in other ways. Most of these landscapes are admirably drawn, many of them show great cleverness in the arrangement of the composition. A few are really fine in this respect. But a landscape painted on an easel canvas is lost in the Salon. It may be a delicate piece of color like a Corot, or a rich one like a Rousseau; it will not be remarked in the flood of big canvases, or, if remarked, it will not show at its true value surrounded by the "noisy" pictures painted up to the highest possible key to stand the glare of the large galleries. So the landscape-painters have gradually made their pictures bigger, and pushed the key higher and higher, until they have arrived at the sort of things we see here in the Champ de Mars.

Distinction and refinement of color on such a scale are impossible; the picture must strike at first glance, and not be killed by its neighbors. Here is a strong, broadly handled canvas by Binet, one of the best of the younger men, called "The Plain"—a wide stretch of country covering a vast meadow in the foreground, one or two villages and clumps of woods in the middle distance, and a long range of hills at the horizon. The sky is rolled up with clouds high above, a great expanse of masses of white and gray. It is exceedingly well done. There is evident study in the drawing of the clouds, in the modelling of the ground, in the way the dark masses of the woods are placed to break up the monotonous horizontal lines of the plain and the hills. Yet how uninteresting it is, after all, and what a small amount of pleasure there is to be got out of such a picture! It is all seen at once, and there is no depth, no delicate blending of a hundred tints into a harmonious whole, no quiet reserve of color, no sober tones here putting in relief the gayer notes there; little more than a dexterous superficiality. To the works of Yon, a man of a great deal of ability; to those of Saïn, Rapin, Dameron, Saintin, Barau, Nozal, Le Poitevin, Joubert, Le Marié des Landelles, Petitjean, Diéterle, Boudot, and others of less talent, these remarks are pertinent. There are others, again, such as Montenard and Gagliardini, who catch the eye in another fashion. These are painters of sunlight. Their process is to force up the colors in the lights with white, opposing other cruder tints, a little lower in value, to set off the most brilliant ones, and exaggerating the shadows. The effect is striking enough, without doubt; but how much truer are some of Guillaumet's pictures, in which the sunlight burns with scorching heat, but where there is air through it all, and not a single discordant note.

Pelouze—the new school shows a marked influence from his work—has not changed either for better or worse. There are ten of his pictures here. No man knows better than he how to paint these big pictures. They are the best of their kind—full of knowledge, vigorously, unhesitatingly painted, marvels of skill, but never rising to the higher qualities of beauty and distinction. He is seen at his best in "Morning in the Woods in Franche-Comté" and "Evening at the Farm," in which the present tendencies of French landscape painting appear in their least unfavorable aspect. In Guillemet, Hanoteau, Bernier, Zuber, in Émile Breton, in Pointelin and Demont, whose works are among those not to be included in the list of scenic pictures, there is much to admire. Guillemet is particularly to be noted, for though he is not exactly a colorist, his pictures have a considerable amount of color quality, and they are anything but superficial. Hanoteau and Bernier made their reputations twenty years ago, and have remained faithful to sound traditions. Of the old school, Jules Dupré and Français, both of whom are represented here, are to be mentioned, principally because their work of to-day is of interest to us from what they have done in the past. Harpignies, a sturdy master of form, a draughtsman such as there are few of, an analyst and a thinker whose work is sure to last, can be studied in eight excellent pictures. He cannot be called a colorist—indeed, he seems to be too much occupied with form to search for color harmonies; but in so far as color is an element in his pictures it is truthful and consistent in all its parts. He never descends to the tricky devices I pointed out as the prevalent evil in so much of the present landscape painting, is always honest and never perfunctory. A composition of a group of naked trees in a picture called "Victim of Winter," is handsome in its elegant simplicity. In "Solitude" and "The Banks of the Loing" are to be found some of the best qualities of the true *paysagiste:* beauty of line, unity of tone, and simplicity of expression. Harpignies has long been a force in the development of landscape painting; much of what is best in it now—good drawing and composition—is traceable to his influence.

Two younger painters of the life of the fields have become prominent in the past ten years, and both are worthy. Lhermitte is the abler man of the two. Julien Dupré is, by comparison, a trifle superficial, and does not seem to be so much in sympathy with his subjects. Lhermitte as a colorist is far from satisfying in his two large pictures shown here, "The Harvest" and "Wine." The picture now in the Metropolitan Museum, called "The Vintage," is infinitely better in this respect. There is research of character, the types are truthful, and the rendering is broad and soberly conceived. What is deplorable is the size of these compositions; the figures are even larger than life. Reduced to a third on an easel canvas, the pictures might be painted with some thought of color harmony. As they are, the painter is not able to do much more than color his figures and their environment in certain tints more or less truthful-looking when viewed in their ensemble, but entirely lacking in the harmonies of local color. The charcoal drawings by this artist to be found in another part of the exhibition are on this account more satisfying, for he is not concerned in them with color at all, and we are not distressed by its insufficiency, as we do not expect it.

Julien Dupré, though he paints his simple subjects on a large scale, too, at times, succeeds better as regards color. It is fresh and bright without much depth, but with considerable variety, and answers the purpose—not much more. His picture of "Milking Time," from the Salon of 1888, and "Haymaking," both large canvases, are good examples of his skill. Both are well drawn and soundly painted, but neither has a breath of art—of that sort of art we find in Millet's work, I mean, where the peasants are real peasants who toil in the fields and look as if they belonged there. There is more of that in Lhermitte, but between him and Millet there is a long gap.

Benjamin-Constant is one of the few men in France to-day who paint a large canvas without forgetting that there is such a thing as color. He is a competent draughtsman as well. In his exhibition here his methods are best exemplified in two works, "Les Chérifas" and the decorative panels for the new Sorbonne. "Les Chérifas," two women in a dimly lighted room hung with heavy stuffs and carpeted with rich rugs, is one of those pictures of life in the Orient with which the painter's name is identified. It is not superficially colored, with glowing notes here and there, without regard to values, as many pictures of these subjects by other painters are. A vast number have been painted by Frenchmen, but only three before Benjamin-Constant have done them so well as to require special mention: Delacroix, Henri Regnault, and Guillaumet. Guillamet, an artist of very great talent who died a few years ago, has perhaps succeeded better than anybody else in reproducing the *couleur locale* of the Orient, and his works are marked by a sobriety of color unusual with painters of these subjects. Benjamin-Constant, while he sometimes uses the Oriental subject, as Delacroix and Regnault did, as a fit theme for the display of puissant color harmonies, also impresses one with a look of truth to the scene itself. In "Les Chérifas" he has apparently tried to be truthful and to produce a color work as well. While it is far from equalling the brilliancy of Delacroix or Regnault in the latter respect, it is yet so good as to make it a very creditable canvas. In the midst of the other big pictures in the galleries where it is hung, huge expanses of dull brown and gray, where the painters seem, after having placed a few figures laid in with conventional tints, to have filled up the rest of the canvas with whatever came handiest in the way of muddy palette scrapings, "Les Chérifas" is remarkable at first glance. Possibly it gains by its surroundings—almost anything with a pretence to real color should; but aside from that it has color quality that deserves recognition of itself without regard to comparisons. In "Les Lettres—L'Académie de Paris—Les Sciences," three vast decorative panels full of figures of heroic size, embracing almost everything from nude or partly draped female figures to doctors in robes of red or yellow or black, we find a distinct determination on the part of the painter to do something more than a composition of figures colored in neutral tints, a convenient way of making a wall decoration which shall not offend by lack of harmony with its surroundings, but which also is sure to be tame unless, as in the case of the work of Puvis de Chavannes, the composition itself is of such beauty and completeness, and the coloration of such delicacy and refinement, as to preclude a desire to see it changed in any way. Benjamin-Constant in this work has painted from a brilliant palette: the primary colors and infinite combinations of them are here laid in in broad, simple masses. It is brilliant, if not distinguished, in the direction of *la grande peinture* at least, even if it does not reach it, and hence commendable. Compared with similar work in the exhibition, where there is no effort to overcome difficulties, but where painters contrive by tricky means to evade them, it is absolutely refreshing.

A young painter of historical subjects, Ernest Bordes, whose success dates from 1884, when he received a third-class medal for a picture, "St. Julien l'Hospitalier," followed by one of the second class in 1886, deserves to be mentioned here for an excellent work, "The Death of Bishop Proetextatus," in which, along with able draughtsmanship and well-studied composition, there is an evident inten-

tion to *paint*, to preserve the equilibrium of values while searching the actual color in each. This has become so rare with the painters of to-day that it is worth noting whenever found, and it is gratifying to find it here and there in the work of the younger men. There is in this fact some hope that what may be included in the general term of historical painting will not fall into the complete decadence that the contemplation of most of the work of this class in the Champ de Mars gives us good cause to expect in the near future.

It is not necessary to study further in detail the work of individuals in the exhibition. The well-known painters I have not already mentioned are here represented by more or less satisfactory specimens of their art. The average is about the same as it was eight or ten years ago. Vollon, Duez, Jean Beraud, Dantan, Adan, Detaille, Le Blant, Renouf, Courtois, Pille, and Commerre are some of the most notable in the mass of contributors. Mme. Demont-Breton, always a conscientious painter, shows distinct progress over her earlier work, and makes a most creditable exhibition. Norbert Goeneutte, whose subjects are similar to those of Beraud—scenes of Paris life; Raffaelli, a man of much talent, but eccentric in his methods, a searcher after character above everything else; Marius Roy, a clever painter of genre; Guinard, whose exhibition consists of but one picture, but that a very good one—a life-size study of a man feeding a calf—are a few more names worth noting. Meissonier, whose best work occupies a place in the Retrospective Exhibition, is here represented by ten canvases—a portion of what he has produced in the last decade. "The Traveller," a man on horseback beating his way along the road in the face of a storm, is the best of these. A portrait of himself, "bricky" in color and dry in *facture*, is notable for the drawing only.

I have purposely left until the last in this review of landscape painting in France at the present day the work of the one man who stands out prominently as the possessor of a perfectly individual talent, and who is, beyond question, one of the greatest artists of our time. Cazin, though he is most properly classed as a landscape-painter, has also a decorative side in his painting, and frequently introduces figures, sometimes even making them the subjects of his pictures, but never treating them as the chief element, and never concentrating the interest in them at the expense of their surroundings. His "Judith—The Departure," "Tobit," and other pictures shown by him in the Champ de Mars contain figures, but they occupy only equal importance with the landscape. They are in it and a part of it, not accessories, like the shepherd under the trees or the man and the horse in the road, introduced in the conventional landscape for the sake of the opportunity to put in an accenting color note, and yet not absorbing the attention as in the works of the peasant painters, where the landscape is subordinated to the figure. It is best expressed by saying that Cazin is a decorative landscape painter. His landscape and his figures are treated as component parts of one harmonious whole, in which every note of color has its proper place and its proper strength. For Cazin is a colorist, a great colorist—not in the sense that Delacroix is, for example; he is far more sensitive and refined than Delacroix. He more nearly resembles Millet, though more diversified. We shall not be able to describe him by comparison with others, for he possesses something that belongs to none. His color schemes are always quiet and reserved; there is never a sharp contrast, nor what is often called an "effective" play of one high note upon its complementary. The contrasts and the counter-play exist, but they are subdued so that they do not attract notice by themselves; they are effective in the best sense of the word because they make themselves felt only in the ensemble. Analysis, in fact, is disagreeable, for Cazin's work is so delicately impressive that it seems like scraping a portrait by Titian to see how it was painted, to seek out the details of his methods. The result, however attained, is infinitely beautiful. It is beautiful in color, in the sustained unity of the atmospheric effect, in truth, in simplicity, in the charm of that real art that depicts nature with a faithful eye and sympathetic brush, and is infused with the loving tenderness of a poetic temperament. Whether it pleases the public, outside of a select few, I do not know—but moderately I imagine, though Cazin's place among his fellow-artists is a high one. In New York, partly owing to the exclusive worship of other gods, and partly because his best work has never been seen there, he does not hold the rank his marvellous talent entitles him to. I trust it may not be long before he is fully known and appreciated. There is scarcely any living painter whose acquaintance is so well worth making.

A NORTHERN SHOOTING AFFAIR.

TO THE EDITOR OF THE NATION:

SIR: That the South does not monopolize the reckless use of firearms, that lax notions concerning such recklessness are not confined to the authorities of Southern communities alone, has been illustrated afresh by an incident that came within my observation last week.

The town of Shamokin is one of the largest in the anthracite region of Pennsylvania, having a contiguous population of from eighteen to twenty thousand. One of its citizens, Tovey by name, came home from work last Thursday evening to find that his wife was at a picnic and that no supper had been prepared for him. When Mrs. Tovey appeared, a quarrel ensued, in which one Shovlin, the wife's brother, took part. It is not certain which of the men first armed himself, but Tovey procured an axe and Shovlin a revolver. In the fracas Shovlin shot at Tovey four times, without other effect than to collect a great crowd and to frighten the target so badly that he tripped on his axe. Shovlin then went to his brother's house, a few blocks distant, and there spent the night. In the morning he found a policeman, went with him to the Council Chamber, and was fined in the sum of five dollars *for shooting within the borough limits.*

One of the Shamokin evening papers had a full account of the affair, but the editor has not a syllable of censure for this gross abuse of power on the part of the town officials. And yet what an absurd distinction to draw with regard to a boundary line! Had Shovlin been considerate enough to take his brother-in-law outside the borough limits, a tedious and inconvenient journey, to shoot at him with his revolver, all would have been well. But to outrage the councilmanic dignity by trying to murder him in the heart of the town was too reprehensible, and a monumental penalty is necessary to deter future meddlers in family quarrels.

LYNCH LAW AND CHRISTIANITY.

TO THE EDITOR OF THE NATION:

SIR: I am sorry to see that the "Southern Pastor" thinks that I have misrepresented him. It seems to me that he must have misrepresented himself and his Christianity; for he says much harder things of himself than any I should ever have dared to write. It is very evident that his "standard of Christianity" and mine do not agree; but this is no place for a religious discussion. However, he says: "If any one that really understands the conditions can suggest a better remedy [than lynch law], no one would welcome it more readily than I." I cannot understand how a minister of "Christ's Gospel" could be obliged to ask any layman for a better remedy than lawless violence for any evil whatsoever. It is astonishing how good people who decry professed Anarchists will at the same time preach Anarchy themselves.

The "Pastor" admits that "the elevation of this barbarism by Christian education is the true method," but adds, "It works a little slowly, and meanwhile must innocence, etc." That is, if a man knows that honesty is the true method of conducting business, but finds "it works a little slowly," he is justified in doing a little stealing to help along the good cause of his fortunes.

In spite of all the "Pastor's" appeal to "the inherent right of self-defence," which, by the way, has been questioned by many Christians, notably the Quakers and the "noble army of martyrs," he misses altogether the main point in dispute, and that is, whether lawless violence is the proper cure for lawless violence. We certainly should not consider a man justifiable who tried to break his child of the habit of swearing by thrashing him and swearing at him during the operation. This "inherent right of self-defence" is too often, in the South, made the excuse for aggressive violence and murder. The reference to "Pinkerton's men" does not help the "Pastor's" argument. The pot should never call the kettle black; it does not help to clean the pot a particle.

I must say finally that I am not a "Northern philanthropist," but a Southerner, born and bred in a slave State, and that my knowledge of Southern chivalry and Southern barbarism has been acquired by personal experience and observation. I regard the characteristic vices of the Southern people as the natural outcome of generations of slavery. Thomas Jefferson has shown that slaveholding not only degrades the slave, but also brutalizes the master. It makes him unreasonable and violent in his temper, ready at all times to resort to force instead of milder and more Christian means. Besides, those who hold or have held slaves come to regard them as a different race of beings, to be governed by different means; and those of the "superior race" are always prone to inflict all manner of barbaric outrages upon their "inferiors," which they would not tolerate a moment if applied to themselves. They utterly fail to see that he who performs or attempts to justify barbaric actions is necessarily a barbarian himself.

WM. SCHUYLER.

WEBSTER GROVES, ME., August 27, 1889.

AMERICAN REPUTATION FOR ILLITERACY.

TO THE EDITOR OF THE NATION:

SIR: I have just seen a letter in one of your July numbers where your correspondent complains of the general belief among Englishmen in American illiteracy. This reminds me of an experience a short time since in St. John's College, Cambridge. We were wandering

about with one of the Fellows, who had been cordial and kindly in his attentions to us. As we entered the beautiful dining-hall, my eye fell on a fine portrait of Wordsworth, and I said, "So, this is Wordsworth's college." "It WAS. Wordsworth is dead," was the prompt though gentle correction.

Now for the other side. Later in the day one of the party was looking over some old coins in a curiosity-shop. He bought a three-penny piece of the time of Charles II. Presently he asked the price of a Jubilee six-pence, and was surprised to be asked three times as much as for his three-pence. He said he thought it would be the other way. "Oh," said the man, "a great many people know about the Queen and the Jubilee. Very few people here know or care anything about Charles II." AMERICAN.

MONT ST. MICHEL, August 18, 1889.

WATER-MARKS.

TO THE EDITOR OF THE NATION:

SIR: In No. 1258 of the *Nation* a reviewer raises a question as to the help afforded by water-marks in fixing the date of publishing of any book. The following may be of interest: I have seen a copy of the Aldine (1497) edition of 'Dictionarium Græcum,' in which there are at least six different marks. Of six consecutive sheets or leaves, two have no marks, while the remaining four have marks totally unlike. In these six sheets there are three, if not four, different kinds or qualities of paper distinguishable. WALTER B. SHEPPARD.

PENN YAN, N. Y., August 24, 1889.

SHORT POSTAGE.

TO THE EDITOR OF THE NATION:

SIR: May I appeal to the charity of the *Nation* for relief from an affliction which, if not grievous, is persistent and useless? I am in more or less continual receipt of letters from unknown friends in America on subjects connected with my letters to the papers or articles on Italian art in the *Century*. Sometimes they are directed to the *Century*, sometimes to Rome, and sometimes to Athens; and generally bearing a two-cent stamp. I have even received a double letter with a two-cent stamp, on which I have had to pay sixteen cents supplementary postage. Sometimes a directed envelope is enclosed with a two-cent stamp affixed. This of course, as any simpleton should know, is wasted. May I notify correspondents that my address is *always and simply* "Rome, Italy"; or, if I should be away from the city, "care of F. M. Handley, Banker," will reach me quicker? I will not, however, any longer notice letters that come to me with a two-cent stamp. Human patience draws the line there. Under no circumstances put *Poste restante* or the address of my apartment, if known, and don't put Esq. after the name.

Yours, with many thanks,

W. J. STILLMAN.

PIEVE DI CADORE, ITALY, August 18, 1889.

A RECTIFICATION.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly permit me to give publicity, through the columns of the *Nation*, to an injustice that has been done me? In my paper on "Iridescent Pottery in Mexico," in the current number of *Harper's Monthly*, I am made to say, "My attention was called by an American visitor to Mexico, some two years ago, to remarkable specimens of iridescent pottery which he had found at Patzcuaro," and later, that I "took up the clue," etc. During Mr. Charles Dudley Warner's visit to Mexico in 1886, I was one day praising to him the strong art instinct of these people, and, in referring to the fact that each section has its own particular style of pottery, whose characteristics readily mark its source, I spoke of the exceeding beauty of an iridescent variety which I had seen in the interior, but whose place of manufacture I knew not. Mr. Warner corrected my phraseology, at first with indulgent superiority, then with some degree of impatience at my insistence, and said: "You may mean highly lustrous pottery, but you cannot mean 'iridescent'; you do not comprehend the true significance of that term; it is out of the question that it be 'iridescent' ware." Then he told me briefly the history of these lustres in Europe.

While I am very ignorant of ceramics, save Mexican varieties, I do believe that I thoroughly understand the exact value of all terms, whose use I may permit myself, of the English language. I was much nettled by Mr. Warner's contradiction, and I assured him that while the ware might be not like that he mentioned, it was surely iridescent, and that I would prove it to him. This was *before* Mr. Warner went to Morelia or Patzcuaro. While he was at Toluca, I found at an Indian fair near Mexico some little jugs of the ware, which I purchased. It chanced that I, with some friends, visited Toluca on the day that Mr. Warner first went to Morelia, he taking the train from which we descended; when we met him on the platform, I laughingly told him that I was ready to make good my "I-told-you-so." On his return from Patzcuaro he brought four or five pieces, miniature cups and goblets, not over two or three inches long, and with barely a trace of the exquisite lustre. I helped him pack them, wrapping them all in a towel for transportation, and I then promised to find and send to him some of the handsome placques of which I had told him.

For over a year I worked hard and constantly to trace this pottery—how hard no one would believe, save those who know the almost insuperable difficulties of obtaining definite or accurate information in Mexico. A few brief lines setting forth these obstacles were eliminated from my paper, like all else tending to show my true part in the matter. Dr. Prime, in his "Introduction" to my paper, says: "Mr. Warner took measures to trace these wares to their origin," and, by implication, that "the result" of those "measures" was my "adventurous journey." The only measure he took was the stimulating, as aforesaid, of my pride and determination by his scepticism, and he had absolutely no other part in the matter. It is true that until Mr. Warner told me I did not know the importance of the beautiful ware, but it is equally true that I first told him, not he me, of its existence.

He knew that I had no resources but the earnings of my pen, yet, notwithstanding all the interest felt by himself and others in obtaining information, no one of them suggested advancing funds to prosecute, and which would have greatly expedited, the discovery. Every penny of the expenses incurred was earned by me by my pen-work, and I have never received any compensation save the usual rates from *Harper's* for my article. I refer to this point only because I think Dr. Prime's wording would give the impression that I was employed to study up the subject. When at last I learned where the pottery was made, I wrote to Mr. Warner, simply as a friend, naming the place and stating my intention to go there shortly. A week or two later I was told that a certain gentleman had gone to the City of Mexico, commissioned by his intimate friend, Mr. Warner, to visit San Felipe and learn the process of making the pottery. I wrote to this gentleman that we might co-operate, but received no answer, nor do I know what truth there was in the rumor of his mission.

A good many people in Mexico had become interested in my sustaining my assertions to Mr. Warner, whose strictures in *Harper's* had aroused some ill-feeling, so that numbers will remember the circumstances as I related them at the time. As soon as I returned from S. Felipe, a railroad employee—I believe he was a conductor—thought he saw profit in the ware, and he exported two car-loads, which he put on sale in the curiosity shops in El Paso, in Santa Fé, in California, and elsewhere. Mr. Warner and Dr. Prime meanwhile wrote to me, saying that they would gladly repay me the costs if I would send them some specimens. I had bought at San Felipe a large crate of the ware, and had it carried on an Indian's back to Guanaxuato, where I repacked it, and shipped it by Wells, Fargo & Co. to Mexico. The express messenger stowed it under a heap of heavy boxes, and much of it was broken. I at once procured more through the agency of friends, and, to insure its safety, carried it in a hand-basket all the way to El Paso, whence I sent to Mr. Warner and Dr. Prime a boxful each, as a present. In view of these circumstances, I think it unfair and ungracious that Dr. Prime should say, describing those pieces, "They had been discovered by Mr. Charles Dudley Warner in a shop in a Mexican city." The notes of the express company, the evidence of parties who saw me pack the ware and ship it from El Paso, and Dr. Prime's own letter of acknowledgment of the box, which he received February 7, 1888 (not "two years ago"), will prove this.

My first account of the expedition was not received by Dr. Prime, to whom Mr. Warner had asked me to send it, and I was out of postal communication much of the time for several months after posting it, being banished to the hot coast lands by the physicians, who pronounced me dying from lung troubles, principally due to exposure incurred on the San Felipe trip. This delayed my paper's appearance nearly a year. I had written also a humorous account of the trip, setting forth how the scepticism of Mr. Warner led up to it; a copy was sent to Mr. Warner of this sketch, which appeared in a leading journal of March 11, 1888.

I am at a loss to know why Dr. Prime should have taken such liberties with my manuscript. Surely Mr. Warner would not prompt or countenance such misrepresentations; it is in naught derogatory to him that he should have been wrong and I right, in a matter relating to a country that he had known but a few days, and I familiarly from childhood. But if Mr. Warner had seen fit to take exceptions to my wording, would not the courteous and just course have been to advise me of such objections, making the employment of the paper contingent upon my optional modification of the phrases which, for the sake of argument, I will say he might have considered vainglorious at his expense? But, no! Mr. Warner himself pronounced the paper "good" and available in a letter which I have before me, and in the course of several weeks that they (he and Dr. Prime) had my paper, awaiting my forwarding of the names of the substances I had sent to be analyzed, they made not the slightest suggestion of such changes, to which I most certainly

would have not consented, but would have recalled my paper, without filling the blanks in question.

It may be said that the changes are editorial. But, as a point of delicacy, Mr. Warner could not countenance, in an office where he fills an editorial position, alterations which rob me of my just dues to redound to his credit. And although one, to be sure, knows that the manuscripts one offers to a periodical are subject, if accepted, to editing, this relates to matters of form only, and does not authorize the interpolation in a writer's paper, and over his name, of sentiments or statements diametrically the opposite of those he has expressed. Again, the editor of *Harper's* cannot be responsible for the statements so utterly at variance with the facts, in Dr. Prime's introduction to my misused paper. I have written to Mr. Warner, asking him, as the person who put me in communication with Dr. Prime, to see that this wrong is righted ; but, lest his absence from home, or other cause, prevent or postpone such act of justice, I appeal to the press to make known the facts, which I declare, by all that I hold most sacred, are as I have stated. Also, as in my isolated place of dwelling I fail to see the current news regularly, I beg that some lover of justice will forward to me anything which may be published in this connection, that my cause may not go by default, as must be if my silence and failure to reply should make me appear to acquiesce in opposing statements. Y. H. Addis.

Chihuahua, Mexico, August 7, 1889.

Notes.

Charles Scribner's Sons publish this month Mr. Robert Louis Stevenson's 'Master of Ballantrae,' and announce besides the second volume of Champlin and Apthorp's 'Cyclopædia of Music and Musicians'; 'Whither? A Theological Question for the Times,' by the Rev. C. A. Briggs; 'Foreign Missions: Their Place in the Pastorate, in Prayer, in Conferences,' by the Rev. Augustus C. Thompson; and 'A Collection of the Letters of Dickens, 1833-1870.' Scribner & Welford will shortly issue 'The Memoir of Count Carlo Gozzi,' translated by John Addington Symonds, with essays of his own on Italian impromptu, comedy, etc.

Franklin's Autobiography is to be printed once more in the Nuggets Series of the Messrs. Putnam, and edited once more by Mr. John Bigelow.

Mr. John T. Morse, jr.'s, biography of Franklin for the American Statesmen Series will appear immediately. 'Two Coronets,' a novel by Miss Mary Agnes Tincker, is also in the press of Houghton, Mifflin & Co.

'Jacob and Japheth; or, Bible Growth and Religion from Abraham to Daniel,' is in the press of T. Whittaker.

An illustrated translation of W. Heimburg's new novel, 'Lora, the Major's Daughter,' is announced for immediate publication by Worthington Co.

'In and Around Berlin,' by an American lady, Mrs. Norton, will shortly appear with the imprint of A. C. McClurg & Co., Chicago.

A translation by Mrs. Wilson of Victor Tissot's 'Unknown Switzerland' comes to us from A. D. F. Randolph & Co. Graphic, vivacious, enthusiastic, it will serve as a vivid reminder of past pleasure to those who have witnessed the scenes it describes, and to inspire the untravelled with desire to see for themselves. Stories, anecdotes, accounts of manners and customs, and fragments of history diversify the diligence-travel and mountain-climbing. Our author detests the large hotels, the dress-coat waiter, Cook's tourists, the mountain railways; and, as the book's name implies, he deals largely with the less commonplace experiences in Swiss sight-seeing. We hear, for instance, much of La Gruyère, very little or nothing of Chamouni or the Rigi. The faults of the translation interfere but slightly with the pleasurableness of the book.

The appearance of the twenty-second annual issue of Poor's indispensable 'Railroad Manual,' for 1889, calls for no remark that has not been repeated twenty times. The preface will be found very instructive, especially on its retrospective side, cognizance being taken of the republic's having begun its second century this year. A population of 4,000,000 in 1789 has grown to 65,000,000, and, in the sixty years ending in 1888, has built for itself 156,082 miles of railroad, at a rate since 1865 of 5,260 miles per annum. Mr. Poor estimates the number of railroad employees at six per mile (say 936,000); the number of employees in affiliated and dependent industries at five per mile (780,000). These, with their families, make a total of 8,850,000, or nearly a seventh of the population. One can readily imagine the influence of this interest on legislation in favor of free exchange and against protection, could it ever be consciously exerted in this direction. But we well know that ignorance and selfishness abound even in the highest walks of railroading as of manufactures.

Two or three medical books of the present year have a general interest. Dr. J. L. Corning's 'Treatise on Headache and Neuralgia' (E. B. Treat) is from the pen of a prolific writer upon neurology. It gives a layman the impression that the author must know a good deal about a subject upon which he writes so much; but the frequent technicalities deny to such a reader much direct benefit. To the profession it would probably be more acceptable if less diffuse. The index is not as complete as a book intended for reference requires. The same publisher sends us a revised edition of the late Dr. Beard's 'Nervous Exhaustion,' edited by Dr. Rockwell, a suggestive book by an original man. Its style is more discursive than directly didactic, and the author's enthusiasm colors some of the statements. Dr. Beard's enthusiasm, however, did much to stimulate attention to functional nervous diseases. In certain social circles, or planes, it is confidently believed that the doctors take out damaged eyes, and, after repair, replace them, and that silver plates inserted in the skull are the correct finish for trepanning. Achievements nearly as startling are becoming actual every-day affairs in surgery, as we are reminded by a reprint of Dr. De Forest Willard's paper 'On Osteotomy for Anterior Curves of the Legs' (*Med. and Surg. Reporter*). The plain English of osteotomy is bone-cutting. Children whose legs utterly fail as locomotive agents by reason of eccentric and numerous curves, have them rectified and made useful by skilful treatment, which in this case means wonderful fractures and cuttings of bone. The author frankly remarks that he has "never ventured beyond six osteotomies at one time," although he adds, "as high as ten have been performed." The degraded physical life that has resulted in such travesties of limbs is frightful to contemplate, while the courage and tender cruelty by which this remarkable mechanical reformation is accomplished are worthy of all praise.

Seldomer than one could wish does one find in the *Magazine of American History* substantial contributions to knowledge like Mr. Robert Stiles's article in the September number, "Lincoln's Restoration Policy for Virginia." Messrs. Hay and Nicolay should be thankful for it when their narrative reaches this point—so near the end—of President Lincoln's career. Mr. Stiles, touching the famous interview with Judge Campbell, on board Admiral Porter's flagship below Richmond on April 5, 1865, quotes the Admiral's 'Incidents of the Civil War' and Grant's 'Memoirs,' which contradict each other as to Porter's being present, but agree in stating that the President, then and there, gave Gen. Weitzel an order to permit the Legislature of Virginia to meet at once for the purpose of bringing the State back into the Union. Admiral Porter also represents himself to have quickly changed Mr. Lincoln's mind, and to have pursued and recalled the order. Mr. Stiles proves, as we think, that this order was sent subsequently from City Point by the President. But his main contention is, that Mr. Lincoln was the author and sponsor of the call on April 11 for a meeting of the General Assembly, and that only on the 13th did he, in Washington, at Secretary Stanton's instance, change his mind and with his own hand prohibit the meeting. Gen. Grant represents this countermanding to have been done independently by the Secretary while the President was still in the neighborhood of Richmond.

The "instantaneous photograph" and "process" engraving seem to have been foreordained for recording what it is the fashion to call the "origins" of State-founding like that of Oklahoma. Those who wish to study the physiognomy of an American settlement in the act, so to speak, will do well to read Mr. Hamilton S. Wicks's article on "The Opening of Oklahoma" in the *Cosmopolitan* for September. The pictures, with dates affixed, tell almost the whole story.

The *Portfolio* for August (Macmillan) has a certain uniformity of contents as helping to a better knowledge and appreciation of three artists, viz., an English sculptor of to-day, E. Roscoe Mullins, an English engraver of the last century, William Woollett, and the German naturalist and animal designer, Joseph Wolf. Examples of the work of each are given. Mr. Mullins's performance has already been so considerable that Mr. Walter Armstrong's introduction of him to the public would appear almost superfluous. Mr. Armstrong is an interested admirer, but by no means a thick-and-thin eulogist. Incidentally he has much to say in praise of a recent provincial foundation, the Harris Museum, at Preston, for which Mr. Mullins sculptured the pediment. The building contains a library, a museum, and a picture-gallery, and seems well worth a visit from rich Americans who have not yet made their wills.

At the last meeting of the American Library Association, Miss Mary S. Cutler of the New York State Library presented the results of an inquiry into the practice of libraries having 10,000 volumes and upwards as to Sunday opening. Miss Cutler is a decided advocate of this practice, but a very fair and temperate one, and, as she wishes to pursue the subject further, she "will gratefully welcome any bit of experience throwing new light upon it," pro or con. Out of 59 college libraries heard from, as many as 12 are open on Sunday; only 3 out of 11 theological-seminary libraries. In Mt. Holyoke Seminary and College, only religious books may be taken out.

The annual report just published by the Trustees of the Art Institute of Chicago tells of their mature deliberation last summer, without opposition from any quarter, to open the Museum free to the public on Sunday, in addi-

tion to the free Saturday. This step "has appeared to justify itself from the beginning." In March last the number of visitors was 6,616. The cost of the opening has been $400 per annum.

Under the unexplained name "The Kyrle Society," a number of persons started twelve years ago a movement "to bring beauty home to the people." They confine their ministration to London alone, and this with the less regret because it is in London that beauty is most needed, and further "that the refusal of the London Society to undertake work at a distance often stimulates an outlying district to start a Kyrle Society of its own." There are already eight or nine provincial societies of this sort, it appears. The original society has four branches devoted to the four objects: (a) of providing and laying out for public use open spaces in towns; (b) decorating with pictures and otherwise hospitals, workmen's clubs, and parish rooms; (c) giving musical performances; and (d) distributing literature. The members of the society work at these tasks gratuitously, and therefore the money cost of its doings is but small. Nor are regular fixed dues exacted, but any one by contributing in money or in labor becomes a member for the year. Moreover, all its tendency being unsectarian, church buildings have to be eschewed; but there are mentioned as having been taken in hand by the Decorative Committee during 1888, "a Roman Catholic Boys' Club, a temperance hall, a Wesleyan mission-room, a Girls' Recreation-room in charge of the All-Hallows Sisters, and another managed by two deaconesses." We extract this information from the 'Transactions of the National Association for the Advancement of Art and its Applications to Industry,' a volume lately reviewed in these columns, and the matter seems worthy of the consideration of Americans alike in cities and in country towns.

The *Real Academia de la Historia* of Madrid proposes a worthy celebration of the Columbus centennial by offering prizes of 30,000 and 15,000 pesetas (about $6,000 and $3,000) for the best works on the discoveries of the Portuguese and Spaniards from the time of Prince Henry the Navigator, and the social, political, and economical results following upon them. Works written in Spanish, French, English, German, and Italian will be considered, and the successful authors will receive, in addition to the money, 500 copies of their books, which will be printed by the Academy. The tribunal will comprise the diplomatic representatives in Spain of any country presenting a work in the competition, within the time, which is limited to January 1, 1892. Any of our scholars desiring further information on the subject can address the secretaries of the Academy, Señores Juan Valera and Juan F. Riaño.

—In *Scribner's*, Mr. Andrew Lang takes up with some asperity the cause of Alexandre Dumas, in an essay which, though of little critical value, is written with even more spirit and cleverness than one confidently expects in this critic's defence of his own favorites. Romantic literature is really the thing at stake in the discussion, though Dumas rather than Sir Walter is chosen for the topic, and in more than one vehement passage the attack is pressed upon the unnamed but easily discerned American novelist who is the champion of "the school of the future"—of realism without any disguises. Mr. Lang's paper does not attempt more than the avowal of his own taste in fiction, and his faith that he is one of a multitude of witnesses to the immortality of fiction as it was; but it is entertaining and tonic. It is, moreover, a pleasure to see a literary paper in the great magazines of this city, since their inattention to literature, except on special occasions, is so marked a characteristic. In the railroad series we have this month an extremely well-managed article upon Safety Appliances; and a second special article is devoted to the subject of the "Small Arms of European Armies," in which the quality of our own armament is much scoffed at. We should notice, also, the beginning of a novel by Harold Frederic, which opens in the Mohawk Valley in 1757, and promises to be an adventurous story laid in an interesting period and country.

—The *Century* opens with one of Mr. Hamilton Gibson's ever welcome illustrated articles on the delicate things of nature. In this case it is the butterflies as "winged botanists" that he employs pen and pencil on, and with his usual success in both. Mr. Wores's pictures in Japan are also noticeable for their effects as engraved, and illustrate the interest of an artist in that country as plainly on the æsthetic side as his agreeable text records the impression he received of the people. The third fully illustrated paper is upon the subject of the Pharaoh of the Exodus, whom Mr. Paine finds in King Menephtah. His argument is very learned and exhaustive, and involves the telling of a very interesting piece of Egyptian history, together with the tragedy which there was in the slaying of the Pharaoh's only son, Setî Menephtah, by the angel of the Lord in his passage over Egypt. A remarkably complete series of cuts informs us as completely as is possible of the features and figure of the king and of his heir in whom his line came to an end. A paper of special interest to students of Napoleon consists of some unpublished letters of English officers, and a diary kept by one of them on the voyage to St. Helena, in which the conversation and trivial acts of the ex-Emperor are closely noted. Mr. Kennan tells the history of the Kara prison, for the misery of which his earlier papers have prepared us without making the story any the less revolting now that it is read in full. Masaccio is the subject of Mr. Cole's Italian engraving—an admirable group from the fresco of the Tribute Money at Florence; and Mr. Stillman takes the occasion to define again realism and naturalism in art. A spirited war-poem by Mr. Roche also deserves mention.

— Alike to those who grieve or rage over the word *reliable*, and to those who contemplate it with equanimity, the opinion touching it of the chief editor of the great English Dictionary now in course of publication will be of interest. Dr. Murray, as might have been expected, maintains that *reliable* is "good, useful, well-formed, and ancient"; thus accepting the character of it demonstrated again and again by Dr. Fitzedward Hall, especially in what his endorser calls "his scholarly and exhaustive treatise, 'On English Adjectives in *-able*.'" The incisive winding-up of Dr. Murray's defence of the expression is in these terms (*Notes and Queries* for August 17):

"When will people learn that the history of words, as of anything else, can be learned only by putting one's self in the position of a learner, and ought not to be invented to give support to pet prejudices or aversions? Let a man who has a chronic antipathy to *reliable* say frankly, 'I know nothing about the history of this word, and I care less; but its color irritates me and drives me furious.' We should then know where we were, and keep out of his way, recognizing that the case was one not for the etymologist or lexicographer, but for the pathologist."

—Apropos of our articles on Mme. de Staël, particularly as a conversationist, a Western correspondent writes:

"In 1857, introduced at Sunnyside as a friend of Commissioner Ellsworth, I enjoyed an hour's talk with Washington Irving. It will be remembered that it was with Ellsworth that Irving made the tour to the Rockies in 1832 which he commemorated in his 'Tour on the Prairies.' He recalled with special pleasure his crossing a river, tied up in a skin bag that closed around his neck, and was held upright by a swimming Indian, as Irving could not swim. But, as I had been an Italian traveller, he soon began to talk of his visit to Italy, about 1805, when he had just attained his majority. In Rome the chief reunion of strangers was at the palace of Baron [William] von Humboldt, then Prussian Minister Resident, and easily first among the literati. His residence was in the Trastevere, on the right of the street leading from the bridge of St. Angelo to St. Peter's. Mme. de Staël was then in Rome, and just inspired with 'Corinne,' the culmination of her genius. She was seldom absent from Humboldt's conversazioni, and was the observed of all observers. What Irving most vividly recalled about these gatherings was that De Staël was their uncrowned queen. She was already in the afternoon of her days, and few ladies there present were so plain-looking, but her passing pleasing tongue always drew listeners swarming around her. It seemed that the young and beautiful ladies must be envious as they saw themselves deserted by all men of head or heart for one who had no visible charms."

—Dr. Giuseppe Pitrè of Palermo is rapidly bringing to a successful termination his gigantic enterprise of illustrating the life of the Sicilian people in all its ramifications. We have already noticed his collections of Sicilian popular songs, tales, proverbs, festivals, and children's games. To these fourteen stout volumes he has just added four which are perhaps of even greater interest than their predecessors. They are devoted to uses, customs, beliefs, and prejudices ('Biblioteca delle Tradizioni popolari siciliane,' vols. xiv-xvii. Palermo: C. Clausen), and offer a rich mine for the student of superstitions. The first volume contains two extensive monographs, one upon the carnival and the historical development of its celebration, and the other upon the survival of Carlovingian traditions among the people. The latter is of the greatest value to the student of the mediæval epics of the cycle of Charlemagne, and reveals popular interest which is amazing. In 1885 there were in Palermo no less than nine permanent puppet shows devoted exclusively to the representation of plays from the Carlovingian epics. In 1883 there were in the rest of the island sixteen such shows. To these must be added the professional story-tellers, one of whom requires sixty days to exhaust his repertory. The professional singer of these epics is now found only in Naples. The Carlovingian traditions also survive in many local legends. It is worth noting that traditions of the Arthurian cycle are almost entirely wanting, an additional proof of the courtly and literary nature of this cycle. The first volume also contains articles on itinerant musicians and dances, cries of street venders, dresses, and household utensils, customs of the workers in the sulphur mines and of sailors and fishermen.

—The second volume is devoted to the various customs connected with marriage, birth, death, the relation contracted by godparents ("il comparatico"), and the mysterious Sicilian institutions of the *mafia* and *omertà*. The latter (meaning "manliness," from Lat. *homo*) is the sentiment of independence of social laws, and the solution of all controversies by violence or by the arbitration of the most prominent representatives of the *omertà* in the neighborhood. In other words, the *omertà* is precisely the same spirit which prevails to such an

alarming extent in our own Southern States. The *mafia* (the origin of which is doubtful) is harder to define, and does not seem to differ essentially from the *omertà*, although by some it is made a synonym of brigandage and organized theft (*camorra* and *malandrinaggio*). Other articles in this volume treat of gestures (we notice that Dr. Pitrè frequently cites our own Garrick Mallery), nicknames, imprecations, oaths, and greetings. The third volume is devoted to customs, superstitions, proverbs, etc., connected with agriculture, botany, zoology, etc., and contains in its five hundred pages a mine of material for the student of comparative mythology. The fourth volume is perhaps the most remarkable of all from the last-named standpoint on account of an extensive monograph of over two hundred pages upon supernatural and wonderful beings. We can now only call the attention of those interested in the history of witchcraft, etc., to this remarkable article. The remaining chapters are devoted to lucky and unlucky persons and things, buried treasures, uses and beliefs of children, and miscellaneous beliefs and superstitions. In the chapter on lucky and unlucky persons and things some astonishing details are given in regard to the lottery in Italy. In 1884 232,532,882 lottery tickets were sold, about eight and one-third to each inhabitant of the kingdom. A Neapolitan buys on an average fourteen and a half; a Sicilian about the same; a Venetian twelve; a Tuscan and a Roman over seven; a Lombard, a Modenese, and a Ligurian, a little over four; an Umbrian and an inhabitant of the Marches, hardly one and a half. What a story these figures tell!

—To the fourth volume are appended a glossary and an excellent index, and the value of the work is greatly enhanced by the admirable bibliographical notes which follow each chapter or article. Pitrè's great work will be completed by a nineteenth volume (now in the press) on popular medicine. It is impossible to speak too highly of this remarkable achievement, the like of which no other country can show, and we are lost in amazement when we reflect that it is the work of one man, a practising physician of narrow means. May he find his reward in the gratitude and remembrance not only of his countrymen, but of the students of popular customs and literature all over the world. Nor should we forget the enlightened publishers who have made this national monument possible.

NATURAL INHERITANCE.

Natural Inheritance. By Francis Galton, F.R.S. Macmillan & Co. 1889.

Mr. Galton's book has a twofold interest, viz., that of the questions under discussion and the results to which his inquiry points, and that of the methods employed in the investigation. The author's own keen pleasure in his work seems to be almost equally divided between these two aspects of it, though the novelty of the pursuit and the mysterious and alluring harmony of mathematical processes give a zest and attractiveness to the points of pure method, which the author at several places acknowledges with delightful frankness, and which cannot be paralleled by the satisfaction which the substantial results of the inquiry afford. Mr. Galton is not a professed mathematician, and one must admire the conscientious care, the courage, and the skill with which he has employed the refined methods of the theory of probability (or, more specifically, the theory of error) in interpreting his statistical data. The schemes adopted for tracking out the currents of heredity which underlie these given facts, the discrimination and care with which the details of these schemes are worked out, and the painstaking elucidation of the methods so as to bring them within the grasp of the non-mathematical reader (provided, alas! that he "brace himself to a sustained effort")—all these are alike worthy of the highest praise.

The point about which everything centres in the main portion of the book is the question of regression. Given a parent possessing some attribute in an exceptional degree, are the children of this parent likely to possess it in the same or a higher degree; or, on the other hand, are they likely to possess it in a lower degree? In other words, is there likely to be a regression towards the general level of the race? Mr. Galton not only answers this question in the affirmative, but, surprising as it may seem, gives a numerical measure of the degree of this regression, which applies to all those attributes in human beings which he has investigated.

But a difficulty confronts us at the very threshold. It is not only one, but two parents that are concerned in this matter; and their variations from the standard of the race—as regards the attribute under discussion—may be either alike or opposite, and they may be of different degrees of intensity. Must we concern ourselves with the status of each parent, or is it sufficient to consider the aggregate or average of the two? Mr. Galton satisfied himself by an argument which we have not space to present, but which it will be necessary to mention again further on, that the average character of the two parents is all that need be taken into account: so that, for example, the children of a very tall father and a mother of middle height are likely to present the same peculiarities of stature as do the children of a pair both of whom are moderately tall. And very fortunate it is for Mr. Galton's purposes that such should be the case; for it is plain that a very far greater mass of statistics would be required to reach conclusions of any trustworthiness if every important difference in the combination of the two parents required separate classification and discussion.

In the above illustration we have used stature as the attribute under consideration; in Mr. Galton's book by far the longest and most important discussion is that of the data of stature, these being, for a variety of reasons, best suited to the purpose. And here a minor point arises, which, however, is very easily disposed of. Since the standard height of women is different from that of men, a vexatious complexity would continually present itself in the discussion were it not obviated by the device of enlarging all the female measures in the proportion in which the average male height exceeds the average female height. This is accomplished by adding eight one-hundredths to the height of each female, or, roughly, one inch for every foot. The height of the female, thus increased, Mr. Galton calls her "transmuted" height, and the introduction of these transmuted females obliterates the question of sex in the remainder of the discussion, the average male height being henceforth the sole standard. The height obtained by taking the average of that of the father and that of the transmuted mother, gives the stature of a fictitious being very appropriately denominated the Mid-Parent. Now, Mr. Galton finds from a large array of figures, and verifies in an ingenious variety of ways, that on the average the deviation of a child from the standard height is two-thirds the deviation of its mid-parent. This is the numerical determination above alluded to. Thus, the mean stature of the population with which Mr. Galton is dealing being 68¼ inches, a mid-parent whose height is 71¼ inches will usually have children whose mean height (female heights being transmuted, of course) is 70¼ inches. Mr. Galton expresses this fact by saying that in the matter of stature the "regression" from mid-parent to child is two-thirds. It would have been more in accordance with mathematical and physical usage in analogous matters to call this fraction the "coefficient of regression," or "factor of regression"; a "regression" of two-thirds suggests the idea that two-thirds of the deviation is lost, rather than that two-thirds is retained.

It will be well to say a word here as to the reasons why this phenomenon of regression might be expected *a priori* to take place. Two such reasons may be given, both of which are but lightly touched on by Galton, as indeed, in the present state of knowledge, they must be. The first is that unless such a tendency to regression existed, deviations from the original type of the race would rapidly become more and more exaggerated, a state of things which is in general contradictory to the doctrine of organic stability—a doctrine which is somewhat vaguely but very suggestively discussed in the introductory part of Mr. Galton's book. While this reason rests upon a final cause for regression, the second reason points to an efficient cause of that phenomenon. As Mr. Galton puts it (p. 104): "The child inherits partly from his parents, partly from his ancestry. In every population that intermarries freely, when the genealogy of any man is traced far backwards, his ancestry will be found to consist of such varied elements that they are indistinguishable from a sample taken at haphazard from the general population." The point becomes plainer if we make use of the term "latent elements," which Mr. Galton employs elsewhere in the discussion of this matter. It is impossible, namely, for the offspring of two parents actually to present in his own person all the characteristics of them both; some of the physiological elements which determine these personal characteristics are transmitted to the offspring, and are capable of being further transmitted to his descendants, though not manifesting themselves in his own personal development. Now, since a given pair of individuals possess in their constitution such "latent elements," representing in a greater or less degree an indefinite number of preceding generations, their children's characteristics will be in some wise compounded of the visible characteristics of the parent pair and of the characteristics of this near and remote ancestry; and hence, from the consideration adduced in the foregoing quotation, there will be a tendency to regression towards the general type of the race.

To go back: we have seen that when the mid-parent's stature exceeds the standard by three inches, the child's stature may be expected to exceed the standard by two inches; the child's *peculiarity*—its deviation from the average—may be expected to be two-thirds the peculiarity of the mid-parent. But let us reverse the question: given a man who is taller than the average, what may we infer as to his mid-parent? The answer is not at all what one might at first blush give; it is not by any means true that the probabilities are that the mid-parent's stature will show an excess over the average three-halves as great as that of the child. Quite the contrary: though it is true that, given a tall mid-parent, the child is apt to be less tall than the mid-parent, it is also true that given a tall child, the mid-parent is apt to be less tall than the child. Though the child is apt to be more mediocre than the parent, it

is still true that the parent is apt to be more mediocre than the child. The explanation of this seeming paradox is very simple: given that a parent is exceptional, it is true that the child is apt to be less exceptional; but given that a child is exceptional, this may be due either to its parents being equally or more exceptional, or to the child being an exceptional child of comparatively mediocre parents. Now, mediocrity is so extremely preponderant in numbers, the number of people who are near the average is so very much greater than that of people who differ from the average in a marked degree, that in spite of the chances being against a *given* mediocre pair giving rise to exceptional offspring, the whole great mass of mediocre people will furnish among them a greater number of exceptional children than will the small body of exceptional parents.

There is thus regression from mid-parent to child, and also regression from child to mid-parent; and in the same sense in which the former is measured by the fraction two-thirds, Mr. Galton finds that the latter is measured by the fraction one-third. So that, in a population whose average height is 68¼ inches, if the height of the mid-parent is 71¼ inches, the safest guess for the height of the child is 70¼ inches; while if the height of the child is 71¼ inches, the safest guess for the height of the mid-parent is 69¼ inches. Before leaving this point, we may be permitted to quote this comment of Galton's on its significance (p. 106):

"The law of Regression tells heavily against the full hereditary transmission of any gift. Only a few out of many children would be likely to differ from mediocrity so widely as their Mid-Parent, and still fewer would differ as widely as the more exceptional of the two Parents. The more bountifully the Parent is gifted by nature, the more rare will be his good fortune if he begets a son who is as richly endowed as himself, and still more so if he has a son who is endowed yet more largely. But the law is even-handed: it levies an equal succession-tax on the transmission of badness as of goodness. If it discourages the extravagant hopes of a gifted parent that his children will inherit all his powers, it no less discountenances extravagant fears that they will inherit all his weakness and disease.

"It must be clearly understood that there is nothing in these statements to invalidate the general doctrine that the children of a gifted pair are much more likely to be gifted than the children of a mediocre pair. They merely express the fact that the ablest of all the children of a few gifted pairs is not likely to be as gifted as the ablest of all the children of a very great many mediocre pairs."

The two foregoing determinations—of "filial regression" and "mid-parental regression" respectively—suffice to give an idea of the nature of the determinations which Mr. Galton has undertaken to make, and upon which he has expended no less skill in the marshalling and discussion of his facts than patience and energy in their collection. We regret very much that we can here give no idea of his method of determining fraternal regression—or rather methods, for several distinct methods were employed, the point being one of peculiar difficulty; and the close agreement of the results of these methods is gratifying evidence of the soundness of the work. Suffice it to say that, by means of these three factors of regression, Mr. Galton proceeds to compute the extent to which a peculiarity possessed by a relative in any degree—uncle, cousin, etc.—may be expected to present itself in a proposed individual. Thus an individual may be expected to possess one-third of a known peculiarity of either parent; two-thirds that of a brother, two twenty-sevenths that of a cousin, and so on. So that if the degree of resemblance to be expected in personal peculiarities be accepted as a measure of nearness of kinship, a man's brother is twice as nearly related to him as his father is, and nine times as nearly as his cousin is.

The determinations of the factors of regression were all made from the data of stature, these being far richer and better adapted to the purpose than any others at the author's disposal. Perhaps the most interesting portion of the book is the application of the results thus obtained to the statistics of eye-color. It is, of course, quite conceivable that while there is a tendency to regression in respect of stature, there may be none or there may be a different degree of regression in respect to other attributes. But in the matter of eye-color, Mr. Galton, adopting the hypothesis that the same ratios applied there as in the case of stature, proceeded to test it as follows: Taking the statistics of three successive generations of a large number of families, he applied the hypothesis to the figures of the two older generations, calculating from them what the statistics of the last generation should be. The striking accordance of the results thus obtained—not only in large aggregates, but in numerous subdivisions—with the actual statistics of the last generation, seems to be conclusive evidence of the general correctness of the supposition that the factors of regression found for stature apply also to eye-color; and, of course, the trustworthiness of the original conclusion is itself greatly reinforced by this circumstance.

As it is not by any means obvious how peculiarities of eye-color can be made the subject of numerical investigation of this sort, a few words on this point are necessary. The scheme adopted by Mr. Galton is as follows: Most eye-colors can be distinctly classed as either light or dark; there is, indeed, an intermediate variety, which may be sufficiently indicated by the name hazel; these Mr. Galton distributes between light and dark in a satisfactory manner. Now, in all three of the generations studied by Mr. Galton, there was approximately the same proportion of light-colored to dark-colored eyes; and he measured the deviation from the average in a given family or group of families by the variation from this proportion which it presented.

To give some idea of the trustworthiness of the calculations, we shall cite a single example. There were in all 183 children whose two parents and four grandparents were all light-eyed. By Galton's formulæ there ought to be found among these 183 children 172 light-eyed ones; the actual number of light-eyed children was 174. The agreement in this case is somewhat more marked than usual; but it is striking throughout, and, as above intimated, is rendered much more remarkable by the number of classes in which it holds. In constructing his formula, however, Mr. Galton commits a curious error, which seems of sufficient interest to justify some exposition of it. He points out that the degree in which the child exhibits its parent's peculiarity is not a correct measure of the parent's own separate contribution to the child's peculiarity; for the parent's peculiarity implies (in the average of cases) a certain amount, though a less amount, of the peculiarity in the parent's progenitors; and it thus becomes a question how much of the child's peculiarity is really due to that of the parent, and how much must be ascribed to more remote ancestry. The fraction ⅔ was very well, as long as we knew nothing about grandparents; but when these are also known, we have to attribute to them a certain weight, and to the parents taken by themselves a correspondingly diminished weight. Now, there is no absolute method of deductively determining what the diminution should be, and Mr. Galton says that there are two limiting mathematical hypotheses which may be made, and by which the required fraction may be deduced. By one of these the fraction becomes ⅘, by the other $\frac{8}{11}$; and, with the true British instinct for compromise, Mr. Galton adopts ½ as the value, this being almost exactly midway between the above two fractions. Nor would this proceeding be other than wise, were it not for the circumstance that throughout the applications Mr. Galton works on the second of the hypotheses exclusively, and therefore ought obviously to have adhered to that hypothesis in the determination of his fraction. This would have given $\frac{6}{11}$ as the mid-parental contribution to the child's peculiarity, when deduction has been made for the contribution of the remoter ancestry, while Mr. Galton uses ½; and we may add that a recalculation of the eye-color table on this basis shows a somewhat closer agreement with the facts than is shown by Mr. Galton's table.

We have left to the last the mention of a criticism which may prove to impair the biological value of Mr. Galton's work, though it would leave the interest, both of his methods and his results, almost intact. This is the objection that has been made by Prof. W. K. Brooks to the inference of regression from such observations as those made by Mr. Galton on human stature. The objection is twofold. In the first place, Prof. Brooks insists very strongly on the distinction between inherited and non-inherited peculiarities. Peculiarities are sometimes due to accidents or influences having an external origin; and there is probably no more interesting or important unsettled question relating to heredity than the question whether such peculiarities may be inherited. Now, Prof. Brooks thinks that if Galton had eliminated cases of this kind, he might have found very different results, and no such tendency to regression as his figures now show. We cannot regard this point as having much force: first, because these accidental influences are as likely to have diminished as to have increased the parent's deviation from the average (for it must be remembered that Galton's cases were not picked cases of extraordinary stature, but a promiscuous lot), and thus their existence would not seriously affect the average result; and secondly, because the consideration of earlier ancestors forms, as appears above, part of Galton's theory.

Prof. Brooks's other point has reference to the similarity or diversity of the two parents, a difficulty alluded to in the early part of this article. Apart from the mere net resemblance in stature, Prof. Brooks insists that we ought to take account of resemblance in the numerous separate elements which together determine stature; and he thinks that "if Galton had studied by themselves the cases where the parents were alike in stature, both short or both tall, and had picked out from among these the ones where the exceptional stature was due to the same peculiarity, for example, a very long femur, . . . he would have obtained a very different result." This point deserves investigation. Mr. Galton did, indeed, find that resemblance or difference in stature on the part of the parents did not perceptibly influence the phenomena of stature presented by the children; but, while a sufficiently extensive and varied collection of results of this kind would be almost tantamount to a demonstration that resemblance in details was of no more effect than resemblance in the aggregate, it would require more than what Mr. Galton gives us on this head to justify a conclusion concerning it.

We cannot even mention a number of other subjects discussed in the book and in its inte-

resting appendices. Justice, however, requires us to say that the application of the arithmetical theory of regression to the data concerning the artistic faculty, while highly ingenious, strikes us as distinctly unsatisfactory, owing chiefly to the vague character of the data themselves. We wish also before closing to obviate a possible false impression by saying that Mr. Galton does not pretend that his figures have more than an approximate correctness; and, moreover, to encourage non-mathematical readers by the assurance that a large part of the interest and the instruction which the book affords can be obtained without mastering the mathematical portions. It is difficult to say to what class of readers this extremely interesting book can be most warmly commended; its substantial results appeal most to the scientific student of heredity, its methods to the mathematician, its numerous and almost bizarre tables to him who has a craving for curious facts and to whom *nil humanum alienum*. But perhaps most of all we feel moved to commend it to those facile statisticians—and their name is legion—to whom two or three columns of figures are sufficient for the settlement of any proposed question of political economy, and who might here learn something of the spirit in which he must work who would make the stony figures of statistics speak, and force them into the service of truth.

AMERICAN SONNETS.

American Sonnets. Selected and edited, with an introduction, by William Sharp. (The Canterbury Poets.) London: Walter Scott.

When an Englishman, however kindly of purpose, undertakes a collection of American sonnets, the wonder is apt to be, in Dr. Johnson's phrase, not that he does the thing well or ill, but that he does it at all. In Mr. Sharp's case there is an excellent intention and a cordial though not always discriminating fulfilment. In preparing his little volume of two hundred and fifty sonnets, he has one or two obvious advantages in his nationality; for example, he is not obliged to ask leave of publisher or author, and can take a dozen of Longfellow's sonnets, where an American editor might find himself limited to three or four. Publishers are willing that a few plums should be borrowed from their favorite pudding, but the privilege must not be used very far. On the other hand, an English editor is necessarily limited to the larger collections and the leading magazines, and misses the good things to be found in obscure volumes, in books privately printed, and in the newspapers.

There is no evidence, for instance, that Mr. Sharp has ever seen the admirable bibliography of sonnets published in American magazines, prepared by Mr. J. C. Rowell and published in the *Berkeleyan* (University of California) for October, 1887. If he has seen it, he certainly has been beyond the reach of many periodicals mentioned in the list, or has made an imperfect use of them. Again, he is little acquainted with the minor American poets of the last generation, and omits sonnets which have what may be called an historical value, as Garrison's prison-sonnet on "Freedom of the Mind," Allston's on his friend Coleridge, Daniel Webster's on "The Memory of the Heart," Theodore Parker's "The Way, the Truth, the Life," T. G. Appleton's "Pompeii," and Percival's and Willis's acrostic sonnets to Miss Emily Marshall. Among living poets he wholly omits John Albee, Mrs. Elizabeth Akers Allen, W. E. Channing ("The day is past"), George H. Boker ("To England"), Louise Brooks, Ina D. Coolbrith, Héloise Durant, Louis Dyer, W. Gibson, Mary T. Higginson ("The Playmate Hours"), Maria Lowell ("I love thee!"), O. M. McKnight, Henry Timrod, Sarah H. Whitman, Sarah C. Woolsey ("Love me for what I am"), and George E. Woodberry ("Gibraltar"). All these have written better sonnets than many given by Mr. Sharp, yet he does not even mention their names.

The proportion to be given to various bards is so much a matter of individual taste that we will not insist upon it, though we could certainly have spared the sonnets of Miss Rives and Mrs. Wilcox, and some at least of Mrs. Moulton's eight, in order to have more than two of the thoughtful and noble poems of Jones Very. But there is in Mr. Sharp's dealings with names and personalities much of that confusion which is the inconvenience of a foreigner. He is evidently under some confusion as to the way in which married women's names are written in this country. Mrs. Ella Wheeler Wilcox appears always with a hyphen between her last two names, and is indexed under Wheeler-Wilcox. Mrs. Botta appears successively as Lynch, Anne (p. xiv.), Anne Lynch (pp. 152-'5), and Lynch-Botta, Anne Charlotte (p. 289). Amélie Rives is cited under her maiden name only; Gertrude Bloede only as Stuart Sterne, and Lucia Jennison as Owen Innsley. Christopher Pearse Cranch has his middle name contracted into "Pease." The editor does not know that Auringer's poems have appeared in a volume, and says that Jones Very was "once well known, but is now seldom read," the fact being that he was known to few during his life-time, while two distinct editions of his poems have appeared within ten years. There is occasional carelessness of editing: thus, the "flush of sun" in Helen Jackson's sonnet "Her Eyes" is weakened into "flash of sun"; and Higginson's lines in "The Baby Sorceress,"

> "Yellow, like the sands
> That lend soft setting to the azure seas,"

are made extremely realistic by the substitution of "netting" for "setting." Such minor criticisms could easily be multiplied, but they mostly illustrate only the necessary drawbacks of a transatlantic editorship, and leave Mr. Sharp's good-will and generous intention unimpaired. Great credit is due him for what he has accomplished in the way of selection, in spite of all this; that he should have singled out from the mass of contemporary literature so fine a sonnet as the late David Wasson's,

> "As unto blowing roses summer dews
> Or morning's anthem to the tree-top choirs,"

and should have first introduced to the English public the rare and delicate genius of Edith Thomas.

The preface, while intended to be critical, is uneven in quality, and the notes at the end are often of the shallowest description. The editor has "waded through"—as he not very graciously terms the process—"considerably over two hundred volumes of American minor verse," and his conclusion is, that "a finer body of sonnets on general themes could be selected from the writings of the secondary poets of America than those of our own minor bards" (p. xxix). He makes, however, some criticisms whose value is impaired by the quality of the sonnets he praises; he selects for compliment, indeed, Mr. Aldrich's fine sonnet "Fredericksburg," but equally compliments his halting "Pursuit and Possession," in which "haunt me" is made to rhyme with "want thee." He complains of sonnets that are "Petrarchan in all respects, save a rhymed couplet at the close" (p. xxix); ignoring the fact that Petrarch himself, with all the wealth of Italian syllables at his command, closed with a rhymed couplet whenever he wished (as in sonnets lxxiv, cxxxiv, cclxxxiii); and would doubtless have done it still oftener had he written in English, where rhymes are so much less abundant that Coleridge thought an English sonneteer should be excused from all strict sequence in his rhyming. He complains of the "extraordinary structural looseness" that prevails among his American authors, whereas he himself practically creates that looseness by including as sonnets the rhymed couplets of Mr. Charles Heavysege, a Canadian, whose productions are about as sonnet-like as Pope's "Essay on Man." He justly censures those foolish people, if such there be, who have mentioned Sidney Lanier as "the American Keats," but himself employs a yet flatter phrase—if flatter be possible—when he describes Saxe as "a kind of American Christopher North" (p. 291). His assertion that "*every* American poet who writes sonnets has addressed one to, or composed one upon, Sleep" (p. l) is simply silly; and his eking out his book with thirty pages of quatrains affords a meaningless and inappropriate enlargement. We ought, perhaps, to give a certain meed of patriotic acknowledgment for a well-meant and doubtless laborious compilation; but a really critical and satisfactory collection of American sonnets is still a desideratum.

Impressions of Russia. By Dr. Georg Brandes. Translated from the Danish by Samuel C. Eastman. Thomas Y. Crowell & Co.

This is by far the most important book on Russia that has been published for some years, in spite of the number which have appeared since things Russian have become the fashion. The author is no novice to travel, to literature, or to thought. He is one of the foremost of European authors, understands how to make comparisons, how to discriminate, and how to judge what he has seen or read. History, biography, philosophy, and criticism have been his themes; and his chief work, the 'Main Currents of the Literature of the Nineteenth Century,' shows that he was acquainted with the literature of Russia long before the present curiosity about it sprang up. His remark that he can never forget the impression which Lermontoff's 'A Hero of Our Times,' in the French translation of Marmier, made on him when a schoolboy, and how he loved and admired the book—the first which he understood as a grown-up man—shows that with him the knowledge of Russian literature is no new thing.

One is naturally inclined to give weight to the ideas about Russia expressed by such a man, even when they purport to be only the impressions of a brief stay. The journey of Dr. Brandes, however, was not one of an ordinary kind. He had been invited in 1887 to deliver a course of lectures in French before the Russian Authors' Association at St. Petersburg. He subsequently delivered his lectures in Moscow, then remained for a while on an estate in the south of Russia, and then returned by the way of Smolensk and Warsaw. He was thus enabled to spend some time in the three most characteristic parts of Russia, and to be on terms of intimacy with all classes of society, having access to some which the ordinary traveller very rarely sees. At the same time he says: "I am not unmindful of how little of what I did see I was able to understand fully, nor of how inconsiderable a portion of a country like Russia and of its inhabitants was placed before me. But naturally I believe in my capacity for observation and in the soundness of my judgments."

Thus Dr. Brandes has been able to call atten-

tion to many points of life and character which have either escaped the notice of previous travellers, or have not been mentioned by them; and occasionally he throws a light on the inside history of events. He has something to say about the internal political condition of the country, and the causes which produced it, as well as about the relations of the court and society. He naturally devotes much space to contemporary literary history, and gives sketches and characterizations of living authors whose names are hardly known in the West except to specialists, while in a few pages he relates the history and present position of Russian art so well that the reader would be prepared to understand and enjoy with more knowledge the next exhibition of Russian pictures he might have to see.

The book displays great breadth of view and calmness of judgment. One of the very best parts is the sixth chapter, where the author maintains that in order to understand what Russia really is, we must perform the process of exclusion—by first eliminating those elements which are common to all European peoples, as well as to those who have accepted European culture; and then those characteristics which are common to all Slavic races. Then only can we judge what is purely Russian, or Russian moulded by Asiatic influences. Of this manner of procedure he gives some interesting examples, each of which is instructive. But, alas! there are not many travellers who make even an effort to become acquainted with other Slavic peoples before judging of Russia, except Germans; and their relations to other Slavic peoples are so intimate and complex that race-hatred is apt to warp their minds.

Fully half the book is occupied with a review of Russian literature from the earliest times. The fact that the author is a Dane, and versed in the old northern ballads, gives an additional interest to what he says of the old Russian ballad epics. His special studies add weight to his criticisms on the Russian poets and novelists of this century. The judgments of so great an authority may be deemed conclusive by ordinary readers; and it is to be hoped that no one—for we know of no one else equally qualified to speak—will dare to publish a book on this subject for some time to come. The translator might turn his attention to what perhaps would now interest us, a rendering into English of Dr. Brandes's similar book on Poland. The present translation is generally well done so far as we can determine without comparing it with the original; but one is curious to know what the author really said when speaking of what the translator calls "Saltykoff's *gory* description of Russian provincial governors" (p. 77). A male member of the Imperial family is usually styled *Grand Duke* and not *Prince Imperial* (see p. 111); and—lest we may be criticised in turn—we may remark that the translation of technical terms is generally governed by usage without regard to derivation, and that while *Prince* is an equivalent of the Russian *Kniaz*, that of *Velikii-Kniaz* is *Grand Duke*.

Origins of the English People and of the English Language. Compiled from the best and latest authorities by Jean Roemer, LL.D. D. Appleton & Co. Pp. xxiv, 658.

THE successive chapters of this work treat of the Kelts, Romans, English, Danes, and Normans, Anglo-Norman French, with specimens, and the fusion of Anglo-Norman French and Anglo-Saxon English into one language, with specimens of Early English. An appendix follows on the French sources of modern English, giving an historical sketch of the French language, its etymology, and specimens of Early French; and this appendix is, to our mind, the most useful portion of the book. A large mass of information has been collected from various authorities, a list of which is prefixed, but it does not seem to be well digested. It would have been well to give the particular authorities followed for each chapter or section, that the reader might have a ready reference to them. It is plain that Sharon Turner has been followed for the Anglo-Saxon period, and this is unfortunate, for while Turner's work was creditable for the beginning of the century, his knowledge of the Anglo-Saxon language was deficient, and will not stand the test of modern criticism. No better evidence of this is needed than a comparison of his translation of the poem on Athelstan's victory at Brunanburh (pp. 111–112) with any modern text and translation. It is full of errors, some of them ludicrous in the extreme, as, for example, "the hoarse toad," intended for a translation of *hasupâdan*, ashen-hued, an epithet of the following *earn*, eagle; but it would take too much space to point them all out, even in this short extract.

The compiler regards the *Jutes* as Dutch (p. 67), "*Deutsch*, or *Dutch* [being] pronounced *Jutes* by the Britons, to designate the early German marauders"; and in chapter xi long lists of words are given from the 'Ancren Riwle' and from Chaucer as of Dutch origin, which are simply direct descendants of Anglo-Saxon, and so originally cognate Teutonic, and not at all derived from Dutch. They stand on a very different level from the French words in the 'Ancren Riwle,' of which a partial list is also given.

The difficulty in writing about the origins of the English language without a practical knowledge of the Anglo-Saxon, or oldest English, is illustrated throughout the work, but especially in chapter ix, section 2, in which the author treats of the "loss of inflections and grammatical changes in Anglo-Saxon before and after the Norman conquest." He is betrayed into such statements as the following (pp. 354–5): "The Anglo-Saxon syntax was also singularly anomalous and disorderly. Its prepositions were used as if possessed of the power of altering the cases of the nouns they governed, as occurs in Latin and Greek; but so irregular and capricious were the principles of this government that in the same sentence the same preposition throws its connected substantives into four different cases. To the confusion of all regular grammar, almost all its prepositions have this inconceivable power" (!) Truly an inconceivable power—so inconceivable that its possession might well be questioned, especially as the line given at the foot of page 355 to sustain the statement shows the preposition *mid* construed, as usual, with but one case, the dative. A very slight knowledge of Anglo-Saxon inflections would have prevented this error. The so-called "confusion" and "anomalies" of Anglo-Saxon grammar are still further commented on, which but shows the importance of the historical study of English in our schools and colleges, based on a competent knowledge of the oldest English. Lack of space will not permit the pointing out of other errors, and of numerous misprints, which might have been corrected by more careful proof-reading. By excision and revision the book may be improved. It contains much useful information, but it is too bulky for general use.

Henry V. By the Rev. A. J. Church. [English Men of Action.] Macmillan & Co. 1889. Pp. 155.

KING HENRY V. is one of the problematic characters of history. As a "man of action" he is perhaps the greatest among the successors of William the Conqueror. The legends that have grown up about the story of his youth have been pretty effectually disposed of, and, negatively at all events, we must agree that "there is absolutely no evidence to show that Henry was accustomed to the society of vicious and disreputable companions" (p. 46). There remain the more serious charges that, while a man of "almost ostentatious piety," he engaged unprovoked in a war of conquest against a nation distracted by feud and misgovernment, that the war was distinguished by acts of the grossest inhumanity, and that he was eager in the policy of persecution, allowing an early friend, a man of high character, to be burned over a slow fire on a charge of heresy.

Mr. Church does not extenuate these faults, but ascribes them to the age:

"It would be unjust to doubt the sincerity of his piety because many of his acts seem inconsistent with our own conceptions of the character which piety should produce. . . . His religion made him what few kings have been, temperate and chaste. It did not make him merciful; it would not be too much to say that in Henry's eye it made no man merciful. We must compare it, not with the religion of a Havelock or a Gordon, but with the grovelling superstition of a Lewis the Eleventh. It would certainly be more just to charge him with fanaticism than with hypocrisy" (p. 152).

Elsewhere he says (p. 117) in relation to the atrocities at the siege of Rouen: "He was a soldier first; and to his conception of a soldier's duty, which was to use every military advantage which came in his way, he subordinated everything. For wanton cruelty he had no taste: it did not come within the scope of his business; but from cruelty that was not wanton—that is, was dictated by some consideration of necessity or expediency—he never shrank." But what military end was furthered by allowing the twelve thousand non-combatants, thrust out from the city, to perish miserably between his lines and the walls? It may be said that the beginning of the inhumanity was with the authorities of Rouen, and that their crime was as great as Henry's. But every non-combatant expelled from the city added just so much to the capacity of resistance; while, if they had been permitted to pass through the English lines, the capitulation of the city would not have been delayed a single day.

In regard to the French war, Mr. Church has some interesting and ingenious remarks:

"He seems to have looked upon his wars for the acquisition of the French crown as a devout prince two centuries before might have looked upon a crusade. It was his mission to recover what he seems, difficult as it is to believe it, to have sincerely regarded as his rightful inheritance. By one of those processes of self-deception that are so difficult to imagine of others, so easy to perform for ourselves, he had persuaded himself of the soundness of a title which seems to us to need no refutation; and all his candid, his almost audacious confidence, his unhesitating rejection of compromises, as well as the earnestness of his prayers and thanksgivings for victory, indicate a profound conviction that he was doing a work to which he had been divinely sent. If we are to compare him with the famous conquerors of the world, we should find his parallel in Alexander, convinced that it was his mission to take the vengeance of force for centuries of Persian wrong, rather than in Napoleon, whose faith did not go beyond a conviction of the power of his big battalions" (p. 153).

This comparison is very felicitous—as historical parallels are very apt not to be; and the remarks upon self-deception are much to the

point. But such self-deception—in the case of Henry as well as of Alexander—is commonly tacitly assisted by an estimate of advantage to one's self. It is not likely that Edward III., who first advanced this claim, deceived himself as to its validity, although it was far more plausible in his mouth than in that of his great-grandson; there were abundant causes of complaint, and this claim afforded a pretext for a war which was in his mind desirable of itself. But during the fourteenth century these undetermined rules of succession, exemplified in the claims to the French and the Scottish crowns, had been gradually determined by the logic of events, and what had been plausible a century before was ridiculous now. If Henry's claim to the French crown was valid, he had no title to that of England; and, great as is the power of self-deception, it is hard to believe that so vigorous an intellect as Henry's could have deceived itself in this matter.

In short, when we have to do with religious persecution and wars of ambition, we do not deny that the motives are sometimes of the purest; but we are entitled to demand in both cases the most unimpeachable evidence, and to feel some degree of suspicion when there is room for the workings of intellectual pride, individual or class interests, or self-aggrandizement.

Elementary Lessons in Heat. By S. E. Tillman, Professor of Chemistry in the United States Military Academy. Philadelphia: J. B. Lippincott Co.

THIS work is to be regarded rather as a compendium than as an elementary treatise. We are reminded on reading it of a well-written series of lecture notes from which much relatively less important matter is omitted. From this point of view, if supplemented by good lectures supplying fulness of detail, it may be really useful. It has many special merits. It is refreshing to meet with a treatise on heat in which we do not find a large number of forms of apparatus which have long had only an historical interest, but which have been copied from text-book to text-book as if they formed established principles of science. It is also pleasant to find—for the first time, we believe, in a text-book—an account of the work of Wm. Ferrel on the deflections of the atmosphere due to the rotation of the earth on its axis as part of a general mathematical theory. The whole subject of meteorological phenomena, as connected with heat, receives an amount of attention very unusual in American works, and the treatment is both good and interesting. There is a brief sketch of thermo-dynamics, chiefly in connection with the steam-engine. The other general headings are those which are found in all text-books on the subject, and do not require special notice. They are perhaps somewhat meagre, but are clear and intelligible. We regret not to find the metric system of weights uniformly employed, as it should be in every treatise upon a scientific subject. On the whole, however, Prof. Tillman's work deserves commendation.

BOOKS OF THE WEEK.

Alexander, Mrs. A Crooked Path. Chicago: Rand, McNally & Co.
Baring-Gould, S. The Pennycomequicks. Frank F. Lovell & Co. 50 cents.
Bayfield, M. A. The Ion of Euripides. Macmillan & Co. 90 cents.
Billings, Dr. J. S. Index Catalogue of the Library of the Surgeon-General's Office, U. S. A. Authors and Subjects. Vol. X. O—Pfutsch. Washington.
Carr, Mrs. Comyns. Margaret Maliphant. Harper & Bros. 45 cents.
Clegg, J. Directory of Second-hand Booksellers and List of Public Libraries, British and Foreign. Rochdale, Eng.: James Clegg; New York: Westermann.
Daniell, M. G. Exercises in La in Prose Composition. Part I., based on Cæsar's Gallic War. Boston: Leach, Shewell & Sanborn.
Dostoyevsky, F. M. Crime and Punishment. T. Y. Crowell & Co. 50 cents.
Fitzwilliam Museum, Cambridge. Catalogue of Casts in the Museum of Classical Archæology. By Chas. Waldstein. Macmillan & Co.
Flagg, I. Euripides: Iphigenia. Boston: Ginn & Co. $1.50.
Ford, W. C. The Writings of George Washington. Vol. III. 1775-1776. G. P. Putnam's Sons. $5.00.
Gagnebin, Mme. A Happy Find. T. Y. Crowell & Co. 50 cents.
Hayden, E. West India Hurricanes and the March Blizzard, 1888. *Forest and Stream* Publishing Co. $1.50.

Houghton, Mifflin & Co.'s
NEW BOOKS.

American Religious Leaders.

A series of biographies of men who have exerted great influence on the religious thought and life of America.

This series is designed to serve the same purpose with regard to the religious history of America, which the series of American Statesmen serves with regard to its political history. It will include biographies of eminent men who represent the theology and methods of the various religious denominations of America.

The first volume, just ready, is:

Jonathan Edwards.

By Professor A. V. G. Allen, author of 'The Continuity of Christian Thought.' 16mo, $1.25.

Professor Allen writes with the impartiality of a historian, and succeeds admirably in portraying the great qualities of Edwards and the profound influence exerted by him on American religious thought.

Benjamin Franklin.

In the Series of American Statesmen. By JOHN T. MORSE, Jr., author of the volumes on John Adams, Thomas Jefferson, and John Quincy Adams, in this series. 16mo, $1.25.

An admirable account of Franklin as a statesman, and of his great and varied public services.

Two Coronets.

A Novel. By MARY AGNES TINCKER, author of 'Signor Monaldini's Niece.' 12mo, $1.50.

A noteworthy story, with characters and scenes of Italy and New England. The sharp contrasts of life, character, and custom in the two countries form the background of a story full of movement, social engineering, and conspiracy, with quiet areas of genuine New England family affection and content.

Recollections of Mississippi.

By Hon. REUBEN DAVIS. 1 vol. 8vo, $3.00.

Mr. Davis of Mississippi here gives a very graphic description of life in the South for the half century before the Civil War. Its social life, its lawlessness and chivalry, its political and professional contests are portrayed very effectively.

Literary Landmarks.

A Guide to Good Reading for Young People, and Teachers' Assistant. By MARY E. BURT, Teacher of Literature in the Cook County Normal School at Englewood, Illinois. With Charts. 16mo, 75 cents.

Miss Burt's successful experience as a teacher of literature has enabled her to prepare a handbook which is not merely a guide to the best books for young people, but an economical *system* of reading, good for all ages.

English and Scottish Popular Ballads.

Edited by Prof. FRANCIS J. CHILD of Harvard University. An *Edition de Luxe*, strictly limited to one thousand copies. In eight parts, each part containing about 250 pages. Part VI. Imperial quarto, $5.00 *net*.

HOUGHTON, MIFFLIN & CO.,

WATTS' DICTIONARY OF CHEMISTRY.

Revised and entirely rewritten by

M. M. PATTISON MUIR, M.A., F.R.S.E., Fellow, and Prælector in Chemistry, of Gonville and Caius College, Cambridge,

AND

H. FORSTER MORLEY, M.A., D.Sc., Fellow of University College, London, and Professor of Queen's College, London,

Assisted by eminent contributors.

In Four Volumes, half bound.

Volumes I. and II. Now Ready.

Vol. I. (*Abies—Chemical Change*). *Octavo, pp. xx-752.* $14.50.

Vol. II. (*Chenocholic Acid—Indigo*). *Octavo, pp. xii-760.* $14.50.

Partial List of Contributors.

LOTHAR MEYER, Ph.D., Professor of Chemistry in the University of Tübingen.
Allotropy.

C. O'SULLIVAN, F.R.S., Burton-on-Trent.
Arabic Acid, Bassorin and Cerasin.

T. E. THORPE, Ph.D., F.R.S., Professor of Chemistry at the Royal School of Mines.
Atmosphere, Combustion and Flame.

RAPHAEL MELDOLA, F.R.S., Professor of Chemistry in the Finsbury Technical College.
Azo-colouring matters.

E. RAY LANKESTER, M.A., F.R.S., Professor of Zoölogy at University College, London.
Bacteria.

W. D. HALLIBURTON, M.D., B.Sc., Assistant Professor of Physiology at University College, London.
Blood and Haemoglobin.

THOMAS STEVENSON, M.D., Lecturer on Forensic Medicine at Guy's Hospital.
Detection and Estimation of Poisonous Alkaloids.

ARTHUR G. GREEN, Esq., F.I.C., Research Chemist to the Atlas Works, Hackney Wick.
Diazo-Compounds and Indigo.

R. THRELFALL, M.A., Professor of Physics in the University of Sydney, N. S. W.
Dissociation and Explosion.

FRANK W. CLARKE, Esq., B.Sc., Chief Chemist, United States Geological Survey.
Elements.

IRA REMSEN, Ph.D., Professor of Chemistry in Johns Hopkins University, Baltimore.
Equivalency and Formulæ.

F. W. RUDLER, F.G.S., Curator of the Museum of Practical Geology, London.

MACMILLAN & CO.'S NEW BOOKS.

A New Novel by F. Marion Crawford.

SANT' ILARIO.

By F. Marion Crawford, author of 'Saracinesca,' 'Greifenstein,' etc. 12mo, cloth, $1.50.

"The author shows steady and constant improvement in his art. 'Sant' Ilario' is a continuation of the chronicles of the Saracinesca family. . . . A singularly powerful and beautiful story. . . . Admirably developed, with a naturalness beyond praise. . . . It must rank with 'Greifenstein' as the best work the author has produced. It fulfils every requirement of artistic fiction. It brings out what is most impressive in human character, and what is most interesting in human action, without owing any of its effectiveness to sensationalism or artifice. It is natural, fluent in evolution, accordant with experience, graphic in description, penetrating in analysis, and absorbing in interest."—*New York Tribune.*

English Men of Action. New Volume.

MONK.

By Julian Corbet. 12mo, cloth limp, 60 cents; edges uncut, 75 cents.

Already Published:

DAVID LIVINGSTONE. By Thomas Hughes.

HENRY THE FIFTH. By the Rev. A. J. Church.

GENERAL GORDON. By Colonel Sir William Butler.

LORD LAWRENCE. By Sir Richard Temple.

WELLINGTON. By George Hooper.

THROUGH ROMANY SONGLAND. By Laura Alexandrine Smith. 16mo, $1.50.

A TEXT-BOOK OF GENERAL THERAPEUTICS. By W. Hale White, M.D., F.R.C.P. With illustrations. 12mo, $2.50.

"While it promises to be of much value to physicians, it is full of interest for the lay reader who is interested in the treatment of disease and the maintenance of health."—*New York Tribune.*

Nature Series. New Volumes.

MODERN VIEWS OF ELECTRICITY. By Oliver J. Lodge, LL.D., D.Sc., F.R.S. Illustrated. 12mo, $2.00.

"So far as electricity is concerned this is the book of the year. The object of this book is to present to the non-mathematical reader the modern view of the ethereal theory of electricity. To our mind there is no living exponent of these theoretical views so able as the author of this book."—*Electrical Engineer.*

TIMBER AND SOME OF ITS DISEASES. By H. Marshall Ward, M.A., F.R.S., F.L.S. With illustrations. 12mo, $1.75.

THE HISTORIES OF POLYBIUS. Translated from the text of F. Hultsch by E. S. Shuckburgh, M.A. 2 vols., 12mo, $6.00.

Macmillan's Geography Series. New Volume.

AN ELEMENTARY CLASS-BOOK OF GENERAL GEOGRAPHY. By Hugh Robert Mill, D.Sc., F.R.S.E. With illustrations. 12mo, 90 cents.

IRON AND STEEL MANUFACTURE. A Text-Book for Beginners. By Arthur H. Hiorns, author of 'Practical Metallurgy' and 'Elementary Metallurgy.' 16mo, $1.00.

New and Cheap Edition.

THE PARNELL COMMISSION—THE OPENING SPEECH FOR THE DEFENCE. Delivered by Sir Charles Russell, Q.C., M.P. Carefully revised by the author. 8vo, 75 cents.

Elementary Theological Class-Books.

AN INTRODUCTION TO THE CREEDS. By the Rev. G. F. Maclear, D.D. 18mo, 60 cents.

NEW PUBLICATIONS OF THE Oxford Clarendon Press.

SELECTIONS FROM CLARENDON.

CHARACTERS AND EPISODES OF THE GREAT REBELLION. Selected from the History and Autobiography of Edward, Earl of Clarendon, and edited, with short notes, by the very Rev. G. D. Boyle, M.A., Dean of Salisbury 12mo, $2.00.

CHAUCER. THE LEGEND OF GOOD WOMEN. Edited by the Rev. Walter W. Skeat, Litt.D. 12mo, $1.50.

CHAUCER. THE MINOR POEMS. Edited by the Rev. Walter W. Skeat, Litt.D., M.A. 12mo, $2.60.

"Our debt to Prof. Skeat for giving us these poems in so accessible a form, and still more in so pure a text, cannot easily be overestimated."—*Literary World.*

"Prof. Skeat has brought to bear upon the elucidation of the text all the great learning he has accumulated in the preparation of the various works with which his name is now so honorably connected. We have little hesitation in saying that there is no student of Chaucer living to whom this volume will not be an absolute necessity."—*Evening Post.*

NOUUM TESTAMENTUM DOMINI NOSTRI IESU CHRISTI LATINE. Secundum Editionem Sancti Hieronymi. Ad codicum manuscriptorum fidem recensuit. Iohannes Wordsworth, S.T.P. in operis Societatem adsumte Henrico Iuliano White, A.M. Partis Prioris Fasciculus Primus Euangelium Secundum Mattheum. 4to, $3.25.

A New Edition.

A COMMENTARY ON CATULLUS. By Robinson Ellis, M.A., LL.D. 8vo, $4.50.

CONTRIBUTIONS TO LATIN LEXICOGRAPHY. By Henry Nettleship, M.A. 8vo, $5.25.

TWO OF THE SAXON CHRONICLES. Parallel (787-1001 A. D.), with supplementary extracts from the others. A revised Text. Edited, with Introduction, Critical Notes, and Glossary by Charles Plummer, M.A., on the basis of an edition by John Earle, M.A. 12mo, 75 cents.

QUINTI SEPTIMII FLORENTIS TERTULLIANI. Apologeticus Adversus Gentes Pro Christianis. Edited, with Introduction and Notes, by T. Herbert Bindley, M.A. 12mo, $1.50.

A GRAMMAR OF THE RUSSIAN LANGUAGE. By W. R. Morfill, M.A. 12mo, $1.50.

Macmillan & Co.'s New Catalogue of Publications will be sent free by mail to any address on application.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 12, 1889.

The Week.

THERE appears to be no doubt that the Administration has decided that it would not be expedient to call an extra session of Congress. The arguments against one are so many and so obvious that serious consideration of the matter was scarcely necessary. Aside from all other considerations, the President and his advisers must naturally be in no hurry for the assembling of a Congress in which the Republican majority will be so small that firm support of the Administration would, under the most favorable conditions, be a difficult thing to obtain. With an enthusiastic and harmonious party, thoroughly in accord with the President's course, it would require very careful management to maintain party support for him in a Congress having barely a Republican majority to elect a Speaker; and with any discord or dissatisfaction, such support would be out of the question. Nobody can tell now how the Republican members as a whole will feel towards the Administration when they come together, but it is notorious that there are some of them who are not at all satisfied with the President's course in regard to appointments. This was inevitable from the moment he decided to give himself up to a personal supervision of the distribution of patronage. He was certain to make in his own party as many enemies as friends. When the Congressmen get into Washington, the wrangles over offices will increase rather than diminish, and the President's burdens in this direction will be greater than ever.

The first six months of President Harrison's term are ended, and what are the most conspicuous developments of his policy? What topics connected with him are most discussed in the press? First, there is Tanner and his course in the Pension Bureau. That is, by common consent, a national scandal of such serious proportions that leading newspapers of the President's party are calling for Tanner's removal as the only thing which can save the Administration from disgrace, and the national Treasury from possible bankruptcy. Second, there is the choice by the President of "Tom" Platt, "Matt" Quay, and Mahone of Virginia as the men to whom he prefers to hand over the patronage of the Government to be used by them in building up a political Machine. Third, there is an increase of over $7,000,000 in the public debt during the last third of the six months, though for the corresponding period in every one of President Cleveland's four years there was an average decrease of about $10,000,000. Fourth, in removals from office without cause the President has surpassed all previous records, and has so completely broken not only the pledges of his party's platform, but his own personal pledges as well, that there is a formidable movement in the Republican party for the unconditional repeal of the Civil-Service Law. The net result of this six months' work is a lower moral tone in politics than the country has shown since 1872.

That the Administration begins to be troubled by the increase of the public debt is shown by the repeated attempts of the organs to explain it. An extremely mysterious account of the cause of the increase during the month of August given by the *Tribune* last week had, we think, the effect of causing considerable public alarm owing to its great darkness. The financial writer of the same paper comes to the relief of his editorial brother, and tries to show that it is "an extraordinary credit to disbursing officers in the last monthly statement of over $50,000,000 which is the occasion of the apparent increase in the debt"; and this, he adds with a sheepish air, "is so much money now in the Treasury that soon is to be paid out by the disbursing officers, thus increasing the amount of money in circulation." We presume the real cause of this queer stuff is the writer's fear that the public supposes that the Treasury has been paying out more money than Congress has appropriated. But the public is not so simple-minded as that. It knows very well that all Government money is got rid of by giving it to the disbursing officers, or giving them power to draw it, and that when a man's accounts show an increase of his liabilities, the matter is not explained by alleging that all the checks he has given have not yet been presented, and that when they are there will be more money in circulation. The true way to clear up the whole matter is to admit frankly that Tanner has been too "liberal to the boys," or, in other words, has been spending money too rapidly for the good of the party, and must be dismissed or put in charge of a lighthouse.

Somebody in England, apropos of the late discussion over the grant to the Prince of Wales on his daughter's marriage, has put forth the theory that the monarchy there is much less expensive than our Presidency, in answer to some American who made the account stand thus:

Crown	$2,781,279 per annum.
President	50,000 " "

The Englishman says that to know what the Presidency costs, we must take into account the expenses of the quadrennial election, which include outlays of every description during the campaign for party purposes, and these he estimates at $20,000,000 for a period of four years. The account will then stand thus:

President—	
For election	$20,000,000
Salary	200,000
Total	$20,200,000
Crown—	
Succession	Nil.
Four years' civil list and annuities.	$10,873,120
Balance in favor of monarchical government	$9,326,880

It is to be said, however, that the Queen's income by no means includes all the cost of royalty. There are a great many expenses made necessary by the "dignity of the Crown" which are not covered by the royal income, and which would probably double the cost of royalty. It is also to be observed that there is no comparison between what America and England can afford to spend on government—a consideration of very great political moment. On the other hand, there ought to be added to our expenses the various means now resorted to for getting rid of the surplus. All squandering of the public money in order to secure votes is really an addition to the cost of the Presidency. Tanner's outlay, for instance, should undoubtedly be added to what President Harrison will cost us before we are done with him.

"Corp." Tanner appears in a somewhat new light in the revelation which comes from Detroit concerning a pension agency there. The agent applied to Tanner some time ago asking for an increase of $1,500 in his allowance for office expenses. The "Corp.," with customary liberality to the boys, no sooner received the application than he granted it twice over, giving to the office an extra credit of $3,000. One can imagine him saying on reading the request: "An extra allowance of $1,500? Why, of course. But while you are about it, hadn't you better take $3,000?" The agent joyfully accepted the $3,000, raised the salaries of all his old clerks, and employed a new clerk in addition. The office was enthusiastic over the liberal Tanner policy, and things went merrily on till the vouchers for the extra expenditures reached the Auditor at Washington whose business it was to consider them. He refused to allow the increase. Then there was a panic in the agency. The agent had to supply in some way the new clerk's salary, while the old clerks failed to get the increase they had expected. Worse than this, the agent, rather than pay the new clerk's salary out of his own pocket, assessed all the old clerks sufficiently to make up the necessary amount. He says of this extraordinary act: "The extra expense was incurred under the supposition that a larger appropriation was to be made for the office. The appropriation was not made and the expense had to be met. You know that people working under the Government must submit to any arbitrary decision or get out." This view of the civil service of a great nation is the Harrison-Tanner one which came into vogue with the victory of the party of moral ideas last November

---

"President Harrison is allowing all the Democratic collectors in Maine and elsewhere to serve out their terms, unless there is special reason otherwise," says the Lewiston (Me.) *Journal* (Rep.); "but not one of the civil-service *par excellence* papers gives him credit for this, but continues representing that he is disregarding civil service." The *Jour-*

nal is probably no better authority as to the President's course regarding collectors outside of Maine than it proved to be as to his policy regarding postmasters, who, it announced some time ago, were to be allowed to serve out their terms, whereas the President has ever since been removing them wholesale. Presuming, however, that it is correct in the statement that he is allowing Democratic collectors in Maine to serve out their terms, we take great pleasure in giving him credit for keeping his word as to one class of officials in one State. How much better he would stand to-day if he had been equally conscientious in living up to his pledges regarding all classes of officials in all the States!

Congressman Houk of Tennessee, the most prominent Southern Republican in the House, announces that he will "test the sentiment of the House on this sham Civil-Service Law" by offering an amendment striking out the item making an appropriation for the support of the Commission when the appropriation bill containing that item comes up. Nine-tenths of the members, he says, know that the law is a fraud, and say so in private, and he is "going to smoke those fellows out and put them on record." This is good news. It will be a satisfaction to learn exactly how many Republican Congressmen there are of the Houk school, who are shameless enough to confess that when they pledged themselves last fall to live up to the platform of their party, which called not only for the maintenance of the Civil-Service Law, but also for "the further extension of the reform system," they meant as soon as their party came into power to repudiate their pledges.

Valuable testimony as to the good effect of the Civil-Service Law, even in Maryland, is furnished by the Hagerstown *Herald*, a Republican weekly. The *Herald* takes up and condemns the recent action of the Republican clubs of the Third Congressional District of Maryland in calling for a repeal of the Civil-Service Law, declaring that "if the Republican party should go before the country on the platform which these Baltimore politicians have laid down, it would be beaten out of sight." In arguing for the superiority of the merit system to the spoils policy, the *Herald* makes the following statement as to the operation of the former in Maryland under Mr. Cleveland, which is of value as the testimony of a political opponent: "Without the Civil-Service Law, the Democratic heelers in Baltimore would have held high carnival in the Federal offices. With it, we have had an honest management of the public business, and only in a few instances has the public sense of decency been shocked by the appointment of notorious rascals to responsible positions. If there had been no civil-service law, so fair and moderate a man as ex-Gov. Groome would not have been made Collector of the Port, and certainly a very different class of men would have forced their way into all the subordinate places."

No pretence is made by the friends of the Administration that any other than political influences were considered in the three appointments for this city and Brooklyn which were announced on Tuesday. In each case the appointee is an experienced political worker who has been given a public office as a reward for political services in the last campaign. For six months the filling of two of the offices thus bestowed, those of Surveyor and Naval Officer, has been under almost constant consideration at Washington, and almost innumerable visits have been made to the President by "Tom" Platt, Senator Hiscock, and other leaders in order to pick out the men whose choice would be recognized by the party as best entitled to the rewards. The President himself has been reported frequently as saying that he would appoint the men whom the party leaders could thus agree upon as worthy. There has been no pretence made that either the President or his New York advisers were seeking the good of the public service. In commending the appointments, the *Tribune* recognizes the political aspect as the controlling one by saying of the new Naval Officer, Mr. Willis, that "he did capital work for the cause led by Gen. Harrison a year ago," and of the new Internal-Revenue Collector for Brooklyn, Mr. Nathan, that "he has also established his claims to special recognition at the hands of his party." It was said of Mr. Willis early in the contest for these offices that he must have one of them not only because of his work in the Harrison campaign, but because he represented a ward in Brooklyn which raised $50,000 for the Harrison campaign fund. The money claim has steadily outweighed all others, as precedent would have led us to expect.

Mr. George W. Lyon, who receives the Surveyorship, has been a strong aspirant for almost any good Federal office since the moment of Harrison's election. He will make the office as much of a Republican stronghold as Mr. Beattie has made it a Democratic one, and that is about all that can be said of the change. It is the substitution of one politician for another, and one set of Boys will have to "go," while a new set will take their places. The removal of Col. Burt before his term has expired, and the replacing of him in the Naval Office by a politician who will use the office for political purposes, is a far different matter. Col. Burt has conducted the office solely in the public interest and in strict accordance with civil-service-reform rules. He has, in fact, been for years a model public servant, devoting all his energies to the sincere, intelligent, and indefatigable purpose of doing his whole duty to the country without fear or favor and without regard to politics or political considerations. Of his ability, integrity, and usefulness there has never been a question. What a spectacle it is when such a man is turned out of office before his term has expired, in order to make a place for a political worker who "did capital work" for the election of the President who thus rewards him.

The tale which Gen. Joseph C. Jackson tells in the *Times* of Tuesday, of the perfidious treatment which he has experienced in the matter of the District Attorneyship at the hands of the Hon. William M. Evarts, well merits the attention of our best moralists. It appears that the General's testimonials were signed by so many men of wealth and influence residing in this city and the suburbs that they would have compelled his appointment at the hands of the most hardened administration, had not the President been able to take refuge in the fact that he had turned the matter over to Senator Evarts. Gen. Jackson accordingly kept a close watch on Mr. Evarts through the summer, and so overawed him that he left him under the impression that he (the Senator) was working for him like a beaver. When pursued to his Vermont farm, he confirmed this impression by his looks, his general demeanor, and by driving the General about in a wagon. There was one little defect in the General's arrangements which might, if unrectified, have accounted for the subsequent disaster; but it *was* rectified. The name of Colonel Elliott F. Shepard appeared in the testimonials at first among "the men of business," of whom the Colonel is an ornament. But he does not carry as much weight as a business man as he does as a lawyer—a fact which he pointed out to the General. The name was accordingly shifted to the forensic side of the document, where it naturally led all the rest, and seemed to make the General an irresistible candidate. Now comes the catastrophe. The Senator, it appeared, had all along been supporting another man, who got the place, and he accordingly fled to Europe to escape the exposure of his infamy, while the Colonel sneered in his paper at the testimonials! If Gen. Jackson's nature should now be soured, and he should take a sombre view of the future of his race, who could blame him? If he should indeed lose his confidence in man—one of the worst of human experiences—who ought to shoulder the responsibility? Is it not Senator Evarts? And yet we have little doubt that he is at this moment cracking jokes in some resort of European nobles, in utter forgetfulness of the wreck he has made of Gen. Jackson's faith and hope and charity.

The tariff plank of the Pennsylvania Democratic platform is strong and to the point. It not only reaffirms the national platform of last year, but it applauds President Cleveland's efforts to impress the need of tariff reform on Congress, and states the ends sought by the reform in a way which shows that the platform-makers are comprehending the strength of the issue much better than they have hitherto done. There is no recognition of the time-honored falsehood that protection benefits wages, in the demand for a "revision and reduction of tariff taxes for the relief at once of American labor, American industries, and American taxpayers, by the repeal of such tariff taxes as now invite and protect monopoly, a greed that lessens production, lessens employment of labor, decreases wages, and increases cost to consumers; and by the ad-

mission of raw material free of duty in all cases where it will enlarge our product, multiply our markets, and increase demand for labor." An equally excellent plank is the one favoring the Australian ballot system as being "adapted to meet the requirements of our Constitution and the special wants of our people." Gov. Hill's view of that system as a "mongrel foreign one" evidently finds no favor among Pennsylvania Democrats. The chief defect in the platform is the absence of all mention of civil-service reform.

The Philadelphia *Press* on August 30 led off its editorial page with a paragraph which said: "The leading newspaper of Manchester, England, the *Examiner*, declares that 'if the United States were to abolish the duty on cotton goods, we should shut up every one of their cotton-mills in less than ten years.'" This alleged quotation had so much the appearance of the false quotations put out during the last campaign by the Secretary of the Home-Market Club and by Mr. Plummer of this city that we at once set to work to verify it. First we telegraphed to a London correspondent to attempt this task. He cabled us directly: "I have searched the file of the Manchester *Examiner* for the last fortnight and can find no trace of the statement cited." Next we addressed a written inquiry to the editor of the *Press*, asking for the date of the *Examiner* quoted from. To this we have obtained no answer whatever. We have not given up the search by any means. But meanwhile we have no doubt that the paragraph will be doing duty in the high-tariff press all over the country, with the added statement, perhaps, that if the American mills do not close fast enough, the Cobden Club will send over some of its "gold," buy them up, and set fire to them. If these Englishmen do think that lower duties will hand over our home markets to them, they are very kind to give us such a warning as the *Press* publishes. Little acts of this kind ought to go far towards promoting international friendship.

A telegram from Mr. Armour, the head of the great dressed-beef combination, which Senator Vest produced before the Senatorial Investigating Committee in Chicago last week, and of which Mr. Armour subsequently acknowledged the authenticity, ran as follows:

> FREELAND, Penn., Dec. 18, 1888.
> Can't allow Schwab to continue killing live stock. If he will not stop, make other arrangements, and make the price so we can get his trade. ARMOUR & Co.

Mr. Armour refused to appear before the Committee, but he explained that this telegram was addressed to "our own agent, whom we had a perfect right to tell that he should not kill cattle if he sold our dressed beef." This seems perfectly reasonable. The Trust has a perfect right to prescribe the qualifications of its own agents, and to dismiss them if they are not satisfactory. The point to which we wish to direct attention is, however, that in this case it was not content with taking its business away from Schwab. Instructions were given that if he continued the perfectly legitimate trade of killing cattle, he was to be driven out of it by making prices so low in competition with him that he could not continue it. This brings us at once to the great political objection to Trusts—an objection which would remain overwhelmingly strong in every free country, even if all that is said of their economical advantages were true. Granted that they do not raise prices; granted that, on the contrary, they lower them; granted that they save capital and labor by preventing overproduction—it is still true that, in order to accomplish their purpose, they claim and frequently exercise powers which, as against individuals, are irresistible, and which no free people could ever be induced to lodge in the hands of any body whatsoever—legislative, executive, or judicial.

The New Orleans *Times-Democrat* has for years rendered the country a service by presenting, about the 1st of September, an annual review of the progress made by the South during the preceding twelve months. The showing for the present year, made in its issue of Monday week, is the most encouraging yet made, the progress having been greater than in any previous twelvemonth, and a healthier one as well, there having been "a steady advance everywhere and in all lines of business." The assessed wealth of the South, which was $2,164,792,795 in 1880, now amounts to $3,759,053,367—an increase of almost 75 per cent.; while the value of agricultural products has risen from $611,679,048 to $868,979,523, and of manufactures from $315,924,000 to $651,202,000, with a growth of railroad mileage from 17,808 to 36,686. No feature of the showing is more encouraging than the great increase in the amount of money expended for schools, which has much more than doubled, leaping from $6,145,706 in 1880 to $13,905,304 in 1889. Better still, the *Times-Democrat* finds that while there has been a steady movement during the decade, "no greater progress has been made during any period than the past twelve months." It was back in 1880 that the agitation for Federal aid to education in the South was started, upon the theory that the South was then raising as much money for schools as it could possibly stand or could possibly raise for years to come, while at least double that amount was needed; and yet, in 1889, it appears that the expenditures have been far more than doubled, and are growing faster now than ever before.

The proposed ceiling-scandal inquiry by the Albany Grand Jury is looked upon with pretty general suspicion as to the sincerity of the moving forces behind it. The presence on the jury of two men who admit not merely their personal friendship for ex-Superintendent Andrews, who had nominal charge of the "job," but that they were actually employed by him, is not a guarantee of strictly impartial inquiry. Albany is notoriously a bad place in which to conduct an investigation of any kind of legislative jobbery. It has always been so, for perfectly obvious reasons, and its reputation in this respect has not improved during the period in which Gov. Hill's influence has been so powerful. The ceiling scandal can never be thoroughly probed without seriously damaging many of the foremost politicians in both political parties, including the Governor on the Democratic side and the Speaker of the Assembly on the Republican. The chances for such probing, therefore, in a city especially sensitive to "pulls" are not great.

Judge Hughes, the well-known "Tom Brown" of other years, has a pathetic article in the last *Forum* about his "lost leader," Mr. Gladstone, of whose mental and moral aberrations touching the Irish question he gives a sad account, and he winds up with the following very startling warning to the American admirers of the British statesman:

> "I cannot but warn you that you are deceived, and that while you are meaning only to express admiration for and confidence in a statesman with whose career you are not familiar, you are in reality doing what in you lies to palliate crime and to set aside the old commandments, 'Thou shalt do no murder,' 'Thou shalt not steal,' 'Thou shalt not bear false witness,' 'Thou shalt not covet.'"

What is curious in all this is, that Judge Hughes should not perceive that on a question of the character of a foreign statesman Americans are sure to take testimony on *both* sides, and weigh it. Therefore, there is a certain naïveté in his giving us a list of eminent men who have refused to follow Mr. Gladstone, but no list of those eminent men who have followed him. Those who have abandoned him, he says, are the Duke of Argyll, Mr. Bright, Lord Selborne, Lord Hartington, Lord Derby, Mr. Goschen, Sir Henry James, Mr. Chamberlain, Leonard Courtney, and Mr. Jesse Collings. But, says Judge Hughes:

> "I will not speak of those who followed Mr. Gladstone. Many of them are old friends and men of high standing and character, and no unnecessary word of mine shall add to the bitterness of the present crisis."

This is surely very funny. He is, of course, bound to tell who they are who have followed Mr. Gladstone, especially since "many of them are men of high character." How can Americans judge until they hear *all* the witnesses? Among those who have followed Mr. Gladstone are Lord Spencer, who was Lord Lieutenant of Ireland in the worst days; Lord Aberdeen, who filled the same office; Lord Hampden, so long Speaker of the House of Commons; Lord Rosebery, Earl Granville, Sir George Trevelyan, Mr. Shaw Lefevre, Mr. Edward Freeman, John Morley, James Bryce, Cardinal Manning, nearly all the leading Nonconformist ministers in England, and a large proportion of the Presbyterian ministers in Scotland. In fact, the Gladstonian list seems at this distance to have vastly more moral weight than Mr. Hughes's. So that he must pardon us for looking upon his suggestion to Americans that these men are "doing what in them lies to palliate crime and set aside the old commandments, Thou shalt do no murder, etc.," as exceedingly droll.

THE COMING AMERICAN CONFERENCE.

THE international conference, soon to assemble in Washington, deserves a more intelligent and a more critical consideration than—so far as we have seen—it has yet had in our country. Whether or not the proposal, and the law of the last Congress, to invite Brazil and Mexico, with each and all the republics of Central and South America, to a conference with each other and with our own Government, for the purpose of commending and urging the doing of certain things, will turn out a wise and far-seeing proposal and law so far as we are concerned, nobody can now foresee. The conference was promoted by Democratic revenue-reformers, and by those protectionists who fancy that free trade will be safe along parallels of longitude, but not safe along parallels of latitude, and by those Republicans who "guess" that our manufacturers—unable, as those protectionists say, to compete *in* the United States (unless aided by custom-house taxes) with Britons, Germans, and Frenchmen sending hither their products and wares—can compete with Britons, Germans, and Frenchmen *outside* of the United States, and in Central and South America, without such custom-house walls, fences, and barriers; and especially so if our Government will pay for steamers to carry cheaply our products to the people at the south of us and bring hither theirs.

The law of the last Congress to which we refer, is so diffuse and sprawling that it embraces among the objects to be sought by the conference almost everything a government can attempt. One expressive object is, for example, the securing for each government of more extensive markets for its products. Among the enumerated objects is *anything* "presented by any of the said States." Besides peace, prosperity, arbitration, extradition, there are enumerated in the law, as objects to be sought, a customs union, regulations governing imports and exports, the *classification* and *valuation* of merchandise in the ports of each, a uniform system of invoices, a silver coin to be a universal legal tender, and the establishment of regular, swift, and cheap means of transportation and intercommunication. Did the draughtsman of the law, or did Congress, enumerate merely for buncombe all those topics to be discussed and voted on by the conference, or is the conference really to have power to bind, in some form, those governments participating? Have we really committed the requirements of our custom-house invoices, our customs taxes, our customs nomenclature and classifications to the discussions and deliberations of this conference? If not, what does the law really intend?

There may be eighteen Spanish-speaking governments represented by as many delegates as each government may see fit to send, but no State can have more than one vote. Our Government may be one among nineteen votes on our tariff system or on silver as exclusive legal tender. If Mexico and the States of Central and South America shall decide to go *earnestly* into this conference, and not in a perfunctory way, and send their very best men as delegates, our Government at Washington will inevitably be over-matched, not only in numbers and votes, but in knowledge and diplomatic expertness. All of those delegates will probably speak Spanish and French accurately and fluently, but not English, while probably few, if any, of our delegates will be able to speak or understand any language besides English. Spanish America is not behind ourselves in the learning of its publicists, political economists, and diplomatists, the best of whom have had European education and training, which ours have not had. It has sent forth the very best of modern treatises on international law. The accuracy and completeness of knowledge of European literature—touching finance, taxation, political economy, and public law—possessed by the leading public men of Spanish America, is superior to that possessed by our leading men, and especially by such as those selected, or likely to be selected, by Mr. Harrison to attend this conference. And, besides, the linguistic ignorance of our delegates will put us at a disadvantage if Spanish America, either of her own motion *or under the inspiration of British diplomacy*, shall really set out to control the conference. It is not unlikely that Germany and France may slyly "chip in and take a hand." Peace, prosperity, arbitration, and extradition are harmless topics, but when we invite such an international conference at Washington in order to persuade the Spanish American peoples not to trade with Europe, but to trade only with us, the Satan of diplomacy, which is money, will inevitably be at work, and not on our side. Spanish America is largely in debt to London, Paris, Amsterdam, Hamburg, and Berlin, but not to New York. In current trade our merchants do not, as a rule, give the long credits to Central and South American buyers that British sellers can give and do give.

While the chief obstacle in the way of our more unrestrained trade, fuller trade, and closer business relations of every sort with the Spanish-speaking peoples at the south of us is our clumsy and provincial system of taxation, which impedes those peoples in selling to or buying from us (which impediment could not be altogether overcome if our Federal Government maintained vessels, steam and sail, carrying merchandise to and fro, up and down lines of longitude, free-gratis-for-nothing), there are other advantages over us which Europe, and specifically London, has. South and Central American youths of both sexes go rather to Europe to be educated, than to us. European States have sent to South and Central America the most promising of their diplomatic and consular agents, while our own Government at Washington has looked on those States as a sort of Botany Bay dumping-ground to which can be sent political workers with a "pull" who cannot safely be accredited to a European government. Nowhere in the wide world has there been, or is now, a more promising field than in South and Central America for an ambitious and clever American wishing to make a name for himself in diplomacy, and nowhere have we needed, and do we now need, more diplomatic comeliness, grace, shrewdness, tact, and skill in the use of foreign tongues; yet our budding diplomatists prefer Berne, Lisbon, Copenhagen, St. Petersburg, Rome, Brussels, The Hague, and such like posts, where there is nothing to do and no glory to be won, and our Government commissions to sensitive Spanish American governments men who are off color as much as "Pat" Egan. It will require a good many American international conferences at Washington to obliterate the impression created by the Landreau claim and Mr. Blaine's Chilian policy.

Germany does no such stupid work in South and Central America as we have done. Her diplomatic and consular agents and commercial travellers soliciting trade are united, alert, complaisant, and persuasive in the language of the country. One sees with half an eye, by glancing at the money articles in the London *Times*, its reports of sales of bonds and stocks, how unlike are the commercial, financial, and business ties which bind Mexico and Central and South America to London from those which exist between the peoples of those States and New York. Quite one-half as much space is given in the London *Times* to the price of investments in Mexico, Central and South America as to investments in our own country. New York newspapers scarce ever give quotations and prices for the former. Everything in the way of Central and South American investments has attention in London. The great part of the money for internal improvements by the governments and people to the south of us on this hemisphere comes from London, and not from New York. As the volume of loanable capital increases among ourselves, and seeks the risks and higher rates of Spanish America (and yet Argentine 5s sell in London for 97, Brazilian 5s for 104, Buenos Ayres 6s for 103, Chilian 4½s for 104, Uruguay 5s for 74), our commercial relations with those countries will be closer, if we do not repel them by what we call our "protective system." Unless we can form with the States to the south of us a customs union, surrounded by a custom-house wall of protective taxes against all the rest of the world, we shall have to abandon competition with Britons, Germans, and Frenchmen in those neutral markets until we modify our own mediæval taxing laws and stop taxing imported raw materials.

It will be edifying to hear or read the reply of Mr. Harrison's delegates (and especially if they all shall be Republican protectionists) to their South and Central American colleagues when they are demanding that we shall tear down or reduce our custom-house walls in order that Spanish-speaking people to the south of us may send hither and sell to us their products; that we shall modify our clumsy and senseless taxes in order that our own people may produce as cheaply as Britons, so that Central as well as Spanish America may be thereby enabled to buy of us, instead of buying of Englishmen, Scotchmen, and Welshmen.

"CORP." TANNER.

THE indications are strong that Tanner will be dismissed from the Pension Bureau within a short period. He should never have been appointed, even if President Harrison had not solemnly pledged himself to the people of the United States that, "in appointments in every grade and department, fitness and not party service should be the essential and discriminating test." Now, the presumption that a "Corp." is unfit to take charge of a great public office is just as strong as the presumption that a "Fatty" is unfit to take charge of a city prison. This particular "Corp." had undoubtedly a very strong claim on the public care. He lost both his legs at Bull Run, but it is only in 'Alice in Wonderland' that the loss of a man's limbs becomes of itself a qualification for high public office. In this case there was no other. Tanner is an illiterate man, with no business training and a very slight sense of responsibility. He once held a sinecure at the Custom-house in this city, and at the same time carried on a pension agency, and was with difficulty compelled to do some work for his salary and give up the pension agency. Moreover, he is loose-tongued and light-headed, with little more sense of duty to the public than "Fatty" Walsh had when he became a jailer. That President Harrison, fresh from his oath of office, and fresh from his promises to put none but the fit on guard, should have sent for a man of this description, and have turned him loose into a great financial department of the Government, with the demoralizing remark, "Be liberal to the boys," was surely a very extraordinary act.

Consider for a moment what the office is of which Tanner was put in charge. He actually has the disbursing of a sum larger than the total expenses of the Government before the war. In 1860 the total expenses of the Government were in round numbers $66,000,000. The outgo in pensions last year was in round numbers $80,000,000, and Tanner said in a recent speech that he was debating whether he would next year ask for $110,000,000 or $115,000,000. Eighty millions was last year nearly one-third of the total expenses of the Government, besides the pensions. Were Tanner to get what he wants, he would next year have the disbursement of a sum more than half as large as the other expenses of the Government. The Secretary of the Treasury and the Treasurer, who are usually men of education and experienced financiers, have hardly any discretion in the distribution of the funds which they control. They are tied down by law in the disposal of every cent of it. They cannot be "liberal" with it without committing a crime. But the Commissioner of Pensions has, through his control of or influence over the examining boards, almost absolute discretion in deciding whether a man shall have a pension, what the amount shall be, and whether he is entitled to arrears, which in some cases amount to a small fortune.

This is prodigious power for any man to possess in dealing with a fund of $80,000,000. There are not many men in America fit to exercise it. We doubt if any man in any country was ever allowed to exercise it until now; certainly no man like Tanner ever was. Its committal to him was all the more extraordinary because the President, of course, knows as well as any one what big battalions of cheats and humbugs march behind the honest veterans who are now claiming the national bounty. Every one who witnessed a battle during the war knows what a host of skulks and deserters filled the fields and roads in the rear, how shameless they were, and how little they seemed to care how their comrades fared at the front. These men are not now trying to escape observation by any means. The memory of their exploits in active service does not cover them with confusion. On the contrary, they are everywhere the loudest-mouthed and most rapacious and most ostentatious applicants for cash rewards for wearing the uniform and keeping out of danger. Tanner himself has been tried by the Brooklyn post of the G. A. R. to which he belongs on the charge of having been a straggler when he was wounded. His account of the occasion was exceedingly cloudy. He was one of thirty-five men of the Eighty-seventh New York who marched to the second Bull Run without colors or officers, and there were only five of them together—he could not explain why—when he got under fire. But it is to his credit that he *was* under fire, and that the enemy were able to get at him with shell, while he was lying down reading in an orchard, after having distributed pears to "the boys." There are thousands of noisy veterans to-day who have not half so good a story to tell, and the more solemn the obligation of the country to reward those who never flinched, the more imperative the duty of separating the wheat from the chaff, and seeing to it that cowards do not share the rewards of valor. For such work there could, of course, hardly be a more unfit person than Tanner, and how to reconcile his selection for the place with Gen. Harrison's sense of public and private obligation, as described by himself, we confess we do not know.

THE TREASURY AND THE TARIFF BILLS.

PROBABLY until Congress has assembled will not be revealed unto the taxpayers the plan and purpose which underlie the call by the Treasury on the chief tax-gatherers at the large ports to examine the Mills bill, the Randall bill, and the Senate bill of the last Congress, and give their opinions on certain indicated features of each of the three bills. There is fair ground for inference that the movement is an Administration movement, having the assent of the Republican "Boys" and the associations of manufacturers which are in a position to dictate, if they see fit, the tariff policy of the present Executive. It is safe to say that neither the Mills bill nor the Randall bill has been committed to the examination and criticism of the newly appointed tax-gatherers in order to strengthen either of them. Nor is it absolutely certain that word has not been sent by the Treasury, through its special agents, to Baltimore, Philadelphia, New York, Boston, and Chicago to "knife" the Senate bill.

The legislation on the tariff by the last Congress had for a chief motive and reason the extinction of a rapidly increasing and dangerous surplus; but between the conspicuously successful efforts of Tanner as a surplus-reducer, the payments for bond-buying, and schemes of various sorts for depleting the Treasury balance which have leaped to light since the 4th of March, a surplus will no longer be an exhortation to taxation reform. The Republican leaders may not now be willing to repeal the internal tobacco tax or cut down the external sugar tax. A great deal will, however, depend on Tanner. He has increased pension payments for July and August of this year by $10,000,000 beyond what they were for the corresponding months of last year. The Treasury surplus, which was $107,500,000 a year ago, is now only $40,500,000. Tariff reform is plainly not any longer to turn on the surplus. If our customs taxes were not so severe on consumption, and chiefly on consumption by workingmen, but bore heavier on the property and savings, or accumulations, of the well-to-do and the rich, Tanner might be looked upon as a butler siphoning, by Tichenor's aid, capital out of the rich man's bottle into the bottle of the "Boys"; but unfortunately the money which he pays out in pensions is wrung by Tichenor chiefly out of the wages of labor. Tichenor well knows that when he added 19 per cent. to the taxes on worsted clothing, he added that much more weight for the laboring men to carry on their holidays and Sunday outings. Tanner takes that money and flings it to the Boys in Blue, and would pour it into the laps of the widows of the "Boys" when they marry again.

It would be an orderly and commendable procedure if the Treasury would prepare a tariff bill *de novo* and submit it to Congress as an Administration measure. Only the Administration can know with how much money Tanner intends annually to enrich the "Boys," and what sum the Administration will require for the next fiscal year. It may be 300, or 400, or 500 millions all told. Perhaps Tanner knows not. Who does, if not the Administration? Congress will probably add liberal schemes of its own to the Administration fads, whatever they are, and will increase taxes to provide the money therefor. But the Administration should be able to say what annual sum it wished, and the Treasury should be competent to put on paper its plan of taxation to raise that sum. But is it competent? Who in the Treasury can do it? Assume the sum of money annually required to be 300 millions or 400 millions, more or less, who in the Treasury can, between now and next December, devise and vindicate the details of a safe and wise plan of taxation to bring in that sum? How much shall be assigned to the internal and how much to the external revenue? How much of it shall be paid by articles having an origin *outside*, and how much by articles having an origin *inside* our country? Who is there now in the Treasury capable

of preparing and sending to Congress two plans, one to raise the needed annual sum on a purely revenue basis, a tariff only for revenue, and the other showing a variation and increase of rates in order to promote, protect, and preserve our industries according to the protective idea on which Harrison was chosen, or believes he was chosen, to be President?

Such a task would be far beyond the physical and probably beyond the mental competency of Secretary Windom. He is already wearied and worn by the pestilent office-seekers. He has had no time carefully to familiarize himself with customs law, which is as abstruse and artificial as patent law or the law of real estate. He must take it all at second hand from Col. Tichenor or Capt. (it is pleasant nowadays to use a military title less than that of General) Macgregor of the Customs Division. Assistant-Secretary Batcheller has not much more acquaintance with the details of customs law, tariff law, and Federal taxation than a Sioux Indian chief. No one remains but Col. Tichenor, whose experience and training in the Treasury have been in the work, and according to the mental and moral methods, of a customs detective at home and abroad. And, besides, his health, never robust, has already been seriously impaired by his endeavor to work out in the Treasury the scheme of the syndicate of manufacturing associations which fancy they put Harrison in the White House, and demand the execution of the "bond of iniquity" by which the putting was accomplished. It is plain to see that Tichenor's tariff will be the tariff of that syndicate which has compelled an increase of taxes by Treasury order on worsteds, silks, and all along the line. But, nevertheless, if we are to have a new tax law from this Republican Congress, embodying the ideas which Harrison will say triumphed by his election, it is proper that it come from the Treasury. Will it? Can it? Who is to prepare it?

MANNERS IN THE PUBLIC SCHOOLS.

We are hearing a good deal just now of the need of other kinds of training than mere literary training in the schools. There is a loud demand, not only for manual, but for moral and religious training—something very hard to get in a satisfactory shape, because its efficiency must largely depend on the character of the teacher. It is not every teacher who can make himself or herself a moral or religious influence, or even furnish a proper vehicle for moral or religious instruction. But there is a branch of ethics which might be taught in every school, and which ought to be taught in every school, but is grossly neglected to the great national detriment—we mean what is called manners or "minor morals." In this field it is safe to say our common schools do nothing, or next to nothing, and there is none within their reach in which they might do so much.

We are not now talking of the kind of demeanor in ordinary intercourse known as "politeness," though this is terribly deficient in nearly all our boys and girls. Little or nothing is done in the schools to combat the mischievous delusion that sauvity of manner is a confession of social or other inferiority, and that in order to preserve his self-respect and maintain his republican equality, an American has to be surly or indifferent, after the manner of hotel clerks or expressmen, and too often salesmen and "salesladies" in stores. The result is, that we have probably the worst-mannered children in the civilized world. And the result of this neglect of the schools is to give a great many young people a dull, unready air—that is, they avoid quick responsiveness, lest it should seem like servile eagerness to please, and the habit of dilatory answering ends in giving an appearance of dulness and stupidity. One of the great uses of schools is to fortify the children of the State against whatever is evil and deteriorating in the political or economical condition of their lives. One of the great uses of American schools should be to fortify American boys and girls against the bad influence, either on mind or manners, of the passion for equality pushed to extremes, and the still more corrupting passion for notoriety fostered by the newspapers.

One of the defects in our civilization to which attention is now being called by the preparation for the Exposition is the filthy and squalid condition of our streets and highways and the surroundings of our houses. Everybody who has seen a foreign capital anticipates with more or less shame the arrival in New York of people who are accustomed to the comfort and cleanliness of London or Paris or Vienna. No doubt much of this filth and squalor is due to defective municipal administration. But, unfortunately, it is not New York alone which suffers from it. Similar nuisances are to be encountered in every town and village in the State, and no merely legislative or official remedy will be effectual without a reform in popular habits, which must begin in the schools.

It is not easy to teach neatness to grown men and women, but it is possible to infuse into children a horror of the anti-social practice which helps a great deal to disfigure and vulgarize our cities, and especially this city, of throwing down refuse of whatever nature—peanut shells, bits of paper, ends of cigarettes and cigars, old shoes, hats, ashes, saliva or other excretions—in places frequented by or seen by one's fellow-citizens, such as streets, roads, lanes, sidewalks, public stairways, etc. Our indifference to this practice, which appears to be the result of a long familiarity, is incomprehensible to foreigners. It disappeared from European countries completely fully one hundred years ago. It is now found nowhere in the Eastern hemisphere except in Turkish or other Mussulman towns and cities, and is looked upon as the sure sign of a low civilization. It is considered in every European city a grievous offence against a man's neighbors to make any public display of offal, or to sit down quietly in the presence of filth or rubbish of any description. A horror of it might be taught to every child in the public schools by any average teacher. To instil it should be one of a teacher's first duties, for it must be remembered that the chief observable superiority of the civilized man over the savage lies in the greater cleanliness of his person and dwelling. Nothing about an Indian encampment is so revolting as the indifference of the inhabitants about their garbage and refuse. If they get it outside their door, it is the most they strive for. When it is remembered that two-thirds, probably, of the houses, stores, and offices in this city deposit their sweepings in the streets, and follow them in many cases with the slops, one has a humiliating sense of our nearness to the Crow or the Apache in some of our social usages. No child should leave the public schools without having a dread of refuse ground into him. He should be taught to hate the sight of unswept streets or sidewalks, of saliva-stained marble or granite, of ashes and refuse of every description, and especially of bits of newspapers and ends of cigars, as signs of gross selfishness and a low social tone.

THE FUTURE OF SOUTHERN CALIFORNIA.—II.

Oregon, August, 1889.

That there could be no better way of investing capital than by building reservoirs is shown by the fact, recently pointed out by the California State Board of Trade, that ten years ago the lands of Fresno sold at from $3 to $20 per acre, while now, with water on it, the same land sells at from $75 to $750 per acre. Equally great is the gain from an æsthetic point of view. Without water four-fifths of Southern California is a dreary cactus-desert during the greater part of the year; with water it is a veritable garden-grove. Nothing could be more delightful than to watch the effect of water in this magic climate, when the first rains fall in October or November. Up to that period everything except the irrigated garden and orchard oases wears a parched yellow and brown aspect; but hardly has the rain penetrated a few inches into the soil when the grass turns green, and, before the eye has become accustomed to the change, gaudy flowers, gradually increasing in variety and abundance, spring up on all sides, even on land which appeared to be pure sand, but which on closer examination proves to be rich in decomposed vegetable matter. The irrigated gardens have an abundance of choice flowers all the year round, and the garden of the house where I lived, though without the slightest pretensions, had in full bloom, in January, petunias, calla lilies, violets, honeysuckles, geraniums (six feet in height), stock, California poppy, hyacinths, smilax, heliotropes, nasturtiums, red, white, yellow, and *green* roses, etc. In February a frost nipped the leaves of the bananas, heliotropes, and nasturtiums, but in a few days they were out again, and of the three or four subsequent frosts none was heavy enough to injure them, while the other flowers mentioned grew uninjured all the "winter." This was at Anaheim, twelve miles from the sea and twenty-eight miles south of Los Angeles, and gives a better idea of the climate than columns of statistics. Nor was it an exceptional year, for there are orange trees in the State over eighty years old, and at the San Fernando Rey Mission olive trees over a hundred years old, proving that in all this period there has been no

frost sufficiently severe or prolonged to injure these sensitive trees. In 1880 a little snow fell in Los Angeles County—just enough to astonish the young folks who had never before seen any; nor have they seen any since. The only time when ice ever forms (never more than a quarter of an inch in thickness) is immediately before sunrise, and hardly has the sun risen above the horizon when it disappears again.

To this short duration of the occasional frosts is attributed the fact that they do not kill the semi-tropical vegetation, as happens occasionally in southern Europe; and at nine or ten o'clock the California farmers may be seen ploughing for their winter wheat in shirt sleeves. Hence sufferers from pulmonary complaints who cannot endure cold, will not know that the thermometer ever reaches freezing point if they remain in bed till the sun has been out for half an hour. Immediately after sunset they will again need the protection of the house, or of a spring overcoat, as the temperature at that time suddenly drops ten to thirty degrees. But while the sun shines they cannot afford or desire to lose its rays for a single minute. It is the very luxury of existence to walk, ride, or hunt in the Southern California February sunshine. The oldest inhabitants, used to it as they are, cannot help muttering every morning, "What a fine day!" January, February, March, and April, the very four months which are the most disagreeable of the twelve in the East, are here the most perfect: the sky of the deepest blue, the air neither cold nor warm, exhilarating, and laden with the perfumes of orange blossoms and wild flowers. There are of course some disagreeable days, but they are few and far between, there being but twelve to twenty rainy days in Los Angeles County during the whole "rainy season" from November to May, so that invalids hardly ever miss their sun-bath. Dr. C. B. Bates mentions, in the *Southern California Practitioner*, the case of a consumptive who kept a record of the weather at Santa Barbara, and found that in a year there were but fifteen days upon which he was confined to the house, ten of them being rainy and five windy; and another case of a lady who, without any other than a brush shelter, spent all of eighteen months except nine nights in the open air.

This will appear the more remarkable in view of a certain peculiarity of Southern California rains. Elsewhere, people often exclaim: "If we only had fine weather in the daytime, I shouldn't care how much it rained at night!" Here this wish is fulfilled, for most of the rain falls at night. Some will be ready to cry out against the "eternal monotony" of this sunshine, but on arriving on the ground they will find this objection purely theoretical, and will be only too glad to know that they can make projects for work or pleasure, for picnics or excursions, weeks ahead, with an almost absolute certainty of having fine weather. Still, there are a few day-showers to break the "monotony," and they make up in profusion what they lack in frequency—a fascinating spectacle to the senses, and still more to the imagination, which evokes pictures of prosperous grain-fields and lovely flower-meadows. Surely that must be pronounced an ideal climate for an invalid and valitudinarian where every rainy day, even during the so-called rainy season, is regarded as a special dispensation of a kind "Providence," is commented upon in jubilant editorials by the journalists (who had for some time predicted "better weather," *i. e.*, rain), and is recorded in telegraphic tables noting the daily rainfall in every town, to the hundredth of an inch! And be it admitted that there is ground for this jubilation, for in three years out of ten the rainfall is insufficient, and then the crops suffer, except where irrigation is practised.

In this immunity from rain-storms, Southern California possesses a great advantage over other winter resorts for invalids, but it is only one out of half-a-dozen advantages which may here be briefly touched upon. The first and most important is the dryness of the atmosphere, which favors the rapid radiation of the earth's heat, so that the nights are always cool enough for refreshing sleep, even in midsummer, and sleep is the best of all medicines. So dry is this air that strips of beef can be jerked in it by simply letting them hang out doors till desiccated. And the strangest part of it is that the sea breeze, which always blows during the hottest hours of the day, is a dry wind too—a circumstance which some have tried to account for by considering it a sort of undertow, or a wave of air which came from the dry desert lands to the eastward and returns thither, absorbing but little moisture during its brief contact with the ocean. But whatever the cause of this dryness, it is a great hygienic factor, which this region can play out as one of its highest trumps against Florida and Italy. No enervating, malarial swamp winds, no sultriness, such as often makes suicide a welcome thought in the East, will ever oppress any one in this Western sanitarium, not even during the rainy spells. Nor has California ever suffered from yellow fever, like Florida, or from the cholera, which is a constant menace in Spain, Italy, and Sicily. Again, on the shores of the Mediterranean, in Europe as well as in Africa, the invalid will find it almost impossible to obtain comfortable lodgings and proper food, except in the large cities, while in California he can find home comforts in any village and many farm-houses in the midst of the wildest scenery and purest air. Never will his nostrils be offended here by the pestilential odors which poison the air within a radius of several miles of Italian and Spanish cities; nor will he ever be compelled by the muddy condition of the streets to take his walks all winter long on the roof of the hotel, as the proprietor of the Continental at Tangier told me some of his invalid winter-guests did. What a life compared with the floral walks, the hunting, fishing, and picnicking on the dry ground and under the blue rainless sky of Los Angeles or San Diego County! Surely, Southern California is destined to become the sanitarium, not only of America, but of Europe as well.

What makes the fulfilment of this prophecy the more probable is the circumstance that California is an all-the-year-round sanitarium, and not one of the mere winter resorts which compel the unwilling invalids to pack up and seek a new clime when May is gone. No one would dream of spending the summer at Malaga, Cannes, Naples, Palermo, Algiers, or Jacksonville, exposed to a sultry, malarial atmosphere and the danger of deadly epidemics; whereas California has countless places where summer and winter are alike, or rather alike unknown, the only season known being an eternal spring. Many residents in our Eastern and Middle States have often wondered what has become of the spring which used to form one of our seasons. It has followed the general tide of immigration, has gone West, and may now be found in riotous profusion along the coast and the foothills of California. Not that all parts of Southern California are as exempt from a summer season as they are of winter. On the contrary, there are many most desirable winter resorts which invalids and tourists will be only too glad to abandon in June, such as Riverside and other places too far in the interior to get the benefit of the afternoon sea-breezes. Even so near the sea as Los Angeles, it is by no means pleasant to be exposed directly to the rays of the July sun; yet, owing to the dryness of the atmosphere—which, moreover, increases as the heat increases—100° are not so oppressive here as 90° in New York. Besides, in the East there is no refuge from the all-pervading heat except in a cellar; whereas here one needs only to step into the shade to find relief, the difference between the sunny and the shady side of a house running as high as 30°. Finally, as Southern California has an average width of only forty miles, it takes only an hour or two to reach the seacoast, where it is always pleasant; and cool mountain resorts are equally accessible everywhere, as can be seen by a glance at the map, which is blackened by groups and chains of mountains, attaining in the San Bernardino range a height of over eleven thousand feet. No wonder that camping is the favorite pastime of the Californian in summer—and not only of the wealthy; for as the farmer does all his work in winter, he can lie fallow in summer, like his somnolent fields, and pitch his tent along any beach or cañon he chooses; and camp-life is so inexpensive, especially when rod and rifle are available, that the poorest can indulge in this luxury during the warmest months.

Surely, when the human race cuts its wisdom teeth, it will no longer crowd into dirty, noisy, malodorous cities, but will seek health and fresh air all the year round. Southern California will loom up more and more as an ideal place for building up a vast city in the country, so to speak—a city in which each house will be surrounded by ten or twenty acres of irrigated land, capable of producing all the fruits and vegetables, eggs and poultry needed by the family, and shaded by one of the fifty varieties of eucalyptus trees already imported from Australia, or by the spacious pepper tree, and a small orange, peach, and fig orchard. Such a city could be built up in a few years, with shade and all. Elsewhere when people plant trees, they do so for the benefit of posterity; here a row of the eucalyptus will grow in a few years large enough to afford abundance of shade. Noiseless electric railways will traverse this country town in every direction, bringing the scattered population to the business places and centres of amusement. But they will not crave the artificial excitements of city life as they do now, for when there are no excursions to the sea or the mountains, the fascinating care of the orange groves and flower gardens will absorb all the leisure moments. What novel, what theatrical play, could afford so much amusement as the daily irrigation of a flower-bed, and noticing how the plants grow visibly and in a few weeks develop into exotic wildernesses of tropical and semi-tropical flowers of the most gorgeous colors and unheard-of size? Or watching a rose bush as it gradually intertwines itself among the branches of an orange tree, which some morning will present the bewitching spectacle of a tree bearing red roses, white orange blossoms, and golden oranges all at the same time? Or sitting under this orange tree in February, listening to a mocking-bird perched on its branches, and reading in your paper about the blizzards and storms of the East, and the tornadoes and cyclones which you know will never visit your home? Why should our novelists lay the scenes of their tales in Andalusia when we have an Andalusia of our own right here on the Pacific Coast? At one time it formed part of the so-called Great American Desert, but in the next cen-

tury it will be known as the Great American Paradise.

Yet let not the coming population of the Pacific Andalusia fancy that they will be spared all the trials and annoyances of life. Even Southern California has its disadvantages — quite enough to prevent it from degenerating into a Utopia. Thus you will some morning be standing in your garden admiring your favorite banana bush. Suddenly it will tremble and sink into the ground a foot or two. Earthquakes are not unknown in this region, but they don't "strike in one place" like that. No, it was one of those irrepressible gophers, the terror of the rural Californian. They will eat the roots of your fruit trees and choicest flowers, regardless of expense, and though cats and traps will catch them and irrigation drowns them, the neighboring fields always furnish a fresh supply; and what is worse, their subterranean passages from these fields serve as tunnels which carry off your water, and make you pay twice as much for irrigation as you would have needed but for those holes. Then there are scale bugs of all colors, which attack your orange trees and have to be sprayed off; and a mysterious disease which kills your vines; and small green insects which eat up your flowers and buds; so you need a whole drug store to combat them. Rabbits will eat your vegetables and grape-vines, and the quails will feed on your grapes; and, to add insult to injury, the Los Angeles sporting clubs have succeeded in passing a law which prevents you from shooting these birds at a time when it would do most to protect your crops. However, if you are a sportsman, you will forgive and observe this law, which enables you at other times to shoot at a flock of quail in your own vegetable garden, though you live in a town of two or three thousand inhabitants.

The desolate appearance which all the unirrigated parts of the country present after May must also be reckoned among the disadvantages of this climate; for a sensitive soul can hardly help feeling pity for the drooping, parched vegetation, especially after noticing once with what eagerness it drinks in the first rain of the autumn, with as much evident enjoyment as a Bavarian emptying his mug of beer at a draught. Nor can one help admitting that the orange groves and eucalyptus avenues, delightful as they are, cannot entirely atone for the absence of green forests—for Southern California, except in the foothills, is as treeless as Spain, which it resembles in so many other respects—and a single oak tree has more than once furnished the nucleus of a town. The higher mountains are as bare of trees as the valleys, but this is compensated for by the consequent greater clearness and variety of the sculptured outlines, and by the snows which fall during every rain-storm, sometimes extending almost down to the foothills. In the clear southern atmosphere these mountains, though they be fifty or sixty miles away, seem to be almost within stone's throw, and as they are visible everywhere, they constitute one of the greatest charms of Southern California. Once in a while, however, this view is spoiled for a day or two by one of those desert winds and sand-storms which are the most annoying features of this climate, and are known as the Norther, or the "Santa Ana" wind, as the Anaheimers call it, in order to give a hated rival town a bad name. Without being a hurricane, or even a gale, this wind reaches a considerable velocity, is as dry and warm as if it came from an oven, and raises clouds of dust which obscure the sun and mountains as effectually as the smoke of the forest fires does in Oregon, and a film of which even lines the waters of the Pacific to a considerable distance from the shore. If I finally mention that this dust, even when it lies quietly on the ground two or three inches thick during seven or eight months of the year, is by no means a desirable thing to have about, I shall have mentioned all the serious blemishes that I could discover on the face of this fair country; and they are so insignificant compared with its attractions that I have given them the advantage of having the last word in this letter, confident that they cannot essentially modify the opinion therein expressed as to the future of Southern California.

HENRY T. FINCK.

ARTISTIC DISCOVERIES IN VITERBO.

ROME, August 10, 1889.

GIOVANNI BATTISTA ALMADIANO, a noble Viterbese, prelate of the chamber and friend of Leo X., was sent, soon after 1500, on an embassy to Germany. He there became acquainted with a gentleman from Mantua, whom he cared for most affectionately during a mortal illness. Before his death the Mantuan confided to Almadiano that his only regret was that he had not been able to carry out his cherished plan of erecting a church and monastery for the Carmelite brothers of the congregation of Mantua. To comfort his last moments, Almadiano promised that immediately on his return to Italy he would himself carry out this plan. And so he did, building in Viterbo a fine church, dedicated to St. John, and an elegant cloister, and giving them to the Carmelites. The architect was Giuliano da San Gallo; the sculptor, Andrea della Robbia; the painter, Sebastiano del Piombo. These names have only now been connected with the monument, through the following discoveries of Cav. Ettore Gentili, whose acquaintance with the monuments of the Middle Ages and the Renaissance in Italy is exceptionally thorough.

In 1870 the Italian Government, as is well known, deprived the religious corporations of many of their buildings, giving them to the communes for public use. The church of S. Giovanni was then made into a gymnasium, and an infant asylum was established in the monastery. The municipality appointed a committee charged to select whatever works of art were worthy of being placed in the museum. From all the contents of the church this committee selected for preservation only what they called "a wooden bust of little value," for the sole reason that on the pedestal was the inscription, *Jo. Bap. Almadianus MDX.* The bust was covered with several thick coats of plaster and colors laid on at various times by barbarous hands, but Gentili recognized that under all this must be a terra-cotta by a master of the best period of the Renaissance. A careful removal of the black, red, and yellow paint disclosed a superb work. The head is a remarkably living likeness, with high and thoughtful brow, lips full, and eyes large and intelligent. The broad and chaste style, the surety of modelling, and the masterly execution had already indicated Andrea della Robbia as the author; and this conjecture of Gentili was confirmed by the discovery of documents showing that Andrea was at this very time working in Viterbo for Almadiano, for whom he executed the beautiful lunette over the door of the church of S. Giovanni, while for the Dominicans he made the famous lunettes of the church of S. Maria della Quercia.

A few days later, Gentili was engaged in verifying some inscriptions in the chapel of Lorenzo di Giacomo, in the suppressed church of the Verità. The ladder was about to be placed on top of a pile of old canvases, but he opposed this act of carelessness and insisted on examining these paintings, though assured that they were merely old rubbish fit only to be burned. In one of these canvases, condemned to destruction, he recognized, under several pounds of dirt and plaster, the hand of Sebastiano del Piombo, the great rival of Raphael and the intimate friend and companion of Michelangelo. This painting, 2.85 metres high by 2 metres wide, was at once carried to the Communal Museum. It was cleaned and found to be in perfect preservation. It contains five life-size figures, and the subject is the Baptism. In drawing and color this painting is remarkable: the figure of Christ stands out in such powerful relief, is of so solid a coloring and so true an anatomy, as to fully justify the reputation of this master, great in a period of giants. It is strange that this work has never been mentioned or recognized, and still more strange that the committee, even if unable to recognize its author, should not have realized its merit. And this, notwithstanding the fact that two other famous works by Sebastiano del Piombo are in the Museum of Viterbo itself: the Flagellation and the Pietà. In both of these the life-size figure of Christ is identical with that in the Baptism in form, play of light, and color; and in the Flagellation the head of one of the executioners is the same as that of St. Peter Martyr kneeling by the side of Christ in the Baptism. The beauty and authenticity of the new painting are now generally recognized. Its history was investigated, and it was found to have been originally placed over the high altar of the church of S. Giovanni: it was consequently ordered by Almadiano.

The lucky discoverer also noticed in the church itself the following inscription: *D. O. M. Has Carmelitanas ædes ac templum per Leonem X. sacro fonte decoratum, illique B. M. Virginis de Peste sacellum prope fontem ejusdem Pontificis diplomate lenitum, Joannis Baptiste Almadiani nobilis Viterbiensis insignis pietas in Deiparæ obsequium excitavit, extruxit an. Dni. MDXV tanto benefactori oberat Patres grati animi monumentum posuere.* A search for this *sacellum prope fontem* dedicated to the Virgin disclosed an elegant little octagonal church, with a door whose imposts were beautifully carved in relief. But its interior was bare, covered with a yellowish coat of plaster. Gentili judged that neither Almadiano nor the Carmelites would have left the building so unadorned, and that under the plaster would be found paintings of the first years of the sixteenth century. The removal of the plaster in certain parts has already brought to light four large figures by Giovanni Spagna, the pupil of Perugino. Three are in a niche, and represent S. Antonio and S. Bernardino on either side of S. Sebastiano: this central figure is perfect in design, and, like all the S. Sebastianos of the Umbrian school, is of refined elegance. The figure is nude, and stands out from a background of a dark brownish red; the saint is wounded, and the expression of his face shows his suffering, but is self-contained and dignified. The opposite niche contains merely the figure of S. Giovanni di Dio, superbly modelled, and covered with drapery that falls in broad soft folds over slender and nervous limbs. The relief of this sympathetic and expressive figure is such as to give one, at first, the impression of an antique sculpture. Gentili hopes to discover other figures on either side. Meantime, he has uncovered, on the outer edges of the niche, two painted pilasters whereon, with facile hand, Giovanni Spagna designed two *candellieri*, in

which are graceful interlaced figures of men and animals, real and fantastic, leaves and branches, and vases of graceful shapes. C.

THE SON OF A KING.

PARIS, August 22, 1889.

THE letters written by the eldest son of Louis Philippe, who was called the Duke of Orleans after his father mounted the throne, have just been published by his two sons, the Comte de Paris and the Duc de Chartres. The premature death of the Duke of Orleans has always been considered as one of the causes of the Revolution of 1848. The nation lost its confidence in the future of the dynasty when it was represented only by an old king and a child. The Duke of Orleans had great prestige, and when he became the victim of the most unfortunate and unforeseen accident, he was mourned by the whole nation. I opened with much curiosity the volume, edited by his sons, as I was very anxious to discover from the Duke's correspondence if he was worthy of his great popularity and reputation. I have never heard anybody speak of him except with praise: his surviving brothers never mention him except with admiration and with a sort of respect which is rather uncommon between brothers. I must say that, after reading the correspondence of the Duke of Orleans, I came to the conclusion that his reputation has not been overrated, and I am inclined to think that the promises which he gave would even have been surpassed:

"Et les fruits passeront les promesses des fleurs."

The events which we see under our eyes help us to understand the past. The Duke of Orleans had, for a man just arrived at manhood when his father ascended the throne, a very clear comprehension of the state of Europe and of its future. Under the Restoration, Louis Philippe remained, as it were, in the shade; he did not conspire against the Bourbons, but he educated his children in a spirit which was somewhat different from theirs. His salon at the Palais Royal was opened to the marshals and generals of the Empire; his oldest son heard from their own mouths the history of the great wars of the Revolution and the Empire. He was allowed to mix with young men of his time who were more distinguished by their talent than by their birth. Among his friends we find Alfred de Musset; there are several letters of the Duke to him which show a great intimacy. (One of the finest of Musset's poems was the one which he wrote after the untimely death of the Duke of Orleans.) We find also letters addressed to Colonel (afterwards General) Marbot, who had been on the staff of Marshal Ney (the unpublished memoirs of General Marbot are among the most extraordinary documents on the period of the First Empire). His aunt, Mme. Adelaide, who was the Egeria of Louis Philippe till she died—a person of uncommon character and intelligence—took the greatest interest in him.

Under such influences, and with a father like Louis Philippe, who has not unjustly been called the modern Ulysses, and who had seen many men and many places, it is easy to imagine that the Duc de Chartres (so he was called till his father became king) developed rapidly, and as soon as he became Prince Royal we find him imbued with the highest sense of his duties and responsibilities. He must be judged from the standpoint of 1830. The Revolution of 1830 was not only a movement towards a more liberal and parliamentary form of monarchy; it must not be forgotten that it was also a national movement against the treaties of 1815. It was a form of what is now called the *revanche*—a protest against the Holy Alliance which had humbled France and placed her under a sort of tutelage. The Duke of Orleans was essentially a representative of the Revolution in a national sense; and in his remarkable preface, the Comte de Paris insists upon this point. In the will which the Duke of Orleans made at Toulon on the 9th of April, 1840, before starting for Africa, he says:

"It is a great and difficult task to prepare the Comte de Paris for the destiny which awaits him, as nobody at present can know what this child will be when the question arises of reconstituting on a new basis a society which has for its foundation only the mutilated remains of its previous organizations. But whether the Comte de Paris be one of those instruments which are broken before they have been made use of, or whether he be one of the workers in this social regeneration which is only dimly foreseen through great obstacles and perhaps rivers of blood; whether he be King or merely an obscure defender of the cause to which we all belong, he must above all be a man of his time and of his nation; he must be a Catholic, and a passionate, exclusive servant of France and of the Revolution."

Speaking of this passage, which has often been cited, the Comte de Paris says that "by the word Revolution, the Duke of Orleans merely means France in arms against the European coalition, resisting foreign intervention in its domestic affairs; France opposing the hostility of the European Powers by means of the pacific diffusion of doctrines which have become the basis of all modern goverunents, but which were then, let us not forget, proudly repudiated by the principal Continental monarchies."

The Duke of Orleans was not in the position in which the Comte de Paris now finds himself; the whole Legitimist party looked upon him as the son of a usurper. The division between the Legitimist and the Orleanist parties has now come to an end, since the death of the Comte de Chambord, and it is natural that the Comte de Paris should not desire to consider himself the representative of Revolutionary ideas. His personality represents exactly the reverse of these ideas. The European changes which his father desired have been accomplished; and, to the credit of Louis Philippe, it must be said that the hostility which Europe showed him at first, ceased when he revealed himself the most firm representative of peace.

A little temerity and enthusiasm can easily be pardoned in a young man. The Duke of Orleans was convinced that great changes were impending in Europe. He writes in 1831 to the Comte de Saint-Priest about the "complete and durable pacification of Italy, which can have stability only if it be supported by liberal institutions." Long before Cavour and Napoleon III., he thinks of the regeneration of Italy; he sees with "extreme pain" the invasion of the Romagna by the Austrians. During a visit which he makes in Alsace with his father, in 1831, he writes to his aunt, Mme. Adelaide: "What the King must say, with the clearness which is his characteristic, is that he will always put himself at the head of the nation and repulse the enemy." He did not perhaps understand very clearly the state of Germany. The King had received in Strasbourg the visit of four German princes—the King of Würtemberg, the Grand Duke of Baden, the Margrave his brother, and his brother-in-law, Prince von Fürstenberg.

"Since these German Princes are here," writes the Duke of Orleans to his aunt, "I should like the King to take advantage of it, and to render them thoroughly French. It is very important that France should undo slowly the Germanic Confederacy as constructed in hatred of us by the Holy Alliance, and should help to form a new one which would be in accord with our ideas, and in which we should exercise the influence which Austria and Prussia have exclusively reserved for themselves in the present confederacy."

You must not be too much surprised at this passage. When Napoleon III. embarked in the German war, French diplomacy was not much better informed as to the sentiments of the members of the German Confederacy. It must be said, also, that in 1831 the work of the unification of Germany was little advanced, that it was still purely ideal, and that it had found no expression in diplomacy and statesmanship.

In a letter to Marbot, written at Mulhouse in 1831, the Duke of Orleans returns to the subject:

"I have strongly urged the King to profit by the presence of the German Princes in Strasbourg to strike a blow at this rotten edifice called the Germanic Confederacy, to this association directed by Austria and Prussia against France and the liberal ideas of which they fear the propagation. . . . It seemed to me that the Princes of Baden were as French as Germans can be. As for the King of Würtemberg, he is completely under Russian influence, and I think he cannot be trusted. The Deputies from Darmstadt and from Frankfort also expressed with frankness their desire to bind themselves to the French alliance; and, in general, if some German Princes are hostile to France, all the peoples, without exception, and especially the armies, have felt the need of rallying to the tricolor flag, which left among them memories of strength and greatness which nothing has effaced. I have had on this subject curious details from the various French diplomats whom I have seen here."

At a distance of nearly sixty years, these lines sound very extraordinary. To be sure, the Revolution of 1830 in France had excited some revolutionary movements in Saxony, in Cassel, in Brunswick, in the Rhenish provinces. The personal observations of the Duke of Orleans were correct, but there was much illusion in the minds of those who thought that the tricolor flag was in the German eyes only a symbol of greatness; the wars of Napoleon were not forgotten, nor the sufferings and humiliations of the invasions.

In Belgium the Duke of Orleans found another field for his plans of reorganization. France had obtained the permission of Europe, in case of a Dutch invasion, to march to the help of Belgium and to occupy the Belgian fortresses. "Every day this necessity of reconstructing Europe on a basis more reasonable, and less hostile to France and to the peoples in general, presents itself more to my mind. . . . What I invoke with all my prayers, what I would seal with my blood if necessary, is the rupture of the treaties of 1815 and a new organization of European society." At the end of this reorganization he sees a general disarmament of Europe. Such were the generous dreams of the young Prince.

"It will only be when the people have obtained more or less complete guarantees, more or less liberal institutions, that the Powers will disband their armies, which, everywhere except in Europe, are only assembled in order to oppose progress and the just exigencies of nations. So long as a single Power maintains a system as ruinous as it is contrary to the true interests of Government, the disarmament will be an impossibility, because it can only be general, because it must take place everywhere at the same moment."

In home politics we find the Duke of Orleans, in that early period of the reign of his father, on the side of the most liberal doctrines. To his Aunt Adelaide he writes on October 27, 1831, from Maubeuge: "The question of the peerage seems still to present many dangers. I hope that the Ministry will prepare by all possible means to force the adoption of article 23 of the Constitution by the Chamber of Peers." This article abolished the heredity of the peerage. I could not help thinking, as I read these lines,

of the late Duc de Broglie, who once said to me: "Remember that, without an hereditary peerage, monarchy cannot live long."

The correspondence of the Duke extends till the time of his death. It will give every reader the impression that he was a man full of ardor, of patriotism; that he took an intense interest in public affairs, in the French army, in the greatness of his family and of his country. His style is very good, and at times becomes very eloquent. He clearly prepared himself for great things, and he died without having accomplished what he had dreamed. The preface of the Comte de Paris to the edition of his letters is a fine literary page. It is also a link between the past and the present, in a political sense.

THE FINE ARTS AT THE PARIS EXPOSITION.

V.—THE RETROSPECTIVE EXHIBITION OF FRENCH ART, 1789-1889—THE SCOPE OF THE EXHIBITION.

PARIS, August 12, 1889.

IN default of a catalogue of the Retrospective Exhibition, and owing to the difficulty of defining its limits in the great display in the Champ de Mars without some sort of official designations, I find, now that the catalogue is published and the works properly numbered, that I underestimated the extent of this part of the exhibition. The approximate figure of seven hundred works, which I gave in my first letter, turns out to be that of the oil paintings only, of which there are 652. The exhibition of drawings and water-colors includes 558 works, that of sculpture 140, that of engraving on medals 129, miniatures 76, architecture 376, and engraving and lithography 465. The total number of works in the Retrospective Exhibition is therefore 2,396.

While the exhibition of drawings, including as it does well-chosen works by such men as Ingres, Prud'hon, Géricault, Delacroix, Delaroche, David, Carpeaux, Baudry, Barye, and many others of value, and a collection of thirty drawings, mostly in pastels, by Millet, is of the greatest interest to those who wish to study the exhibition historically and in detail; while in the exhibition of architecture and engraving there is a rich display in which the special student will find the period of a hundred years of French art in these branches admirably illustrated, I shall not attempt to do more than give them this passing notice. Even in sculpture I shall be forced to note only a few names and cite but a few of the best works among the considerable number of admirable ones in this part of the Retrospective Exhibition.

Rude, Houdon, and Barye, a trio whose names have been chosen for the places of honor on the tablets in the interior of the dome of the Palais des Beaux-Arts, must first of all be mentioned. "L'Amour Dominateur," a statue in marble, which has been brought from the Museum at Dijon, and a cast in plaster of the celebrated figure of Cavaignac on his tomb in the Montmartre Cemetery, best exemplify Rude. By Houdon there are seven busts, a bronze figure of Apollo, and a cast of the Diana in the Louvre; and Barye is excellently represented by thirteen bronzes—"Jaguar Devouring a Hare" and "Panther Seizing a Deer" (both from M. Bonnat's collection, by the way) being most noteworthy. Then come Carpeaux, Clesinger, Carrier-Belleuse, Paul Dubois, Guillaume, Chapu, Falguière, Mercié, St. Marceaux, Aimé Millet, Fremiet, Cavelier, Thomas, and others, some represented by a single work only, for the exhibition is a picked one. Rodin has here a single piece, one of those bizarre manifestations which this now much-talked-of sculptor seems to delight in producing. It is a bronze mask, showing a strongly-marked face of a man, modelled with the greatest vigor and verve, and is famous as "L'Homme au Nez Cassé."

Though this collection has been judiciously chosen, and has been made as representative as it is possible to make an exhibition of sculpture where some of the best works of the men it is proposed to exemplify are in fixed places and cannot be taken temporarily to an exhibition, there is no doubt that the only way to study the sculpture of the past century in France is to go and see it *sur place;* and in Paris alone, in the Louvre, the Luxembourg, and in the public places and gardens, we can get a better idea of its extent and its merits than we can here. We should have to go to the Cathedral at Nantes to see the originals of the four figures by Dubois on the tomb of Gen. Lamoricière, and so the administration has placed plaster casts of them in the exhibition. In supplementing in this way what is to be seen in Paris itself, it is possible to get a comprehensive idea of the work of the sculptors, though, as has been said, that cannot be done in the Champ de Mars alone.

But the chief interest for the general public and for Americans especially is in the pictures. M. Proust and the committee of artists, critics, and directors of museums have drawn upon many private collections, and brought together works that have not been seen publicly for years. They have taken others from the museums in different cities in the provinces, some of the principal pictures of almost all of the painters belonging to the museums of their native towns, and have even had authority in certain cases to bring some works needed to make the representation complete from the Louvre, the Luxembourg, and the National Gallery at Versailles. In consequence, they have been able to organize an exhibition which has never been equalled in France. Magnificent is the only word that fitly characterizes it.

The period illustrated is the hundred years from 1789 to 1889. Beginning with Fragonard (1732–1806), we find three pictures which connect directly the painting of the time of Louis XVI. with that of David (1748–1825) and his contemporaries Gérard, Drolling, and Prud'hon. Following Prud'hon are Ingres and Flandrin, from whom proceed such men of the school of our day as Baudry and Delaunay. Contemporary with Ingres are Gros, Géricault, and Delacroix, from whom are descended (1) the Barbizon Group (Millet, Rousseau, Troyon, etc., and Corot); (2) Decamps, Regnault, Fromentin, and the other "Orientalists"; (3) Courbet, Fantin-Latour, Bastien-Lepage, Monet, Manet, and the unclassable impressionistic painters such as Raffaëlli. The painters of to-day of historical subjects may also be said to be descended from Ingres, but there is but little of their work in the Retrospective Exhibition. We have further to note that Horace Vernet (1789–1863) was a contemporary of Ingres, and that his successors in our time are De Neuville, Detaille, and the other military painters of whom so many have appeared since the war of 1870–71, and that the first of the military painters of this type was Charlet (1792–1845).

There is very little in the two pictures and the portrait of the artist by Fragonard, apart from their historical interest, to call for notice. The color is pale and thin, the drawing prim and careful. In the portrait there is considerable character and a freer technique. Nor need we stop long to look at the twelve canvases by Gérard, ten of them portraits from the galleries at Versailles—only long enough to note that they evince research for the character of the sitters, and that in color they are agreeably mellowed by time; nor is it necessary here to say more than this of the three portraits by Drolling. We go at once to the work of Prud'hon, where we find a painter of great ability, the best man of his day in many respects, seriously occupied with the question of form, and giving us straightforward, hardy drawing, distinguished always by a pronounced feeling for style. These qualities are best seen, perhaps, in "Innocence," one of the twelve pictures brought here to represent him—a nude figure of a young girl, seated and the body slightly bent forward. Most of the other works are small, one or two of them being little more than sketches. Rightly to estimate his place in the art of the century, however, we should go to the Louvre and see the "Enlèvement de Psyché," a beautiful work which it has not been thought necessary to bring here to complete his representation, or which, more probably, it has been deemed impossible to spare from that precious collection.

Almost as much has been done in the case of David, however. The portrait of Madame Récamier, which, though unfinished—not much more than an *ébauche* in fact—is considered one of the best things he ever painted, has been brought here from the Louvre. It is a cause for congratulation that it is so, for there is real pleasure to be had in looking at this natural portrait of a beautiful woman, which it is not possible to find in the finished portraits, such as that of "Michel Gérard and his Family"; and certainly it is something different from pleasure that one feels in looking at the vast canvas on which David has depicted the coronation of Napoleon I. and the Empress Josephine at Notre Dame in 1804. Yet, though it is stilted and artificial, I don't know that it is not quite as good in its way as much of the work of the kind that is being done to-day, and it is certainly better than some of it—than Wencker's "Laying the Corner-Stone of the New Sorbonne," for instance, which occupies a prominent place in the galleries of the Decennial Exhibition. David and his school believed that there was nothing beautiful outside of the antique, and there is little enough of nature in their compositions. In David's pictures of classical subjects, a number of which are in the Louvre, there is absolutely no nature at all.

This sort of artificial work was at the climax of its glory when Ingres came upon the scene, and he who has in our day become the type of classicism was then looked upon as a revolutionary. Ingres combatted the principles of David's school throughout his career, and, as one of his pupils, M. Amaury-Duval, has pointed out in a volume of souvenirs, 'L'Atelier d'Ingres,' his first admirers were Géricault, Delacroix, and others of the new school, who wished to throw off the yoke of the Institute, and believed they could win under the leadership of such a man as Ingres. Afterwards, when they were successful, came the division into the Draughtsmen and the Colorists; and Delacroix and his followers, cutting loose from Ingres, formed the famous Romantic school which ardently opposed him, and which was continued in our day by the Barbizon painters and some of their contemporaries. So that, whatever may be the aspect of Ingres's work to-day, when looked at in the light of the new movements towards *plein air* and impressionism, however purist and classical it may appear to us, it is certain that the impulses that have brought modern French art to the high level it occupies to-day were first given by him, and he cannot be considered otherwise

than as a figure of the first importance in this Retrospective Exhibition. His art now stands for the epitome of Academy traditions to which he always clung, and which he always preached, finding the object of his adoration, not, like David, in the Greeks and Romans, but in Masaccio and Raphael. Seven of his works have been placed in the galleries in the Champ de Mars. The celebrated picture of "St. Symphorien," brought here from the Cathedral of Autun, one of his compositions painted while at the French Academy at Rome, "Jupiter and Thetis," and "Napoleon I. on his Throne," are the chief of these. None are remarkable for color—indeed, there is almost no color at all, but merely flat neutral tints; but in all of them is that remarkable drawing on which his fame principally rests. In a portrait of a young man with his head turned over his shoulder to look out of the canvas in full face, the drawing, as in the portrait of Bertin in the Louvre, is marvellous.

Of Flandrin, who is often spoken of as his best pupil, it is not necessary to speak at length. His work shows more attempt to represent color, but it is completely eclipsed by the brilliancy of the great leaders of the "Romanticists," Delacroix and Géricault. Before I speak of them, Baron Gros must have a passing mention. He is still referred to by the *anciens* as a master, but his work is not estimated so highly by the younger men, who still revere Ingres and speak enthusiastically of Géricault and Delacroix. One of the best known of his works is here, the portrait of General Count Fournier-Sarlovèse, a work of dignity, but inclining to pomposity, skilfully painted, and not without a certain amount of truth to nature. Among other canvases is a portrait of Dubosc, the celebrated model who saved from his earnings in the *ateliers* of the masters of those days money enough to found a prize at the Institute for young artists. The pictures here by Baron Gros are all of moderate dimensions. At the Louvre he may be seen in all his glory in the great canvases depicting the retreat from Russia and other events in the campaigns of Napoleon. He cannot be said to exert any influence on the military painting of today, which proceeds directly from Horace Vernet.

The story of Géricault working in a barn on his picture "The Raft of the Medusa," and dying in poverty at the age of thirty-three, is familiar. The picture has long been in the Louvre and the painter ranks as a *chef d'école*. Delacroix was equally poor, and when he had finished his picture of "Charon's Bark," which is now one of the treasures of the Louvre, he could not raise money enough to get a frame for it, and had to make one of boards and paint it yellow. In this humble setting it came before the jury at the Salon, and, as the story goes, the frame came apart, and the picture was about to be barred out on this account, when a painter, one of the celebrities of those days, whose name I do not now recall, gave it as his opinion that it was a remarkable picture, and ordered a frame for it at his own expense. More fortunate than Géricault, he lived to see fortune and fame come to him before he died. I need not repeat the story of the fight between the Classicists, with Ingres at their head, and the Romanticists, led by Delacroix. The details are familiar. The battle was a hot one, and is not entirely fought out even to this day. How much of the fame attached to the name of Delacroix belongs to his part in the founding of a new movement in art, and how much of it is due to his merits as a painter, it is not very easy to determine; but I think it certain that his ability has been exaggerated, and that time will place a more moderate estimate on his worth and artistic balance as a colorist, while not detracting from his value as the prime factor in the development shown in the art of painting since his advent.

The revolt was begun by Géricault, who did not live to carry on the war, and no small part of the glory which rightly belongs to him is attributed to Delacroix. Leaving out of the question his one great picture, "The Raft of the Medusa," a work that is simply wonderful, not only in itself, but in view of the conditions under which it was painted and the absence of anything in the painter's artistic surroundings to help him, the self-reliance of a very young man breaking with all traditions and producing a work like this must have been enormous, and his courage and determination in the face of adversity are worthy of the highest admiration. He was in no respect a sensationalist, but sober, dignified, and honest in his expression of what he felt sure must be the truth. In less important works, such as some of those in this exhibition, we find in every case the same sure, self-possessed way of painting, the same reserved strength and depth. Delacroix is both flighty and fiery by comparison, at times is entirely unintelligible, and again, as in this big picture, the "Battle of Taillebourg," simply stupid. At one time we have a bewildering richness of a multitude of glowing tints, where the motive of the composition disappears in the volcano-like eruption of color, and the canvas must be viewed merely as an exhibition of the artist's virtuosity in color combinations, with an utter disregard for form; at another an uninteresting composition of many figures, where form is observed, but color in its true sense is forgotten. Perhaps in one of the pictures here, "Les Convulsionnaires de Tanger," Delacroix comes as near as he ever does to a just balance of form and color, always excepting the "Charon's Bark," in which all that is best of his talent seems to be summed up, and that other wonderful picture in the Louvre, "The Entry into Constantinople." In spite of the faults and insufficiencies that may be pointed out in particular cases, however, the ensemble of his work is extraordinary in its brilliancy. His influence on the modern school of French art has been immense, and with him and Géricault we enter upon a new phase, a movement that has extended to every part of the western world where art flourishes, and that has produced in the Barbizon painters and their immediate contemporaries one of the most admirable schools of painting the world has ever seen.

WILLIAM A. COFFIN.

Correspondence.

OHIO'S POLITICS.

TO THE EDITOR OF THE NATION:

SIR: It seems to the writer that you are inclined to underrate the advantages to be secured by the overthrow of Foraker and Forakerism in the coming election. The nature of the hold which the Governor has obtained on the Republican party of this State does not seem to be fairly comprehended by most outside writers. He is not in reality the popular idol which he seems to be upon the surface. It is true that he is the Ohio Blaine with a majority of his party; but, during the last two years, his tyrannical use of the party machinery, together with his absurd vanity and evident shallowness, has developed a rapidly increasing minority who are thoroughly disgusted, and would breathe a sigh of relief at his utter defeat, even if it should involve the loss of the Legislature and a seat which the party hopes to gain in the United States Senate. His renomination was the result of the hardest kind of work by himself and his henchmen, and would not have been possible in an untrammelled convention. He knew that his grasp was weakening, and resolved to stake his all upon a desperate attempt to regain it. If he loses, he will no longer be a prominent factor in the politics of the State or nation. If he wins, he will make a mighty effort to capture the next Presidential Convention, and with no insignificant grounds of hope for success. Granting, for argument, that, so far as Ohio is concerned, there is little choice, we think that the effort of Ohio Democrats to relieve the country of the possibility of a Foraker campaign for the Presidency is sufficient to entitle them to the sympathy of the independent element in the East.

The greatest objection to Mr. Campbell is the tendency which he has shown in Congress to flinch from his real belief for fear of offending the supposed "protection Democrats" of Ohio. The fate of ex-Congressman Beriah Wilkins, in Ohio's great wool district, or some other reason, seems to have strengthened his spinal column somewhat, in this respect. He is not a bitter partisan, as is Mr. Foraker, nor has he the qualities which would enable him to build up anything analogous to the Foraker "machine." He could hardly make any change for the worse in the internal affairs of the State, for our Constitution has carefully divested the Governor of all opportunities to exercise any real power except by the illegitimate use of the privilege of appointing minor officials. We have reached bottom in this line, and any change must tend towards reform. Aside from internal affairs, there is the power, so freely exercised by Foraker, to make Ohio ridiculous in the eyes of the outside world by turning her highest office into a theatre for the exhibition of the antics of a circus clown. This Mr. Campbell will not do, even though he is sometimes (*not* "universally," as an outsider is justified in inferring from Ohio papers) called "Jimmy."

W.

OHIO, September 7, 1889.

ENGLISH WOMAN-BURNING.

TO THE EDITOR OF THE NATION:

SIR: Since the *Nation* is making an *enquête* (after the fashion of *Mélusine*) on this topic, I send you the following item, which I take from the *Yorkshire Notes and Queries* for October, 1888, p. 1.:

"The general gaol delivery of our Lord the King of his county of York, held at the Castle of York, 9 March 16 George III. [1775], before Sir Henry Gould, Knight, John Aspinal, Esq., etc., Giles Earle, Esq., High Sheriff.

"Elisabeth Boardingham, late wife of John Boardingham, guilty Petty Treason. To be drawn upon a hurdle to the place of execution on Wednesday next, the 20th Day of this instant March, and there to be burned with fire until dead."

The editor of *Yorkshire Notes and Queries* says: "The above is copied from a printed folio page addressed to Mr. Waugh, keeper of the House of Correction, who held the post from 1766 to 1794"; and he adds, "the last case of burning to death probably."

H. GAIDOZ.

PARIS, 22 RUE SERVANDONI.

AMERICAN NEGRO-BURNING.

TO THE EDITOR OF THE NATION:

SIR: I enclose an item, apropos of the subject of execution by burning, from the *Arkansas Gazette* of September 3, which does not, apparently, consider it of sufficient importance for editorial comment. It would be interest-

ing to know the views of "A Southern Pastor" on the comparative merits of burning and hanging in such cases.—Respectfully,

W. L. WORCESTER.

LITTLE ROCK, ARK., September 4, 1889.

[We retain the *Gazette's* head-lines, but substitute for the statement of facts a more decent version which we find in another paper.—ED. NATION.]

A RAPIST COOKED.

KENTUCKY PEOPLE AVENGE AN OUTRAGE IN SUMMARY BUT BARBARIC STYLE.

LOUISVILLE, September 3.—The *Courier-Journal* has a despatch from Somerset, Ky., which says that Wm. Oates, a prominent farmer residing a few miles from Monticello, has two daughters, aged respectively twelve and fourteen years. Mr. and Mrs. Oates going away on business left the two young girls in charge of the house. Mr. Oates had in his employ a negro boy almost grown. He entered the house, and, after locking the door upon the two young girls, assaulted the youngest. The other escaped, and, going to a neighbor's house, gave the alarm. A posse was immediately organized. The negro was caught in the woods and tied to a stake. A rail pen was then built around him, coal oil was poured over him and upon the rails, a match was applied, and he was burned to death.

TO THE EDITOR OF THE NATION:

SIR: Your kindness in giving so much space in your valuable paper to "Correspondence" deserves many thanks from your subscribers.

The different opposing views of cultivated men are great lessons to the thinking reader, and show how some men of the finest mental texture can be carried to the extreme of wrong simply from the habit of seeing the wrong from childhood, and considering it a "necessary evil." Is it not atrocious that a minister of "Christ's Gospel" should speak in defence of one of the greatest crimes of this age—lynch law—no matter from what side he views it? Mr. Schuyler is perfectly right, and I hope he has the sympathy of all those Christians who truly understand the sublime principles of "Christianity." EDWARD MAYERHOFER.

YONKERS, N. Y., September 6, 1889.

TO THE EDITOR OF THE NATION:

SIR: Pardon me for further trespass on your space, but the interests of truth demand it, and this shall be my last word. Mr. Schuyler's caricature of my position is a *petitio principii*. If all killing were wrong, as all stealing is wrong, his analogy would hold good; but that is the very point in debate. Carried to its logical consequences, Mr. Schuyler's argument would deny the right of revolution on which our Government is founded, the right of defensive war, and even the righteousness of capital punishment by law. The question is simply this: Is there any emergency that can justify a man or a community or a people in taking life without process of law? Mr. Schuyler, it would seem, thinks not; but the common judgment of mankind and the word of God answer in the affirmative. Whether the case in point is such an emergency admits of serious debate; good men differ widely about it; it has caused me grave perplexity. But there are conditions under which the safety of society seems to demand it. I rejoice to hope that those conditions are gradually disappearing, and that, under the elevating influences of Christian education, they will soon disappear altogether. A SOUTHERN PASTOR.

WILMINGTON, N. C., September 7, 1889.

PREHISTORIC SICILY.

TO THE EDITOR OF THE NATION:

SIR: I have just received a note from Prof. Orsi of the museum at Syracuse, saying that he has found in a Siculian tomb in the vicinity of Syracuse two vases of the second or third style of "Mycenean" pottery. This is interesting as showing that the Siculi had, in all probability, commercial relations with the Greek isles before the Greek colonization of that locality. As there were found at Orvieto, in tombs not older than the sixth or seventh century, ordinary vases of the Mycenean description, there is nothing chronologically surprising in this, but it is another item in the evidence which goes to show that, as indicated by some traditions, there was a Greek colonization of a less aggressive type than that of Syracuse, Naxos, etc., and prior to it. This would account for the Greek character of Segesta, of whose foundation, indeed, one tradition speaks as having been the work of a band of Greeks returning from Troy under the leadership of a Trojan chieftain. In none of the Siculian tombs has there been any pottery of the Greek type found hitherto, and as the provenance of the Mycenean is not determined, though almost certainly to be assigned to some of the Greek islands, this negative evidence is in favor of the find of Prof. Orsi being anterior to the establishment of the Greeks as masters in that part of Sicily. In the tombs of Orvieto the Mycenean pottery is found in company with Attic.

In matters so difficult of determination as the prehistoric relation of races, these trifling indications are always of value, cumulatively if not individually.—Yours truly,

W. J. STILLMAN.

PIEVE DI CADORE, August 25, 1889.

THE AMERICAN SCHOOL AT ATHENS.

TO THE EDITOR OF THE NATION:

SIR: The friends of the American School in Athens hope that you may kindly grant space for a letter written for the purpose of interesting your readers in its plans. This school was founded, has been carried on for seven years, and provided with a fine edifice, a permanent director, of European reputation as an archæologist, Dr. Waldstein, and an endowment fund of over fifty thousand dollars, through the efforts and sacrifices of a few liberal-minded people, chiefly in Boston and New York. Of the thirty pupils thus far, four have been women. All instruction is free, and the library is open to all Americans in the city. The object is to encourage the study of ancient art, architecture, topography, and all related branches best pursued on the soil of Greece.

It is not too much to say that this school is already playing its part in the revolution of American scholarship. Narrow book-learning is giving place to a many-sided study of the ancient life. There are two facts which add a special charm to these comparatively novel lines of work: First, new and valuable additions are made every year to our materials. Such excavations as those at Olympia or Pergamon tell us much that could not be learned from any other source. It would be difficult to name any lost literary work whose recovery would add so much to our knowledge. Second, these statues, temple-remains, etc., come to us, not, like our manuscripts of the ancient authors, through a succession of mediæval copyists, but directly from the ancient masters' hands. The Hermes, emerging from the drifted sands of the Alpheios, bears the marks of Praxiteles's chisel. The blocks of the Parthenon were swung into their present position under Phidias's own eye.

There is, moreover, a practical side to such efforts as these of the American School and its supporters which may well recommend them to our countrymen. There can be no better influences brought to bear upon our own artists and architects than a close acquaintance with and study of the still unrivalled productions of Greek masters. Not that we desire to rear a generation of mere copyists, even copyists of Phidias and Praxiteles; but the museums of Athens, and the temples there and throughout Greek lands, cannot fail to educate the hand and eye, as well as elevate the moral sense, of every thoughtful art-student who is so fortunate as to put himself under their influences. Especially, the materials are constantly accumulating for an adequate historical view of the gradual artistic progress in ancient Greece—the slow but successful struggle of the creative genius of a race against the crudeness of its own conceptions and the resistance of stone and bronze. The archaic and early classical works are perhaps even more instructive than the seemingly effortless triumphs of the Golden Age; just as Giotto seems more fully one like ourselves, struggling and learning, than does Raphael or Titian. There could be no more practical way of improving the arts of design in America than to send our most promising graduates to develop the historical sense, and the full consciousness of our debt to earlier races, by a year or two spent in the classic lands.

As your readers are aware, an opportunity has now been offered to the American School to undertake a task of world-wide interest and of the greatest importance. Delphi will be excavated soon in any case, by some other nation if not by ourselves. The failure of our Institute to secure the aid for which it asks will, therefore, not be a fatal misfortune to the scientific world, but it will be an irreparable loss to us. It is evident that the work at Delphi, and the proper publication of what will be discovered there, would tax the highest powers of our classical scholars and of Humanists generally for a decade at least, and form the best possible training-school for a whole generation of American students—such a school as Olympia has been for the Germans.

It would be a lasting disgrace to our national intelligence if this enterprise should fail for lack of a sum so trifling, as compared with the result to be obtained by its expenditure—a sum often spent on a single banquet or a single picture. Yet it would not be strange if its success should depend on the small contributions of liberal-minded and thoughtful men of limited means. The original founders of the school have been heavily taxed already. It is not certain that our rich fellow-citizens generally will see the lasting value and patriotic character of so unbusiness-like an investment. It is to be hoped, therefore, that none will be deterred merely by modesty from offering a small sum for the work. Subscriptions may be sent to Percival Lowell, Treasurer, No. 40 Water Street, Boston.

Even an expression of hearty interest and good-will is most welcome. It is the desire of the Institute to make this undertaking a source of national pride and instruction, not a mere pet project of classical scholars. In this secondary, but equally important task, the members of the Institute appeal for and count confidently upon the aid of all educated men and women, of all who feel the dangerous isolation of our national life and our young civilization. We need, more than any other people, to be reminded of our debt to other lands and races than ours. We have received from them nearly everything that makes human life attractive. We may still learn much from them as to the higher uses of existence. Perhaps we need above all to learn true humility—to see

that in the fair harvest-fields of the world's life others have sown that we may reap.

WILLIAM CRANSTON LAWTON,
Secretary to the Delphi Committee.

CAMBRIDGE, MASS.

Notes.

G. P. PUTNAM'S SONS' list of fall publications includes 'A Midsummer Drive through the Pyrenees,' by Edwin Asa Dix; 'The Land of the Viking and the Empire of the Tsar,' by E. Frazer Blackstock; 'In the Time of the Cherry Viewing: A Tale of Life in Japan'; 'Liberty and a Living; or, Working and Playing on the Great South Bay,' by Philip G. Hubert, jr.; 'The Letters of Horace Walpole,' a selection edited by Charles D. Yonge; 'The Constitutional History of the United States, as Seen in the Development of American Law,' being papers by Judge Cooley, Henry Hitchcock, Geo. W. Biddle, Chas. A. Kent, and D. H. Chamberlain; and the following verse: 'Epithalamium,' by Mary Mathew Barnes; 'The New Pandora: A Drama,' by Harriett H. Robinson; and 'Day Lilies, and Other Poems,' by Jeanie Oliver Smith.

'Familiar Talks on Astronomy,' by Capt. W. H. Parker; 'Musical Moments,' a collection of poetical passages relating to music, both natural and instrumental; and 'Theresa at San Domingo,' a child's story of the negro revolt on that island in 1789, translated from the French of Mme. Fresneau, are among the forthcoming publications of A. C. McClurg & Co., Chicago.

The Rev. David J. Reynolds of Jamaica, a Wesleyan minister, contemplates preparing for the press a small volume upon the 'Proverbial Philosophy and Folk-lore of West Indian Africans.' Mr. Reynolds has lectured with notable success upon Jamaica Proverbs. He is a master of his subject.

Mr. J. J. Thomas, the author of 'Froudacity,' which is a counterblast to Mr. Froude's 'English in the West Indies,' is a native of the Island of Trinidad, in the British West Indies. He is a black man of pure African race. For years he was a schoolmaster, and he was Secretary to the Board of Education of that colony when, from failing eyesight, he felt bound to retire on a pension from the Government. He is about fifty-five years of age. He is known as the author of a 'Creole Grammar,' a philological work of some value, treating of the French *patois* spoken in Trinidad and other places. A second edition of this work is now being got out by Mr. Thomas.

We have received from the *Forest and Stream* Publishing Company a lecture on "West Indian Hurricanes and the March Blizzard, 1888," by Everett Hayden of the U. S. Hydrographic Office. The handsomely printed quarto pamphlet is illustrated by twenty-three plates—maps, charts, and diagrams; including an example of the use of oil in rough weather to prevent the breaking of seas on board. The lecture was delivered before a yacht club in these waters, and every yachtsman would find it valuable in its present shape.

A British geography in which "each country has been looked at from the standpoint of a native," and not treated with reference to "its importance to the British nation," is a novelty. Such is Hugh Robert Mill's 'Elementary Class-Book of Geography' (Macmillan). It deserves attention for its scheme, and may be helpful as an adjunct to our poor text-books in this branch of common-school study. A friendly American colaborer would have saved some errors and disproportions in the section on the United States. For example, on p. 258 it is quite recklessly stated that "the Indians of the States are neither so numerous nor so independent as those of Canada." The fact is, however, that they are at least three times as numerous; those of Canada in 1881 being set down at only 108,547.

Buyers and sellers have been chiefly in the mind of Mr. Thomas Savage in preparing his 'Manual of Industrial and Commercial Intercourse between the United States and Spanish America' (San Francisco: The Bancroft Co.). Mr. Savage was for a long period in the United States consular service in Spanish America. By the use of fine type, he has compressed a great deal of statistical and general information into some 600 pages, and has produced a very valuable book of reference, with a manifest endeavor to see and to set down things as they exist. Tourists as well as merchants may profit by the use of it. Doubtless it will be kept up to date in successive editions, with the changing of tariffs, the multiplication of railroads, etc. There are three outline maps of the United States, Mexico, and South America.

Mr. Spurgeon has for twenty years edited a "sheet almanack intended to be hung up in workshops and kitchens." It is called "John Ploughman's Almanack," and he has furnished it with a proverb for every day. These he has felt moved to make into a book, 'The Salt-Cellars' (A. C. Armstrong & Son). The "godly sentiments" have been "sandwiched in between slices of wit and common-sense," and "thus has the salt itself been salted"—in Mr. Spurgeon's opinion. The effect of accompanying proverbs with a cheap exposition ("homely notes") has generally been to destroy their flavor altogether. It seems to us to be not otherwise in the present instance, the title of the book notwithstanding.

Mr. Robert Grimshaw's 'Hints on House-Building' (New York: Practical Publishing Co.) is an unpretentious little book which has been sufficiently appreciated to justify a second and enlarged edition. It will repay reading. The suggestions are plain and practical.

In the summer of 1887 the Associated Charities for the Eighth Ward of Boston induced Prof. Dwight Porter of the Institute of Technology to investigate the sanitary condition of the tenement-house system there. This study gradually embraced the worst parts of the city at large, and Prof. Porter's report, not made until December, 1888, has just reached us in print. It is the old story of excessive overcrowding, of insufficient ventilation or none, of arrangements for the disposal of waste that become instead depots of destruction, with the necessary consequences of preventable disease and death. The report contains two reproductions of photographs, an interior and an alley, several plans of buildings, good and bad, and illustrations of grossly defective sewerage from actual cases. The distress and suffering from sickness that does not terminate in death, and the discomfort and misery that nominal health undergoes in such quarters, are not easily computed. But fortunately every year shows amelioration, and the abounding and intelligent charity that brings to light these evils at the same time lessens them. This is not done by the demoralization of giving, but by judicious control of the house-owners. The report also contains valuable information as to the Tenement-House Problem in New York, where the evil is greater and the progress better than in Boston. In both cities it is chiefly the lowest of foreign immigrants that wallow in this slough.

The American Historical Association was incorporated by Congress at the beginning of the present year, its seat being fixed at Washington, and a helpful connection with the Smithsonian Institution being established. It therefore takes its place at the capital beside the National Geographic Society and the National Academy of Science. Its membership exceeds five hundred. The proceedings of the meeting held in Washington in December, 1888, have now been published by G. P. Putnam's Sons. Besides the summary report of the Secretary, Prof. Herbert B. Adams, eleven papers are printed in full, in which the share of the West is noticeable; *e. g.*, "The Early Northwest," by Wm. F. Poole; "The Influence of Gov. Cass on the Development of the Northwest," by Prof. A. C. McLaughlin; "The Place of the Northwest in General History," by Prof. Wm. F. Allen; "Internal Improvements in Ohio, 1825–1850," by Chas. N. Morris. Of these the second and the last are in the nature of original and very valuable contributions to American history. Prof. Welling's "States'-Rights Conflict over the Public Lands" is in line with the foregoing; and so is Willard Clark Fisher's "American Trade Regulations before 1789." Douglas Brymner's account of his reducing to order the Canadian Archives is stimulating. The extra-continental paper is Mr. Henry C. Lea's on "The Martyrdom of San Pedro Arbués." The volume is well worth the price, and it suggests the near approach of the time when the Association shall give us an historical journal that will connect itself with the life and growth of the nation.

We have received the first number of *Haverford College Studies*, published by the Faculty of that institution, and obtainable of the Secretary at Haverford College P. O., Pa. It contains five articles: "The Library of the Convent of the Holy Sepulchre at Jerusalem," by J. Rendel Harris; "Work of Haverford College Observatory," by Francis P. Leavenworth; "On the Geometry of a Nodal Circular Cubic," by Frank Morley; "On the Period of the Rotation of the Sun," by Henry Crew; and "On the Symbolic Use of the Colors Black and White in Germanic Tradition," by Francis B. Gummere. The last paper is the only one that can be enjoyed by the general reader along with scholars and specialists. Mr. Gummere concludes that the usage in question is mixed and inconsistent.

At Como in June, on occasion of the dedication of a monument to Garibaldi, was published a trial bibliography of the patriot ('Saggio Bibliografico del gen. Giuseppe Garibaldi'), preceded by a chronology of the principal events in his life. A revised edition is promised shortly.

Dodd, Mead & Co. have followed the example of several other houses in issuing a literary bulletin, which they call *New Publications* (No. 1, August, 1889).

The *English Illustrated Magazine* (Macmillan) begins a new volume with the October number, and will then be enlarged in size and printed from new type in a single broad column. Its American readers, who have been increasing, will be specially catered for.

A new domestic candidate for favor is the *New England Magazine* ("new series"), issued in Boston this month under the editorial management of the Rev. E. E. Hale and Mr. Edwin D. Mead. It "will be devoted especially to New England life and history, although this in no narrow or provincial spirit." The first number is purposely a Plymouth and Pilgrim number, and abounds in readable articles by well-known writers and in illustrations. A sonnet, "Character," by Lucy C. Bull, is the sole poetical contribution, and if the editors can be as sparing hereafter while maintaining

the level of this example, they will usefully criticise the practice of their esteemed contemporaries.

The final report on the geology of New Jersey of the State Geological Survey, now in course of publication, has, as our readers know, a completed first volume. For the second, it is in contemplation to illustrate the botany of the State, in connection with full lists of minerals, plants, and animals. The finer shade and timber trees are to be figured, and it is quite possible for amateur photographers, whose name is now legion, to assist the Survey materially by the loan or gift of portraits of notable native trees, with the necessary indications as to name, place, etc. They may be addressed to Prof. Geo. H. Cook, State Geologist, New Brunswick, N. J.

—The fourth of Mr. J. C. Pilling's bibliographies of aboriginal North American languages has been published by the Bureau of Ethnology (Washington: Government Printing Office). It deals with the Muskhogean languages, including Alabama, Chikasaw, Choctaw, Creek, Hitchiti, Koassati, Mikasuki, Muskoki, and Seminole, and records 521 titles. 467 of the entries describe printed matter and 54 describe manuscripts. Of the prints more than 80 per cent. and nearly as large a proportion of the manuscripts have been seen and described by the compiler himself. The failure of this bibliography to reach the high average, over 94 per cent., of *de visu* descriptions, reached by the preceding 'Bibliography of the Iroquoian Languages,' is due, for the most part, to the large number of Muskoki titles inserted from the *Indian Journal*, of which Mr. Pilling was unable to see a complete file. The present descriptions of books, on the other hand, are somewhat more elaborate than in the previous numbers of the series. Another commendable feature of this number is the frequent biographical sketches of authors whose works are recorded. In cases like those of the Rev. C. C. Copeland, Mrs. A. E. W. Robertson, Alfred Wright and his wife, and other missionaries, or of Legus Choteau Perryman, principal chief of the Muskokees and many others, these details are especially valuable because they are based on authentic materials and the information is not elsewhere accessible. But it is at least doubtful whether long sketches of such well-known persons as Chateaubriand, Elias Boudinot, E. B. O'Callaghan, and William Bartram—men whose linguistic writings were, in the main, only incidental to their other activities—should be reproduced from an every-day book of reference like 'Appletons' Cyclopædia of American Biography.' In his 'Bibliography of the Algonquian Languages,' which is announced as the next of the series, Mr. Pilling may well content himself with a condensed account and a reference for those authors whose lives have been already written at length in substantial volumes or well-known periodicals or biographical dictionaries. Thus room will be made for lives of the comparatively obscure authors whose efforts were confined to the field with which the bibliography deals, and whose careers must remain unknown unless some specialist, for instance Mr. Pilling, publishes in some appropriate place, for instance, the 'Bibliography of the Algonquian Languages,' the sketches which he enjoys exceptional facilities for compiling.

—"Endowments" is the title of an address delivered last year before the College Association of Pennsylvania, which seems to us of enough permanent value and interest to deserve a word of notice even at this somewhat late day. Its author is Dr. J. G. Fitch, one of Her Majesty's Chief Inspectors of Schools, and lately an Assistant Commissioner under the Endowed Schools Act. As an official, Dr. Fitch has seen much of the evils wrought by endowments in England, which are great enough, he thinks, quite to justify Turgot's strong condemnation of them in the 'Encyclopédie' more than a century ago. Charitable foundations have demoralized the poor in many places, sowing seeds of improvidence and favoring hypocrisy and immorality. They have narrowed education, and hindered its growth and diffusion; have repressed originality and discouraged effort. Any gain that has come from them has been dearly bought. Dr. Fitch would rid men's minds, so far as is possible, of the superstition that cherishes and keeps alive the vanities of founders, and their useless restrictions that hamper many bequests, and would have endowments, or at least their income, put to use by a living, and not a dead hand. He would also have the State assert for itself the two-fold right of a private legatee: (1) to judge whether the conditions attached to a gift are such as to make it worth accepting, and (2) to spend the income of the endowment in the way the State deems best for its own interest and needs. All this and much more those who are interested in the subject will find set forth forcibly and with illustrations in Dr. Fitch's address, which is published by the Globe Printing House of Philadelphia.

—No historian bespeaks keener interest than does Polybius of Megalopolis for his patriotic and spotless character, his personal sufferings, his careful study of authorities, his rigid adherence to truth, and his deep and sound philosophy. Every one who has to write on the struggle between Rome and the nations she subdued in the time of the Scipios must appeal to him as a supreme authority. And yet this good man and great writer—for such beyond all doubt he was—is well-nigh unreadable. Livy practically translates him—he comes dangerously near mistranslating him; yet it is a delight to read Livy, it is a penance to read Polybius. It is singular, therefore, as Mr. E. S. Shuckburgh tells us, that there was no English translation of him entire. This he has given us, with a learned and valuable introduction, in two very handsome volumes ('The Histories of Polybius,' Macmillan). Having tested his translation in several places chosen at random, we are prepared to say that its accuracy in rendering all the matter contained in each sentence of the original, and no more, is what all who know Mr. Shuckburgh's sound and varied scholarship would be led to expect. If it does seem at times that he has ravelled out and reknit Polybius into rather too light and loose a fabric, we can only say, "Try it yourself." Any one who thinks he can reproduce the texture of the original—we are using one of Polybius's own metaphors—will find that if the pattern is sometimes striking, the fabric is, in every respect, uncommonly *tough*, and he will feel grateful to Mr. Shuckburgh for some attenuation.

—Professor Stürenberg of Leipzig, well known for his researches in the topography of ancient battle-fields, has recently published a programme (of the Leipzig Thomasschule) entitled "Zu den Schlachtfeldern am Trasimenischen See und in den Caudinischen Pässen." Both essays are supplementary, since he regards the main question, that of the locality of the battle-grounds in general, as being now well determined. In an earlier essay he had decided for the plain of Tuoro, on the north shore of Lake Trasimenus, which is evidently the place that Livy had in mind. The present discussion is to show, in reply to Faltin, that although the locality described by Polybius is impossible, and in fact does not exist, we need not, nevertheless, discard entirely Polybius's account of the fight. Apart from his mistake in representing the Romans to have marched up a narrow defile with their backs to the lake, Stürenberg maintains that Polybius's account of the battle is essentially correct, and in fact fits much better in the true field of battle than in the one imagined by himself. In the other essay he assumes it as settled that the place where the Roman army was entrapped was the valley of Montesarchio, which town is on the site of the ancient Caudium. The question discussed is, by what route it entered this valley. Nissen holds that it was by the way of Santa Agata de' Goti, while Stürenberg argues for the valley of Arienzo. This valley used to be considered the place of the ambuscade, although the entrance to it does not at all correspond to Livy's description. But at Arpaja, at the upper end of the valley, is a regular pass or gap, and the village of Forchia, at this very point, warrants us in placing here the Furculæ Caudinæ. The mistake of the old tradition was in placing the trap on the wrong side of the pass. According to Stürenberg's view, the Romans had already passed the Forks and made their way through the valley of Caudium to the pass beyond, which opens into the valley of Beneventum. This they found occupied by the enemy.

— We learn with regret from the latest English papers of the death of the Rev. Dr. Samuel Beal, Professor of Chinese at University College, London, on August 20, at the age of sixty-four. He was a graduate of Trinity College, Cambridge, in 1847, and, five years later, was appointed to a chaplaincy in the Royal Navy. This led to his serving during the China war of 1856-58, when he was found qualified to be an interpreter, and proved of singular usefulness in this capacity. He retired from the navy in 1877, and was elected to the chair of Chinese in University College, holding also several livings during his professorship—the last at Greens Norton, Towcester, Northamptonshire, where he died. His Oriental studies resulted in a long list of distinguished publications, and were specially directed towards Buddhism, Prof. Beal "being the first Englishman (following in the steps of Rémusat and Julien) to translate direct from the Chinese the records of Buddhism in that country, which throw such a flood of light upon the dark period of Indian history." For the past ten years Prof. Beal has been a valued contributor to the *Nation*. In his reviews and his private correspondence his amiability and scholarly integrity were most apparent, and have left to the writer of these lines a pleasant memory.

—A volume of much interest to students of the Second Empire is announced for publication in Paris next November. This is a selection from the letters and papers of the Duc de Morny, who was one of the most unscrupulous of the Ministers of Napoleon III., and was also perhaps the ablest of them. He left a great mass of letters and documents, running back to the year 1830, to his son, the present Duke, who has spent the last four years in the study and arrangement of them, and the preparation of a portion of them for the press. He proposes to print documents and letters only, without a word of editorial comment, and, as many readers will be disappointed to hear, everything that is in any degree scandalous will be left out. There are to be no merely personal letters included in the two volumes, nor anything that can be called polemic. No

doubt the time will come when much that is held back at present will be given to the world. It must have been a temptation to the present Duc de Morny to have such a bomb-shell in his hands as his father's papers were, and so tempting a target before him as the present situation in France presents. He could very likely have furnished some very interesting information about men still active in politics and society, and perhaps have spoiled some fairly good reputations. But he has done wisely in refraining, we should say, whether he is moved thereto by expediency or by some higher consideration. He is to make his own first appearance in politics this fall, as the revisionist candidate in the district of Puy-de-Dôme, which twice was represented by his father.

THOMSON'S TRAVELS IN MOROCCO.

Travels in the Atlas and Southern Morocco. A Narrative of Exploration. By Joseph Thomson. Longmans, Green & Co. 1889. 8vo, pp. xviii, 488.

Mr. Joseph Thomson won his spurs as an African traveller ten years ago, when a very young man, by successfully conducting an expedition to the Lakes. This was followed by an adventurous journey through Masai-Land and another in the western Sudan, which have confirmed his reputation as one of the most daring of modern explorers. In some respects his last exploit in scaling the Atlas Mountains was the most difficult and dangerous of all his undertakings. He was heavily handicapped from the outset by the Sultan's passport, which expressly forbade his travelling in the mountains, as well as by the determined opposition of his Moorish servants to his plans and by his inability to speak Arabic. That he was able, notwithstanding these obstacles, to cross the Atlas by two different passes, and to climb several of the higher peaks, was certainly an extraordinary achievement.

Still, while we admire his pluck and pertinacity, we can hardly recommend his methods, for it was only by systematically deceiving the lesser officials, in most cases, that he could make his way into the wilder parts of the country. Now, wholly apart from the moral objections to this course, the consequences to the European traveller who may follow him may be very serious. Some of those sheiks who innocently suffered him to go through their districts, contrary to the express commands of the Sultan, may have paid a severe penalty for their disobedience, and will be likely to make it very disagreeable, if not dangerous, for the next European who comes within their power. There is no question that Bishop Hannington's murder was occasioned by the alarm of the King of Uganda at this very Mr. Thomson's success in reaching the Victoria Nyanza in his second journey. So, without any fear of such a tragedy as this, we are strongly inclined to believe that, for a time, he has rendered Morocco more inaccessible than ever.

He landed at Tangier in March, 1888, where he was obliged to wait several weeks for the "Sharifian Umbrella," or passport. But the real starting-point of his expedition was Mogador, on the Atlantic coast, which he reached partly by sea and partly by land. This preliminary land journey was mainly over a treeless plain, without streams, where there was to be seen "nothing but rounded low ridges, or even more monotonous flat expanses, varied only by waving corn, dark-green bush tracts, or gorgeous flower-reaches." In places progress was rendered dangerous by "the manner in which the country Arabs store not only their food, but their water supplies. Pits having the shape of champagne bottles are dug in the easily-worked shell-sand, and then cemented inside to keep out the damp when filled with grain, or to keep in the water when filled with water, the former being called *metamores* and the latter *mitfires*." For long stretches the country was literally honeycombed with these pits, old and new. It was not till the end of May that Mr. Thomson was able to reach the mountains. This was at Demnat, a small town about sixty miles to the eastward of the city of Morocco. The approach to this place was by a bridle-path "arched over by fruit-trees and walled in by bush and flower and creeper, growing to right and left with all the gipsy grace, wild beauty, and prodigal profusion of the tropics. It had all such a homelike aspect, too, for the pomegranates and figs were literally smothered under the glorious wreaths of wild rose and honeysuckle which broke through them and spread themselves over their every branch, till nothing was seen but rich masses of odoriferous flowers." Once within the fortified gateway, however, and "all the sweet charms of nature were shut out. We threaded garbage-strewn streets hemmed in by mean, mud-built dwellings." The town, notwithstanding this, wore a certain air of prosperity, there being few ruined houses and still fewer beggars. Nor is this to be wondered at in a place where a family can live on fivepence a day, with meat at two meals. The natives are Berbers, or Shellach, as they are called here, who seemed to occupy an "intermediate place between the Moor and the Arab." They showed none of the hostility of the true Moor to the infidel, but, on the contrary, manifested delight at seeing the party. Their women, too, regardless of the express injunctions of the Koran, went about the streets unveiled.

Far different from the Medinah, or Mohammedan quarter, was the Mellah, or Jewish quarter. Here everything was unspeakably repulsive from filth and disease. "No family, however large, occupied more than one small windowless room, though frequently several families are huddled together like pigs in a poke." These rooms, in two stories, are built around courts some fifteen feet square, which serve at once for the "common family sewers, general reception and workrooms for the women, and happy playgrounds of the children," as well as stables for their animals. The consequence is, that about 80 per cent. of the Jews suffer from ophthalmia. This condition is now the result neither of compulsion nor of poverty. They are not obliged to live in the Mellah, and are, as a class, richer than the Moors, who live in clean streets and wholesome houses.

Another indication of the prosperity of Demnat was a dam thrown across a stream to store the water for irrigating purposes, "the only modern public work raised for the general good of the community which we saw in southern Morocco." At a little distance above this the river flowed under a magnificent natural arch some 140 feet high. "Stalactites of all sizes and shapes hung from the roof in rugged yellow pendants, and the irregular walls were adorned with clustered pillars of stalagmite and other mouldings of Nature's workmanship." Climbing to the top, it was found that the arch was used not only as a highway, but also as an aqueduct by which another stream was conveyed across the glen.

As Mr. Thomson found it impossible to penetrate the mountains at this point, he made a second and successful attempt from a town to the westward. The way was by a bridle path, difficult, and in many places dangerous, through a savage and mostly desolate region. As the summit of the pass was approached, "we could have imagined we were penetrating some gigantic volcanic crater by way of a great rut or fissure through its lava and cinder-built sides." The view southward from the top was impressive though disappointing. A level plain, without a single conspicuous feature, lay stretched out before them, while "an even more deadly uniformity characterized the coloring of this mournful landscape." A surprise awaited our traveller, however, at the foot of the pass, in finding the abode of the Kaid of the district "a magnificent and imposing castle of the old baronial style. We could hardly believe our eyes as we scanned the turreted walls, the crenelated battlements, the fortified gateways and outer lines which rose before us with such a princely air of military strength and glory." Here, in the very heart of an unexplored territory, a week was spent. The chapters descriptive of life in this Moorish stronghold, the dances in the court, the banquet, the interviews with the Kaid and his principal men, are among the best in the book.

Although courteously treated so long as he remained within the castle or among its retainers, the opposition to Mr. Thomson's further progress was so determined and dangerous that he was obliged reluctantly to retrace his steps. Crossing to the northern slope of the central chain, he proceeded westward, seeking another point from which he might again penetrate to the higher mountain region. On the way he fell in with an Aissawa, or snake-charmer, whose repulsive performance is described in a realistic manner. We have only space for the closing feat, performed in the evening when the men were seated about the camp fire. From the centre of the glowing embers the Aissawa "drew forth a piece of charcoal, held it—I will not say coolly—between the tips of his fingers, while he blew it to a white heat; then, with a preliminary 'Bismillah!' he calmly put it into his mouth, and leisurely munched, then swallowed it, with evident signs of enjoyment, while the Moors broke into cries of 'Allah Akbar!' (God is great!)"

This part of the Atlas was less disappointing than the region which he had just left. The mountains were more irregular in shape, while the streams which flowed from them were bordered with fine groves of walnut, oak, almond, and other trees. Here Mr. Thomson managed to elude his guards, and, after a dangerous and exciting climb, reached the summit of Jebel Ogdimt, 12,734 feet above the sea, being the first explorer to gain such a height. The principal feature in the scene before him was "the wall-like grandeur of the Anti-Atlas, which ran seaward, a southern bounding barrier to the great Sus plain. Hardly a prominence broke the almost even level of its summit, hardly a spur jutted from its stern precipitous sides."

These cool heights were now exchanged for the sultry air of the city of Morocco, where the latter half of the summer was spent with a thermometer ranging from 68° to 112°. It was a life marked with interesting incidents, the most exciting being a narrow escape when attacked by a mob during the "powder-play" at a great festival. Hardly less dangerous than the Moors were the numerous ruinous houses. "There are few days without a disastrous catastrophe, and every squall or strong breeze which crosses the city leaves behind it ruined houses and people buried beneath them."

Before leaving for the coast, Mr. Thomson made a final dash into the heart of the Atlas, and climbed another peak, which he found to

be 13,150 feet high. But these ascents were so dangerous, from the fierce opposition of the mountaineers, that he did not dare to attack the neighboring peak, Tizi-n-Tamjurt, which rose some 2,000 feet higher, and is probably the loftiest in the range. His route to the ocean was along the northern slope of the mountains to the point where they sink down to the level of the great plateau of which a considerable portion of southern Morocco consists. Here he turned southward, and made his way unmolested through the turbulent and rebellious district of Sus to the port of Agadir.

It is difficult after reading Mr. Thomson's lively and very entertaining account of his journey to see what attractions Morocco presents to the traveller. Of striking natural beauty it is singularly destitute, the region about Demnat alone excepted; even the mountain scenery being disappointing as regards picturesqueness and grandeur. The ancient ruins are few and unimportant. There is no mention of wild animals except the boar. The people, with a reservation in regard to the Berbers of Demnat, were uniformly repulsive, both Moors and Jews. The effect of the frightful oppression under which they lived was evident at every step. The further Mr. Thomson went and the more he saw, the deeper was his impression that the country was the worst governed in the world. He aptly describes the Government as a "huge blood-sucking octopus," which is "pushing its horrible feelers" even into every remotest mountain village, and draining its life-blood. One cannot resist the conviction that the ruling class is the worst and most hopeless race upon earth; and they seem incapable of reform. Even the Moors of Tangier, who have been for generations in daily contact with western civilization, are unaffected by its influences. "Nowhere can one see the slightest evidence that the Moor's dress, his manners and customs, his ideas, religious or secular, or any other aspect of his life, have been modified in the slightest degree."

The only persons, in fact, for whom Mr. Thomson has a good word were his Jewish guides, whose courage and faithfulness alone enabled him to accomplish what he did. It is, perhaps, the chief defect of his book that it dwells too constantly upon the hatred of the Moor for the "Nazarene." The detailed description of the constant misconduct of his servants also becomes very wearisome. Some of the illustrations are very good, but others give little idea of the scenes which they are intended to represent. The map is not very clearly drawn, and has apparently been prepared in great haste, the errors in spelling being numerous.

THE FIFTIETH-ANNIVERSARY EDITION OF 'FESTUS.'

Festus, a Poem. By Philip James Bailey. Fiftieth-Anniversary Edition. George Routledge & Sons.

CHARLES LAMB objected to brandy and water on the plausible ground that it "spoiled two good things," and it is certain that the sagacious distiller of high-proof spirits does not reissue his wares after half a century's keeping, diluting them with three parts water to one part brandy. This is, however, the very thing which the author of 'Festus' has done. Not content with remoulding it line by line, and transposing the passages thus handled without regard to previous arrangement, he has fearlessly "extended," as the book-fanciers say, a poem of 10,000 lines into a poem of 40,000 and left it, thus enlarged, as a bequest to posterity. A feat more daring was never done in literature; and when we consider that the expansion is always in the direction of a graver treatment, scarcely a new point of relief or relaxation coming in, and some such points being struck out, the daring becomes more apparent. In the original poem the scenes were too long, and the conversations between Festus and Lucifer too weighty; but the scenes are now much longer, and the discourse between these two personages occupies nearly half a volume of 794 pages. A single soliloquy by Festus fills thirty-eight pages (pp. 281-319), and covers about two thousand lines of rhymed verse. It shows an extraordinary hopefulness of spirit to suppose that so heavily freighted a barque can be launched for another voyage of fifty years.

There are a good many still living who were in a manner contemporaries with this once famous poem, and can recall the time when it was regarded as a successful bid for immortality. In the early days of Browning's 'Paracelsus,' Margaret Fuller wrote of that poem in the New York *Tribune* that it was "an interpretation of the age less penetrating than 'Faust' or 'Festus.'" She was one of the most ardent Goetheans of the time, and this linking together in conceded position of two books which would now seem so unequal in merit, affords the best illustration of the changed relations of Mr. Bailey's poem within fifty years. Yet the remarkable thing about the book is not so much that it should have lost ground in half-a-century as that it should still retain, after that interval, ground enough to stand upon. Perhaps the fact that the writer himself has survived for that length of time may have something to do with the case. It is a great thing when an author lives to look after his own children, and to secure that fame which comes, as the French saying is, from a prolonged patience in living. This suggests an advantage in early authorship, and we have Mr. Bailey's own assurance that, when the original work was begun, "not twenty summers had embrowned" his brow. This statement he wrote in 1839, three years later, and he is now, in fact, in his seventy-fourth year. He has had other literary ventures, but this is his life's work, and he reissues it quadrupled in size, perhaps from the same motive which led Wordsworth to print his 'White Doe of Rylstone' in quarto, to mark his own appreciation of its value.

Though the original poem is thus swamped in increased dimensions, the author has fortunately left untouched many of those striking lines and passages which gave it its first repute. Théophile Gautier says that, however mediocre a literary work may be, if it becomes suddenly famous, we can commonly detect afterwards the grounds of the notoriety; and a rereading of 'Festus' takes us back to the sense of vigor and illumination which its best passages afforded in its early days. No doubt the author aimed at much besides this fragmentary excellence, and held certain views which the poem was supposed to present as a collective work. In America these opinions doubtless contributed to the vogue of the book, for it pleased the Universalist denomination, a large and widespread body. But the real interest of a long poem is rarely found in its plot or argument. No one cares, for instance, for the plot of Keats's 'Hyperion,' while his 'Endymion' has no plot at all. The charm is in the passages, the quotable extracts; and though it is now evident that 'Festus' had by no means the organ cadence of 'Hyperion,' nor even what David Wasson admirably called the "flocculent beauty"—a beauty as of a sky full of little cloudlets—that marked 'Endymion,' it had yet a certain fresh and noble quality of its own, which is not lost in the expanded edition. Such passages as—

"We live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on a dial.
We should count time by heart-throbs. He most lives
Who thinks most, feels the noblest, acts the best" (p. 71),

or,

"Yet truth and falsehood meet in seeming, like
The falling leaf and shadow on the pool's face" (p. 153),

or,

"Trifles like these make up the present time;
The Iliad and the Pyramids, the past" (p. 159),

or,

"Why will we live and not be glorious?
We never can be deathless till we die;
It is the dead win battles" (p. 72),

are sure of lasting memory. The book that contains them may be sunk beyond plummet's sounding, yet these passages will float, and somebody will write from time to time to the "Notes and Queries" department of some newspaper, and ask whence they came. These lines are luckily left unchanged, and so are the following:

"Man is one,
And he hath one great heart. It is thus we feel
With a gigantic throb across the sea
Each other's rights and wrongs; thus are we men" (p. 39).

"Men might be better if we better deemed
Of them. The worst way to improve the world
Is to condemn it. Men may overget
Delusion, not despair" (p. 64).

But in other cases the author confuses and muddles what was once a fine touch by attempting to improve upon it. One of the favorite passages of the original poem, for instance, was the hero's terse description of his first love, a passage which now appears in amplified and weakened form, as can be easily shown by italicizing the added lines:

"I loved her for that she was beautiful,
And that to me she seemed to be all nature
And all varieties of things in one;
As many charmful changes had in thought
And sweet caprice as the opal hath of hues;
Would set at night in clouds of tears, and rise
All light and laughter in the morning; fear
No petty customs nor appearances,
But think what others only dreamed about,
And say what others did but think, and do
What others would but say, and glory in
What others dared but do; *so pure withal*
In soul: in heart and act such conscious, yet
Such careless innocence, she made round her
A halo of delight; 'twas these that won me;
And that she never schooled within her breast
One thought or feeling but gave holiday
To all" (p. 45).

It requires but little inspection to see that the merit of the original delineation, if merit it had, lay largely in the fact that it was executed with a few strong strokes, and that every added line must weaken it; the introduction of the halo of delight and the opal and the "charmful changes" only harm and do not help. The same may be said of the elucidations in the elaborate preface, in which it is explained, for instance, that the poem resolves itself, upon examination, "not into books or acts, but into twelve or more groups, celestial, astral, interstellar and terrestrial, solar, planetary, and one other, the sphere of the Infernals" (p. 2). All this bears upon the work, not as a poem, but as a theological treatise, an aspect for which a few may care, but which the profane multitude will prize very little. Should there be any, however, who like nearly eight hundred pages of such discussion, cast in the form of blank verse, they will find in this enlarged edition what Emerson promised to the readers of Swedenborg — "a sufficient library for a lonely and athletic student."

A History of Greece. From the Earliest Times to the Ionian Revolt. By Evelyn Abbott, M.A., LL.D., Fellow and Tutor of Balliol College. G. P. Putnam's Sons. 8vo, pp. 553.

MANY as are the histories of Greece, it cannot be said that Mr. Abbott, in adding another to

their number, has undertaken a superfluous or needless task, for we do not know of any upon just the scale and plan of his. It is not a popular sketch—it is indeed severely scholarly; on the other hand, it is not a work of ponderous and exhaustive erudition. Such a work would perhaps be unnecessary so long as the scholar can find in Grote's volumes a detailed discussion of every problem in Grecian history, not yet by any means antiquated, if needing correction here and there. Mr. Abbott's book may indeed be called exhaustive as a collection of known facts, supplementing where necessary the work of Grote, and aiming to give the reader the latest results of scholarship. But the discussion is generally brief, and the treatment is compendious, so that, in view of the broad field covered and the amount of detail, many parts are necessarily the dry repetition of facts.

It will be seen, therefore, that this book is especially suited to the needs of students as a book of reference, rather than of general readers. Few would have the patience to read it through, while the great majority of classical scholars will find it extremely convenient and useful, first, for making a cursory survey of the entire subject, and then for consultation upon points of uncertainty. For this purpose there is a good index, which does not, however, contain the unimportant names. It must not be supposed, however, that the book is altogether of this character. Such subjects as the poems of Homer and Hesiod, the laws of Lycurgus, the constitutional history of Athens, are treated in a full and interesting manner. Of pure narration there is very little; this is evidently neither the especial taste nor power of the author. The description of the geography, climate, etc., of Greece in the first chapter is very well done, and, as special points of peculiar merit, we will mention the account of the Asiatic Greeks (p. 487) and of early lyric poetry (p. 512). The remarks upon ostracism, in regard to which Mr. Abbott takes a different view from Grote (p. 482), upon the failure of Solon's constitution (p. 450), and upon the Ionic tribes (p. 284), are also particularly deserving of attention.

Mr. Abbott's method is sober and conservative. His judgment in questions of doubt generally commends itself as sound and impartial; in matters of evidence he is cautious, and on the whole sceptical. We are inclined to think him too sceptical in regard to the historical value of Homer. He points out the impossibilities of Homer's geography and the uncertainties of any deductions from his works as to chronology or the sequence of events, and then, with considerable plausibility, extends the same reasoning to the description of institutions, and even of manners and customs, and concludes that as a witness to history he is practically worthless.

"Whatever line of investigation we pursue, we cannot fail to recognize the same want of historical truth in the poems" (p. 151). "'Homer,' then, is of little or no value as evidence of the early civilization of Hellas, because we have no means of ascertaining that his statements are historically true" (p. 155). "The pictures, then, which have been drawn of the Homeric state or family, of Homeric art and civilization, are not to be accepted as descriptions of what really existed at any definite period. They prove little or nothing for the historical condition of ancient Greece. The minstrels treated facts as they chose, and for their own purposes, and the whole story of the Trojan war fades at the least touch of criticism" (p. 158).

In these extracts we have a rule of criticism which forbids us to use the Homeric poems as evidence for historical facts of any kind, except as to "the inward life of the time [of composition], its aspirations, and ideals." "They present to us the ideals of life and character which delighted the audience to which they were addressed, and continued to delight generation after generation till Hellenism became extinct" (p. 160). But what gave birth to these ideals? They could hardly have been created out of nothing by the constructive imagination of the poet. It would, no doubt, be begging the question to assume that men in that stage of civilization above all others lacked the capacity to conceive of institutions and social forms other than those of which they had practical knowledge; but we believe it would be safe to make nearly the same assertion of men at all stages of civilization. Nothing is harder, as every student of history knows, than to transport one's self into the mind and the environment of another generation: the most insipid or high-flown dime novel is built out of the life, sentiments, and manners of the age, however much these may be distorted by straining after romantic effects. We do not see what society Homer can depict if it is not the society about him, lighted up, no doubt, and elevated by imagination and aspiration.

There is a clear distinction, in this respect, between the events and their environment. The writer of these poems was engaged in narrating events of a distant past, known to him only by oral tradition; but nothing is more certain than that oral tradition is utterly unreliable in regard to facts of this character. The incidents of the war, whether the war occurred at all, the geography, nations, and chieftains of that distant epoch—all these are things of the kind with which tradition plays surprising pranks. As to these, the poet tells us what has come to his ears, with such variations as he chooses to add to it, and it has almost no historical value at all. But in depicting society and institutions he has no choice but to describe what he himself has seen, painting with the truthful colors of his own day a body of incidents and a geographical outline which are essentially fabulous.

The Nibelungen Lied, to which Mr. Abbott refers in this connection, affords a useful illustration, all the more instructive because it was composed in a fully historical epoch. The composers of this poem found to their hands a group of historical names, nations, and personages—the Burgundians upon the Rhine, Attila far in the East, Theodoric at Verona. The distance of time had the effect of making these appear contemporary, and so we have a wholly unhistorical, an impossible, association of historical names and persons. But the coloring of the story is historical—not of the time when the events were supposed to have occurred, but of the time that the poem was written. The true principle of interpretation is hinted at, as we think, in the words (p. 161): "We must always bear in mind that the Homeric poetry is epic poetry, and that the epic conception of life was not that which prevailed in the home of the peasant or the fold of the shepherd." The picture is correct, but partial. Making allowance for the idealism of the poet, the society depicted in these poems is really that of the personages with whom epic poetry concerns itself—court and camp, prince, hero, and high-born lady. But if we wish to see Grecian society as a whole, we must supplement Homer's view with that of the other great poet of the primitive Greeks, Hesiod, of whom Mr. Abbott gives an appreciative account, in one of the best passages of the volume. In Homer

"we move among exalted persons, in a scene where there is no room for the interests of humble life. The poets' songs are 'the crown of the feast.' Hesiod treats of other subjects. His muse is serious—nay, she is sad; she seeks no longer to amuse a delighted audience, but to beguile the unhappy and rebuke the foolish. The days of martial enterprise are over; the relations of gods and men are changed; it is the poet's task now to arrange the knowledge of the past, and record the wisdom of the sages—a wisdom which is often the fruit of bitter experience" (p. 323).

In the spelling of proper names, Mr. Abbott has chosen those forms which have become familiar in English literature, rather than those which aim to represent with exactness the sound of the original. We do not regard this as a reaction against Grote's practice, but as establishing a distinction based upon a sound principle. Greek and Latin, *as foreign tongues*, should be pronounced as nearly as possible as the Greeks and Romans themselves pronounced. If we cannot hit the exact pronunciation, any approximation to the right is better than a pronunciation which is admittedly wrong. But a book in the English language, to be read by English-speaking people, should observe the forms which have become established in English literature.

Principles of Procedure in Deliberative Bodies By George Glover Crocker, President Massachusetts Senate, 1883. G. P. Putnam's Sons. 1889. 16mo, pp. 169.

THIS neatly-printed little book merely adds one to the unnecessary manuals now in print, having neither in form nor in substance any cause for existence. Such manuals cannot add to the principles of parliamentary law, and, coming into competition with Cushing's standard work, they must be of value only as they supplement his explanations. Many writers, like Mr. Crocker, seem to think that Cushing-and-water will be more wholesome or more palatable than the original. They have an idea that by writing down the subject to the level of the ignorant they are giving valuable instruction; but in truth the object is useless and unattainable. Parliamentary law is a science; like heraldry, it is a small subject, easily mastered by one with a natural taste for it, but of no value to most persons and by them difficult of acquisition. The principles are simple, but the whole skill and usefulness lies in the power to apply the right rule at the right moment. No amount of theoretical practice will enable a man to control and direct a crowded meeting unless he has the rare ability to know his business and to keep his head. Therefore, as every man who aspires to be a chairman has a safe and thorough guide in Cushing, he does not need these dilutions, and the general public will find that unless it can master Cushing, the science must be a sealed one.

We have examined Mr. Crocker's book in the hope that his experience might throw light upon some of the vexed questions familiar to all parliamentarians. We note only three or four which call for consideration. Mr. Crocker says (p. 26) that debate "cannot be renewed after the votes in the affirmative have been given, after the meeting has begun to divide, or after yea-and-nay voting or voting by ballot has begun." This is flatly contradictory of Cushing ('Law,' etc., § 1610-1616), and must be merely a usage of the Massachusetts Senate. On p. 99 Mr. Crocker says that, on an appeal from the decision of the chair, the question as usually put is unfair. It is worded, "Shall the decision of the chair stand?" and in case of a tie vote the decision is overruled. Theoretically the balance ought to stand the other way, and Mr. Crocker proposes the wording to be, "Shall the decision be overruled?" He is doubtless right in this matter; but it may be

noted that in 1880 the Boston Common Council adopted a rule retaining the old question, but adding, "that it shall be deemed to be decided in the affirmative unless a majority of the votes given are to the contrary." We prefer, however, Mr. Crocker's form as simpler and clearer.

On p. 116 he lays down the rule that "if a quorum is present, a vote is valid, though less than a quorum votes." This heresy is clearly propounded for use in the Massachusetts Legislature. In that House of Representatives a new rule was passed this year, that if, on taking a standing vote, the presence of a quorum be doubted, "a count of the House shall be had, and if a quorum is present, the vote shall stand." This theory was first announced by Speaker Sanford in 1874, and is a very important change from all former practice. The mere presence of a member is thus counted an act of voting. In practice, this leads to dodging votes, and to all kinds of trades and bargains. The validity of the rule has not yet been tested by the courts, and the Legislature was afraid to obtain an opinion from the S. J. C. thereon. Of course, the practice of the national House is just the reverse. If no quorum voted, no action was taken. How many blocks and delays would have been avoided at Washington had the members been the peers intellectually of the Massachusetts legislators!

The coming session of Congress will doubtless cause renewed interest in the subject of parliamentary law. Already it is announced that the rules are to be altered and simplified in order that public business may be transacted. It is well to remember that parliamentary law may be easily reduced to one principle, viz., that the power of the whole body rests with the majority thereof, and that it is superior to all forms or rules. Any vote can be put by direction of that majority, and the minority is simply without redress. If it stays, it can command no recognition; if it goes away, it is simply a faction, and the power is left behind. Nothing but provisions in the United States Constitution can control Congress, and nothing but clauses in the State Constitution can control a Legislature. All subordinate corporations can be controlled by the creating authority. Some day, it is to be hoped, these facts will penetrate the American intellect, and then the necessary laws will be enacted. Until that time, all that parliamentarians can do will be to arrange rules and provide for emergencies according to the principles accepted by them, and gradually prepare a good code, ready for adoption when the necessary sanction is given.

At present it is safe to say that many acts are done which the courts on appeal would refuse to sanction. For example, it is usual, in adopting a code of rules, to add that it shall be altered or amended only by vote of more than a majority, as two-thirds or three-fourths. Mr. Crocker (pp. 146-7) recognizes the utter absurdity of this, and yet speaks of "the general conceded validity of such rules." In fact, the custom has continued merely because it has not been contested. Some day it will be found out that the Legislature of the State can pass such a rule only after the Constitution has expressly given the power. Massachusetts long remained without any constitutional provision to allow less than a quorum to meet and adjourn from day to day and compel the attendance of delinquents. But the power had to be distinctly given.

One of the most needed reforms in statesmanship is a clear discovery and statement of the few powers necessary to be given to our legislators for their organization as a legislative body, and then the incorporation of a grant thereof into the constitutions, national and State. As it is, we drift into useless troubles and delays because that parliamentary law is indispensable, and yet has no basis of authority, uniformity of practice, or defined boundaries.

Life of Friedrich Schiller. By Henry W. Nevinson. London: Walter Scott; New York: Thomas Whittaker. 1889.

A FEW sentences from Mr. Nevinson's closing chapter will serve to indicate his point of view and at the same time to illustrate the quality of his work:

"It is perhaps hardly possible, in these days, to appreciate him [Schiller] as highly as his reputation appears to demand. He is still commonly used, it is true, as a text-book for schools, because he wrote good German, and has received from Propriety her meed of honor that 'there is no harm in him.' But serious students would probably admit that few poets of equal fame are now less studied for their own sake. His name remains familiar to all, because it has been consecrated by its connection with a genius higher than his own—a genius more closely in sympathy with the thought of recent years. But otherwise the present age is generally content to remain ignorant of him, and could hardly understand where the secret of his reputed greatness lay. For the present age . . . justly plumes itself on its realism, while against realism Schiller declared it was his special mission to do battle . . . Guided by our own experience of modern life, we are constrained to circumscribe the heroic within very narrow limits, and . . . we regard the ideal forms of Schiller's drama with melancholy or indifference. The high emotions, the hopes and passions, which he stirred in the hearts of our grandfathers seem in us to be dead of atrophy. It is difficult, if not impossible, to put ourselves back to the time when Carlyle, in his beautiful and enthusiastic 'Life of Schiller,' gave to the world the first-fruits and earnest of his greatness. Our hopes from German literature are no longer so high as in the days when Goethe was still alive and the words of his fellows were welcomed by many as revelations of a new gospel of art and wisdom. Their work has now for a long time been either absorbed or rejected. It is true that German thought has as much influence, and in the near future is likely to have more than at any previous time. Now, however, it no longer works through literature, but through science, arms, and social ideas. In literature for the last thirty years we have been gradually but surely returning to the French alliance. . . . The German mind, still retaining a love of the ideal, finds in Schiller's heroic creations a satisfaction unknown to more realistic peoples; and German literature, with all its high merits, has been throughout so deficient in dramatic power, so obscure in the outline of character, compared with other European literatures, that the importance of such dramatic production as it possesses is likely to become a little exaggerated in popular opinion."

To all of which we can yield only a partial and qualified assent. We do not think that Schiller's plays are used as text-books merely because they are harmless and written in good German, or that his reputation is very largely due to his connection with Goethe, or that the present age is to any great extent drifting away from him because of his excessive idealism. It is easy to mistake a natural process of individual growth, that is, to mistake a change that goes on in one's self and in neighbors of like age and temper with one's self, for a general "movement," or a great secular drift of opinion. In the case before us the simple fact is, as it seems to us, that Schiller is preëminently the poet of the young. And this he is now just as much as he ever was, and in England or the United States as much as in Germany, save that in Germany he is very much more read and studied. Experienced teachers of German literature will testify that Schiller usually strikes fire in the mind of youth some time before Goethe does. As the learner grows older, more reflective and observant of facts, as he more and more reads to compare and to be instructed, and not simply to be thrilled and edified, he learns to prefer Goethe. On the other hand, if he continues to read as the young read (a thing he is very likely to do if he reads at all, and does not belong to the class with whom the study of literature is a business), a certain preference for Schiller will go with him through life. In other words, Schiller, like Byron and Heine, is the poet of those who care more for fervor than for truth; and this fact stamps him, as it stamps Byron and Heine, as a poet of the second rank. But in the second rank Schiller has no superiors. It is surely no paltry claim to immortality to serve ingenuous youth, whose idealism is not yet palsied by sad experience or sicklied o'er with the pale cast of thought, as a never-failing source of high and wholesome inspiration.

Mr. Nevinson's work appears as the twenty-fourth number of the "Great Writers" collection, edited by E. S. Robertson, and published at a shilling a volume by Walter Scott of London. It is an able and conscientious work (in spite of its unpretending size and price), and deserves to be generally read by students of German literature. In truth, we should find it hard to name a book in which the reader of to-day can find Schiller more thoughtfully and readably discussed than in the little volume before us. It is written with ample knowledge of Germany and German literature, and in a terse, vigorous style which avoids non-essentials and goes straight to the heart of the matters in question. Naturally, it has not the fulness of information which characterizes the German biographies, notably that of Düntzer; but, in compensation, it has not their soporific effect upon the brain. Mr. Nevinson's critical observations seem to us in the main sound, and are always suggestive even where one is compelled to withhold assent. They are much more warmly appreciative, too, than might be inferred from the quotation at the beginning of this notice. It is nowhere forgotten that Schiller was really a "great writer," the actual favorite, probably, if a vote could be taken, of the German people; and that, being this, he requires explanation. The most exacting reader will hardly make any more serious charge against Mr. Nevinson's criticism than that he now and then, occasionally, perhaps from lack of space, settles some large question too easily. This he seems to us to do, for example, in dealing with the "Jungfrau von Orleans." He echoes the familiar condemnation of Schiller for giving us an idealized Maid, who dies in glory on the battle-field. He recounts the story of Jeanne Darc as it was, telling in strong and simple language the tale of the "pauvre petite bergerette" who turned the tide of a great war, and then adds: "Every element of the profoundest tragedy is there, and all that art could hope to do would be to read the truth aright." But this hardly satisfies. One may contend that the actual Jeanne Darc is not adapted for a dramatic heroine, and that dramatic poets have done well to avoid the subject. But if one adopts Mr. Nevinson's contention, he is at once confronted with this difficult question: Why is it that a story conspicuously known to the whole world for centuries, and containing ready to hand all the elements of the profoundest tragedy, has not been successfully dramatized except by Schiller? Mr. Nevinson here seems to confound the pathetic with the tragic. To our thinking, a purely realistic Jeanne Darc is not available as a tragic heroine. Modern Protestant art cannot hope to "read aright" the

central truth of her story by simply introducing the story as it was upon the stage. The tradition must be "made over" in one way or another. That Schiller's interesting experiment is a perfect success we would by no means contend; but he has at least come nearer than any other great modern poet—vastly nearer than Shakspere or Voltaire—to reading aright, for modern Prostestants, the central truth of his heroine's career. At any rate, his critics should never forget that Schiller knew perfectly well what he was doing and why he was doing it, and had thought long and carefully upon the whole subject of the relation of the drama to historic verity.

Scintillæ Juris. By Charles J. Darling, Q.C., M.P. With Frontispiece and Colophon, by Frank Lockwood, Q.C., M.P. Fourth edition (enlarged). London: Stevens & Haynes. 1889.

SCINTILLÆ JURIS,' of which we are glad to see a new edition, is a treatise compounded in nearly equal parts of sense, humor, and absurdity. It belongs to a class of books, of which the 'Comic Blackstone' is perhaps the best known, which aim at furnishing amusement to the professional man of a kind which the laity can never hope to enjoy thoroughly. The basis of the humor in these works generally is the assumption that the law, instead of being the perfection of human reason, is, in the language of one of Dickens's characters, "a Hass"; that the administration of justice exists indirectly for the benefit of lawyers and judges, who earn their fees and salaries by causing the property of honest people to come into the possession of those who have no right to it, including themselves, and that a lawsuit is a game of cards in which the player wins who has most cards up his sleeve. This view of the law, though stoutly maintained by laymen ever since the beginning of their troubles with it (and perhaps the most irritating part of their discomfort is that they have never been able to get along without it), is only perfectly appreciated by lawyers, who know just how far it is true and where it is false.

Of all the humorists who have taken up this field, Mr. Darling, though not the most popular, is the most acute. His work is marred by the fact that he is often unable to distinguish between his good things and his things which are not good at all. For instance, his chapter on judges seems to us devoid of point. On the other hand, some of his criticism of the well-known maxims of the law has a humor which, if not very deep, is very pleasant. For instance, he suggests that the maxim "He who comes into equity must come with clean hands," now applies, since the fusion of the two systems, not only in equity, but in law also, and adds that "the utility of the maxim is that he who goes in clean will come out less dirty than he who is soiled from the first." Again, the maxim, "Boni judicis est ampliare jurisdictionem," "was probably invented to comfort the conscience when judges were paid by fees on the cases brought before them. It is characteristic of a good general to extend the area of the country he can hold and plunder." Again, of "Summum jus, summa injuria," he says: "This is a more candid statement concerning law than one might expect to find in a law-book; but it is useful, should any one complain of the imperfection of our law, to be able to point out that in its integrity it is even more hurtful."

The chapter on witnesses contains much sound sense. For instance: "A witness who understands the effect of his testimony on the issue seldom gives it fairly"; "Much truth is spoken that more may be concealed"; "A religious witness takes credit for so many virtues that he allows himself much license in dealing with the truth." In the chapter on cross-examination there are suggestions of great subtlety, as, "If you suggest to an adverse witness a fact in his own favor, he will often deny its existence for fear it should be to your advantage." Again: "A timid question will always receive a confident answer."

We may close our extracts with two or three golden rules for examinations in chief: "As a rule, never allow a witness to state that which he is most anxious to mention, for it will surely be either slanderous or irrelevant"; "I would prevent a witness from attributing his acts—as some do—to higher motives than men are used to find in their every-day affairs. There is a reproach in the contemplation of unaccustomed refinement which gains no favor from the less cultivated"; "We always suspect the honesty of those who are actuated by motives which would not influence ourselves."

Jewish Portraits. By Lady Magnus. Boston: Cupples & Hurd. 1889.

ESSAY-WRITING, always rare in any strict sense of the term, is going more and more out of the fashion. Our "historical method," our passion for indexes, references, and foot-notes has changed the character of magazines and reviews beyond all hope of recognition by their original founders. Reviews have become digests, essays "papers," and, in the prefatory note to this charming little "gallery of portraits," Lady Magnus has herself used the term which indicates a learned society as audience, rather than a cultured and curious reading public. Yet "papers" they are not, but a collection of graceful essays, if anything too few, with sufficient learning to be useful, a love and admiration for the past of her people, and a passion in their defence against persecutors and traducers which cannot fail to command at once gratitude and respect. Some of the essays were written as early as 1882, and all have appeared in different periodicals, so that the recurrence of certain ideas hardly to be expected in a single volume is easily explained, while the intensity of feeling exhibited against Jewish persecutions in the past must be viewed in the light of the unhappy occurrences of the beginning of this decade, which succeeded in arousing even the gentle spirit of the late Emma Lazarus.

The first essay is devoted to Jehudah Halevi, the physician and poet, "who solved the pathetic puzzle of how to sing the Lord's song in a strange land," whose charming manners made him the centre of a coterie of Spanish-Jewish writers who (to adopt the compliment of a friend) pitched their tents in each other's hearts; whose philosophical work, the 'Khozari,' would alone have made him famous, and whose love sonnets, like Solomon's Song, whether inspired by a real passion or an idealized Jerusalem, would have been sufficient to give him rank as a poet. "The Story of a Street" (the Frankfort *Judengasse*), and "Heinrich Heine, a Plea" (against Carlyle's "that blackguard Heine" and Charles Kingsley's "Who was Heine? A wicked man") both have the same tendency—a candid picture of the condition of the Jews in Germany during the second half of last century and the first half of the present, and the ascribing of their characters, not always lovable, to the unfair circumstances under which perforce they existed. The life of Heine is "the story of one who was a Jew, and poor, a convert without the zeal, a model of resignation and yet no Christian." He was German yet French, having the good fortune to live during the French occupation, "when some healthier amusements than Jew-baiting were provided for the populace."

Lady Magnus briefly presents Prof. David Kaufmann's view of George Eliot and Judaism ("An Attempt to Appreciate 'Daniel Deronda'"), and in passing very quaintly pays her respects to Mr. Swinburne, who has "no ear for the melodies of a Jew's harp," and, possessing no "taste for the dissection of dolls, leaves Daniel Deronda to his natural place over the rag-shop door." The answer comes in the shape of an art criticism once pronounced in the *Louvre:* "The picture was Correggio's 'Marriage of St. Katherine,' and to an Englishman standing near us it evidently did not fulfil preconceived conceptions of a marriage ceremony. He looked at it long, and at last turned away, muttering, 'Well, I can't see anything in it.' That was evident, but the failure was not in the picture." Menasseh ben Israel, who gained the respect of Cromwell, and opened England to the Jews, receives due praise for his deeds, but his writings are described as "compilations of dead men's minds, . . . duly labelled and catalogued selections from learned mummies." The essays on "Charity in Talmudic Times" and "Moses Mendelssohn" cannot be briefly characterized, since they are themselves but characterizations of what it would take several volumes to tell. The former contains all the suggestions for a "paper," if not for a treatise.

We take leave of this little volume (calling attention to the impossible reference to *Yoma* on page 14, almost with shamefacedness) with a feeling that the author is a valuable member of that growing community in England which is creating an Anglo-Jewish literature different from its Spanish predecessor of six centuries back, yet as full of promise, of utility, and, in the present instance, of beauty as well.

The American Prize Method for Systematic Instruction in All Branches of Piano Playing. By Edward J. Finck. Portland, Ore. Wiley B. Allen & Co.; Philadelphia: B. F. Baines.

PIANO-PLAYING is a modern epidemic, and the demand for instruction-books is therefore enormous. Besides the large number of methods published in this country, vast quantities of the best foreign books are brought over on every steamer, and the best ones may be had in almost any language. Of Urbach's 'Preis-Clavierschule,' adjudged the best among forty competitors by Kullak, Seiss, and Reinecke, eight editions, or 36,000 copies, were printed in three years; and the most thorough of all instruction-books, Lebert & Stark's, of the Stuttgart Conservatory, although it is in four volumes and very expensive, has been equally successful. The possibility of winning such successes urges many teachers to embody their own views and experiences in a volume, and, consequently, new methods are published constantly in all parts of the country, including the far West. Mr. Finck, the author of the work whose title we give above, is a graduate of the Stuttgart Conservatory, and composer of a number of piano pieces well known on the Pacific Coast. His book received the vote of a majority of the judges appointed by the editor of the *Etude*, in a competition open to American teachers. While the general order of proceeding

in a pianoforte method is confined within too narrow limits, by the nature of the subject, to allow of complete originality of treatment, there are some points in this method which call for special commendation. The first is of a practical nature, being a complete index, which, serving also as a table of contents, is for convenience printed on the first page. Such an index is greatly missed in other methods, and will save much loss of time and temper on the part of the pupil as well as the teacher. Another feature, which, strange to say, is also novel, is a full series of questions, printed at the bottom of each page, enabling the pupil to review his own knowledge and saving the teacher considerable trouble. The Method also differs from others in having the very first exercises in both the treble and bass clefs instead of only one clef. This has the disadvantage of requiring the pupil to learn both these clefs at once, which is apt to be confusing; but the subsequent gain perhaps more than compensates for this, for it initiates the pupil at once into the clef which will be the habitual province of each hand, and it will prevent him from confounding or identifying the first five notes with the five fingers, which happens with comic frequency—a pupil who has practised his five-finger exercises for weeks imagining that the sign for the thumb must always stand for C, the first finger for D, and so on.

One other feature deserves mention: there is more rhythmic variety than usual in the exercises, compelling the pupil to keep strict time and count carefully. In most methods and studies for beginners, even in such famous ones as those of Cramer and Lebert and Stark, there is a curious rhythmic monotony which is apt to demoralize the student and make him mechanical in his habits, as is abundantly attested by the aggravating inability of most amateur pianists to keep time when playing with a stringed or other instrument. The pieces interspersed for the entertainment of the pupil and the formation of his taste are judiciously selected from the best classical and modern masters, but there is an occasional carelessness in the noting of tempo or expression marks, as on page 128, where Chopin's Prelude, opus 28, No. 6, is printed without any intimation of the tempo for the guidance of the pupil—which is the more to be regretted as such pieces are sure to be played too fast if there is no tempo sign. The definitions as a rule are clear and concise, although there is an occasional grammatical error or inelegance. On page 52 there is a serious misprint in the G instead of G sharp in the harmonic minor scale, and another one on page 94, where the slur in the explanation of 161 b should be extended over four notes instead of three.

Principles of the History of Language. By Hermann Paul. Translated from the second edition of the original, by H. A. Strong, M.A., LL.D. Macmillan. 1889.

THE science of language, for reasons inherent in the justified use of the term, has followed, in the main, the same general lines of historical development that have characterized the other sciences. Like them, it has necessarily had its empirical stage, in which phenomena in their mutual or reciprocal relationship were more or less imperfectly understood, and correlation was imputed when it did not exist, or was often unsuspected when it did. In it, as in them, a period of particularism necessarily preceded the evolution of laws whose field of operation has, since their formulation, in the light of newly discovered or more categorical knowledge, not seldom been extended on the one hand, or contracted on the other. As a result of this development in the direction of reality, the new science has outgrown the tentative efforts of its earlier years, and the intuition that was characteristic of the beginnings of the study of the phenomena of language has gradually, but none the less surely, given place to scientific reason and definiteness of method.

Down to the appearance, in 1880, of Prof. Paul's 'Principien der Sprachgeschichte,' no scientific formulation had been attempted of the determined principles and methodology of the science. The first edition was, accordingly, in reality an "epoch-making" book; and although, in one sense, it contains but little material that is for the first time advanced, in another it is really one of the most original, as it is one of the most important, books in the whole literature of the subject, and determines, as Prof. Wheeler in his preface to the American edition says, "a distinct period in the development of the science." A second edition of the book, enlarged and in some parts rewritten, appeared in 1886. It is this later edition that is the basis of the present translation, so that the English reader has in it the carefully considered statement of the science well down to the present day.

The essence of Prof. Paul's work, as he expresses it in a note to his introduction, "is to trace the development of language from the reciprocal effects which individuals produce upon each other." It leads him from a consideration of the necessity for a system of principles to accompany the history of language to a discussion of the nature of the development of language, and the detailed rationale of the various phenomena connected with it.

Professor Paul, the foremost Germanist in Germany, through his published works and the joint editorship with Professor Braune of the *Beiträge*, to which he has been a frequent contributor of original articles, has acted a radical part in the progressive growth of the new philology. His standpoint in the present book, as elsewhere, is the rational but perhaps not uncontested one of the neo-grammarians, who have all along most actively insisted upon statement of method. From the thorough treatment of the subject that it discusses, its breadth of perspective, and the profound use made of the material at hand, the work is entitled to rank, where Professor Wheeler assigns it, "as the fundamental handbook of the science."

The translator, Professor Strong, who holds the chair of Latin in University College, Liverpool, has performed his task in the main carefully and well. The practical usefulness of the book has been increased by paragraph numbers and marginal catch-lines. Some few of the original references are omitted, but a number of others, chiefly from English sources, have been added. The translator has also furnished the volume with two indexes. Of these the first is only partial, and consequently misleading; a multitude of words of all kinds has been omitted, and such a valuable reference, for instance, as Verner's Law (which, by the way, probably through a typographical error, is misstated in one of its stadia on page 192) finds no place in it. The plan on which the index of authors, at the end of the book, is constructed it is absolutely impossible to determine. Less than one-third of the number referred to are contained in it at all, and these appear to be selected utterly at random.

In its new or original form, this work should surely find its way into the hands of every scientific student of language.

BOOKS OF THE WEEK.

Alexander, Rev. W. The Epistles of St. John. A. C. Armstrong & Son. $1.50.
Allen, Dr. N. N. Korean Tales. G. P. Putnam's Sons. $1.25.
Baker, C. W. Monopolies and the People. G. P. Putnam's Sons. $1.25.
Beaugrand C. The Walks Abroad of Two Young Naturalists. T. Y. Crowell & Co. $2.
Besant, W. Children of Gibeon. Harper & Bros.
Blackstock, E. F. The Land of the Viking and the Empire of the Tsar. G. P. Putnam's Sons. $1.25.
Bolton, Mrs. Sarah K. Famous Men of Science. T. Y. Crowell & Co. $1.50.
Bradish, A. Memoir of Douglas Houghton, First State Geologist of Michigan. Detroit: Raynor & Taylor.
Bridger, Dr. A. E. Man and his Maladies; or, A Way to Health. Harper & Bros.
Cone, Rev. O. Salvation. Boston: Universalist Publishing House. 25 cents.
Davis, R. Recollections of Mississippi and the Mississippians. Boston: Houghton, Mifflin & Co. $3.
Dumas, A. Les Trois Mousquetaires. Boston: Ginn & Co. 80 cents.
Eggleston, E. First Book in American History. D. Appleton & Co. 70 cents.
Farmer, Lydia H. Short History of the French Revolution. T. Y. Crowell & Co. $1.50.
Goss, W. L. Jed: A Boy's Adventures in the Army of '61–'65. T. Y. Crowell & Co. $1.50.
Heimburg, W. Lora: the Major's Daughter. Worthington Co.
Hichborn, P. Report on European Dock-yards. Washington: Government Printing-Office.
Hogue, Prof. A. The Irregular Verbs of Attic Prose. Boston: Ginn & Co. $1.00.
Johnston, R. M. Ogeechee Cross-Firings. Harper & Bros. 35 cents.
Sweet, Sophie. Captain Polly. Harper & Bros.

To All Who May Be Interested in

THE REFORM OF THE TARIFF:

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff; and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a blank form for filling in the desired information.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

THE WEEKLY POST, NEW YORK.

HOUGHTON, MIFFLIN & CO.'S

SATURDAY BOOKS.

☞ 112TH THOUSAND.

Looking Backward.

By Edward Bellamy. *An entirely New Edition from new plates.* Cloth, price reduced to $1.00; paper, 50 cents.

An attractive edition of this remarkable story, which has excited a popular interest greater and deeper than any other American story since 'Uncle Tom's Cabin.'

Six Portraits.

By Mrs. M. G. Van Rensselaer, author of 'Henry Hobson Richardson and his Works.' 16mo, $1.25.

Papers of much biographic and art value on Luca Della Robbia, Correggio, William Blake, Corot, George Fuller, and Winslow Homer.

The Heritage of Dedlow Marsh,

And other Tales, including A Knight-Errant of the Foot-Hills, A Secret of Telegraph Hill, and Captain Jim's Friend. By Bret Harte. 16mo, $1.25.

Character and Comment.

Selected from the Novels of W. D. Howells. By Minnie Macoun. 16mo, $1.00.

A tasteful little book of those noteworthy and delicious sentences which abound in Mr. Howells's stories.

Our Cats and all about Them.

Their Varieties, Habits, and Management; and, for Show, their Points of Excellence and Beauty. By Harrison Weir. With a portrait, and many illustrations by the author. $2.00.

Mr. Weir stands at the head of animal draughtsmen in England. His book, by its fund of varied information about cats and its excellent illustrations, appeals to all cat-lovers.

Calendar Books.

Selections from the Writings of Emerson, Hawthorne, Holmes, Longfellow, Lowell, and Whittier for every day of the year. Each book of selections is put up in a parchment-paper cover. Price of each 25 cents; the six in a box, $1.50.

Gudrun.

A Mediæval Epic, excellently translated from the Middle High German, by Mary Pickering Nichols. Carefully printed, with decorations from German books, mostly of the sixteenth century. With a colored facsimile of a page of the original MS. of the poem. 8vo, cloth, or parchment-paper boards, $2.50.

On the Functions of the Nose,

And their Relation to Certain Pathological Conditions. By Greville Macdonald, M.D., Physician to the Throat Hospital, London. 8vo, $1.25.

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the publishers.*

HOUGHTON, MIFFLIN & CO.,
BOSTON,
11 East Seventeenth St., New York.

3. *Hours of Idleness.* Byron's. Newark, 1807.

The highest bidder can obtain each or all on Nov. 1, 1889. Address BIBLIO, *Nation*, New York.

Eggleston's School Histories.

I.

A First Book in American History.

WITH SPECIAL REFERENCE TO THE LIVES AND DEEDS OF GREAT AMERICANS. By EDWARD EGGLESTON. With Maps and numerous Illustrations. Square 12mo, half bound. Price, 75 cents. [*Now just ready.*]

"The children into whose hands Mr. Eggleston's charmingly written volume is put will have before them pictures, vignettes, etc., almost as exquisitely dainty as those which adorn Couquet's *éditions de luxe.* Even the maps are so drawn as to interest as well as instruct, and all that fine paper, beautiful clear type, and careful printing can effect has been done by the publishers. The text is skilfully written, and is well adapted to interest young minds in the doings of great Americans."—*New York Tribune.*

II.

A History of the United States and Its People.

FOR THE USE OF SCHOOLS. By EDWARD EGGLESTON. With Maps, Prints in Colors, and numerous Illustrations. Square 12mo, cloth. Price, $1.25.

"Adorning and enlivening it are maps which keep pace with the story and make familiar by colors and drawings, specially contrived for episodes and epochs, all the surroundings which fasten not merely events, but their full significance on the mind. These maps are to be cordially commended. . . . The illustrations, apart from the maps, are admirable examples of American wood-engraving. They are innumerable, and they are lavishly scattered along the margins or dropped into the text itself. Softly and tastefully finished, they constitute themselves an element of beauty as well as of interest. . . . The literary style of the book is worthy of its scholastic character. . . . The most pleasing, the most convenient, and the most fascinating popular text yet produced upon the subject that ought to be dearest to American youth."—*Chicago Tribune.*

D. APPLETON & CO., PUBLISHERS,

1, 3, and 5 Bond Street, New York.

New Classical Text-Books

THE attention of Instructors in the Classics is invited to the NEW INDUCTIVE TEXTS by Prof. Wm. R. Harper of Yale, and his assistants, of which there are now ready—

I. THE INDUCTIVE LATIN METHOD. By Professor Harper and Professor Wm. E. Waters, Ph.D. 323 pages. Cloth.

II. THE INDUCTIVE GREEK METHOD. By Professor Harper and Professor Isaac B. Burgess, A.M., of Rogers' High School, Newport, R. I. 355 pages. Cloth.

These books embody strikingly new methods for beginners in the study of Latin and Greek, and are meeting with very great favor.

"I am satisfied," says *Professor Lincoln of Brown University*, "yours is the only practical method of learning a language thoroughly; the only one for mastering the language for use, whether literary or scientific. I have been trying for several years past to get my pupils to read and study their Latin in this way. If teachers would only patiently use your method from the very start and persistently keep it up, if only for your twenty Cæsar chapters, I venture to say that their pupils would find but little difficulty after that in reading Cæsar anywhere. Then, too, they would *read* Cæsar, or be well on the way to reading without stopping to translate."

*** Price for introduction, $1.00 each. Special rate for exchange for books of like grade. Sample pages by mail on application.*

NO. 59 WALL STREET, NEW YORK.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 19, 1889.

The Week.

So far as we have been able to ascertain, not one of the fifteen leading editors whom the President has bribed with important offices has ventured to say anything concerning Tanner's removal which was worthy a moment's serious consideration by an intelligent human being. Nearly all their comments have been, like those of the *Tribune* of this city, fit only to be classified among the "jokes" or humorous utterances of the period. Not one of the fifteen editors has even hinted at what he knows to be the truth in the matter—that Tanner's appointment in the first place was an inexcusable blunder, and that his removal was made necessary in order to save the Administration from disgrace and the country from possible bankruptcy. Truth of this kind has to be sought in such unsubsidized Republican journals as the Philadelphia *Inquirer* and *Ledger*, the St. Paul *Pioneer-Press*, the Worcester *Spy*, and a few others whose editors have not been appointed to office. But for them the public would not be able to find the facts in the case outside the Mugwump and Democratic press. The most conspicuous instance that we have seen of the servile effect of Presidential bribery upon a newspaper appears in the Detroit *Tribune*, whose editor was recently appointed a collector of internal revenue. He defended Tanner up to the very moment of his removal, and then bewailed his fate by saying: "We regard it as an unfortunate break in the household of the Administration, and sincerely regret that it could not have been avoided."

The country now waits to see what other representative of the Grand Army Machine shall be appointed as Tanner's successor. Evidently the New York *Press*, whose editor is Commissioner of the Census, did not exaggerate the power of this machine or the President's fear of it. The Boston *Advertiser*, whose editor got his brother appointed to a consulate the other day, accepts the situation, and says: "It now remains for the President to appoint some other member of the Grand Army." Major Merrill of Massachusetts called on the President on Friday, and, according to the *Herald's* correspondent, said that "the occasion called for the appointment of a man of national reputation and universal popularity in the Grand Army, and the appointment could not be delayed without disastrous results." The correspondent adds, what everybody will believe, that "the President seemed impressed with this view."

The Philadelphia *Press* cautiously says, regarding the succession to Tanner, that "the President is hardly likely to make a mistake in filling the office a second time." That depends on whether he keeps his pledges the second time, as he did not the first. It is only necessary that he should follow the rule laid down in his letter of acceptance, but shamelessly broken in the choice of Tanner, that "in appointments to every grade and department, fitness, not party service, should be the essential and discriminating test." It is not encouraging that the test made most prominent in the current discussions of the succession is the relative strength of various candidates with the Grand Army Machine—a machine so powerful that the New York *Press* thought the President worthy of fulsome praise for the alleged courage which he displayed in removing Tanner at the risk of its displeasure. The Philadelphia *Ledger* makes some pertinent remarks upon this point: "It is said that the Grand Army is to be conciliated by the appointment of its late Commander as Commissioner of Pensions. He may be a worthy and proper man, but if he should accept office as the representative of the Grand Army of the Republic or any other organization of soldiers, he will be handicapped, as was Corporal Tanner, from doing his full duty as a public servant, owing allegiance to no other power."

Mr. H. K. Thurber, who as a disseminator of forged English press quotations in behalf of Harrison was not surpassed even by John F. Plummer himself, has been ignored by the Administration in the selection of a site for the new Appraiser's stores, and is naturally indignant. He said last week to a *Times* reporter, in speaking of the selection of Bowling Green:

"It is an outrage—a striking triumph of political influence over the true commercial interests of the city. In full knowledge of the facts, Secretary Windom has chosen a site which was opposed by men representing fully 90 per cent. of the importations physically handled at the Appraiser's stores, and which only had the backing of politicians, real-estate manipulators, and such importers as do their business with the Appraiser by sample. Of course there is an African in the woodpile. It does not require a very keen sight to locate him either."

The African whom Mr. Thurber sees in the woodpile is well known to be "Tom" Platt, who, whatever other service he may have rendered to President Harrison, was never caught circulating forgeries in his behalf. His claim, therefore, is obviously much inferior to Mr. Thurber's, for the latter circulated forgeries by the ton both before and after their true character was exposed. After it had been exposed, he gave public notice that he would make the proper correction in his next batch of circulars, and when the batch came out, it was discovered that his correction consisted in changing the credit line on the most flagrant of the forgeries from "London *Times*" to "a London paper." Zeal like this ought certainly to have some influence with its beneficiary, and we are not surprised at Mr. Thurber's righteous indignation.

The iron and woollen-manufacturers of New England seem to be somewhat dazed by the *Tribune's* assurances that it understands their business interests better than they do themselves. They had been supposing that they knew what was the matter with their own affairs. They knew they were losing business and money, and they came to the conclusion that they had no remedy save in free raw materials. The *Tribune* assures them that they are "deceiving themselves"; that they are "tricky free-traders"; and that if they are not careful, they will incur the wrath of the Pennsylvania iron-manufacturers and Western wool-growers, and be utterly destroyed by having the duties removed from manufactured products. This information that, no matter if their business is going to decay, it is their duty as good Republicans to let it go rather than try to save it at the peril of undermining the protective system, does not strike them as meeting the emergency. We trust that the *Tribune* will read them all out of the party, and make it manifest to everybody that the Republican party is invincibly opposed to tariff revision and reduction of every kind.

A week ago the *Tribune*, meeting the demand of the woollen-men for free wool, laid down the doctrine that "protection cannot be politically maintained or logically justified as a partial or one sided affair. If it does not benefit American labor as a whole, it will be voted down." We had no sooner fairly assimilated this great principle—that is to say, that the woollen-manufacturers were not to be allowed to prosper unless the wool-growers could prosper at the same time—when the following appeared in the same organ addressed to the Boston, Massachusetts, men, who are asking for cheap coal and iron ore in order to enable them to prosper as well as Pennsylvanians:

"In the slow growth of a nation, all parts and all industries cannot advance with equal step. Some must unavoidably pluck the first fruits of any beneficent national policy. The Eastern States were in position to get the lion's share of benefit from protection at the outset, but now Western and Southern producers begin to share the bountiful results, and there are found some Eastern men who deplore that state of things. Here is an Eastern furnace, built by protection, but now abandoned by reason of the cheaper production in Alabama; 'if that is protection,' say some, 'let us have less of it.' But it is a pretty time to object, after pocketing the largest share of the advantages for twenty years. Here is an Eastern textile mill, which Western or Southern competition renders no longer profitable. 'Lower the tariff, so that no more mills shall be erected?' Hardly; protection was never intended for the exclusive benefit of any man or set of men, but for the benefit of the whole country."

Well, then, why do the wool-growers insist on "advancing with equal steps" with the woollen-men? Do they not see that some must unavoidably get more "first fruits" than others? Are they not aware that "protection was never intended for the exclusive benefit of any man or set of men"? Why are they unwilling to be ruined in order that the woollen industry may flourish, supposing that free wool would ruin them? Why do they follow the example of the New

England iron-men, who insist on "advancing with equal steps" with Pennsylvania? Do they not prove themselves to be really selfish rascals, and are they not ashamed, surrounded as they are by unselfish, disinterested, and patriotic high-tariff men, all spinning, weaving, and mining for the good of their country, to insist on growing wool at a profit?

The story comes from Philadelphia that the well-known Appraiser Leach is following up the policy he initiated about woollens some months ago, by raising the duty on merino carpet wool from 2½ cents per pound to 10 cents, to the great confusion of the carpet-manufacturers, who say, and not without reason, that if his decisions are sustained, it will ruin them. Of course they have protested and appealed, but it will be a good while before they get a decision, and the evil-minded say that Mr. Leach's purpose will be answered if in the meantime the price of wool goes up, and the Western wool-speculators who cornered the wool market soon after the Presidential election can get rid of their stocks at a good advance. Of course this may be a foul slander on a worthy man and a pure Administration, but as long as custom-house officers are allowed to make sudden changes in rates of duty, it is a kind of charge that will continue to be made, and, what is worse, to be believed. There is no man in this community or any other who enjoys enough public confidence to be allowed to do what this Administration is attempting—make sudden and arbitrary changes in the price of leading commodities.

The first document sent out by the Massachusetts Ballot-Act League, designed to instruct political committees and voters in following the methods of the new law, is a compact pamphlet of fifteen pages, which may well serve as a model for use in other States where ballot-reform laws have been adopted. It contains full directions for the proper execution of the law, and gives suggestions to committees which will enable them to see to it that all necessary requirements are met in the preparation of nomination papers, in the form of the ballot, in the proceedings on election day, and in various other matters which will be new to all the voters, both in advance of the next election and at the polls on November 5. The pamphlet contains also a full list of penal offences, and the texts of the new caucus acts and of the Ballot Act. Copies can be obtained upon application to Albert C. Burrage, 89 State Street, Boston.

The first trial of the new Ballot-Reform Law of Minnesota was made at a special election in one of the wards of Minneapolis last week, and the result, like previous trials in Milwaukee and Louisville, completely silenced the opponents of the Australian system. Speaking of it, the St. Paul *Pioneer-Press* says: "The universal verdict that it worked like a charm is uttered in a tone of mild surprise, while the limited area covered and the lightness of the vote are announced as excuses for success. It seems hard to persuade people that the law would not have shown itself utterly unmanageable but for these extraordinary conditions in its favor." The election passed without the slightest confusion or friction, and it was especially remarked that the time consumed in marking and depositing the ballots was much less than had been supposed would be necessary. This has been the experience in every place in which the Australian system has been put in practice. It has always worked simply and smoothly, and the "cumbrous" quality in it which has so alarmed the "Dave" Hill and Tammany variety of statesmen has never been discovered upon actual trial.

Gov. Hill's action in trying to boom himself as a Presidential candidate by having his portrait hung up in the hotels, bar-rooms, and grocery-stores of New England is exciting considerable attention. Opinions differ as to the usefulness of this method of arousing popular sympathy and support. The only immediate precedent is that of the great Powderly of the Knights of Labor. Shortly before the campaign of last year he had something like a half-million lithographs of himself, with his signature in very bold autograph ending in a beautiful flourish, scattered broadcast over the land. They were scarcely issued before the Knights began to go to pieces as an organization, and when the time arrived to nominate Presidential candidates, Mr. Powderly's name was not mentioned in any quarter. Whether the lithographs had any effect one way or another is of course a fine point for investigation. Gov. Hill's photographs may be more useful to him, but the facts that his term as Governor will expire before the opening of the Presidential campaign, and that the election for his successor will be held in 1891, constitute the most formidable obstacle to his ambition.

The signs of the times are not favorable to the various third-party movements. Even the most powerful of them, the Prohibition, is apparently weaker than it has been for several years, if we may judge by the diminished attendance at its State conventions. The National Greenback party has just held a convention at Cincinnati, at which twenty-five delegates assembled. When asked what the programme was to be, the leader of this movement replied: "There will be a speech by me, and afterwards I will read Washington's Farewell Address." That was a pretty accurate summary of the convention's work. What has become of the Randall high-tariff Democracy we are unable to say. It is several months since its leader in the press issued a call for the Democracy to "get together" on the Randall platform. Every Democratic State convention which has been held this year, all of which have assembled since that call was issued, has reaffirmed the national Democratic platform of last year, and most heartily approved President Cleveland's tariff-reform course. One of the former members of the Randall squad is now running for Governor of Ohio on such a tariff-reform platform. It might be timely for the Randall party to assemble and read a farewell address of some kind.

If Congressmen Reed and McKinley are thinking of taking the stump in Virginia in behalf of Mahone, they will have some awkward things to explain. They must, of course, support Mahone as the champion of an honest ballot and a fair count, and if they do this, they will be confronted with his record as a tissue-ballot operator when he was Chairman of a Democratic Congressional committee in 1876. He then sent out bundles of tissue ballots in size a little larger than postage-stamps, with orders that these only should be used by Democratic voters. The law then was that if the number of ballots in the boxes exceeded the number of names on the poll lists, one of the election judges should be blindfolded, and should draw out the number of ballots in excess. An excess was produced by the Democrats voting ten or twenty tissue ballots each. As the negroes voted large ordinary paper ballots, those were the ones which were drawn out by the blindfolded judge. Documents proving this device to have been invented and used by Mahone are in existence, and they will make defence of him awkward for Northern champions of the "poor negro" who take the stump for the "Little Napoleon of Readjustment," as that devout Blaine man, Mr. William Walter Phelps, once called him.

A convention is in session in New Mexico framing a constitution under which it is hoped that the Territory may come into the Union as a State. It is a waste of time. The last census showed that there were in New Mexico 108,721 white and 1,015 colored inhabitants, and that 60 per cent. of all persons above the age of ten years were unable to read. This being the case, a Republican Congress will refuse to admit the Territory, on the ground, so well stated by Mr. George F. Hoar of Massachusetts when New Mexico made a similar application fifteen years ago, that "when Congress is considering the question whether the people of a Territory shall be formed into a State of the Union, *the fact that they cannot perform the duties of American citizenship by voting intelligently on public questions*, the fact that the great body of them cannot understand the laws of the country, cannot read the discussions of political questions, cannot obtain information about their interests from newspapers or magazines, *constitutes a strong reason why we should require such a community to wait for admission until they are better prepared.*" If, however, the conditions were reversed, and New Mexico had 108,721 colored inhabitants against only 1,015 white, even if much more than 60 per cent. of them could not read, a Republican Congress would undoubtedly disregard the fact that "they cannot perform the duties of American citizenship by voting intelligently on public questions," and promptly admit a community of such ignorant people, on the

ground that they would of course always vote the Republican ticket, and thus give the party another Representative in the House, two additional members of the Senate, and three more Presidential electors.

The Indianapolis *Sentinel* shows the hypocrisy of the Republican cant about the negro by pointing out that, although at least 2,800 votes for Harrison were cast by colored men in Indianapolis, not one of the 175 clerical positions at the disposal of the Republican Federal officials whose headquarters are in Indianapolis is filled by a colored man, the only members of the race employed in any capacity being some colored men who are engaged about the several public buildings in scrubbing floors, cleaning spittoons, and performing other like menial services, which white politicians do not hanker after. It further points out that no colored man has ever been nominated by the Republicans for a State office in Indiana, that there are no colored mayors, sheriffs, auditors, treasurers, city or county clerks, or judges in Indiana, and never have been any, although about half of the counties are Republican—many of them only through the colored vote; and that, although Mr. Harrison has appointed a host of Federal officials in Indiana, not even so much as one little fourth-class post-office has been given to a negro.

The hardest blow which the "Bill to Promote Mendicancy" has yet suffered was administered by the Georgia Legislature last week. Georgia has been one of the most backward of all the Southern States in the matter of public education, showing a large percentage of illiteracy when the last census was taken, and yet appropriating only money enough to keep her schools open three months a year. Consequently Georgia has all along been a chief reliance of Blair, Mayo, and the other Northern men who have been advocating Federal aid to education in the South. "Look at Georgia," they would say. "That great State appropriates only money enough to keep her schools open three months in the year. The schools ought to be open six months, but that would take twice as much money, and the people cannot stand any heavier taxes than they pay now. The Federal Government must come to the rescue, and send from Washington the rest of the money needed to provide an efficient school system." We showed long ago that it was not lack of ability, but only lack of disposition, which prevented Georgia from making adequate appropriations for schools, and that the chief element in fostering this difficulty was the agitation of the Blair bill, which held out the hope of getting the money from the Treasury vaults at Washington, instead of taking it from the pockets of Georgians. The Legislature now confesses the entire truth of this statement, and covers with confusion Blair, Mayo, and the other advocates of mendicancy. On Wednesday week the Senate, by an almost unanimous vote, passed a bill, which is certain to go with equal ease through the House, doubling the length of the school term and correspondingly increasing the appropriations for the support of schools.

One would think that, with all the Federal offices of the city in the hands of sympathetic Machine Republicans, the Boys would be able to wait patiently till their turns came around to get something, but this is not the case in the Sixth Assembly District. The Republican Association of that district has adopted the following sentiment: "Resolved, That we express through the press our *oposition* to Civil Service as it now exists, *oporating* to the *benifit* of the political *oponants* of the Republican party." The Boys were so hungry with long waiting that they had forgotten how to spell—a misfortune which is known to happen to the best of people in times of great nervous strain or physical weariness. Any one can see what a formal obstacle a civil-service examination would be to patriots seeking places who were liable to lapses of this kind There was great suffering among the Tammany Boys from a similar affliction when they began to enter the civil-service examinations for municipal places, but, if latest accounts are trustworthy, they are able to pass now with almost miraculous ease.

The singing of "a song of welcome" to Mr. Depew on the tug on his arrival is a new feature of these occasions. The name usually given to a song of praise sung in the presence of the object is a hymn, and this one might as well be called so outright. It will have to be called so before long. In a very few years such hymns would be numerous enough to form a "collection," and might be announced by number and verse on the tug, and even "deaconed out," as the New Englanders say, two lines at a time. Mr. Depew's sensations in listening to the song must have been peculiar, because it is such an experience as few men have. We should think that at certain stages in the proceeding, if he have the stomach of most sensible men, he must have felt tempted to clear the tug of his admirers with his trusty walking-stick.

Dr. Allan McLane Hamilton did a good piece of work on Thursday in getting one Mann, the publisher of *Town Topics*, indicted and committed to the Tombs in default of bail for criminal libel. The continued existence and apparent prosperity of this paper are one of the great disgraces of the city. It might have been suppressed long ago if there were among its victims even half-a-dozen with as much pluck as Dr. Hamilton. But the clubs and individuals who buy it and study its disgusting contents are even more to blame than the scamp who gets his living out of it. Hundreds of people pore over its scandalous trash who ought to be ashamed of knowing its name—all because it professes to give "society gossip."

The demand of the London dock laborers that the 1,000 "blacklegs," or "scabs," as our strikers call them, who have been employed during the strike by the dock companies shall be forthwith dismissed, is a quick reduction to absurdity of the misery argument so freely used against the dock companies. The "blacklegs" are clearly worse off than the strikers, or they would not have accepted the work and wages which the strikers refused. If, therefore, the dock companies are bound to keep a certain number of men out of destitution, and if destitution gives an unanswerable claim to employment at a certain rate of pay, the position of the "blacklegs" is vastly stronger than that of the strikers. If Cardinal Manning were consistent, he would now be urging the dock companies not to yield to the strikers, and to shelter the blacklegs. The trouble with the London public is, that the strike has taken them unawares, as the earlier car strikes took us here. They are still in that pristine stage of thought in which, when Labor "demands" something, everybody admits that Labor must be right, else why should he make "the demand"? They have yet to learn, as we have learned, that Labor, like everybody else, is sometimes wrong; that it does not follow that because Labor is apt to be poor the employer is sure to be rich; that, as a matter of fact, most employers are poor and struggling, and that the doctrine that anybody who once employs a man must keep him as long as he pleases to stay at wages fixed by himself, is a monstrous doctrine; that this monstrous doctrine does not become rational because asserted by a strike, and that the misery argument, if used in a strike of unskilled labor, must be fatal to the strikers, if there are, as there usually are, other men waiting to take their places.

The Italians have done a grand thing in erecting, on the spot where he was burnt alive by the Papal Inquisition in Rome, a statue to Giordano Bruno, one of the precursors of modern intellectual freedom, and one of the noblest products of the Italian soil, that fruitful mother of great men. He predicted in his last moments, after years of imprisonment, the rehabilitation of his memory through the triumph of his ideas, and his countrymen have only done one of their most solemn duties in making provision for the perpetual remembrance of his martyrdom. They are finding full justification, if they needed any, in the furious denunciations of them, first by the Pope and then by the Catholic bishops, who are pouring torrents of their peculiar ecclesiastical vituperation on the memory of the murdered philosopher—who was, according both to Cardinal Gibbons and his brother of Montreal, Archbishop Fabre, "an enemy of God and virtue, a man without doctrine or morals, whose revolting crimes brought him under the condemnation of ecclesiastical and civil laws." Yes, and if Archbishop Fabre and his kind had their way to-day, there is hardly a man eminent in science, or literature, or philosophy who would not be "an enemy of God and virtue, a man without doctrine or morals," ripe for their gibbet and their stake. But, thanks to the Brunos of the world, we have clipped their claws, and made their sentences all "sound and fury, signifying nothing."

THE SUBSIDIZED PRESS.

We hardly expected when President Harrison appointed fifteen of the leading Republican editors to lucrative offices, in defiance of all the best traditions of constitutional government, that the inconvenience—to use a mild word—of the performance would so soon be felt. But it has been made abundantly manifest in the Tanner affair. The great use, we will not say of an independent, but of a friendly press to an administration lies in the warnings it is able to give the official class of the state of public opinion on any particular point. This function of the press is doubly valuable in this country, owing to the remoteness of our political capital from the great centres of affairs, and the consequent state of isolation from the currents of popular thought and feeling in which the President and the members of the Cabinet live. To officials in this position the comments on their doings of friendly critics, such as even strong party papers might furnish, would be invaluable, especially in times of such perplexity and tribulation as Tanner has created. Not only would such comments serve as a guide in shaping a policy, but they would furnish immense help in getting out of a scrape by making it appear that in his mode of getting out of it the President was obeying the voice of his own party. The Tanner trouble has been brewing a good while, and Tanner himself was aggravating it every week by his foolish speeches. The friendly remonstrances of the leading Republican newspapers, offered two or three months ago, might therefore either have stopped Tanner in his folly, or shown the President the necessity of putting some check on him before things came to a crisis.

Such friendly criticism, however, the President could not get from papers whose editors held office under him. They were all afraid of saying something to offend him, or which would seem indelicate coming from salaried men to their employer. Such leading Republican newspapers as the New York *Tribune*, Indianapolis *Journal*, *Iowa State Register*, Utica *Herald*, Detroit *Tribune*, Burlington *Hawkeye* (Iowa), Burlington *Free Press* (Vt.), Kennebec *Journal*, and Buffalo *Commercial Advertiser* were therefore condemned to silence during the whole of Tanner's rise and progress. The President could not learn from them, whom he would trust and listen to, what an unfit appointment it was and what risk he ran in making it of creating serious embarrassment for himself. They knew all this, but they dared not make it known lest he should "bounce" them as he bounces Democrats and Mugwumps. They were therefore silent as the grave during the whole of the Tanner controversy, or at most uttered some faint words of apology for Tanner or some half-hearted abuse of his assailants. So the President and Tanner both went blindly on, in ignorance of what the country was thinking and saying about them, until the explosion came.

The effect on the press itself of bribing the press is seen now to be also deplorable. Most of those who read such newspapers as the above read no others. All they know of what the great world is thinking or saying they get from their favorite organ. When that organ said nothing about Tanner, or if it said anything said something pleasant, the readers, of course, concluded that Tanner was "doing splendidly," and that everybody was satisfied with him. Now, when he is suddenly removed for gross unfitness, they discover that the Mugwump and Democratic papers have been protesting against his appointment and denouncing his doings all along. They therefore, naturally enough, infer that it is the Mugwumps and Democrats who have turned him out, and that the President has succumbed to their dictation, although their organ has kept constantly telling them for the last year that the Mugwumps were all dead. If, on the other hand, they hear nothing of the Mugwump and Democratic assaults, Tanner's removal must seem to them sudden and even capricious, their own organs having in no way prepared them for it, and the President must suffer accordingly in their estimation; whereas, had the organs done their duty, they would see in the removal the natural and unavoidable and meritorious correction of a mistake. No wonder that good Republican organ the Wheeling *Intelligencer* warned the Administration before the removal was made, that "the fire of the Mugwump and Democratic press would not be a good reason for it"—that is, a reason which the Administration could afford to give. But how many Republicans there must be in the rural districts who are unable to see any other reason.

The truth is, that of the many extraordinary things that President Harrison has done, none was so extraordinary as his publicly taking the leading editors of his own party into his pay. Nothing quite like it has ever occurred since the newspaper press became a power in parliamentary countries. Usually the first step taken by a régime which means to be corrupt in its methods is to purchase the silence or applause of the principal editors for cash, but it is generally done secretly. The money is called "a reptile fund," and the transaction only leaks out on criminal trials or in long-subsequent biographical revelations. It must stand to the eternal discredit of the American press that so many of its leading conductors were ready to take their pay openly, and not even in a lump sum, but in monthly instalments.

"THE NATION'S DEBT TO THE SOLDIER."

The audacious attempt of the Grand Army Machine to seize control of the United States Government, so far as its operations affect the interests of those who served in the Union Army during the civil war, promises to do a good deal towards clearing the air and leading to sound conclusions. It was high time that people should think seriously about the fundamental principles involved in the pension question, and they are bound to think when they find an organization of a few hundred thousand voters insisting upon the right to govern eleven millions of voters. There has been a great deal of loose talk about "the nation's debt to the soldier," and the public has good-naturedly kept quiet while demagogues have encouraged the members of the Grand Army to go on increasing their demands, until at last they assert their right to supreme control over the Treasury of the Union. The Tanner incident will serve the good purpose of causing people to stop and examine into the nature of this so-called debt, the collection of which the alleged creditors are pressing with such impudence.

Lincoln's first call for volunteers appealed to patriots throughout the North, and for some time after the firing on Fort Sumter the Union armies were filled with volunteers whose motives were as unselfish as ever carried men into the field. But as year after year passed, while the discipline and effectiveness of the Union forces steadily rose, the standard of the soldiers as unselfish patriots steadily sank. The appeal to patriotism no longer, as at first, sufficed to fill the quotas of the various States. It became necessary to offer larger and larger premiums to secure men whom patriotism alone would not impel into the ranks. Finally, even bounties of hundreds of dollars apiece would no longer serve the purpose. Men could not be bought to serve as soldiers in sufficient numbers, and force had to be used in many parts of the North. Thus the unselfish volunteer of 1861 was succeeded by the man who "figured on the problem" of getting shot, and was ready to take his chances if he could get enough hundred dollars in cold cash, and he in turn by the man who could not be hired to turn soldier by any number of hundred dollars, but had to be made to serve by "the strong arm of the Government" through the draft.

Anybody who lived in a village of any Northern State during the civil war can recall personal cases which illustrate the steady lowering of the tone of those who went from it into the army as the years passed. Of course, there were exceptions—cases where men of the truest patriotism did not volunteer at first, because family duties seemed to demand their presence at home, and finally came to recognize the call of the country as superior; but these exceptions only prove the rule that the men who joined the army in 1863, 1864, and 1865 did not rank anywhere near so high in the scale of patriotism as those who enlisted in the first year or two of the struggle.

Truth requires the further statement that many of these later accessions to the Union Army were not merely lacking in patriotism, but that they were also worthless and often vicious characters. These were the men who formed the class of "bounty-jumpers," in their attempts to get more than one premium for their enlistment; who feigned illness and sought the hospital in times of danger; who could never be depended upon if they were forced into an engagement; who were ready to desert at the first opportunity. They were a source of constant anxiety to their commanders, and of constant disgust to their patriotic and courageous comrades. Unhap-

pily, the number of this class was not small, as any candid observer will testify. In an army where the enlistments rose into the millions, the soldiers who have no claim whatever to be called patriots must have been tens, and even hundreds, of thousands.

The politicians who cater to "the soldier vote" have always kept these ugly facts out of sight. They have flattered the vanity of the class by telling them that every soldier was a patriot to whom "the country owes a debt which it can never pay," and that they ought to demand whatever partial payments they would like. Too many newspapers have sustained this position of the stump-speakers. The result is, that the Grand Army Machine has come to demand whatever it wants. Major William Warner, who was its choice for Tanner's successor, and consequently was offered the place by the President, in a speech at the recent Milwaukee encampment declared for a pension to every man who served for any length of time in the army, and insisted that "these men"—the bounty-jumpers, the shirks, the cowards, the deserters, as well as the brave patriots—"have claims upon the State at least equal to that of the bondholders."

It was high time to call a halt in this mad rush of demagogism and rapacity. Happily, the Tanner incident promises to serve this purpose. Everything connected with the affair helps to bring out in strong relief the degradation of the soldier ideal by the Grand Army Machine, and the danger to the State from the growing power of this Machine. The very fact that such a worthless fellow as Tanner was the favorite of this Machine, and was forced by it upon the President for an office which he was notoriously incompetent to fill, was of itself enough to open people's eyes. The circumstances of his removal will arrest the attention of the nation. When it was reported that he was to be turned out, despatches of this sort began pouring in upon him from Grand Army men in various parts of the country:

"Eighty-two thousand Republican majority in Kansas demands your retention in office. Hold the fort, for we are coming! The loyal sentiment is with you."

"Don't surrender to the brigadiers; the G. A. R. is with you. You are doing right. Don't be bulldozed."

"Bully for you, Jim. You are doing exactly right, and if Harrison interferes with you, he'll hear from us."

"The survivors of the Union Army in this vicinity congratulate you upon your splendid administration of the Pension Office. We cannot believe that President Harrison will dispense with you. If he does, we will see him later."

"The G. A. R. boys here are with you to a man. You are the first enlisted man to be given a prominent office. We want you to hold it. Do not be intimidated by the shoulder-straps."

"We are with you. If the Administration does not sustain you fully, good-by Foraker."

"You are the pride and joy of the G. A. R. Don't surrender. Don't resign. Harrison dare not remove you."

"By the removal of Mr. Tanner," says Major Merrill, of Massachusetts, a former commander of the Grand Army, "the President has aroused the indignation of Grand Army men all over the country." So great is this indignation, and the consequent danger of the President who aroused it, that it is reported—and there is nothing incredible about the report—that it has been thought prudent to surround Gen. Harrison with detectives, to protect him from possible personal assaults at the hands of wrathful Grand Army men.

Such ugly facts as these will do a great deal more than any amount of argument to show how much humbug there has been in the talk about "the nation's debt to the soldier." The plain fact is, that there are a great many soldiers to whom the nation owes no gratitude at all. They became soldiers from greed or necessity, rather than from patriotism, and did their best to avoid all danger of getting hurt. If they were, nevertheless, wounded or disabled in service, they should be given pensions, because the Government contracted to give pensions in such cases; but that is all which should be done for them. To give every bummer or coward whose name appears on the army rolls $12 a month for the rest of his life, which is what a service pension means, would be the grossest of outrages against patriotism itself.

WHAT SHALL WE SAY TO THE SOUTH AMERICANS?

When one has invited twenty gentlemen to come to his house and discuss with him any topic any one of the invited may propose, it is not to be expected that when the gentlemen have assembled, the host will peremptorily exclude any topic. The United States, by a solemn piece of legislation, have invited delegates from South America, Central America, Hayti, and Santo Domingo, to join delegates from our North America (including Mexico), to convene in Washington for a conference over topics enumerated in the law, and also over any other topic any invited State may suggest. It has been recently put about from Washington that the State Department will endeavor to exclude political topics, and confine discussion and action to economic topics, such as increasing the markets for the products of each State. A "customs union" is one of the objects specified in the law. It is an object political as well as diplomatic. If Mexico or Central America (including the five States of Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador), or the Republic of Colombia, wish the Conference to discuss and act on the Monroe doctrine or the neutralization (in the interest of Europe) of a canal at Panama or at Nicaragua, who besides a majority of the States represented can say "Nay"? Assuming that the Monroe doctrine and canal neutralization are among the topics to be by the United States suppressed if presented in the Conference, there will remain a topic which is included in the objects for which the Conference has been convened, and in which some of the States invited are intensely interested. It is the impediment in the way of the coming of South American wools into our markets—an impediment interposed by the severe customs tax, averaging some 40 per cent. ad valorem, thereon levied at our ports.

One of the governments invited—and one is enough to illustrate what we say—is that of the Argentine Republic, with an area of one million and a half of square miles, a territory as large as all central and western Europe combined, and an increasing population, now not less than 3,000,000, and a chief city of over a fifth of a million. That population is largely of European birth. There are over 200,000 Europeans in one of the fourteen provinces. The republic has now more than 18,000,000 horned cattle, and not far from 140,000,000 sheep, of which last at least one-quarter are owned by Scotchmen and Irishmen. The quantity of wool, cereals, hides, and tallow which the Argentine Republic will, in the near future, have for sale to foreigners, cannot now be estimated by anybody, so vast is the promise of the country. There are experts who predict that the Argentine Republic can and will supply the world's demand for wool, and by that competition woollens and worsteds will, in the end, be cheaper relatively than cottons.

What will our delegates to this Conference be directed by our President Harrison to answer when, by the orders of the President of the Argentine Republic, his delegates address our delegates thus: "Your Government has invited the Argentine Republic here to say what it wishes done to increase the sale of Argentine products in the markets of the United States of North America. In response to your courteous invitation we say that we ask that your customs tax on wool be removed. If you say that, under the favored-nation clauses in your treaties, you cannot treat us better than you treat Australia and other wool-producers, then we ask that *all* imported wool be untaxed by your Congress"?

Although experts differ, there is a tendency of proof to show that there are only two really distinct varieties of sheep, the long-wooled and the short-wooled, from which come woollens and worsteds. Of both of these Prof. Archer gives thirty-two original varieties, four of which he apportions to Europe, fifteen to Asia, eleven to Africa, and only two to America, namely, the West Indian sheep found in Jamaica and the Brazilian sheep. The Spanish or merino type is by every one put first. Spain has fallen off as a wool-producing country, and because her merino type has been transplanted. It is due to George III. that this splendid breed came to England. The first English Merino Society was formed in 1811. Australia never had native sheep, but now she exports over 1,283,350 bales of wool. The British Kingdom, the Australian colonies, and the Cape have now 115,000,000 sheep and a clip of 600,000,000 pounds of wool. France had, in 1885, only 22,616,547 sheep. Spain has fewer than France. In all the dominions of Russia there were in 1882 only 51,689,088 sheep. Germany has 22,000,000, Austria nearly 4,000,000, Italy 8,596,108, Sweden and Denmark and Norway only 4,500,000. All Europe has only 171,866,965. The United States (ourselves) had in 1885 only 48,322,331. British North America has only about 3,000,000. So that, apart from Europe and Australia, the country most in prominence now in wool production is the

Argentine Republic and the region of the La Plata. Already the Argentine Republic is only the second government in supplying wools, the chief part of which are of the merino type. The Argentine fleece is rapidly increasing in weight, and improved methods are making it more cleanly. The La Plata Valley and the Argentine Republic have now quite three times as many sheep as we have. Of 58,000,000 sheep in 1883 in one province, Buenos Ayres had 32,000,000 belonging to Argentines, 18,000,000 to Irishmen and Scotchmen, and 8,000,000 to other nationalities. Formerly Argentine wool could not be used, excepting for common fabrics, but now it has a more clean and a firmer staple. There are many sanguine persons who believe that if the Argentine Republic can have an end of revolt and revolution, and if mechanical contrivances for cleaning the wools go on as recently, the future of wool-growing is hers, and she can supply the wool-consumption of the world, and, by greatly reduced prices, defy competition.

What she wishes of us a blind man can see. Will President Harrison, Secretary Blaine, and a Republican Congress give to her free trade with us in wool, if she will give to us free trade in all the things we can make or produce? If not, why did we invite her to our Congress of the three Americas?

SPANISH-AMERICAN NATIONALITY.

An element of great importance in the question of our commercial relations with South America is the intense and growing spirit of nationality cherished by the rulers and the people of the leading Powers of Spanish America, and their unbounded hopes of future development. This element has been too much neglected by our press, and, it is to be feared, by the promoters of the coming Conference at Washington. Indeed, our common manner of speech in reference to South American trade runs against this rising sense of nationality with peculiar offensiveness. We speak about our purpose to "capture" a large part of that trade. Our Congressmen give notice that we are going to "seize" upon some of the profits which European exporters to the lands south of us are now enjoying. Nothing could be more fatuous. Let any one read the official literature of the principal countries of South America, and he will everywhere meet with the language of a strenuous national pride—a language that finds its best parallel in the bumptiousness and touchiness of our own public documents of about 1840.

Take the following, translated from the message of President Celman to the Argentine Congress, May, 1887:

> "With our spirits calmed after the agitation caused by the last electoral contest, we may pause a moment to trace the road hitherto traversed by the republic, and to examine with serenity her present situation, in order that we may pursue with renewed zeal that path of labor which is the law of every life, and that we may do it under the stimulus of the progress already achieved and of the magnificent destiny to which the future calls us. If we glance over the vast extent of our territory, we shall discover on every hand a people unmistakably devoted to labor, to the supremacy of peace, and to the sovereignty of the law—a people growing rich at a rapid rate, while giving great attention to education and making advance in the truest prosperity, strong in the consciousness of their sovereign rights and accustomed to exercise them peacefully, a people in whom the national sentiment is daily strengthening."

Even Venezuela has enough of the same spirit to inspire her Secretary of State to speak of his country as determined to defend her rights to "that section of South America which is clearly reserved, as by a providential dispensation, to be the emporium of that America to which the Spanish discoverers applied the name of El Dorado, in view of its natural greatness and inexhaustible resources."

Nor is this all froth—at least not in the cases of Chili, Brazil, and the Argentine Republic, the three friendly competitors for the supremacy of South America. The immense quickening of their trade and development of their natural resources and extension of their systems of internal improvement rival in rapidity and proportions anything our own country has ever known. They feel that the future is theirs, and that it is secure. The streams of European emigration are now turning their way. European capital is poured freely into their hands. Their unoccupied lands are being rapidly taken up. Marauding Indian tribes are being driven beyond their frontiers. Political affairs are settling down into stability. National credit is better than ever before. If their social life is yet crude and their public education deficient, that is a help rather than a hindrance to a swollen feeling of national pride based upon material wealth.

There can be no doubt that they have this pride in a high degree; and we have only to reflect how we should have regarded talk of the patronizing kind we indulge in towards them, if it had been addressed to us in 1840, to understand the mingled rage and resentment with which they read the indiscreet utterances of some of our public men. For our history and our institutions they have the greatest regard; our inventive and manufacturing skill they are eager to utilize and imitate; our trade they would welcome on fair terms. But they are bound to maintain their national dignity. They will be neither hoodwinked nor coerced, and many things make them think we should like to both hoodwink and coerce them. Certainly they are in a position to declare their commercial independence so far as we are concerned. And it cannot be too strongly impressed upon our diplomatists and business men that any measures proposed to enlarge our South American trade which are not conceived in a spirit of the truest deference to the feeling of nationality which is as near the hearts of South Americans as our own, are foredoomed to failure.

COLLEGES WITHOUT TEMPTATION.

We have received an inquiry from an anxious mother, on her own behalf and that of others similarly situated, whether we can recommend a college "where the professors make a persistent, united effort to save the students from the temptation to drink," and whether we know of any college "which has any sufficient safeguards against this temptation." We have no difficulty in saying frankly that we do not. We know of no college where the professors "make a persistent and united effort" to save a young man from any temptation, except by setting him a good example. We are not quite sure that we know what our correspondent means by "a persistent and united effort." There are only two things that it can mean: one is preaching temperance to the young man, and the other is watching him so that he can get nothing intoxicating to drink, or can only get it with great difficulty. We all know by experience that preaching temperance to young men is not a very effective preventive, and yet this is all that professors can reasonably be expected to do. They cannot watch young men night and day to see that they get hold of no liquors. They could not do so at all unless they had the students under military discipline and restraint, as at West Point. As matters stand, the teaching work of professors takes all their time, and all their time is not enough. If they had to add police work to their professional work, life would be intolerable to them, and neither work would be well done. We may also add that they are very inadequately paid for what they do now.

We will now go a little further, and say that in our opinion parents who expect to devolve on other people the task of keeping their sons out of temptation after they reach the collegiate age, would do well to keep them at home. Keeping young men of the collegiate age out of temptation is essentially parents' work. It cannot be delegated or imposed on anybody else, except, as we have said, by putting the youth in barracks under military discipline. No civil college in this country is properly organized for any such duty. The professor is a teacher, but not a guardian in the proper sense of that term. His business is to teach young men who want to learn, and get rid of them if they will not learn. It is not his business to keep them out of harm's way by any extraordinary precautions. If parents think their son is unequal to the temptations to which the inevitable freedom of college life exposes him, the proper remedy is not to commit his morals to the care of a poor, hard-worked professor, who is already staggering under the weight of his didactic load, but to keep the youth at home. A youth who needs watching, who cannot be trusted to walk the streets alone, is best and most effectively watched by his father and mother. Their espionage is the only espionage which will not demoralize him, and their remonstrances on his manners and excesses are the remonstrances most likely to prove effectual. No professor can play the detective very long without serious injury to his influence as a teacher, and without developing a certain pride on the part of the students in getting the better of him.

Expectations such as our correspondent entertains about college discipline are, in our mind, based on a wholly mistaken view of the function of colleges, and one to which the colleges themselves have given too much

countenance. Parents who have never attempted to maintain any discipline in their own households, and who bring up their boys without reverence, without refinement, and without self-restraint, expect to get rid of the responsibility for their morals, when the age of puberty comes, by packing them off to college, and charging the professors with the duty of seeing not only that they are diligent in their studies, but also virtuous in their lives. There is no college in the country fit for any such task. It is an abuse of collegiate funds and discipline to undertake it, and we, for our part, hope to see the day when no college will pretend, as some of them do now, to undertake it. The next great step in advance in collegiate education in this country will, we believe, be the resolute shutting of the doors on all boys who are not eager to learn, and who are not willing, while at college, to lead scholastic lives. The waste of endowments and of professors and libraries and laboratories in this country on drones and dunces and idlers is now enormous. Every college has a large proportion of young men who go there either to amuse themselves or to secure the social *cachet* of a degree, and to whom neither punishments nor remonstrances can give a serious turn. Employing professors to lecture to them and mark them and scold them, is a terrible waste of time, labor, and money. They ought to be got rid of very promptly. Colleges should be reserved for studious men about whom their mothers and fathers are not anxious, and to whom the opportunities which college life gives are a precious boon, and who in college contract or confirm habits of industry. It is hardly an exaggeration to say that one-third of the young men who go to college now lose the habits of industry they have acquired at school, and come out into the world, with their degree, less fitted for continuous labor than when they went in.

Of course it is in most cases difficult to say how college life will affect any particular youth until he has tried it. Many a man goes into college studious, and soon becomes idle; many another goes in lazy, and becomes studious and industrious. The experiment has often to be made before any final decision can be reached. But fathers and mothers ought to make up their minds once for all that the college is the world; that when a boy goes to college, he starts in life just as when he goes into business. If they think he cannot safely as yet be exposed to the ordinary temptations of life, the parental roof is the best place for him. If he will not keep out of the dramshop for his mother's or father's sake, he will not do it for the sake of the president or professors.

Anxious parents who are looking for colleges without temptation, might readily get a great deal of comfort by studying French experience in this matter. In France the watching system to the fullest extent exists. Every dormitory has "a judas" in the door through which "the rector" can peep at the young hopefuls at all hours. The students are never out of sight of the authorities, and their morals are looked after with as much care as the fondest mother could desire. The failure of this system on the moral side is acknowledged on all hands, and in fact it seems to be kept up rather for the sake of the masters and parents than for that of the youths. It is held to be the duty of elders to watch the young, and they do it for the good of their own souls, no matter what the effect on the young may be. If parents would use more discretion in deciding whether their boys are fit for college on the moral side, we should hear fewer denunciations of professors for letting them go astray. This is essentially the parent's duty. And it is also his duty to take the boy away from college promptly as soon as he discovers the youth does not care for it, or likes it simply for the good-fellowship and the games.

WASHINGTON AS AN EMPLOYER OF LABOR.

WASHINGTON, August 9, 1889.

THE study of the economy of a Virginian plantation in colonial days has been thus far of a very superficial character, and is generally summed up by the assertion that the extravagance of the planter ran him in debt to the factor, and in the end compelled him to sacrifice his estates. This is true of many examples that could be cited, but it is not true of the really well-conducted plantation; and the examination of some early plantation records and accounts of Washington may prove of advantage in showing that executive talent was all that was required to bring the planter to opulence. It will be impossible to treat in one article all the interesting points raised by these ledgers, as carefully and neatly kept as if he were a bookkeeper in a banking-house, whose position depended upon his accuracy and clear penmanship. One subject may be presented—the labor employed on a plantation.

Washington, it should be remembered, at first occupied Mount Vernon as a tenant, for Lawrence Washington had left the estate to his widow during her lifetime. From 1755 to 1761 he paid a rent to Mrs. George Lee (the widow having again married) for the Mount Vernon tract and slaves upon it, a rent that averaged about £87 a year. What the exact size of the estate was at Lawrence's death I have not been able to determine; but in 1760 Washington paid quit-rents on 1,250 acres in King George County; on 2,626 acres in Fairfax County, all of which were included in the Mount Vernon estate; on 2,315 acres in Frederick, and 240 acres in Hampshire. So that at the time of making his return (May, 1760), he was in the possession or use of 6,431, situated in four counties—certainly a goodly property for one under twenty-nine years of age.

The care of such an estate required much labor, and it is certain that the young owner used every acre of land to the best advantage. Personal supervision of so widely scattered holdings was out of the question, and to overseers was intrusted the management of the outlying properties, but they were subject to Washington's orders in all things. This division of management became more necessary as the estates were enlarged; and as Washington was an eager though shrewd buyer of land, large additions were made each year. So that we find in 1769 that he held in the northern neck alone (including the counties of Fairfax, Frederick [afterwards Berkeley], King George, Hampshire, Loudoun, and Fauquier) upwards of 12,260 acres—a possession nearly double what was noted ten years before. This takes no account of his active speculation in lands on the Ohio, where, in his own right and by purchase, he held claims to many thousands of as yet unlocated lands, or to his thousands in the Dismal Swamp. The cultivation of even a part of this estate required much care, attention, and labor, and the number of help in one form or another was not inconsiderable. The returns to the tax and levy collectors give some clue to the number, as the slave paid the same tax as the white freeman. In 1760, forty-nine taxables were returned from all the holdings; in 1770, the taxables on the Fairfax County estates alone amounted to 135.

This labor was of three kinds: the slave, the indentured servant, and the hired laborer. The slave was, of course, purchased generally in open market, or from some recently arrived "Guinea" ship, whose owners were probably New England merchants who participated in that circle of commercial profit—horses and cows to the West Indies, sugar from the West Indies to New England, rum from New England to the coast of Africa, blacks from Africa to the Southern Colonies and West Indies. A "likely" slave was worth in Virginia in 1754-60 about £50. In 1756 Washington bought of the Governor a negro woman and slave for £60, and two years before a negro woman, Clio, for £50. The possession, then, of forty blacks represented in itself quite a fortune for those days. But it was also the custom to "hire" slaves, especially skilled slaves who had been taught some "art or mystery" which made them very acceptable on a plantation, where all the everyday wants had to be supplied in some way from within, as importation required all of six months, and an uncertain satisfaction at that. Ten pounds a year, payable in Virginia currency, or in tobacco—that better medium of exchange, because exportable—were a fair wage for such a slave. In one instance I find that Washington obtained the use of three—two men and a woman—for £20, or 2,800 pounds of tobacco a year; but the labor must have been of a very ordinary kind to come so cheap.

For ordinary field-work, slave labor was suitable; for other tasks a better and more intelligent quality was needed, and this was supplied by indentured or "covenant" servants, and by hired whites. The covenant servant agreed to serve a captain or "his assigns" for a certain number of years (generally five), on condition of being taken to America. This arrangement was thus a composition for the passage, and, on arrival in one of the colonies, the servant was sold for the time covenanted to the highest bidder. For that time he became a possession of his buyer, and, as the prices for servants were not extravagant, and they were usually of an intelligent description, they readily found a market for their talents. It is said that Washington himself received his early training at the hands of an indentured servant, and that Archibald Alexander, whose descendants have maintained the reputation he acquired, was taught the rudiments of Latin by such an one. In Maryland, just before the defeat of Braddock, when the British recruiting officers did not hesitate to take indentured servants for the ranks, Gov. Sharpe, in his protest, asserted that "the planters' fortunes here consist in the number of their servants (who are purchased at high rates), much as the estates of an English farmer do in the multitude of cattle." In the previous war, indentured servants had been impressed in the New England colonies to garrison the frontier posts; and such was the demand for this quality of labor that England contracted for the transportation of her felons and convicts to the colonies, to be sold for a

term of years as servants. When the Revolution put a stop to that vent for this questionable merchandise, galleys were constructed on the Thames, and to them were the malefactors consigned, unless, as it was stated, they were sent to the ranks to fight against the colonists. The indentured servant has not received the attention from economists that he deserves, being between the slave and the hired freeman, and an important factor in a slave-holding community. I shall return to him in a later article.

The hired freeman may have been some indentured servant whose period of servitude had expired, and who preferred to continue at his trade in preference to taking up land in the back country and starting out for himself. He was hired by the year, at wages depending upon his skill, but ranging from £20 to £40 a year. A house servant received less in money. John Alton and Thomas Bishop, body servants of Washington, received £10 and £13 a year respectively, and, of course, all the necessaries of life, save clothing. In 1756, Bishop's wages were given at £6 and clothing, certainly not exorbitant pay, as gauged by modern rates. A joiner engaged to work on the estate for one year—"that is to say, he shall work duly from sunrise to sunset allowing proper times only for eating, and if he shall lose any time at his said work either by negligence, sickness, or private business of his own, the days and hours so lost are to be made up at the year's end." For that he was to receive £25, a house, and "good and wholesome provisions." That was a contract made in 1759. In 1770 a blacksmith received £32, a house, and provisions. In 1771 a carpenter was hired for ten months for £25, a house, 300 pounds of pork, and three barrels of corn. A gardener received £25, "washing, lodging, and diet," for he was to be on the home plantation. The highest wages noted are those of a miller—£80 a year and some plantation produce. In harvest time whites were hired for 5 shillings a day, and a bonus of $3 for coming, as many of them were hired from distant places.

The pay and duties of an overseer were of a more complex nature. Edward Violett, planter, was placed over the Bullskin Plantation in Frederick County as overseer. He was enjoined to "use his utmost endeavors to make a large and good crop of tobacco, corn, and what else may be required"; to take all necessary and proper care of the negroes on the place, using them with humanity and discretion; to take "all imaginable care of the stock," and exert his utmost skill and industry to raise of each sort as many as he can; he was to make as much butter as possible from the milk of the cows, to prepare the tobacco for the market so "that it may appear at inspection as clean and as neat as tobacco well can"; the corn was to be measured out "with the greatest fugality" as needed; he was to furnish a bed, and keep no horse. For this he was to receive two clear shares of the tobacco and grain, some pork and a young steer, and four shoats; and his wife, one-fourth of the butter made. The value of these allowances ranged from £27 to £34 a year, so that, with all his increased responsibilities, the wages of the overseer was nearly what a carpenter or gardener received. These are merely the general outlines of the contracts, many details being omitted.

Was this system of labor profitable? In the case of one occupation I find unusually detailed statements that are interesting. All weaving was done on the estate by Thomas Davies, and an account was minutely kept of the day on which the thread was delivered, the weight of the thread, the time occupied in weaving; the length, breadth, weight, and number of hundreds in the width; the price per yard and the "shute" or filling required. This item of weaving was by no means a small one in the estate's accounts. In 1768 Washington had made on his own account 815¾ yards of linen cloth, 365¼ yards of woollen, 144½ yards of linsey, and 40 yards of cotton, making a total of 1,365½ yards, the cost of spinning and weaving of which was £30 15s. 10d., no account being taken of the cost of the materials used. But attached to this statement occurs one of those memoranda which go far to show the particular bent of Washington's mind. He enters into an estimate of the comparative cost of manufacturing and importing these 1,365½ yards, and its results do not show much of a balance in favor of the home industry. For he could have imported them for £105.7.3, and the cost of making on the plantation was £76.7.4, leaving a balance of £28.19.11, which he notes "is all that is to defray the expence of spinning, hire of one white woman and 5 negroe girls, cloathing, victualling, wheels, etc." The product of the home loom must also have been of an inferior quality, yet one cannot but be surprised at the kinds of fabrics made; for in this statement I find mentioned striped woollen, woollen plaided, cotton striped, linen, wool-birdseye, cotton filled with wool, linsey, M.'s & O.'s, cotton-India dimity, cotton jump stripe, linen filled with tow, cotton striped with silk, Roman M., Janes twilled, huccabac, broadcloth, counterpain, birdseye diaper, Kirsey wool, barragon, fustian, bed-ticking, herring-box and shalloon (I give his spelling in each case). That is the only estimate that can now be cited.

Not the least interesting part of these contracts is the care which Washington displayed in obtaining help of good character. The men are expressly enjoined to "behave themselves soberly and diligently, in all respects endeavoring by a prudent and commendable conduct to gain the good esteem and liking of their employer." One man was received into service without a proper recommendation; Washington stipulated that it may and shall be lawful "if he should hear anything disadvantageous of the man's character, or find him in any respect dishonest or unfaithful, or if upon tryal he should prove idle and negligent, either in his own work or in looking after those who may be put under his charge," to turn him off at any time. The overseers were ordered to prevent the negroes from running about or visiting without his consent, and also to forbid strange negroes frequenting their quarters without lawful excuses for so doing. One overseer is informed that "there are a number of whiskey stills very contiguous to the plantation, and many idle, drunken, and dissolute people continually resorting the same, priding themselves in debauching sober and well-inclined persons," and is laid under a promise to "avoid them as he ought."

In spite of his care, however, he sometimes got hold of some hard characters. In one case where an overseer worked two horses so as to be unfit for plantation purposes, he became "my rascally overseer." John Beard, a wagoner, "after driving my waggon about 4 months at the rate of £17.10 per annum, behaved so remarkably ill as to oblige me to turn him off, not before I had first sustained some loss by his running me in debt in many places of the road he used to travel." John Winter, a painter, "before he had near finished painting my house, stole a good deal of my paint and oyl, and apprehensive of justice ran off." In 1774 he advertised two runaway servants, one a joiner and the other a brickmaker, offering a reward of forty dollars for their return. Careful manager as he was, the indolence and shiftless behavior of his help were a severe trial to him, and his journals give evidence of occasional outbursts of indignation. At the same time there are more frequent records of his kindness to his servants, of his care for them when sick, and of his thoughts for their comfort and welfare.

WORTHINGTON C. FORD.

THE FINE ARTS AT THE PARIS EXPOSITION.

VI.—THE RETROSPECTIVE EXHIBITION OF FRENCH ART.

PARIS, August 14, 1889.

FOR two men at least, the Retrospective Exhibition is a veritable triumph—Millet and Corot. Especially interesting just at this time, when the fame of "The Angelus" has been spread abroad—and it has been proclaimed far and near as *the* masterpiece of Millet—is the collection of thirteen of his pictures brought together at this exhibition. The most important of the works of his earlier period, "The Finding of Œdipus" ("Œdipe détaché de l'arbre," Salon of 1847), is here, together with a smaller picture of the same epoch, "Nymph and Satyr"; and the series is closed with "Peasants Bringing in a Calf Born in the Fields" (Salon of 1864), and "Sheepfold—Moonlight" (Universal Exposition of 1867). It includes "The Sheepshearer" (Salon of 1853), "The Hog-Killing," "The Gleaners" (Salon of 1857), and the "Peasant Leaning on his Hoe" (Salon of 1863). These celebrated pictures, together with five others of less importance, form such an exhibition of Millet's work as has not been seen since the one made after his death in 1875. Whether we consider him as the subtle colorist, the painter of luminous flesh, the master of glowing light, and of clear transparent shadow, in the semi-classical work of the earlier period, or as the poet-painter of peasants' toil, investing his subjects with the true sentiment of the fields, and interpreting with sympathetic feeling and virile brush the ever-changing beauty, the lovely harmonies of nature in earth and air, in the later one, when his glorious talent reached its full development, we are overpowered by the greatness of the man, and lost in admiration of such consummate art. "The Sheepshearer," a young peasant woman with a pair of shears in her hand, clipping the wool from a sheep stretched out on a table before her, is one of the first works painted by Millet in his second period. It is an important work, though more ordinary in color than later pictures, resembling in its scheme of reds and blues "La Fileuse," a celebrated picture owned in America. "The Hog-Killing" and "Bringing Home the Calf" are chiefly remarkable for puissant color, the first being of the half-dozen most noted of his works. "The Sheepfold," with its wonderful effect of light from the rising moon, is a piece of painting that is simply marvellous in its way, and, with "The Haystacks," "Cousin Village," and "Sheep Pens," shows very well Millet's successful treatment of landscape.

It is useless to attempt to describe the varying charm of each of these works. These simple indications of their subjects and treatment, and their dates, will suffice to give the reader who is familiar with some of Millet's work an idea of the completeness with which he is represented here. I must say something more than this about the "Peasant Leaning on his Hoe," a picture widely known by reproductions in etching and photography, that curiously

naïve composition, with the figure in the middle of the squarish canvas, and the head coming nearly to the top of it; awkward it seems at first. But the peasant is not a shapely figure; he is uncouth and heavy-looking, and, with his hands laid one on the other on the handle of the hoe, and his head raised from his bent figure, he is the type of a hard-worked, drudging tiller of the soil. That we should be impressed by the severity of his toil, not pityingly (for the man is strong and horny-handed) but understandingly, taking in, like him, something of the feeling of his plodding labor and the smell of the earth and the fresh air in the wide open fields, is what Millet strove for; and is it not expressed and does it not reach us when we look at this bare-headed man, in his coarse clothes, with his heavy sabots sinking in the soft earth, alone in the broad plain, with only the birds for companions? And how admirably the picture is painted! The color is sober and deep—no positive tints, no contrasts, but a full harmony of quiet brown and gray; a sobriety that is almost sadness.

But even with such pictures as this we have not seen Millet in all his greatness. There is a picture here to which "The Sower" and "The Angelus" must give way—a picture that gathers all that is best and greatest of his qualities, one of those works of a great artist that leaves nothing unsaid that he has said in his other works, and yet says more. If one of Millet's pictures is to be marked as his masterpiece, it can only be "The Gleaners." There is a wheat-field and three women bending to gather the stray stalks of grain that the reapers have missed; there is a flat stretch of stubble, and in the distance long rows of shocks and laborers at work; there is some red and blue, I think, in the women's dresses, and there is hazy sunshine and a dull blue sky. Across the fields where the peasants are at work there are some white notes—the women's caps, probably. This is what you see when you look at the picture. There are people at work in the fields, and the figures of the three women in the foreground impress you as you see them bent over, two leaning low with their fingers grasping the stalks that lie on the stubble, one less bent and holding her thin bunch in her hands. Then you feel the hazy sunshine, and you hear the far-off hum of the other workers. When you awaken, if you are a painter yourself, you go up to the canvas to see how it is done, and you come away not very much the wiser. Still, you will have noticed that the technique is simple, that it is not painted to show the way it is painted, that it is unobtrusive in handling in every part of the canvas, and that in color the picture inclines to blonde tints. You will observe that the distance is enveloped in air, and that the skyline at the dusty horizon is almost lost, and you will perceive that in some sort of a magic way the painter has placed everything in the most perfect harmony of line, value, and color. Further than that you will discover but little, and to describe the picture you cannot do much more than to say that you have noticed these things. You can only wonder at the marvellous art. Millet certainly never painted another such picture, and nobody else has painted a better one. It is the greatest picture in the Exhibition, and one of the great works of art of the world.

We are accustomed to seeing Corots in New York. There are some in every collection that comes under the hammer of the auctioneer; every club exhibition has three or four; every dealer in town can show you an assortment. But, as we well know, no small number of them are not Corots at all, but imitations; many of them, though authentic, are insufficient sketches and studies. Here at the Retrospective Exhibition are no less than forty-three —forty-three real Corots. It is not possible in the limits of this letter even to name them all; suffice it to say that it is the most complete and comprehensive collection of his works, beginning with a large study of a wood interior, carefully painted in his earliest manner (the canvas is dated 1830), and including landscapes and some figure pieces painted at different periods of his career down to his latest works in the seventies. Here is a delightful "View of La Rochelle" (Salon of 1852), a perfect piece of painting of white walls and quays in the soft sunshine, with the water of the harbor in tender pale grays, and the sky with white clouds and a patch of airy blue. Here are three beautiful landscapes side by side: "The Lake—Italy," "Evening," and "Dance of the Nymphs"—delicious pictures, as charming as they are truthful and full of light and air. Here are the familiar motives from Ville d'Avray, as "The Pond" and "The Punt"; and here is another sort of motive in the "Forest of Fontainebleau," treated with the same regard for truthfulness and the same feeling for the character of the scene and the same tenderness in expression. But even leaving aside all these, and others almost as fine as they are, there is enough in three pictures placed together on one of the walls to place Corot at the head of landscape painters. In the middle hangs a canvas rather over the usual size of most of Corot's pictures, about five feet in length and nearly as high. It is called "Biblis," and has for its subject an open space in the wood, a little valley with grassy slopes and a tiny stream running through it in the foreground. Under the trees at the left is indicated a little figure of Biblis, the nymph who was changed into a spring, which explains the title of the picture. The effect is that of early evening, a little after sunset. Here, again, as with the Millet, description completely fails. There are the most wonderful atmosphere, the most beautiful color harmonies, the most unobtrusive painting—one of the most enchanting landscapes ever seen. Indeed, it is doubtful if any painter ever produced one as beautiful. It is the most beautiful Corot I have ever seen, and I cannot think of any other picture to equal it. Claude seems empty and vapid, Poussin stiff and theatrical, and Corot's great contemporaries, Daubigny, Rousseau, and Diaz, seem earthy and human, in comparison with this divinity in landscape painting. Its two companions, hung on either side, "The Charette" and "Crossing the Ford," though they are noble works of Corot's best period and in themselves beautiful pictures, the one of morning, the other of quiet afternoon light, lose value by the proximity of this wonderful work of the master.

After Millet and Corot in the famous group of painters who were their contemporaries, Troyon is the next most important figure at the Retrospective Exhibition. There is no one work by him here that can be called his best, though there is one remarkably fine one, a grand landscape with cattle, "The Valley of La Touque"; a smaller picture, identical in composition with the celebrated "Morning" in the Louvre; a fine farm landscape with cows at milking time, "Pasture in Normandy"; and another of a shady road at morning, with a peasant girl riding behind a flock of sheep, "Going to Market." There are also four of those splendid studies of cattle, like "A White Cow in the Field," that Troyon has painted so well with his solid, virile *facture* and his strong, forceful color. Rousseau is not seen at his best, though there are sixteen pictures by him, but none of them are extraordinary, and not a few are in the labored, painstaking manner that characterizes his early work. Diaz is not so largely represented, but there is at least one superior work, "The Storm," a plain under a sky with black rain-clouds and light breaking through on the middle distance; and two excellent though less important works, "Morning in the Forest of Fontainebleau" and "Sunset."

The Daubigny exhibition is fairly representative, comprising ten pictures, one of which, "Sluice in the Valley of Optevoz" (Salon of 1885), has long been known as one of the best of his works. It formerly hung in the Luxembourg Gallery, but was transferred a few years ago to the Museum of Rouen, whence it has been brought here. It is a good example of the work of a great landscape painter who is surpassed by no other in his fidelity to nature, and whose frank, simple methods and unaffected style appeal eloquently to lovers of the beautiful and the true. Of the other pictures at least three, "Solitude," "The Banks of the Eure," and one that is designated simply "Landscape," are of the first rank, and there is a "marine" that is interesting because of the rarity of such motives with Daubigny. Jules Dupré is best seen in a large picture, of great dignity of composition and of admirable unity, called "View Near Limousin," and in a magnificent "Sunset," deep and sombre in general tone, with golden light on the clouds at the horizon. Another handsome work is the "Environs of Southampton," painted so long ago as 1835. But Jules Dupré, though still alive, belongs to a generation that passed away fifteen years ago.

Before speaking of Courbet and the realistic impressionist movement instituted by him, it seems proper to return to Delacroix and to his contemporary Decamps, in order to trace the origin of the painters we have classed as "Orientalists." Though Henri Regnault by no means confined his choice of subjects to the East, much of his most brilliant painting is inspired by it, and some of the finest of his color compositions are founded on Oriental themes. A number of them were exhibited at the Universal Exposition of 1878, but he is represented here by but one picture, and that one is not of the class I refer to. The portrait of Juan Prim, however, is considered Regnault's masterpiece, and if it does not represent all sides of his extraordinary talent, it is by itself sufficient to mark him as one of the commanding figures of the art of the century. It is so well known —this portrait of the Spanish General on his magnificent black stallion, with the cheering ranks of soldiers passing in the background—that it need not be described here. Its value as a work of art has long since been determined, and it has been brought here from the Louvre, where it holds an honored place. Fromentin may be studied in six excellent works, the most important of which is the "Fantasia," mounted Arabs wheeling over the plain and discharging their guns from the backs of their plunging steeds; a picture that shows at his best a painter who, if he does not belong in the highest rank, is always distinguished from the crowd by his charming color schemes and a certain scholarly elegance of technique. Guillaumet, most truthful of painters, and who yields to none in artistic sincerity, is represented by four pictures with subjects drawn from Arab life in Algeria.

It was at the Salon of 1851 that Courbet first exhibited "The Stonebreakers," and, so to speak, gave the signal for a battle with existing traditions that has engrossed the attention

of the art world ever since. This famous picture occupies one of the places of honor in the gallery which runs around the central court in the Palais des Beaux-Arts; and in the inside rooms are grouped twelve of his other principal works, including the "Doe Run Down in the Snow" ("Biche forcée sur la neige," Salon of 1867), "The Woman with the Parrot" (Salon of 1866), and "The Awakening." The last two, studies of the nude figure, evoked as much discussion as the "Stonebreakers," caused, of course, by the same hardy, direct processes in painting from nature without choosing, but taking things as they come, and centring the interest in the picture on what Courbet considered of the first and only importance—the effect of light and air. Any possible beauties that might come from arrangement are disregarded; there is no effort to make, by the research of color harmonies, what we term a "handsome" canvas, nor to subdue some things in the picture in order to give greater force to others that may be considered of more importance. It is exactly what Manet has done in a somewhat different way, and with less success, taking his work as a whole. Monet has done the same thing in landscape, adding a scientific color interpretation of nature of his own, and Bastien-Lepage seems to have taken what is best of all, and fully realized the intentions of Courbet, while investing his work with a feeling for subtle beauty that escaped the others. Meanwhile yet another man, scarcely known at all, I think, in America, Fantin-Latour, in a quiet, reflective manner, painted portraits and a few figure subjects, embodying much that is best in Courbet and much that proceeds from his own soberly artistic nature. He was, like Courbet, inspired primarily by the great Romanticists, Delacroix and Géricault. Here, too, should be mentioned Raffaëlli, a painter whose resemblance to Courbet in methods is marked, but whose achievements so far have not been such as to entitle him to more than a moderate rank, and who in some of his works lays himself open to the charge of intentional eccentricity. His best quality is his success in the rendition of character, to attain which every other consideration is sacrificed. Associated with this general movement also is Besnard, who attempts the difficult task of painting "impressions" of light and air without permitting himself to neglect the more delicate gradations of color and the subtlest accents of form; and as landscape painters we should include Boudin and Pissaro.

The exhibition of Courbet's works has received a valuable addition in the past week in the "La Remise des Chevreuils," purchased by the Government at the Secrétan sale and destined for the Louvre. It is the most satisfactory work of them all, and shows, much better than the "Stonebreakers" (which, after all, may be most justly rated as a tentative work), the painter's great talent as a realist. Nothing could be more frankly and hardily painted than this nook in the deep woods, with the deer nibbling at the foliage, or reposing, half-hidden by the ferns, on the banks of the shallow brook that bubbles among the rocks. It is strikingly like nature, and a *tour de force* in technique. Manet, whose works in the exhibition number fourteen, appears decidedly less complete, and, if we except the very able handling in "Le Bon Bock" (Salon of 1873)—which recalls Franz Hals in its simple, direct modelling—and a certain depth of color and dignity of style that is not found in most of his painting, in the "Dead Toreador"—he remains the distinctly impressionistic painter we are already familiar with in New York. In "Le Bon Bock," indeed, which may, all things considered, be called his best work, he realized his aims and produced a picture that is eminently complete.

There are but three pictures here by Claude Monet, all of them small and all good. It is not possible to judge him from these, however, for his painting covers a wide range, of which these three canvases are no more than fractional notes. There is an exhibition of about 150 of his works at the Petit Gallery in the Rue de Sèze, and it is necessary to go there to arrive at an intelligent understanding of his value. It may be said of what is shown in the Champ de Mars that it is landscape painting of great excellence, which differs widely in intention from the work of most of his contemporaries. It is essentially impressionistic, and is surprisingly real in the rendering of the effect of light. It does not go far enough to be complete, and it is not likely that it ever will, for Monet is now an old man. His influence is already apparent in some quarters, and it is as an important factor in the transition state through which landscape painting, or that part of it which is worth serious consideration, is now passing in France, that his work really demands our notice. Whatever comes out of it will have been strongly influenced by Monet and by Cazin.

WILLIAM A. COFFIN.

ITALIAN MUSEUMS AND MONASTERIES.

ROME, August 5, 1889.

IT is only a few months since an entirely new museum, not yet thrown open to the public, has been established in Rome, the "Museo Falisco," installed outside the Porta del Popolo, in some of the capacious halls of that most picturesque and fairy-like of Roman palaces called "Papa Giulio," from its illustrious founder, Julius III. The beautiful ceilings and sixteenth-century frescos, the courts and fountains, seem strangely out of place in the neighborhood of mean tenement-houses. The museum is being organized by Prof. Barnabei, the active Inspector-General of Antiquities, and by Count Adolfo Cozza, whose fame would be wide indeed if it equalled his ability. The collection is composed entirely of antiquities excavated during the last few years on the territory of Civita Castellana, the ancient Falerii; hence the name "Faliscan Museum."

The long and heroic resistance which the inhabitants of Falerii made against Rome; their being forced to build another city in the plain (ruins of Faleria); their strong clannishness; their famous temple of Juno and its great festival—all these are commonplaces of history and literature, and give an added interest to its antiquities. But the Faliscan territory is also interesting for two reasons: first, because it stands apart from its Etruscan neighbors through its long-continued adherence to traditions inspired by its Greek origin; and second, on account of the formation here of what we might term a Latin or Græco-Latin style of art, early in the third century B. C., before the rise of Roman art proper—a fact only just now disclosed.

The idea which has presided over the formation of this museum, though not altogether new, has never before been carried out on a large scale. For that reason I wish here to call attention to its great importance, and to the revolution which its general application would make in the spirit of archæological study. Starting with the important truism that the arts and industries represent the life, manners, and customs of the people, and are sometimes, in fact, as in this instance, almost their only representatives, it follows that the arrangement of an archæological museum should be such as to present the most perfect picture of this life in its complexity and at its different stages. In museums where every class of objects is given by itself, where groups found together are separated, and lose their interest from herding with a mass of similar material, no such picture is obtained: the bronzes are here, the vases there, the terracottas in one room, the jewelry in another.

In the Faliscan Museum the contents of every tomb are religiously kept together. This is a preliminary step; the next is to classify them into periods and groups. There are, I believe, eight main groups, which occupy a period of nearly 600 years, extending from the eighth to the close of the third century B. C. The order is strictly chronological. To one accustomed to the usual arrangement of museums, this is a perfect paradise. We can study the transformation of forms and types; the beginnings of the *graffiti* on vases; the rise and fall of the black ware with raised figures; the importation of pottery from the Archipelago, of Phœnician jewelry and bronzes, and of Egyptian scarabs. In this juxtaposition, even the most insignificant object, which would otherwise become valueless, is of importance. We can trace the earliest importation of Greek vases, the native imitations, and finally the creation of an original native school, after painted vases had long superseded the black ware. Jewelry, arms, utensils, and ornaments, all share in the changes. We are in touch with the life of the Faliscans and feel its pulse; we measure the amount of foreign influence as compared to native talent; obtain proofs of their commercial relations with the East, with Etruria proper, with Magna Græcia, and finally with Rome.

Singularly enough, the remains of the only Etruscan temple known were found three years ago at Civita Castellana itself. So much was left not only of its walls and of its terracotta sculptures and revetment, but also of its painted decoration, that it can be reconstituted, and the crowning touch will be given to the museum when the facsimile of the temple, of its exact size, will be erected there, into which all that remains of the original will be incorporated. Among the most interesting of the individual pieces are some of the terracottas found near the temple, especially a magnificent life-size statue of Apollo, with a lion-like head, in the style of the generation after Alexander. More archæological are some of the singular tombs—the earliest used—formed of huge tree-trunks hollowed out. They are seven feet or more long, and in good preservation, though they probably date from the seventh or eighth century B. C.

Discoveries are being continually made in the necropoli of Civita Castellana, which is now showing itself quite rich in Greek vases of the good period. The last necropolis found by Count Cozza is that of the primitive city, and seems to belong to the seventh century or earlier. The museum, though already filling a half-dozen large halls, will be more than doubled in size before it can be considered complete, nearly half the material already at hand being still in the store-house. Count Cozza has superintended the excavation of everything in the museum, and to him we owe the fruitful idea of its arrangement; but it would never have been carried out except for the untiring energy of Prof. Barnabei, its practical creator. I was fortunate in having them both as my guides through the collection, and in having visited the sites where the discoveries were made. I was already familiar with Count

Cozza's work, through an acquaintance of several years. No one equals him in familiarity with Etruscan architecture; his views on the development of the Etruscan tomb, house, and temple are highly original and important, and will probably be published in one of the early issues of the new archæological publication of the Accademia dei Lincei.

It will be possible to enter almost at once on a similar task for the province of Orvieto, where so much has been discovered during the last few years, and where tombs are still being opened almost daily. Sig. Mancini, the principal excavator, has embraced the idea, and Count Cozza has already, in a small way, busied himself with the formation of groups analogous to those of the Faliscan district. It is to be hoped that the two active founders of the museum at "Papa Giulio" will extend their efforts to the Orvietan territory as soon as possible, for there is no time to spare. Unfortunately, it is too late to hope for a successful application of the plan to all the principal sites. Many, like Veii, Vulci, Cervetri, and others, seem well-nigh exhausted by the sweeping excavations of the past fifty or sixty years. In Etruria each territory has certain autonomous characteristics which are brought out clearly only by the group system. If the method could be applied to all the provinces of Italy where antiquities are still found in abundance, and if a great national archæological museum could be established in Rome, where all these provincial antiquities could be grouped, it is quite certain that the mere juxtaposition of these groups would suggest the solution of many perplexing problems concerning the races, progress, relations, and characteristics of the peoples of ancient Italy.

The new method is already producing salutary effects, even on the dealers in antiquities, and I have just heard of two large lots of vases and other contents of tombs which were purchased by them *en bloc* because objects which had formerly seemed worthless by themselves prove valuable in connection with their surroundings. Private collectors are also being influenced in the same direction. In the three halls of the Museo Etrusco at Florence devoted to the contents of the famous early tombs at Vetulonia, Prof. Milani is adopting the plan of keeping the entire tombs together. If I here call attention to the very different way in which that other great Florentine collection, the Museo Nazionale at the Bargello, is kept, it is in the hope that some steps may be taken to remedy its grave defects. There is no official catalogue; the only one printed is a mere pretence of which even the custodi are ashamed. This, combined with the almost complete lack of descriptive labels, makes it hardly possible to identify the objects, and renders the collection in certain parts quite useless for study.

During five weeks I have made a tour through a great part of that portion of central Italy which is bounded by Tuscany, the Neapolitan provinces, and the two seas, a territory which belonged almost entirely to the former States of the Church: I mean Latium, Sabina, lower Etruria, the Abruzzi, and a part of Umbria. The majority of the monuments of this region are quite unknown, and this was in reality a voyage of discovery full of pleasant surprises. I have no intention, however, of dwelling here on anything but a single point of rather melancholy interest; I mean the condition of the monastic establishments. The early Benedictines and the later Cistercians liked to build in the country, in low lands or on mountain sides; and these monasteries, when suppressed or deserted, have mostly been occupied by peasants. But the Franciscans and Dominicans did not flee from the face of other men; they built usually within the city, or else within a stone's throw of its gates. These are the monuments which, though in far better natural preservation than the former group, have suffered most damage from the recent policy of the Government. Sometimes they have been occupied by schools or asylums, but usually the monks have been superseded by the soldiers. The churches are used as dormitories, and cut up into two or three stories, or else filled with fodder or used as storehouses. In the monasteries the garrison is quartered. Sometimes they become hospitals. It is a case of barracks versus cloister. In a few cases, as at Santa Giuliana of Perugia, there is an officer with some æsthetic sense, who remonstrates against the ruthless destruction of such works as its beautiful early Gothic mortuary chapel; he is forthwith sacrificed by his superiors, and sent to meditate over the folly of not being an insensible machine. It so happened that my studies were mainly in the direction of the development of early Italian Gothic. The monuments of the orders of SS. Francis and Dominic are mostly of the thirteenth century, the time of early fervor and world-wide influence. Far more than the cathedrals and parish churches, they are the great representatives of the Gothic style throughout the country. And as I passed from town to town, and was met by the same monotonous picture of the ruin of art by militarism, it seemed as if such things should not be allowed in the nineteenth century.

A few more words on a special instance, the already mentioned monastery of Santa Giuliana at Perugia, formerly belonging to the Cistercian nuns. In time it dates from the middle of the thirteenth century; in style it is pure Gothic; its preservation was remarkable. Besides the church, there was the entire monastery, with its beautiful two-storied cloister, one of the finest in Italy, its pillared chapter-house and refectory, and its semi-subterranean mortuary church, not to mention many other vaulted halls. Some years ago it had already been given over to the infantry for a military hospital, and the church to the cavalry as a storehouse; but as yet no damage of any consequence had been done. Mariano Guardabassi and Luigi Carattoli, art inspectors for the province, then drew up memoirs setting forth the importance of the monuments, and succeeded finally in obtaining from the enlightened Orientalist Amari, then minister, the donation of the monument to the commune of Perugia, on the condition that the latter should provide another building for the hospital. After a bitter fight the gift was declined. So part of the fault should be laid at the door of the city. Although considerable destruction has been done, there is still time to declare the church and monastery a national monument, and it is far more deserving of this honor than many already on the list. Those who have now the direction of the funds set aside for the protection of monuments are certainly animated with the best intentions, and, if the appropriations were larger, many monuments now gradually decaying could be preserved. Among those that are being destroyed merely by natural causes, one of the most interesting is the old monastery of S. Pastore, near Rieti, built in 1258. It is now private property and rented to peasants. Part of the roof of the church is entirely gone and the grass grows in the aisles; the great tower has been split by lightning and will soon fall. It would need but a few thousand francs—probably five—to put the church in sufficient repair.

A. L. Frothingham, jr.

Correspondence.

A FORCE FOR THE REVIVAL OF THE READING HABIT.

To the Editor of The Nation:

Sir: A thoughtful article in the *Nation* of a year or so ago noted and lamented the decay of the reading habit in the American community. The fact certainly is that comparatively few people nowadays read books—few people, that is to say, in comparison with the aggregate mass of the population of the country. Whether the number of such readers—I mean readers of *books*, not newspapers or magazines—is proportionately less now than formerly, is another question. The fact indisputable is, that it is quite the exceptional man among us, take the American people together, that can fairly be called a book-reader. I am quite sure, too, that this is true in a degree that, could the actual state of things somehow come to be trustworthily revealed, would startle most thinking men who have not happened to have their attention directed to the matter. If, for instance, the census-taker could next year require people everywhere to name the books that they had read during the twelvemonth preceding, the result would probably show that not one person in a hundred of our total sixty millions had within that time been the reader of even a single book. (I suppose that this estimate would have to be modified somewhat if paper-bound trashy novels were to be admitted into the list of books proper.)

I myself a few years ago put this point to a kind of test for my own individual satisfaction—dissatisfaction, as it proved. I was taking a leisurely buggy drive from the Hudson to the Genesee, through one of the most enlightened and most thriving belts of country in the Empire State of the Union. Using what tact I had to select fairly representative individuals in the various classes of persons whom as a stranger I thus met, I contrived, after suitable ambages of approach to the point through casual conversation, to learn from a considerable number of people the nature and extent of their recent familiarity with books. One farmer whom I met in the shade of wayside trees, willingly paused from his journey for a rest, while he answered kindly for me some questions concerning my road; he then, looking doubtfully meanwhile for help to his wife sitting beside him in his carriage, told the inoffensively inquisitive stranger that, besides a Moody-and-Sankey hymn-book, I think it was, they had read nothing in book form during the last two or three years except—except—they forgot the name—the 'Log Cabin,' they believed it was. 'Uncle Tom's Cabin?' I suggested. Yes, that was it, 'Uncle Tom's Cabin.' Another group of three young farmers, fully up to the average of such, testified that they had none of them read any book since the 'Third Reader' at school. In short I found the fact superfluously made out that, so far at least as rural regions may be taken to represent in this respect the country at large, not many people in comparison to the whole number of our population are book-readers.

Now, of course the optimistic view of this state of the case is, that magazines and newspapers have probably taken the place of books in the reading of the general public. That such is to some extent indeed the fact nobody, I suppose, would be inclined to dispute. Undoubtedly an increased proportion of the freshest, brightest thought of the day gets its expression in the columns of the newspaper or in the pages of the magazine. And *Harper's* and

the *Century* have taught us that the audience of the magazine may be very numerous. But comparatively, *how* numerous?—consider that. The high-water mark of the *Century's* circulation was touched, as I seem to remember, at about a quarter of a million copies. This meant, say, three-quarters of a million readers for certain particular numbers of the magazine. But we are sixty millions of people. And this, even this, comparatively small immense circulation—how it dwarfs the currency of even a highly successful book!

Well, perhaps books are among the things that are to pass, having had their day! There are some men of letters who seem willing enough to admit, nay, to demonstrate, that the world no longer has need of letters; that science should, as in fact it will, replace literature as the intellectual food of mankind. Perhaps, perhaps. The old order changeth, yielding place to new, and God—some of the old-fashioned rebellious will feel disposed to say the devil, rather—fulfils himself in many ways. We shall see what we shall see.

Meanwhile there is just now at work among us a much noised, but at the same time quite too little regarded, force for the revival of the habit of reading books. I refer to the Chautauqua Literary and Scientific Circle. Here is an association of persons already 60,000 strong, whose specialty it is that they read, and read *through*, *books*. I submit that that is a noteworthy social fact. It has in it the "promise and potency" of a future. The movement thus named has had a history of eleven years. As Mr. Webster said, "The past, at least, is secure." But that is not all, for this movement lives now with apparently as vigorous a life as ever. And what is significant and full of hope is the fact that the majority of these pledged and strenuous readers of books are persons gained to be such from the ranks of those who, but for the Chautauqua Literary and Scientific Circle, would not be book-readers at all.

The books read are books selected for their solid instructive value, rather than for their merely entertaining character. The idea of the course prescribed, which covers four years of time, is to provide a *practicable* means for ordinary persons, necessarily debarred from liberal education, of surveying intelligently the ground traversed in the average four-years' college curriculum of study. The result to be expected, the result shown in some cases to have been actually realized, is the excitement of desire, and the spread of desire among the ranks of the people to obtain thorough education. Sound learning will be a gainer. The popular basis on which the security of high culture ultimately rests will be broadened. Colleges and universities will have more students, and better. Authors will find more readers, publishers will find more buyers of books. More books, and better, will be produced. The public will be more intelligent. Every good cause will profit by the Chautauqua Literary and Scientific Circle.

I appeal to our leaders of thought, to our masters of culture, to recognize this movement for what it truly is—not the quack offer of a worthless substitute for good education, but a powerful additional reinforcement to the army of intellectual liberation for humanity. It deserves from us all criticism, guidance, perhaps, but certainly encouragement. It is a true force of revival for good things, such as are always ready to perish.

WILLIAM C. WILKINSON.

TARRYTOWN, N. Y., September 7, 1889.

[A weak side of this interesting system is its manufacture of special text-books, which are subject to the limitations of production to order as opposed to spontaneous and competitive production; but also, and more seriously, to the restraints imposed by the nature and extent of the "Circle." The effect of these latter in the controverted departments of science and history, to mention no others, is obvious. As we have before pointed out in these columns, a Chautauqua text-book in United States history ends deliberately with the war of 1812! The sort of book-reader this preparation should evolve is one we have heard tell of who never read a book less than 2,000 years old, and had not got down to Paul and Silas yet.—ED. NATION.]

JUGGLING WITH FIGURES.

TO THE EDITOR OF THE NATION:

SIR: Will the *Nation* allow me to call attention to some peculiarities of logic and argument in a recent paper in the *Forum* by Thos. G. Shearman on the subject of "Henry George's Mistakes"? Seldom has the grim humor of statistics been so solemnly but effectively displayed as in this paper. Mr. Shearman's aim is to support the statement of Mr. George that the rich are growing richer and the poor poorer; and, to sustain his contention, he makes three distinct calculations. The total wealth of the country is placed at $60,000,000,000. From the fact that Eastern savings banks show an average deposit of $365, Mr. Shearman calculates that 400,000 persons own $45,000,000,000, or three-fourths of the entire wealth of the country. From another squint at statistics, he comes to the conclusion that 300,000 persons own $28,000,000,000 of the national possessions.

But it is on his first table that Mr. Shearman accomplishes his grand transformation act in statistics. Assuming that the number of incomes, when arranged in large classes, multiplies from three to five-fold for every reduction in the amount of one-half, he constructs the following table:

200	persons at	$20,000,000.....	$4,000,000,000
400	do	10,000,000.....	4,000,000,000
1,000	do	5,000,000.....	5,000,000,000
2,000	do	2,500,000.....	5,000,000,000
6,000	do	1,000,000.....	6,000,000,000
15,000	do	500,000.....	7,500,000,000
			$31,500,000,000

Having previously shown that 400,000 people own three-fourths of the wealth of the United States, and that 300,000 people only own $28,000,000,000, Mr. Shearman by this table proves that not quite 25,000 people own more than 300,000 people.

Allow me to carry Mr. Shearman's table on a little further, and see what the result would be:

30,000	persons at	$250,000 00.....	$7,500,000,000
90,000	do	125,000 00.....	11,250,000,000
180,000	do	62,500 00.....	11,250,000,000
540,000	do	31,250 00.....	16,875,000,000
1,080,000	do	15,625 00.....	16,875,000,000
3,240,000	do	7,812 50.....	25,312,500,000
6,480,000	do	3,906 25.....	25,312,500,000
10,000,000	do	1,953 12.....	19,531,200,000

This would give a little over 21,000,000 workers and capitalists in this country, which agrees practically with Mr. Shearman's estimate.

Now, what do we find by completing the table? In the first place, that 325,000 persons own $61,500,000,000, which is a billion and a half dollars more than the entire possessions, real and personal, of the nation, according to the highest estimate. In the second place, that the entire national wealth is $165,000,000,000, instead of $60,000,000,000. And in the third place, beginning at the bottom of the table instead of the top, that 19,720,000 workers having the lowest incomes own over $70,000,000,000, which is $10,000,000,000 in excess of the entire national wealth. WALKER KENNEDY.

MEMPHIS, TENN., September 12.

GOLD CONTRACTS.

TO THE EDITOR OF THE NATION:

SIR: In your interesting editorial in the last number of the *Nation* on "The New Silver Campaign," you made no mention of the important fact that the great loan corporations of the East, the insurance companies and private investors, require their Western agents to have their mortgage deeds and notes state plainly that the loan is to be paid in gold coin. I wonder what would be the mental sensations of one of Senator Reagan's enthusiastic constituents when, having saved $1,000 to pay his mortgage, he is informed that an additional $300 must be obtained at once to save his farm from foreclosure sale, on account of the gold premium created by the great Senator's efforts in behalf of silver. And will not the vast army of borrowers all over this country be in the same predicament? B.

MINNEAPOLIS, September 1, 1889.

KEEPING MONEY IN THE COUNTRY.

TO THE EDITOR OF THE NATION:

SIR: I was driving through the Grassmarket here to-day, and had just passed the cross in the pavement that marks the spot where they used to hang people for stealing, when my attention was called to the magnificent free library that "Mr. Carnegie, the American millionaire, has presented to the citizens of Edinboro'."

This led me to reflect upon how things are changed, and to wonder what the mill-owners of Pennsylvania would think of this as an illustration of the way the money they wring from the hard hands of the taxpayers is "kept in the country."

Yours truly, TRANSATLANTIC.

EDINBURGH, September 4, 1889.

ENGLISH CORRUPTION OF AN AMERICAN WORD.

TO THE EDITOR OF THE NATION:

SIR: "Nor has education which is conceived in a partisan, or democratic, or business spirit any considerable advantage over other important interests similarly jerrymandered."—*London Academy, No. 891, June 1, 1889.*

We have here an erudite *Volksetymologie*, a corruption in spelling, pronunciation, and meaning of *gerrymander* (see 'Winsor's Narrative and Critical History of America,' vol. vii, p. 318, note 1.)

Add to this that the 'Encyclopædic Dictionary' gives *jerrymander* and *gerrymander* as alternative forms, and alliterates the latter with *gem*, though the *g* is hard in *Gerry* and its derivative. A. I.

NEW BEDFORD, MASS., September 10, 1889.

Notes.

A COLLECTION of short stories by Mr. Brander Matthews will be published this fall in New York and London by Longmans, Green & Co.,

under the title of the opening story, 'A Family Tree.' The same publishers will issue at the same time the tales of Irish-American character in California which Mr. George H. Jessop has recently printed in the *Century* and the *Atlantic*, and which have more unity than is to be found in most volumes of short stories, as the same young journalist is a participant in the action of all of them. The book will therefore be called 'Gerald Ffrench's Friends.' Add to the foregoing 'The Blue Fairy Book,' edited by Mr. Andrew Lang, an attempt to set down the old favorites of the nursery, once for all, and with due respect for the accepted versions. It will contain nearly two-score tales, from the Greek, from the 'Arabian Nights,' from Grimm, from Perrault and Mme. d'Aulnoy, and from the folk-lore of England. Mr. G. P. Jacomb Hood (who illustrated Mr. Lang's 'Aucassin and Nicolette') and Mr. H. J. Ford will supply numerous illustrations. To a limited large-paper edition Mr. Lang will prefix an essay on the origin of the fairy tales and their relation to each other—an essay not to be included in the ordinary edition, which is intended for those who take their fairies on faith, and who wish no analysis of these fairies' adventures.

D. Appleton & Co. will shortly issue in book form the papers contributed by Mr. David A. Wells to the *Popular Science Monthly*, under the title, 'Recent Economic Changes, and their Effect on the Production and Distribution of Wealth and the Well-being of Society.' Also, the following works: An 'Epitome of Herbert Spencer's Philosophy,' by Howard Collins; Mme. Carette's 'Recollections of the Court of the Tuileries' (Third Empire); 'Great Leaders: Historic Portraits from the Great Historians'; a novel by Admiral Porter, 'Arthur Merton,' and one by Edna Lyall, 'The Hardy Norseman.'

A large paper limited edition of 'William Hazlitt, Essayist and Critic,' with a memoir by Alexander Ireland, will shortly be issued by Frederick Warne & Co.

Thomas Whittaker publishes directly 'The Coming Woman's Grandson: a Tale of Cheddar a Hundred Years Ago,' by Miss Yonge, and 'The Third Miss St. Quentin,' by Mrs. Molesworth.

T. Y. Crowell & Co.'s fall list includes Victor Duruy's 'History of France,' a new and revised edition of Charlotte F. Bates's 'Cambridge Book of Poetry and Song'; 'Ad Lucem,' a selection of prose and poetry for suffering ones, by Mary Lloyd; 'A Dictionary of Prose Quotations,' by Anna L. Ward; 'Convenient Houses, and How to Build Them,' by Louis H. Gibson; and 'Metzerott—Shoemaker,' an anonymous novel.

Fords, Howard & Hulbert have nearly ready 'An Appeal to Pharaoh: A Radical Solution of the Negro Problem.'

Worthington Co. announce 'My Good Friend,' translated from the French of Adolphe Belot by Edward Wakefield.

Joel Munsell's Sons, Albany, solicit subscriptions for a new edition of the Rev. B. F. DeCosta's 'Pre-Columbian Discovery of America by the Northmen'; an enlarged edition of 'The Border or Riding Clans,' followed by a history of the Clan Dickson, by B. Homer Dixon; and 'The Ohio Valley in Colonial Days,' by Berthold Fernow.

We make the following selections from Houghton, Mifflin & Co.'s forthcoming publications: 'Life of Richard H. Dana, jr.,' by Chas. Francis Adams; 'Life of Harriet Beecher Stowe,' by her son; the Scientific Papers of the late Asa Gray, selected by Chas. Sprague Sargent; 'Life of Richard Steele,' by George A. Aitken; 'The Genesis of the United States, 1605-1616,' edited by Alexander Brown; 'Essays in the Constitutional History of the United States, 1775-1789,' by J. Franklin Jameson and others; 'History of the Old South Church,' by Hamilton A. Hill; 'Sermons,' by the late Jacob Merrill Manning; 'Civil Government,' by John Fiske; 'Essays on Government,' by A. Lawrence Lowell; 'The Reconstruction of Europe,' by Harold Murdock; 'Origin and Growth of the English Constitution,' by Hannis Taylor; 'The Continuous Creation: An Application of the Evolutionary Philosophy to the Christian Religion,' by the Rev. Myron Adams; 'The Church in Modern Society,' by the Rev. Julius H. Ward; 'The Struggle for Immortality,' by Elizabeth Stuart Phelps; 'Portraits of Friends,' by John Campbell Sharp; 'Six Portraits: Della Robbia, Correggio, Blake, Corot, George Fuller, Winslow Homer,' by Mrs. Schuyler Van Rensselaer; 'A Rambler's Lease,' by Bradford Torrey; 'Gudrun,' a mediæval epic, translated from the Middle-High German by Mary Pickering Nichols; 'Three Dramas of Euripides—the Medea, the Hippolytos, the Alkestis,' by Wm. Cranston Lawton; a holiday edition, with appropriate illustrations, of Hawthorne's 'Marble Faun'; and (last but not least) an Index to the first sixty-two volumes of the *Atlantic Monthly*.

D. C. Heath & Co. publish this month a translation of Lindner's 'Empirical Psychology,' by Charles De Garmo; and 'Sept Grands Auteurs du XIXe Siècle,' an introduction to 19th century French literature by Prof. Alcée Fortier.

New editions of Ruskin's 'Sesame and Lilies,' and of Prof. David Swing's 'Motives of Life' and 'Club Essays' are in the press of A. C. McClurg & Co., Chicago, together with a rythmical version of the Book of Job, by Dr. George H. Gilbert of the Chicago Theological Seminary, and 'Alexia,' a novel by Mrs. Mary Abbott.

S. C. Griggs & Co., Chicago, announce a translation, by Prof. Julius E. Olsen, of Peter Lauridsen's 'Vitus Bering, the Discoverer of Bering Strait.'

'The Method of Least Squares,' by Prof. G. C. Comstock, is in the press of Ginn & Co., Boston.

Our readers may recall a recent complaint of Mr. Thomas Hughes, levelled, through the London *Times*, at Messrs. Ginn for republishing his 'Tom Brown at Rugby' in their "Classics for Children" series, not only, as he said, against his wishes, but with omissions (on the score of temperance) to which he was strenuously opposed. Judge Hughes now addresses to the same paper a letter showing that the firm's persistent efforts to secure his permission after the first refusal involved a personal interview with their representative, who went away supposing that the concession was granted, though this was not the author's understanding. This removes the imputation of piracy, which could not be entertained of this firm, and Judge Hughes reports, what was also matter of course, that he is to receive a royalty like any domestic author.

The publishers of *Puck* announce that they are about to issue 'In the 400 and Out,' a volume of satirical cuts by Mr. C. J. Taylor, the artist of 'The Taylor-Made Girl,' with which pretty book the new collection of sketches will be uniform.

James Clegg, Rochdale, England, will shortly publish by subscription in a limited edition a 'History of the Parish of Rochdale,' in the county of Lancaster, by Lieut.-Col. Fishwick, F.S.A. The work promises to be one of considerable interest. The list of county families noticed is a long one. There will be numerous illustrations.

Mr. Clegg sends us a second edition of his 'Directory of Second-hand Booksellers and List of Public Libraries, British and Foreign.' Twenty-six pages are needed for the second-hand booksellers of the British islands; nine suffice for Canada and the United States; fourteen for continental Europe. Lists of pseudonyms, initials, and works whose authors' names are supplied for convenience, postal information, and some other matter, fill out the little book, which is not exhaustive.

At the request of the Hakluyt Society, Mr. Everard F. im Thurn, author of 'Among the Indians of Guiana,' has undertaken to edit for the Society Sir Walter Raleigh's 'Discoverie' of Guiana, published in 1596. The Hakluyt edition of the same work, as admirably edited by the late Sir Robert Schomburgk, is now scarce, forty-one years having elapsed since its publication. Mr. im Thurn is specially qualified for the performance of the labor of love to which he is about to devote himself. For years past, his official duties under the Government of British Guiana have brought him into continuous communication with the aboriginals, whose customs and traditions he has carefully studied. He has travelled much in the interior of Guiana, and is especially conversant with that portion of British Guiana which lies between the Essequibo and the Orinoco. It is perhaps overlooked that the coast of Guiana might have received the Pilgrim Fathers had not those in favor of a settlement there been outvoted. Under the year 1617, Prince states: "After humble prayer to God they first debate whether to go to Guiana or to Virginia. And though some, and none of the meanest, are earnest for the former, they at length determined for the latter." It seems almost certain that Raleigh's 'Discoverie' influenced those, "none of the meanest" sort, who voted for Guiana.

The Argosy press of Georgetown, Demerara, is now setting up a second edition of 'West Indian Yarns,' by Mr. G. H. Hawtayne, a Government official in that colony. In these 'Yarns,' of which the first edition has become exhausted, the writer describes with much knowledge and humor a state of things that is fast passing away in the social life of some of the island colonies. As photographs in black and white of society a generation ago, Mr. Hawtayne's amusing sketches will preserve for present and future dwellers in those colonies many shades of existence which would otherwise disappear. Persons who intend avoiding the winter by taking a trip to the West Indies will find much to amuse them in the 'Yarns.'

We lately called attention to Mr. Collar's new text-book of Latin Prose Composition. The principal of another prominent Latin school in Boston, Mr. M. Grant Daniell, has just issued the first part of his 'Exercises in Latin Prose Composition' (Boston: Leach, Shewell & Sanborn). This book deserves to be compared with Mr. Collar's, since both teachers agree in connecting their exercises directly with the Latin authors which the class is engaged in reading. Thus, Mr. Daniell's present volume relates to Books i-iv of Cæsar's 'Gallic War.' Part ii will be based on Cicero's Orations. A vocabulary is in preparation.

Dr. C. W. Dulles of Philadelphia sends us a paper on Hydrophobia (Pennsylvania Medical Society reprint) in which he admits that deaths may occur after dog-bite, but denies that hydrophobia (by which we understand he means rabies) is a distinct or real disease. His reasoning, if it may be called such, does not commend itself to us.

The most valuable of four papers, reprinted as a pamphlet from the California Board of Health Report for 1888, by Dr. Wolfred Nelson, describes the Quarantine (or more properly, Disinfecting) Station below New Orleans, organized by Dr. Joseph Holt of the Louisiana Board of Health. This station is a veritable crucible in which the sanitary dross is extracted from infected ships and cargoes. It protects the city from without, and fosters, rather than retards, commerce, and it is not wasteful of time or money. The other papers iterate that yellow fever is endemic in the American tropics, and that our Southern States are in constant danger of its permanent colonization in them, which is true. The style is prolix, but a condensed tract might be prepared whose circulation on the Southern seaboard would assist in the spread of sanitary facts.

Mr. R. R. Bowker prefaces the seventeenth edition of 'The Publishers' Trade-List Annual' (New York: *Publishers' Weekly*) with a handsome recognition of the corresponding monster British 'Reference Catalogue' (London: J. Whitaker & Sons), with its admirable index, and of Caspar's 'Directory of the American Book and Stationery Trade' (Milwaukee), both issued during the present year, and both already noticed in these columns. Mr. Bowker points out the cost in labor and money and the long time needed to bring these works to their respective degrees of excellence, as a fair excuse for not expanding the scheme of the 'Trade-List Annual,' as some would have him. He rightly insists on the value of freshness secured by his method, by which not only are publishers' catalogues bound together, but an Educational Catalogue is provided, together with a record (by author, title, and subject) of books published from January to June of the current year.

Our recent notice of the 'Memoir of Douglass Houghton,' first State Geologist of Michigan, has brought us numerous inquiries as to the mode of procuring the book. It can be had by addressing the author, Mr. Alvah Bradish, 55 Fort Street, W., Detroit, Mich. The price is $1.75.

A European teaching an Oriental language to the cultivated speakers of it is not a frequent sight, yet Mr. Basil Hall Chamberlain has held, during several years past in the Imperial University of Tokio, the chair of Japanese and Philology. His 'Handbook of Colloquial Japanese,' issued last year, has reached a second edition. In both theory and practice, it forms a thorough equipment for the mastery of the spoken and easy book language.

The *Jahrbuch* of the Deutsche Shakespeare-Gesellschaft opens with a brief account of its history since its organization twenty-five years ago, by the editor, F. A. Leo, who also contributes a paper showing the relations of Goethe to Shakspere. There is, too, a description of the Duke of Buckingham's edition of "Julius Cæsar," and a curious translation of a Japanese student's account of the "Merchant of Venice" by Sekisupiyā (Shakspere), whom he ranks with the Chinese Rakantchin and the Japanese Bakino, "the three greatest story-tellers in the world." There is the usual careful review of Shaksperian literature, having especial reference to the Baconian controversy, and a necrology, which includes the well-known names of N. Delius, with a portrait, Alex. Schmidt, Karl Elze, and Halliwell-Phillipps. An interesting feature is the table of the representations of the plays at the different German theatres, from which we learn that in 1888 twenty-five plays were given 751 times, of which "Othello" took the lead with 129 representations, the "Merchant of Venice" and "Romeo and Juliet" following with 99 and 91 respectively. Mr. Albert Cohn's bibliography for 1887-88 is, as usual, remarkable for its range and fulness. A photolithographic copy of Shakspere's will, of the size of the original, accompanies this volume, which also contains an index of the whole set.

The Royal Prussian Academy of Sciences of Berlin has accepted a donation made by Count Joseph Florimond Loubat of New York for the purpose of giving a prize every five years to works on North America. Such works are divided into two series: (1) those on the history of the aboriginal inhabitants, as well as on geography, archaeology, ethnography, philology, and numismatics; (2) those relating to the colonization of North America by civilized nations, and the modern history down to the present time from any of its sides. The first prize of 3,000 marks ($714) will be given in July, 1891, to the best work of the second class, mentioned above, published between July 1, 1884, and July 1, 1889, whether in English, German, French, or Dutch. Besides those sent to the Academy (before July 1, 1890), copies must be presented to the Libraries of Columbia College and of the Historical Society of New York.

The prize on the Bluntschli Foundation, formed by the contributions of the admirers of the eminent Swiss-German international jurist and professor, has been awarded for the first time to Paul Heilborn, Referendary at Berlin, for an essay on the subject of "The Passage of Belligerent Troops and War Material through Neutral Territory in Time of War." The subject proposed for the second prize competition ought especially to interest Americans under existing circumstances. It is as follows: "The Right belonging to Governments in Time of Peace of Expelling Foreigners; its Foundation according to Public Law, and its Limits according to International Law." The question refers only to the right of expulsion as a political measure, and not as a police measure, not as a penalty of crime. The prize amounts to 2,000 francs ($400). The essays, which ought not to exceed 8 to 10 printed sheets (*feuilles*) 8vo, may be written in English, French, German, Italian, or Latin, and must be handed in at Munich by December 31, 1890. The particulars are given in the *Revue de Droit International* No. 5, 1888, and No. 1, 1889.

The Faculté de Droit of Paris also proposes three prizes from the legacy left by the Countess Rossi: (1) a prize of 4,000 francs for an "Essay on Transmissible Securities (*titres au porteur*) in French Law and the Laws of the Chief Foreign Countries"; (2) a prize of 8,000 francs on the subject of "The Best System of Publicity for the Constitution and Transmission of Rights to Real Property"; (3) a prize of 2,000 francs for an essay on "The Rights of Upper Houses or Senates as to Financial Laws." These essays, which may be written in French or in Latin, should be sent to the Secretary of the Faculty before March 31, 1890.

It is questionable whether the existing libraries in the United States offer sufficient facilities to American students wishing to compete for some of these prizes. Some years ago the Institute of International Law put on its programme as a subject of discussion the best method of spreading in any one country a knowledge of the legislation of other countries. At the meeting the French members laughed at the question and advised other countries to follow their example. The Committee on Foreign Legislation of the French Ministry of Justice started in 1876 a library of this kind, and, by means of well-considered purchases, exchanges with other States, and gifts, this now amounts to over 4,000 works and 18,000 volumes on the legislation of every country in the world, international law, political economy, statistics, and political geography, including dictionaries and other aids. The catalogue of this library has just been published ('Catalogue de la Bibliothèque du Comité de Legislation Étrangère,' Paris, 1889), which is a real vade-mecum on this subject. There is a nucleus for such a library in the State Department at Washington, but similar ones should be established at New York, Boston, and Chicago, and wherever there is a centre of political study. Many a question arises pertaining to our social and political development, the solution of which would be much aided by a careful comparative study of foreign legislation and systems. For completing such a library no better guide could be taken than this Paris catalogue.

—The only article of general interest in *Petermann's Mitteilungen* for August is on the money of Central Africa, by Gerhard Rohlfs. He remarks on the singular fact that, though gold is to be found in nearly every part of the continent, and in some places, as Timbuctoo, for instance, forms an important article of commerce, it is never used for money. The only silver piece in general circulation, being at the same time the highest denomination of money and, to a certain extent, the standard of value, is the Mariatheresienthaler. This coin, which has very nearly driven out of circulation the Spanish two-pillared dollar of nearly equal value, must bear the date 1780 and have a certain number of points on the diadem and crown of the Empress, or it will not be accepted by the natives. Before the English entered upon their Abyssinian campaign, they had a large quantity of these pieces struck off at Vienna. At that time the rupee was introduced, but it soon disappeared, nor are the Italians as yet more fortunate in forcing their five-lire pieces into circulation in the same regions. The most widespread money of the smaller denominations is the cowry, which has a very varied value. Generally, a dollar is worth from three to four thousand shells, but, in one instance, Herr Rohlfs sold three horses for 190,000 cowries, or $38. It took, he adds, five people half a day to count them. Next to the cowry come the strips of cotton cloth, which, when of native make, are mostly of the same breadth (four fingers) as those employed by the ancient Egyptians for wrapping up their mummies. In some countries travellers have found small, thin, horse-shoe-shaped pieces of iron used as currency, their value ranging from fifty to two hundred for a dollar. Some of the provinces of Abyssinia and the adjacent countries use for the same purpose cubes of salt weighing a pound and a half and having a certain well-defined shape, their value varying, according to the distance from the mines, from forty-eight to four for the dollar. It is noteworthy that all this circulating medium, in which, it may be added, Rohlfs does not include the ivory tusk, has a practical use besides that of money—the dollar and the cowry for ornament, the cotton for clothing, the iron for weapons and utensils, and the salt for food. A supplemental number is wholly devoted to an account by W. v. Diest of a journey from Pergamus over the Dindymum range to Pontus. It is accompanied by some admirable maps.

—The tenth of the noble volumes of Dr. J. S. Billings's 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.' (Washington: Government Printing-Office), begins with the letter O and ends with Pfutsch. It

falls below the average in the number of author-titles and (so far as books are concerned) of subject-titles, for a reason which is not apparent till we come upon the list of medical and scientific periodicals and transactions, filling 113 closely packed pages. For the rest, *place aux dames* might be the motto of the present volume, since Obstetrics, Ovary, and Ovariotomy alone demand 140 pages, while other rubrics pertaining at least as much to the female sex as to the male would considerably swell the total just given. Ophthalmia, Optics, and Orbit fill some 25 pages; the Œsophagus 25; the Palate 12; the Pancreas 9 to 10. Orthopædia (the name occurs in a French treatise as far back as 1741, though the literature of the subject is mostly of the last half century) has 10 pages to itself. Paralysis has 67; Pathology 20. The Pest extends over 41 pages, and under this heading occur some of the oldest and most curious works. A. Benedictus wrote in 1493 at Venice his 'De Observatione in Pestilentia'; and in 1674 appeared a 'Propugnaculum contra Pestem,' which invoked the aid of astrology. A characteristic English title for the period (the fore part of the eighteenth century) is 'The Plague. Containing: I. An account of the plague of Athens from the great historian, Thucidides, who had it himself. II. The same in verse by Mr. Creech, from the Latin of Lucretius. III. The same paraphrased in verse by Dr. Sprat. IV. An account of the plague now [1743] raging in Messina,' etc. A very long and important subdivision of the title Pest is the history of it, of which the second part is alphabetized by localities.

—An extremely useful grouping is that of works on the healthfulness of Occupations and Trades; and the lists of statutes concerning Oleomargarin and Pensions will be found convenient. The chapter on Obesity is not inflated, reckoning only three and a half pages; but mankind were early concerned about their adeps, corpulentia, obesitas, pinguedo, polisarcia, polypionia, their embonpoint and Fettleibigkeit—witness C. C. Leissner's 'De Obesitate Exsuperante' (Jena, 1683). The remedial properties of Oxygen were written about as early as 1796-7, but more especially in very recent years. Ozone does not (in this collection) antedate the fifties. Dr. Brown-Séquard was anticipated (as regards the end in view) by old Martin Pansa, with his 'Aureus Libellus de Proroganda Vita' of 1615, to say nothing of his various works of 'Consilium' (phlebotomicum, evacuatorium, anti-nephriticum, anti-pestiferum, anti-podagricum). Paracelsus, by the way, fills two pages, leading off with the year 1565. We turn the 1059th page of Volume X. with renewed admiration for the intelligence and industry which have produced such a monument to the healing art, to the history of the human mind, to American scholarship, and such an unrivalled aid to research in this branch of science.

—Prof. Nettleship's 'Contributions to Latin Lexicography' (Oxford: Clarendon Press; New York: Macmillan) form a work which will be of service to scholars everywhere. It is much to be regretted that his project of the compilation of an entirely new lexicon should have failed through lack of coöperation, for these specimens, selected from what he had already prepared, show remarkably great qualifications for the task. They include such parts of his material as appeared to him to contain improvements upon the current Latin-English dictionaries in matters of arrangement of citations, new views of interpretation, and corrections, as well as a large number of words not given by Lewis and Short. These words seem to be taken chiefly either from late writers or from the old glossaries, to which the author is known to have given special study. Undoubtedly we have much to learn from those ancient lexicographers, who have until recently met with undeserved neglect. Only a few new etymologies are offered, and these with modesty. The quantity of syllables is carefully marked, and the general accuracy of method is evident from the separation of such words as *accerso* from *arcesso*, *designo* from *dissigno*, and in spelling, as in *admentum*. The treatment of *an* first as interrogative and not disjunctive is, we believe, unique in an English book. We wish that Prof. Nettleship had given us more inceptive verbs, correcting the errors which are so common in lexicons under this head. The book has a full index.

—It is not pleasant news to hear that the friendship which has bound together for forty years two great collaborators in French literature has been broken, and that the hyphen is destroyed that joined the names of MM. Erckmann and Chatrian. A difference about money has arisen between the two friends, and they have parted for good and all. M. Auguste Georgel, on behalf of M. Chatrian, lays bare the pitiful story in the *Figaro*, with a superabundance of sordid and ridiculous details. It appears that M. Erckmann has never taken any part in the composition of the plays to which the compound name has been attached, but has had a share in such profits of them as remained after certain collaborators of M. Chatrian had been paid. These payments to other collaborators constituted M. Erckmann's grievance, and he maintained that no part of them ought to come out of his pocket, and sent his nephew to ask that the whole ownership of the plays should be turned over to him as indemnity for what he had already lost in this way. The innocent and upright Chatrian was just about to give his consent to this plundering, M. Georgel says, when he himself appeared on the scene and put a stop to Erckmann's base work. The matter was left to the judgment of a referee, of whom M. Georgel's opinion is very unfavorable, who decided that Chatrian should pay over to Erckmann the sums that had been given to the collaborators. Half of this amount was offered to the nephew, who took it, and the affair was ended. This is the gist of M. Georgel's story, which may be a true and complete account of the unhappy affair. But there are parts of it that one would like to see cleared up before giving it one's entire belief. How did it happen that so bad a referee was chosen, for instance? Besides, M. Georgel tries to overwhelm Erckmann with odious charges of infidelity to France. He lives still at Phalsbourg, he says, among the Germans; he ran away and left his sick and idiotic sister under fire; he has a niece married to a German officer, and so on, and so on. Such absurd and irrelevant charges, together with the prejudice and hostility that appear in every line of M. Georgel's article, will be likely to incline fair-minded people to wait for further information before deciding where the blame in this unfortunate quarrel should fall. The propriety of such a suspense of judgment is made still more obvious by the latest news about the affair. M. Chatrian has affirmed the truth of M. Georgel's letter, and M. Erckmann publishes a note to say that he shall prosecute both his old friend and M. Georgel for libel and defamation.

—In 1872, on the occasion of the celebration of the 200th anniversary of the birth of Peter the Great, Count Dmitry A. Tolstoi requested the Emperor's permission to begin a collection of the letters and documents of that great ruler. A commission was formed of four professors of history, a Senator, the custodian of museums, and an Academician, who divided among them the work of collecting the materials. Appeals to the public and to foreign Powers proved not to be fruitless. By 1877 they had amassed 10,000 documents, but the sum assigned by the Treasury for copying them was so insignificant that two members of the Commission undertook the task of copying a considerable quantity of them. When Count Tolstoi retired from the post of Minister of Public Instruction, the work stopped; in 1884, by an imperial order through the new Minister, Count Tolstoi was intrusted with the oversight of the work, and he confided the charge of printing the first volume to A. F. Buitchkoff, Academician, director of the Imperial Public Library, who had continued his labor of copying uninterruptedly. It appeared that a great quantity of Peter the Great's letters had been lost, as was evident from the letters in answer, of which those giving information of the lost epistles are included in this volume. The notes (among which are quoted 362 of these replies) occupy a good half of the volume of 1.000 pages. What is known as to the fate of the missing letters is as follows: During the last years of the reign of the Emperor Nicholas, the Moscow senatorial archives were kept in a building where there was a school of architecture, with a corridor common to both. The archive hall was closed by folding-doors with leaves. By drawing the door towards one, a crack opened, through which the pupils of the School of Architecture crawled, stretching themselves out upon the shelves and bundles of papers, rummaging among them and tearing them up. Many of the students took especial pleasure in documents with the signature "Petrus," or "Piter," and calmly appropriated them. The materials for the remaining volumes are ready, and, when completed, the work will furnish a valuable aid in the study of the remarkable personality of the great Peter.

STUDIES ON SPAIN.

Études sur l'Espagne. Par A. Morel-Fatio. Première série. Paris: Vieweg. 8vo, pp. xi, 244.

THE author of this charming work has already distinguished himself by his profound works upon Spanish and Catalan literature and philology. In a work published some years ago ('L'Espagne au XVIe et au XVIIe siècle,' Heilbronn, 1878) he gave to the light a mass of historical and literary documents of great rarity and interest. The present volume is of a lighter nature, and appeals to the general reader. It contains three studies: on how France has known and understood Spain from the middle ages to the present day, researches into 'Lazarillo de Tormes,' and the historical element in "Ruy Blas."

The first study is especially novel and interesting. The relations between the literatures of two countries have often attracted the attention of scholars, and we have, for example, an admirable comparative history of the literatures of Spain and France ('Histoire comparée des littératures espagnole et française,' by A. de Puibusque, Paris, 1843); but we do not remember that any one has undertaken a sketch of the acquaintanceship of one nation with another. During the middle ages, intercourse between the two countries was confined almost exclusively to warriors who un-

dertook the crusade against the Moors, and to pilgrims who made the journey to the shrine of St. James at Campostella (Santiago). The latter, we may be sure, did not return to France with any very exalted idea of the inns on the way or of the manners of the wild Basques. Nor was any better impression made by the reputation for magic which Toledo long enjoyed. In the fourteenth century the intervention of Du Guesclin in the struggle between Peter the Cruel and his brother Henry was not of a nature to commend the two countries to each other.

From the fifteenth century on, the relations between the two countries became more intimate. Spanish soldiers take service in France, and Spanish scholars spread the reputation of their universities. With the sixteenth century began the period of Spain's magnificent empire, and with it a brilliant national literature, and now it was the turn of France to borrow. The Spanish marriage of Louis XIII. made *cosas de España* fashionable in France: dress, food, and language, all felt this influence. There was a veritable rage for Spanish grammar, and the press teemed with translations of Spanish novels. This was the first period of Spanish taste in France; the second was a period also of imitation, as Morel-Fatio remarks, but an intelligent imitation, which is able to create works more beautiful and perfect than the originals. This was the period of the "Cid" (1636) and the "Menteur" (1644). The novel, especially that in the style of rogues (*novella picaresca*), is also imitated, but it is not until the next century that this *genre* finds its perfection in the 'Gil Blas' of Le Sage. Meanwhile, more enlightened travellers are making the two countries better acquainted—Bertaut, the Countess d'Aulnoy, and Saint-Simon among them. How popular the Countess d'Aulnoy's travels were, even out of France, may be judged from the fact that the writer of this notice has before him the eleventh edition (1808) of the English translation. It is a very charming book, but the reader should never forget that the writer was famous for her fairy tales.

In the eighteenth century two currents may be recognized—one of the littérateurs, who still seek their material in Spain; the other of the philosophers, who, deeming Spain the land of fanaticism and ignorance, shower contempt upon it. The representative of the former class is Le Sage, whose famous 'Gil Blas' still presents an unsolved enigma. Of the philosophers, Montesquieu and Voltaire have left stinging epigrams which can never be forgotten. Witness these extracts from the 'Lettres Persanes' (lxxviii) of the former: "Ils sont les premiers hommes du monde pour mourir de langueur sous la fenêtre de leurs maîtresses, et tout Espagnol qui n'est pas enrhumé ne saurait passer pour galant. . . . Les Espagnols qu'on ne brûle pas paraissent si attachés à l'Inquisition qu'il y aurait de la mauvaise humeur de la leur ôter"; and, apropos of 'Don Quixote': "Le seul de leurs livres qui soit bon est celui qui a fait voir le ridicule de tous les autres." Nor is Voltaire much kinder. In the 'Essais sur les Mœurs' (ch. 177), he paints the typical Spaniard languishing under his mistress's window, and adds: "Tout le monde jouait de la guitare, et la tristesse n'en était pas moins répandue sur la face d'Espagne." The end of the century produced the two immortal works of Beaumarchais, the "Barber of Seville" and the "Marriage of Figaro," which have done so much to render Spain popular. It is curious, as Morel-Fatio remarks, that the name Figaro, which looks so Spanish, is not, and no one has yet discovered its origin.

With our own century the Romanticists took possession of the Peninsula, and the figure of the Spaniard playing his guitar beneath his mistress's lattice receives a pendant of the jealous Spanish woman with her dagger in her garter. Mérimée and Gautier have left brilliant traces of the influence of Spain, the former in his "Théâtre de Clara Gazul" and "Carmen," the latter in his "Tra los Montes." Hugo, as we shall see later, was also deeply affected by that passion for the *couleur locale* which the Romantic School thought they could find best in Spain.

Morel-Fatio concludes this charming study, of which we have been able to give but a bare outline, with the statement that France has too often, from the spirit of disparagement or by simple ignorance, superficially judged or incorrectly interpreted Spain. That country certainly deserves to be impartially studied which barred the Arab's way, saved Christendom at Lepanto, discovered a new world, drilled an incomparable infantry, created in art the most powerful realism, in theology a divine and enrapturing mysticism, in literature 'Don Quixote,' and finally gave to the noble sentiment of honor its finest and haughtiest expression.

The second study is devoted to that delightful little romance, 'The Life of Lazarillo de Tormes.' Every one has read and enjoyed 'Gil Blas,' but few know that 'Lazarillo' is the parent of that long line of novels in the style of rogues of which 'Gil Blas' is the most brilliant specimen. There are many mysteries about the little book—where it was first printed, and who was the author. The pretended first edition of Antwerp of 1553 has been seen by no one; and, until a copy is discovered, we must accept the edition of Burgos, 1554, as the first. The novel is generally attributed, without the slightest reason, to the famous statesman, Diego Hurtado de Mendoza. The first who made this groundless attribution was the Belgian, Valerius Andreas, in his 'Catalogus Clarorum Hispaniæ Scriptorum' (1607), incorporated the next year in A. Schott's 'Hispaniæ Bibliotheca,' where the statement is softened by the use of the word "putative" when speaking of this attribution. Some years previous to this, Father José de Sigüenza, author of the history of the order of Hieronimites, in giving the life of Fray Juan de Ortega, mentions that he was said to have written 'Lazarillo' when a student at Salamanca, and that the rough draft in his own hand was found in his cell. There is absolutely no proof of this statement but the words of Sigüenza himself. There is no ground for attributing the book to either of the persons named above, and the Spanish student still enjoys the possibility of settling this vexed question some day by a lucky find.

Victor Hugo's interest in Spain dates back to his childhood (he was nine years old), when he accompanied his mother to Madrid. They remained there a little over a year. It was while waiting at Bayonne for the convoy that he saw the little Spanish girl whose face was so deeply engraved on his memory, and whom he later introduced in a touching episode of 'Le Dernier Jour d'un Condamné.' His fondness for Spain first manifested itself in the 'Orientales' (1829), and then in "Hernani" the following year. The Spanish element in this famous play is not very large or very true. Eight years later appeared "Ruy Blas," perhaps the best of Hugo's dramas. In the note to this play the author made the most extravagant claim to historical and local accuracy: "Not a detail of public or private life, of interior, furniture, heraldry, etiquette, numbers, or topography, but what is exact." This statement Morel-Fatio has compared with the facts in the case with very amusing results. Hugo obtained his material from two books—the Countess d'Aulnoy's 'Memoirs of the Court of Spain' (not to be confused with her 'Travels,' mentioned above), and the Abbé de Vayrac's 'Present Condition of Spain.' From the former he drew his details of etiquette and palace life, as well as the rôles of the *Queen* and *Ruy Blas;* from the latter, his details of government, administration, genealogies, and heraldry. The 'Memoirs' of the Countess d'Aulnoy deal, however, solely with Marie-Louise d'Orléans, the first wife of Charles II. Now, in "Ruy Blas" the *Queen* is Marie-Anne of Neubourg, the second wife of Charles, to whom Hugo refers the statements of the Countess d'Aulnoy. This is historical accuracy with a vengeance, and is followed by a host of minor errors in the very points in which the author challenges inquiry. The names of the *dramatis personæ* afford some amusing examples, such as the utterly impossible name of *Don Guritan*, and *Montazgo*, which signifies the tax paid for driving cattle from one territory to another. Morel-Fatio says: "Hugo took possession of this word, which undoubtedly seemed to him very Spanish, and adorned with it the officer of the Indian Council. It is about as if in French we should name some one *Pâturage* or *Passage*." In his verse he says the household of the Queen costs yearly 664,066 ducats, and in his note refers complacently to the work 'Solo Madrid es Corte,' where, he says, those exact figures will be found. What the reader does find there is the sum of 574,866 ducats.

These matters do not detract from the poetical value of the drama, and would be unworthy of notice did not the author expressly vouch for the accuracy of his details. The reader of Morel-Fatio's article will justly infer that it is never safe to trust Hugo in minor matters like these, a conclusion which will be strengthened by a perusal of Biré's 'Victor Hugo avant 1830' (Paris, 1883), a work invaluable for the poet's early life, and in which are rectified a multitude of little errors on the part of Hugo.

PAUL'S SKETCH OF GERMAN PHILOLOGY.

Grundriss der Germanischen Philologie. Herausgegeben von Hermann Paul. I. Lieferung. Strassburg: Karl J. Trübner. 1889.

THE general plan of this important work is similar to that of Gröber's 'Grundriss der Romanischen Philologie,' issued by the same house, and already noticed in these columns. What is contemplated is to provide a succinct and authoritative résumé of all that has been done in the various lines of Germanic philology, so that the student can "orient" himself conveniently either in the subject as a whole or in any of its branches. The work appears in large octavo, closely printed, and is to be completed in five or six instalments of about 250 pages each. The different parts of the subject are portioned out among twenty-six specialists, the general editor being Prof. Paul of Freiburg. Of the collaborators all are Germans, Netherlanders, or Scandinavians, with the exception of J. Wright, who is an Englishman.

The work begins with three sections by Paul himself; the first being on the idea and scope, and the second on the history of Germanic philology, while the third is devoted to the methodology of the subject. The fourth section concerns alphabets, the runes being treated by Sievers, the Latin alphabet by Arndt. Then

follows a very comprehensive fifth section devoted to histories, by various authors, of the different Germanic languages. That part of the history which preceded the ramification of the Germanic tribe, and antedates all existing records, is assigned to Kluge, who also writes the history of English. An appendix to this section will deal with living dialects. The next two will be occupied with mythology and heroic legend, and the eighth will take up the history of the various Germanic literatures. In this connection it is of interest to note that in only three out of ten cases is the history of a literature to be done by the same man that writes the history of the corresponding language. An appendix to this section will deal with popular poetry. The ninth section is to treat of metre, and the tenth of art, which is made to include both the plastic arts and music. Finally, the work is to conclude with four sections upon husbandry (*Wirthschaft*), law, military art, and manners and customs.

Of the work thus planned there is now before us one instalment, embracing the first four sections. The brief introductory section is devoted mainly to justifying the editor's broad conception of "philology," and showing the futility of all attempts to limit the application of the term to any particular department of the "history of civilization." The argument is, that all branches of historical knowledge whatsoever are more or less dependent on the science of written records. Hence it is a matter of convenience how far the history of law, medicine, industry, art, religion, or any other element of human culture, shall be regarded as coming within the domain of the philologist. A real philological classic of our day is Victor Hehn's 'Domestic Plants and Animals in the Transition from Asia to Europe,' though a librarian has been known to catalogue the book as natural history. We may note in passing that Paul's view of philology is substantially in accord with that of Whitney, who defines it as "that branch of knowledge which deals with human speech and all that speech discloses as to the nature and history of man."

The second section is a long and admirable résumé of the history of Germanic philology from the Middle Ages down to the present time. The extensive bibliography and the careful comments of a scholar so able as Paul will render this part of the work invaluable to students. At the close of his retrospect the writer deprecates two evils which, as he justly thinks, stand in the way of a healthy development of Germanic studies hereafter. The first is the partisanship of German scholars which is continually leading them into bitter personal disparagement of the members of opposing "schools." He calls for an abatement of the *odium philologicum*, and urges the need of a more general agreement upon fundamental principles. In this effort of his to put an end to the ridiculous clannishness of German scholars, the scholars of other lands will certainly wish him well; but we fear that his own somewhat caustic treatment of those whom he does not happen to like will not help on the philological millennium. It is surely going too far to say (p. 99) of a man like the late Prof. Scherer that "his critical attempts may be almost without exception characterized as erroneous," or that "his nature did not permit him to produce a well-matured and complete scientific work."

The second of the two evils deprecated is that the growing specialization of scholarship is tending to separate the students of language and the students of literature into two camps, which look with more or less of indifference and even contempt upon each other's operations. Those who concern themselves with phonetics, historical grammar, and the critical study of early texts are often disposed to look upon the students of more modern literature, whose method is somewhat different from their own, as dilettanti; while the latter class return the compliment by regarding the former as pedants absorbed in the form and indifferent to the substance of literary records. Against this tendency Paul very properly raises his voice. The specialization he admits to be in a measure necessary, since the field of philological study is so vast. At the same time he contends that the study of language and the study of literature should, as far as possible, go hand in hand; and that, in any case, the votaries of the one pursuit should indulge in no pharisaical emotions respecting the votaries of the other, but should rather regard them as fellow-workers in a common cause. This preachment of Prof. Paul's is sound and timely, and we hope it may do good both in Germany and in other lands.

For the writing of a chapter upon philological method it would be difficult to think of any one better fitted than the author of the 'Principien der Sprachgeschichte' and the co-editor of Paul and Braune's 'Beiträge.' What he has to say on the subject is rich in suggestion even to the experienced worker, but will be found especially helpful by those who are just setting out in the way of original research. General discussions of method and principle are apt to seem somewhat arid, nor can they, perhaps, avail much in changing habits once formed. But Paul is certainly right in holding that the beginner may save himself much time and much misdirection of energy if, instead of simply imitating a master, and finding out after the lapse of years that he has been imitating the master's weak points along with the strong ones, he will make, as early as possible in his career, a careful study of fundamental principles. Two or three of our author's prescriptions may be specified here. He insists that the philologist of to-day must be well grounded in psychology. He urges particularly the importance of considering *all* the facts pertinent to one's investigation; nothing is to be passed by as unimportant. "To be sure," says he, "the aim is to establish something important and worth knowing; but it betrays the dilettante to pick out deliberately what seems important." With still greater unction, he insists upon the necessity of attending to all possible explanations of the problem under consideration. One is not to make a guess and then go at the collection of facts to confirm it. By so doing the investigator is sure to be beguiled by the prettiness of his own hypothesis, and his work takes on the character of an attorney's brief.

Prof. Paul's bugbear is what he calls "unnützer Hypothesenkram." Against this black beast he loses no opportunity to warn the neophyte, and, to our thinking, makes too much of the matter. Hypotheses are necessary in all scientific work, and whether a particular one is going to be "useless" or not, can often not be told until it has been followed up. There must be more or less of guessing as one goes along, and all that can be demanded is that one keep his guessing and his vanity under the strict guardianship of his scientific intelligence. The maxim of collecting all the pertinent facts before allowing one's self to form a theory has a certain air of wisdom about it, but we imagine that in practice few persons really act on it. Nor, when we consider the progress of knowledge as a whole, can we say that one necessarily wastes his time in following a false lead. If it were highly important for men to get to the North Pole, we should scarcely say that they had wasted their time who had taught us experimentally how *not* to get there. To this should be added the consideration that many a happy scientific discovery has been made by men who found a kingdom while wandering from the trail in search of their fathers' asses. In short, the best regulative against fantastic theorizing is not so much the dread of premature and wrong hypotheses, as the general mental balance which comes of wide knowledge and catholic intellectual interests.

Of the fourth section we have not space to speak in detail. We remark only that this, too, is worthy of the noted scholars whose work it is, and take leave of the first instalment of Paul's 'Grundriss" with the feeling that it is a great work well begun.

Wellington. By George Hooper. Macmillan & Co. 1889.

Words on Wellington. The Duke—Waterloo—The Ball. By Sir William Fraser, Baronet. London: John C. Nimmo. 1889.

Mr. Hooper's Life of the Duke of Wellington belongs to the series of "English Men of Action," and is necessarily very compendious. It does not attempt to give any new view of the Duke—indeed, that is hardly possible. As a man, his qualities are so distinct and simple that it is difficult to make a mistake about them. As a general, there always has been and probably always will be some dispute as to his rank. Mr. Hooper is of those who would give him the highest. What he has to say about Lord Wolseley's criticism is worth quoting: "Lord Wolseley also asserts that if Napoleon had been the man he was at Austerlitz, he would have won the battle of Waterloo." This is a type of a good deal of military criticism which is a stumbling-block to the wayfaring man. The obvious reply is the one Mr. Hooper makes: "It is a pure hypothesis, and about as reasonable as one which might be framed thus: If Soult or Clausel, instead of Arabi, had commanded the Egyptian army in 1882, Sir Garnet Wolseley would not have won the battle of Tell el-Kebir."

Sir William Fraser's book is a gossipy collection of anecdotes about Wellington, supplemented by the account of the author's discovery of the room in which the ball of Brussels took place, with which the public has been already made familiar through the press. The reasons for identifying the historic ball-room with the old coach-maker's depot seem convincing enough, and the picture of the room shows that "Brunswick's fated chieftain" could not have sat within a "windowed niche of that high Hall," because the room was a low one (thirteen feet high), and, although the windows are deeply sunk in the wall, the lower edge of each recess is five feet from the floor. The Duke of Brunswick sitting in one of these would not have presented such a picture as Byron would have cared to immortalize. Sticklers for local accuracy in poetry may add, therefore, one more count to their already voluminous indictment against Byron. In the long run, the discovery of the old coach-maker's depot will probably not affect the poet's credit very much.

Sir William Fraser's book contains a number of good anecdotes, some of them well told, one at least very badly. This is the anecdote of Gen. Grant which has attracted so much attention. The author, instead of giving it once for all, in its correct form, gives, as if true, a grossly impossible story at page 79, which, he says, when he heard it, "fascinated" him, as well it might, and then at page 170 he gives, as

he says, with "regret," the real version. The first story is as follows:

"Gen. Grant was invited to dine at Apsley House by the second Duke of Wellington. A most distinguished party assembled to meet him. During a pause, in the middle of dinner, the ex-President, addressing the Duke at the head of the table, said: 'My Lord, I have heard that your father was a military man. Was that the case?'"

Having put this libel in circulation, the author, at page 170, after expressing, as we have said, his regret that he ever took the chance of spoiling so good a story by inquiring what really took place, coolly says: "I must now, in the interests of truth, state what the Duke told me happened." It seems that Grant, during the dinner, "kept trying to get him to say what was the greatest number of men that his father had commanded in the field." The Duke, with his well-known cleverness, added: "I saw what he was at. If I had said forty or fifty thousand men, he would have replied, 'Well, I have commanded a hundred thousand,' so I was determined not to answer his questions as to this, and I succeeded." It appears, therefore, that the Duke, because he chose to conjecture that Grant would be boastful and uncivil, was so rude as to refuse to answer a perfectly proper question addressed to him by a guest. The story does not shed any light whatever on the character of Grant. It might be told, however, to illustrate certain peculiarities in that of the second Duke of Wellington.

An anecdote relating to the iron shutters on Apsley House, which every one who has been to London has noticed, we have never seen before in print. The shutters were put up after the windows had been broken at the time of the Duke's unpopularity in 1832. Some years afterwards, when he was in great public favor, "a great crowd waited in Piccadilly, and gave him a tremendous ovation on his return home. The Duke took not the slightest notice of their cheering, but, just previously to entering his gate, he pointed with his right hand calmly to the iron shutters. He then took his hat off, with a mockery of gratitude, and entered his house."

The following is a good anecdote of George IV., though what it has to do with Wellington we do not know. When the news of Napoleon's death reached London, some official announced it to the King in these words: "It is my duty to inform your Majesty that your greatest enemy is dead." "Is she, by ——!" said the King.

There is much good reading in Sir William Fraser's book, and the subject is one in which the author has a personal and family interest through his father, who was one of Wellington's officers. It is injured by a certain tone of awe-struck admiration which, however proper as a matter of feeling, is not an aid to narration. In fact, it is the strongest proof of Wellington's greatness that one is able to read such a book without a sneaking desire to pull down the hero from the pedestal on which he is put.

The Scientific Spirit of the Age, and Other Pleas and Discussions. By Frances Power Cobbe. Boston: George H. Ellis.

THE article which names Miss Cobbe's new volume should be read in the light of her own admission in her preface that it is not intended for judicial discussion, but is avowedly a one-sided plea. She is writing, she tells us, "exclusively on the adverse side, and has left the glorification of the modern Diana of the Ephesians to the mixed multitude of her followers." With this understanding, the article is less preposterous than it would otherwise be, but it is still sufficiently removed from any fairness or fruitfulness to make us wish it had not been written. This style of writing may have its place in a young people's debating society, but Miss Cobbe has done too much good work to fall into it in her later years. Although she has appealed from so many current theological forms of thought, she writes of science with genuine theological rancor. She has taken a conspicuous part in the famous vivisection controversy, and has become so embittered by it that science and vivisection have come to be for her nearly synonymous terms. Whatever her theme, she gravitates to this fixed idea. Her arraignment is almost exclusively an arraignment of biological—we might say medical—science. Against our American practitioners in particular she brings a railing accusation, suggestive of the possibility that some cruel wag from this side of the Atlantic has been putting a joke on her. "An eminent American physician" is credited with the remark, "In my country the ardor of scientific research is rapidly overriding the proper benevolent objects of my profession. The cure of disease is becoming quite a secondary consideration to the achievement of a correct diagnosis to be verified by a successful post-mortem." One of the worst dangers which the student of science is, to Miss Cobbe's thinking, likely to fall into, is the adoption of materialistic views on all subjects. In this connection we have the arrant nonsense of the following passage:

"He need not become a theoretic or speculative Materialist—that is another risk which may or may not be successfully eliminated. But he will almost inevitably fall into practical Materialism. Of the two sides of human life, his scientific training will compel him to think always in the first place of the lower. The material (or, as our fathers would call it, the *carnal*) fact will be uppermost in his mind, and the spiritual meaning thereof more or less out of sight. He will view his mother's tears not as expressions of her sorrow, but as solutions of muriates and carbonates of soda and of phosphates of lime, and he will reflect that they were caused not by his heartlessness, but by cerebral pressure on her lachrymal glands. When she dies, he will peep and botanize upon her grave, not with the poet's sense of the sacrilegiousness of such ill-placed curiosity, but with the serene conviction of the meritoriousness of accurate observation among the scientifically interesting 'flora' of a cemetery."

One is strongly tempted to characterize such stuff as this by a certain British monosyllable which is now often heard among us.

An apparent atrophy of Darwin's taste for music and poetry as he grew old is made much of by Miss Cobbe. She returns to it again and again with eager satisfaction. A circumstance due wholly to Darwin's intense engrossment in special studies, and which the engrossment in metaphysics or theology has paralleled much more frequently than engrossment in science, is treated as if it were the inevitable result of scientific studies. Darwin's character, in full view of its limitations, did not do much to discredit biological science.

The other essays in this volume render the suspicion unavoidable that the habit of writing has with Miss Cobbe outlasted inspiration. Even the essay on "Reformed Judaism" smacks of the literary venture more than of a moral purpose. It raises the question whether reformed Judaism may not be made the rallying point of modern Theism, and gives a favorable answer; but it is much more likely that reformed Jews will rally to a Theism which has not avowedly a Jewish or Christian basis than that Theists of Christian antecedents will rally to a Jewish centre. The essays on "The Education of the Emotions," "Thoughts about Thinking," and "To Know or Not to Know" are more remarkable for the poverty of their invention than for anything else.

The concluding essay, "The Town Mouse and the Country Mouse," is much pleasanter than any other in the book. It discusses the relative advantages of life in the country and the town, and what can be said on either side is said very gracefully. But the discussion being limited to the opposition of a London clubman and an English country Squire, it is not particularly helpful to the average American. Six months of one and half-a-dozen of the other would seem to be a more rational solution than either to the exclusion of the other, if the country six months can be in one's own house. Six months of country boarding is not a consummation to be wished. It should be remarked that Miss Cobbe's "Country Mouse" is her own private mouse. She has no praise for the hunts and shootings which constitute for English country gentlemen much of the charm of country life. Had she gone into this she might have found more cruelty in sport than in vivisection. She has a word of protest against the pigeon-shooting at Hurlingham.

The Life of Sidney, Earl of Godolphin, K.G., Lord High Treasurer of England, 1702 to 1710. By the Hon. Hugh Elliot. Longmans, Green & Co. 8vo, pp. 425.

LORD GODOLPHIN, says his biographer, was "a man who was undoubtedly great, but who, as every reader of English history will admit, is much less known to the public generally than are most of his distinguished contemporaries." The political revolution by which Godolphin's administration was overturned, and Harley and St. John came into power, is one of the most picturesque and best-known incidents in the political history of England; but the personality of the man who was thus displaced from power, is, it must be admitted, an indistinct and shadowy one to most readers.

The character which Godolphin really bears as a statesman is, we think, that of a rather timid person, a man of detail, with no large policy and, indeed, deficient in strength and fixedness of principle. Sir Hugh Elliot has endeavored, and not without success, to shake this judgment. For the early part of Godolphin's career, we cannot say that the popular opinion is materially affected. The account here given of his early years and his public life through the reign of William III. confirms the common notion that he was a shifty, vacillating man, a good administrator, but with no positive attachment to either person or party or set of principles. An example is given (p. 158) in his acquiescing in a request of the Queen (Mary) in regard to certain pensions, in which the admission is frankly made that "for the sake of appearances he committed an act which he strongly condemned." From the time, however, of his reaching the highest station, as head of the Government during the greater part of Queen Anne's reign, there appears very little in his conduct to condemn. The author seems wholly candid and fair with his readers, and shows no disposition to extenuate; but the questions that arise at this period are rather in regard to judgment and expediency than right and wrong. The author's aim is to show that Lord Godolphin was not merely an able administrator, as is universally admitted, but a statesman of a higher type. In the war of the Spanish succession, he maintains that Godolphin alone discerned the true line of military policy in his scheme for coöperating with the insurgent Protestants of southern France, and that this plan would have conducted to

great results. In regard to the union with Scotland, the great legislative act of his administration, the credit is given to Godolphin of pointing out the method by which the end was accomplished, in his passage of the Act of Security. It was in this, we are told (page 283), "that Godolphin most signally displayed his greatness, and in which he outshone all his contemporaries, not even excluding the renowned Somers. It was not the destination, but the path to the destination, which he indicated and pursued, and which, in spite of every evil prediction, led to the greatest legislative achievement of the age—the English and Scotch union."

Another point of interest is in Godolphin's relation to Marlborough:

"History has been fond of placing Godolphin in a position very secondary to Marlborough, of treating him as a confidential agent or an honest and industrious head clerk who executed at home the policy which Marlborough directed from abroad. Marlborough's letters are a complete refutation of this mistaken notion. They afford a striking proof of Godolphin's intrinsic and independent value. Every line proves that Marlborough looked upon Godolphin as another self, as a person whose genius was as transcendent in politics as his own was in war" (p. 315).

The great importance of Godolphin's administration, apart from special events of war and legislation, is in the fact that it formed a period of transition from the mixed system of government, controlled by the personality of the sovereign, to the system of party government. This explains, too, we think, much of the inconsistency and apparent insincerity in Godolphin's career. We find some excellent remarks upon this point (p. 217), although its full bearing is not clearly pointed out. Godolphin and Marlborough made an attempt—the last of any moment—to govern without party. It failed; they were forced to associate themselves strictly with the Whig party, and from this time, with rare and short exceptions, the Government of England has been always that of a party. "He has been reproached with disloyalty to the Queen and to the Tory party, with timidity and with fickleness. He was, in fact, engaged in the futile attempt of balancing himself where all equilibrium was impossible."

Godolphin seems to have come to an understanding of the necessities of the case sooner than Marlborough: "Godolphin had long seen the fallacy of the scheme to which Marlborough still so closely adhered. He had abandoned it, and now every effort of his life was concentrated in reconciling the Queen and Marlborough to the Whigs." When the work had been completed, when the Godolphin administration had become a Whig one pure and simple, he was near the end of his power and his life. The Queen was by sentiment and conviction a Tory, and a Tory administration soon came in power. In the events which led to this change, in which Godolphin has been much censured, our author vindicates his dignity and clear-sightedness. Of an earlier crisis (1706) he says: "He loyally bore the odium which should have attached to his mistress, and we believe that to this day his honest attempt to shield her has had the effect of weighting his character with that charge of insincerity so loudly proclaimed against him by the Whigs" (p. 319).

This volume, readable and handsomely printed, nevertheless lacks essential aids to its use. There is no index, the table of contents is extremely meagre, and even the running-titles give very little assistance.

Caroline Schlegel and Her Friends. By Mrs. Alfred Sidgwick. Scribner & Welford. 1889.

MOST persons who have any acquaintance with the life and character of Caroline Schlegel would probably deem her a very unengaging subject for an elaborate biographical memoir. A woman who made trouble wherever she went, who was known in the circle of Goethe and Schiller as Dame Lucifer, who was notoriously lax in her relations with men, and who, withal, whatever her talent, did nothing the least memorable in a literary way, would hardly seem to deserve at this late date the handsome monument here erected to her memory. In short, we cannot help regarding it as a debatable question whether the work was worth doing; but if it was, Mrs. Sidgwick deserves the credit of having done it well; and if she does not compel sympathy for her unwomanly heroine, she at least gives a vivid picture of a curious episode in the history of German literature.

A short sketch of Dame Lucifer's career will suffice to show what manner of person she was. She was born in 1763, her father being Prof. Michaelis, a Göttingen Orientalist of some repute in his day. Her early letters suggest a talented coquette without high principle or steadfastness of character. In 1784 she married Georg Böhmer, a Clausthal doctor with whom she led a dreary existence for four years. Released from her captivity, as she called it, by the death of her husband in 1788, she returned with her children to Göttingen, where she captivated the young student A. W. Schlegel. Later, after living for a time with a brother in Marburg and quarrelling with him, she betook herself to Mainz, where her busy tongue helped to break up the household of the famous republican Georg Forster, whose wife, Therese Heyne, had been her intimate friend at Göttingen. Living in Mainz at the time of the French occupation, she identified herself with the Red Republicans, of whom Forster was a leading spirit, and was known to fame as Forster's "amie." At the same time, having failed to elicit a proposal of marriage from one Tatter with whom she had fallen in love, she resentfully decided to "amuse herself" by becoming the mistress of a certain Frenchman otherwise unknown to history. In the spring of 1793 she was imprisoned for her republican leanings, and suffered great indignities at the hands of her countrymen. Upon regaining her liberty a few months later, she found herself without resources, bankrupt in reputation, and an object of general aversion. From this extremity she was rescued by Schlegel, who had for some time been living in Amsterdam, where he was engaged as private tutor. Schlegel had repeatedly warned his recreant lady-love by letter to have nothing to do with the Mainz Republicans; but now, with a forbearance truly "romantic" (seeing that she was about to become a mother as the result of neglecting his counsel), he got a leave of absence, hurried to her relief, and placed her in retirement under the charge of his brother Friedrich, then a profligate student at Leipzig. It is significant for the character of the younger Schlegel that this woman in these circumstances exercised a decidedly elevating influence upon him.

Two years later, the elder Schlegel returned from Holland and made Frau Böhmer his wife *de facto*. After the lapse of another year, the pair were married in church from motives of policy, and settled in Jena, where for the next few years Frau Schlegel helped her husband in his literary labors, wrote a little occasionally on her own account, and kept open house for the coterie of the *Athenæum*—the Romantics, as Mrs. Sidgwick somewhat strangely calls them. By 1802 she had tired of Schlegel, and by general consent transferred herself to Schelling, the formalities of divorce and marriage following a year or so later at the convenience of the parties concerned. As the wife of Schelling she seems to have led an exemplary domestic life, and to have tried to atone for the aberrations of her stormy past. She died in 1809.

Mrs. Sidgwick's memoir is based upon the published collection of Caroline's letters and upon the well-known works of Haym and Brandes. It is written in a judicial tone, and takes pains to avoid a strenuous application to the Romanticists of moral standards which they deliberately rejected. Of this we certainly do not complain; but the simple truth is, when all allowances have been made that the indulgent muse of history may reasonably make after a lapse of nearly a hundred years, that Caroline and her friends, so far at least as concerns the period here portrayed, were a "sorry set," and no faithful account of them can be very delightful reading. At this distance in time, one could tolerate the sickening details of private life with very good grace if only these things were connected in some way with noteworthy literary performance. But such is not the case. Mrs. Sidgwick, indeed, devotes a chapter to 'Lucinde,' and another to the *Athenæum*; but 'Lucinde' is an insufferably silly book, of which its author himself soon became ashamed, and the *Athenæum* fell flat from the beginning, and died without perceptibly affecting public opinion or the course of German literature. The three volumes contain nothing that any one would now think of reading unless compelled thereto by some sort of duty.

The Federal Government of Switzerland: An Essay on the Constitution, by Bernard Moses, Ph.D. 12mo, 256 pp. Oakland, Cal.: Pacific Press Pub. Co. 1889.

THE author has here assembled in small space the fundamental ideas of central government as found, not only in Switzerland, but in important confederations of both hemispheres. In fact, so many details are given respecting the institutions of the United States, Canada, Mexico, and the South American republics, that one is inclined at times to look back to see if he has made sure of the title. This, however, does not detract from the value of the book. It is evidently an outgrowth of lectures on comparative constitutional history, and the matter thus brought into juxtaposition, especially the more unusual references to Spanish America, will be found useful to the student.

An historical introduction on the rise of Swiss Federalism is followed by a general chapter on Distribution of Power, in which ancient and modern instances are adduced to show that governments have a tendency to centralize in respect to locality, and to expand as regards the number of persons who control them. The parts devoted to legislature, executive, and judiciary are particularly full of details of other countries, though the remainder of the book, touching foreign and internal relations, army, finance, and general welfare, is devoted more exclusively to Switzerland.

The work does not invite much controversy, since it keeps closely to the matter found in the constitutions, often quoting entire sections, and follows the best commentators. It does not attempt to go outside of Federal Government, leaving local institutions for others. Two slight misstatements of fact should be corrected in passing. On p. 110, Mexico, Venezuela, and Switzerland are classed together as giving Senators and Representatives equal

terms—two years in the first two, and three in Switzerland—whereas the peculiarity of the Swiss upper chamber lies in the fact that not only are Senators paid by the States which send them, but the term of office is under State control, and varies from one to three years. On p. 197 the Government monopoly of gunpowder is made to realize "about 500,000 francs annually." The net income for 1888 was 165,905 francs, while in 1884 it was but 88,000, and the average for thirty years would not much exceed 100,000 francs. This, however, does not materially alter the author's comment that the undertaking is unimportant as a source of revenue.

A Treatise on Coöperative Savings and Loan Associations. By Seymour Dexter. D. Appleton & Co.

In this work Judge Dexter has done for the building and loan associations of this State what Wrigley did long ago for those of Pennsylvania. For while this system of coöperation, in its essential features, is the same in all the States, the statutes differ, and Wrigley writes more closely to the law of Pennsylvania, as Dexter does to the law of New York. Judge Dexter's book is very timely now that these associations are rapidly growing in number in New York. It is so easy to start a building and loan association, and so common for the majority of the officers of such an association to have only the vaguest knowledge of the system itself, that a little book of this kind, which discusses the subject clearly and concisely, must do a great deal of good. The manner in which these associations assist members to save money and to own homes is explained in simple language; the division of profits between the different series of an association is illustrated; statistics of the work of the associations in the different States are presented; and the very important subject of premiums, under the different plans in use for paying them, is discussed. Full directions are given about all the details of organizing, with instructions about keeping accounts, and there are copies of all the necessary blanks in the way of mortgages, assignments, notices of withdrawal, stock certificates, etc.

In regard to premiums, the author says: "The association should discourage the bidding of large premiums." That is, he would make the premium simply a measure of the competition for the money in the treasury, and not hold out the argument that the measure of an association's success is the size of the premium it secures. Of the different plans devised for paying the premium, the author gives preference to what he calls "the New York premium plan," which he thus describes:

"The borrower, at the time of his bidding, clearly understands that whatever premium he bids is in the nature of a bonus, and that the amount that he bids is deducted from his loan at the time; and he gives security to the association for $200 a share and pays interest thereon, and the whole premium transaction is closed."

This scheme he defends on the ground of its simplicity. But in every coöperative scheme the idea of strict coöperation should never be lost sight of. If a member of one of these associations pays a premium for a loan with the understanding that it is to run for about ten years, but finds it convenient to pay off that loan in five years, should not a part of his premium be returned to him? There is nothing unfair in "the New York premium plan," when the arrangement is understood in advance by the borrower. But should not cooperation be something more than merely "fair"? The plan of refunding a part of the premium to withdrawing members has been found to work well in practice, and the best way (in effect) to do this is undoubtedly to have the premium paid, not in advance, but in monthly instalments, as additional interest, which it really is. Judge Dexter himself praises this plan so warmly that it is somewhat confusing to follow him to his conclusion that "the New York plan" is the best.

BOOKS OF THE WEEK.

Acton, P. Songs and Sonnets. Longmans, Green & Co. $1.75.
Allen, Prof. A. V. G. Jonathan Edwards. Boston: Houghton, Mifflin & Co. $1.25.
Ashby, Dr. H., and Wright, Dr. G. A. The Diseases of Children, Medical and Surgical. Longmans, Green & Co. $6.00.
Bickford, L. H. A Hopeless Case. Chicago: Chas. H. Kerr & Co. 30 cents.
Biddle, H. D. Extracts from the Journal of Elizabeth Drinker, 1759–1807. Philadelphia: J. B. Lippincott Co. $2.
Billman, I. Bluebird Notes: Poems. Funk & Wagnalls. $1.50.
Bindley, T. H. Tertulliani Apologeticus adversus Gentes pro Christianis. Oxford: Clarendon Press; New York: Macmillan. 6 shillings.

NEW BOOKS.

European Schools;

OR, WHAT I SAW IN THE SCHOOLS OF GERMANY, FRANCE, AUSTRIA, AND SWITZERLAND. By L. R. Klemm, Ph.D., Principal of the Technical School, Cincinnati, Ohio. Vol. XII of "The International Education Series," edited by William T. Harris, LL.D. Fully illustrated. 12mo, cloth. Price, $2.00.

In this volume the author reports the results of a ten months' journey among the schools of Europe. Lessons which the author heard are sketched as faithfully as a quick pencil could gather and the memory retain them. The author saw the best that Europe could offer him, and in this volume he has pictured the best results, described the most advanced methods, and given a great number of valuable hints that will be serviceable to all teachers who wish to advance the standard of their work.

Great Leaders:

HISTORIC PORTRAITS FROM THE GREAT HISTORIANS. Consisting of eighty selections from the writings of Plutarch, Grote, Gibbon, Curtius, Mommsen, Froude, Hume, Macaulay, Lecky, Green, Thiers, Taine, Prescott, Motley, and other historians. With Notes and brief Biographical Sketches by G. T. Ferris, and sixteen engraved portraits. 12mo, cloth. Price, $2.00. [*Ready October 2.*

"Every one perusing the pages of the historians must have been impressed with the graphic and singularly penetrative character of many of the sketches of the distinguished persons whose doings form the staple of history. These pen-portraits often stand out from the narrative with luminous and vivid effect, the writers seeming to have concentrated upon them all their powers of penetration and all their skill in graphic delineation. . . . A selection of these striking passages in the great historians will serve, it is believed, a double purpose—first as a suitable introduction to these distinguished writers for those not acquainted with them, and next as a means of stimulating a taste for the study of history itself. . . . For these reasons this compilation will be found well adapted for the reading class in high schools and seminaries."—*From the Preface.*

The Structure and Distribution of Coral Reefs.

By Charles Darwin. With Notes, and an Appendix giving a summary of the principal contributions to the history of Coral Reefs since the year 1874, by Prof. T. G. Bonney. From the third English edition, just published. With Charts and Illustrations. 12mo, cloth. Price, $2.00.

The publishers have taken the occasion of a new English edition of this work to issue the first American edition, which is made specially valuable by the important additions by Prof. Bonney.

The Political Life of Our Time.

By David Nicol. 2 vols., 8vo, cloth. Price, $6.50.

"The author has read, he has thought, and he can write. . . . He writes with great good sense of the land-laws of the country. . . . He discusses intelligently the relations of labor and capital, of commerce and finance."—*Saturday Review.*

Recollections of the Court of the Tuileries.

By Madame Carette, Lady-of-Honor to the Empress Eugénie. Translated from the French by Elizabeth Phipps Train. 12mo, paper cover, 50 cents.

The inside view which these Recollections give of the Court of Louis Napoleon is fresh and of great interest.

"We advise every one who admires good work to buy and read it."—*London Morning Post.*

A Hardy Norseman.

A Novel. By Edna Lyall, author of 'Donovan,' 'We Two,' etc. Appletons' Town and Country Library. 12mo, paper cover, 50 cents. [*Ready September 28.*

"Edna Lyall stands apart from the crowd by reason of her high tone of thought, her good taste, and the development of character to which, quite as much as to the incidents and working out of their plots, the attraction of her novels is due."—*London Spectator.*

To All Who May Be Interested

IN THE

REFORM

OF

THE TARIFF.

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff, and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a blank form for filling in the desired information.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

THE WEEKLY POST,

NEW YORK.

THE STATUTE OF LIMITATIONS AND ADVERSE POSSESSION. With an Appendix containing the English Acts of Limitation. One volume. 8vo. Law sheep, 689 pages.

PRICE, $6.00.

A NEW WORK ON EXECUTORS AND ADMINISTRATORS.

A TREATISE ON THE LAW RELATING TO EXECUTORS AND ADMINISTRATORS. By Simon G. Croswell. One volume. 8vo. Law sheep. 853 pages.

PRICE, $6.00.

A NEW EDITION OF SCHOULER'S EMINENT TREATISE ON DOMESTIC RELATIONS.

A TREATISE ON THE LAW OF THE DOMESTIC RELATIONS: Embracing Husband and Wife, Parent and Child, Guardian and Ward, Infancy, and Master and Servant. By James Schouler, author of treatises on the 'Law of Personal Property,' 'Bailments,' etc. Fourth edition. One volume. 8vo. Law sheep. 847 pages.

PRICE, $6.00.

NEARLY READY:

A NEW EDITION OF PERRY'S AUTHORITATIVE TREATISE ON TRUSTS AND TRUSTEES.

A TREATISE ON THE LAW OF TRUSTS AND TRUSTEES. By Jairus Ware Perry. Fourth edition, embodying Relevant Cases down to Date. By Frank Parsons. Two volumes. 8vo. Law sheep.

PRICE, $12.00.

The new edition has been prepared by Mr. Frank Parsons, with the same care and learning which have so distinguished his editing of Morse on Banks and Banking, and Blackwell on Tax Titles. About eleven thousand cases are now cited in the work.

TEN THOUSAND A YEAR.

A NEW AND CHOICELY PRINTED LIBRARY EDITION OF SAMUEL WARREN'S FAMOUS ENGLISH NOVEL. With a portrait of the author, beautifully etched by F. T. Stuart. 3 vols. 12mo. cloth, extra, gilt top, $4.50; half calf, extra, gilt top, or half morocco, extra, gilt top, $9.00.

The author's valuable notes, elucidating many legal points in the work, are included.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 26, 1889.

The Week.

THE Iowa Democrats have for several years taken strong ground in their platforms upon the question of tariff reform, and this year they are even more emphatic than usual, showing that they share the increasing confidence which their party associates in other parts of the country are feeling in the strength of this issue. They also follow the example which is becoming general in Democratic platforms of declaring squarely in favor of the Australian ballot system. This is a practice which must cause Gov. Hill much uneasiness. A declaration in favor of a vague reform in election methods would not trouble him at all, for he professes to be in favor of something of that kind; but a specific call for the Australian system, which he says is a "mongrel foreign" one, and is hailed with delight by certain well-meaning people because "it comes from foreign shores and bears the approval of a monarchical government," must fill him with alarm for the safety of the pure American system which he and Tammany are so determined to perpetuate.

The temperance plank of the Iowa platform is a model of straightforwardness and clearness—so much so that it is virtually a new departure. It reads:

"Resolved, That in the interest of true temperance we demand the passage of a carefully guarded license tax law, which shall provide for the issuance of licenses in towns, townships, and municipal corporations of the State by a vote of the people of such corporations, and which shall provide that for each license an annual tax of $500 be paid into the county treasury, and such further tax as the town, township, or municipal corporation shall prescribe, the proceeds thereof to go to the use of such municipalities."

Compare that with the declaration of the New Jersey Republican Convention of Tuesday week in favor of "purity and temperance and the preservation of the home," and "such legislation as will most speedily and thoroughly eradicate the evil of intemperance." Iowa has at present a prohibitory law which is notoriously a complete failure in the cities. The Democrats make the direct issue of supplanting this with a high-license tax law, with a minimum tax of $500, with a local-option provision allowing any community to raise it by popular vote to any limit desired. This is the system of regulation which has accomplished in several Western States the best results thus far achieved anywhere. The New Jersey Republicans would have been both consistent and courageous if they had taken the same stand, for they were committed to the high-license principle, having secured the law embodying it which the Democratic Legislature repealed; but they abandoned their ground in the hope of catching some of the liquor vote.

A sign of the times which merits the attention of politicians is the series of "tariff-reform picnics" in Western States, particularly Indiana, Illinois, and Missouri, the last few weeks. The people gather at some central point from miles around, bringing materials for a substantial meal with them, and then listen to speeches in favor of a thoroughgoing revision of the tariff. Not less than thirty of these picnics have been held in Missouri the past month, and some of them equalled in numbers and surpassed in enthusiasm any meeting held during the Presidential campaign. Senator Vest and other speakers at these picnics report that the interest of the farmers and of the working people generally is something without precedent in their experience. The "campaign of education" is evidently under way.

The success of ex-Secretary Whitney's cruisers has been acknowledged in a very handsome way by his successor. The example ought to have some effect on the Republican newspapers which gave such awful accounts of the doings and designs of Mr. Cleveland's Cabinet. The Indianapolis *Journal*, for instance, which propounded the theory that President Cleveland's character and history justified the suggestion that the banks were making him presents of $10,000 checks for keeping the Government balances in their hands, ought, now that President Harrison is keeping nearly the same balance in the same place, to come forward and say it is sorry to have been so silly and malignant. This sort of confession often does the man who makes it more good than the man who receives it. The war waged on Mr. Cleveland by the Republican press was a disgrace to the American name, and can only be excused by the fact that it came from men who, when ousted from office, felt that they had been robbed of valuable property. It is not unlikely that when the next change comes we shall see on all sides better manners and more candor.

Both the retiring Commissioner of Education and his successor are profoundly impressed with the progress which the South has been making of late years in building up a good public-school system. Mr. N. H. R. Dawson, in his last annual report, says that the increase of enrolment in the schools of that part of the country over the increase in population "has probably never before been paralleled in a country so long settled"; that "the sentiment in favor of free schools supported by public funds is becoming each year more universally prevalent"; and that "the public-school systems of the Southern States have been undergoing an unprecedented development under laws adapted in each case to local circumstances, *and are now practically all established on a permanent basis.*" Mr. Dawson's successor, Prof. W. T. Harris, has returned from a tour through the South, and reports that "in the more thickly settled States of the South, notably South Carolina, Georgia, and Tennessee, popular education is making marvellous strides." Prof. Harris was particularly struck by the prevalence of the spirit of self-help: "the South is taking hold and helping itself," he says, after having been so long told by foolish Northern advisers that it must have help from outside. The statements of Mr. Dawson and Prof. Harris add further weight to the accumulating evidence that any scheme for Federal aid to education in the South is unnecessary and must be mischievous.

The Republican party continues to visit its wrath upon its members who reveal family secrets. Mr. Ainsworth, who told the truth in the New York Assembly last winter about the ceiling scandal, has failed of a renomination, though the chances for the return of the leaders in the job which caused the scandal are said to be good. It will be remembered that Mr. Ainsworth was chairman of the Appropriations Committee, and conducted the first investigation of the ceiling expenditures. In a speech on the floor of the Assembly, in explaining his report, he made the following statement:

"We all know that politics was here last year thicker than the panels above us in this ceiling. And the only reason a commission was attached to this bill was for the simple purpose of taking care of the politics that was in the job on the eve of a Presidential election. Isn't that true? It was an unwise thing to do it. We ought not to have done it. We ought to have left it in the hands of Commissioner Perry, and let the politics take care of itself, and we would have had a Democratic President instead of a Republican if we had done it."

This very frank admission that if an honest ceiling had been built, Cleveland would have been elected President instead of Harrison, sealed Mr. Ainsworth's fate. He tried to explain away the speech, but it had been taken down by the official reporter and could not be suppressed. He has been thrown out of the party now, in accordance with the same inflexible moral code which has decreed that John J. O'Brien should be expelled because he put into his pocket the good Republican money which was given to him to buy votes with.

The last batch of postmaster appointments by the President contained that of Howard Wells, at Rock Island, Ill., vice August Huesing, removed. When Mr. Cleveland became President, he found the Rock Island office filled by C. W. Hawes, a Republican, who had been appointed by President Arthur only a few months before, his commission dating from July 4, 1884. Mr. Hawes was allowed to serve out his four years' term, and a little more, his successor not being installed until September 13, 1888, when a Democrat, August Huesing, was appointed. He retained the employees whom he found in the Post-office—three Republicans and two Democrats—and, as far as can be learned, has conducted the office in an efficient and unexceptionable manner. He is an excellent business man; has given the office his undivided atten-

tion; is a director in the People's National Bank, and some ten years ago was elected Sheriff of Rock Island County (which was Republican by 900 to 1,000 majority) by 465 majority, and conducted the office with ability and to the general satisfaction of the people. Mr. Huesing's term would not expire until September, 1892, but he is removed in September, 1889, without any reason except the fact that he is a Democrat, and the Chairman of the Republican County Committee is appointed in his place. Shortly after his inauguration Gen. Harrison was quoted as saying that "we must do at least as well as Cleveland did" in the matter of allowing officials to serve out their terms, but he long since gave up all pretence of trying to do so.

The Minneapolis *Journal*, a Republican newspaper which is not edited by an office-holder, tells the truth about the present condition of civil-service reform, and the man who is responsible for it. Referring to the outbreak in the Republican party against the reform, in which the Congressman from the Minneapolis district has been conspicuous, the *Journal* declares that "there never was a time when the Civil-Service Law was more generally unpopular and more publicly condemned by those whose party is pledged to its support and extension." While the *Journal* hardly expects to see the Republicans in Congress go to the extent of repealing the Civil-Service Law, it confesses that there is manifestly no purpose to carry out the pledge of the Republican national platform, that "the spirit and purpose of the reform should be observed," with anything like an honest purpose to make it a complete success. Whether or not this pledge shall be redeemed, the *Journal* holds, depends upon Mr. Harrison.

The country still waits to learn what candidate for the vacant office of Commissioner of Pensions shall have the "advice and consent" of the Grand Army of the Republic, and in consequence shall be named for the place by the obsequious servant of this organization who signs commissions. This is no "slander of the Mugwump press": it is the frank confession of Republican organs. The Washington correspondent of the New York *Press* reports that the President of the United States defers making any appointment, because "the President persisted that *he desired a man who had the unanimous endorsement of the G. A. R.*" It seems difficult to understand this prolonged delay of the Grand Army Machine to inform Gen. Harrison whom he must appoint, when there is one man who has "claims" which plainly outweigh all the rest. This is Gen. William W. Dudley. He believes thoroughly in Tannerism, which it is insisted must be maintained, but he has not Tanner's one fault of talking too much. He represents the Grand Army Machine, and believes that there should be no concealment of that Machine's purpose to run the Government, so far as it has any interest in the workings of the Government. He has had experience in the office, having been appointed to the place by Garfield in June, 1881, as a reward for his services in carrying Indiana for the Republicans in the election of 1880. He has put Harrison under far greater obligations than those which compelled Garfield to turn out a most efficient Pension Commissioner of the same party and give him the place in 1881. He was just as much entitled to the Commissionership of Pensions, according to the standards of the Harrison Administration, as Wanamaker was entitled to the Post-office Department. "By rights" he ought to have had the place last March. There is absolutely no good reason why he should be kept out of it now that it is vacant.

The report that the Republican State Committee of Ohio have invited Tanner to take the stump for Gov. Foraker is almost incredible, although the Governor has, with his customary recklessness, plunged Tanner as an issue into the Ohio campaign. Before Tanner's removal Foraker had been denouncing all attacks upon his pension policy as springing from Democratic hatred for Union soldiers, and as being, therefore, beneath any Republican's serious attention. The news of Tanner's removal came while Foraker was in the midst of a campaign speech, and was such a blow to what he had been saying in previous speeches that he was naturally somewhat irritated by it. He broke forth at once into the following "impassioned" view of it:

> "That good, gallant, and most-beloved no-legged soldier, Corporal Tanner, has been removed from his position, for what reason we know not, but we propose, and are going, to know why he was removed. If Tanner does not go back, I want a man put in his place who will carry on business in the same style. It is evident that an obscure member of the Cabinet, who was never heard of before his elevation to that position, has been instrumental in removing Mr. Tanner from office."

The astute editor of the Cincinnati *Commercial Gazette* is suspected of discovering the inflammatory character of this passage when it came to him in the Governor's speech; at all events, it did not appear in the report of that speech published in his paper of the following day. It did appear, however, in other papers, and has caused great anxiety, chiefly because the "obscure member of the Cabinet" alluded to by Foraker has a millionaire brother living in Ohio who has hitherto been a heavy contributor to Republican campaign funds. Efforts have been made to deny that Foraker said what is attributed to him, but the production of a number of affidavits from persons who heard his speech has prompted him to admit that he used substantially the language quoted. If Tanner, whose mouth is said officially to have been so destructive to his own interests as to cause his removal, joins forces on the stump with Foraker, whose mouth has also a national reputation for dangerous explosiveness, there will be a campaign in Ohio which will be worth following.

Every good soldier who is honest about it will frankly admit that there were a great many men in the Union Army who were cowards and sneaks and bummers, and that these men are, as a rule, the most urgent in demanding pensions. The editor of the Portland *Oregonian*, the leading Republican paper of Oregon, who served in the Union Army, declared some time since in the columns of that journal that he knew of his own knowledge that, "since the passage of the Arrears of Pensions Act, about every shirk and utterly worthless veteran of his brigade has been a successful applicant for a pension." In one case a wagoner who lost his leg by tumbling off his team while helplessly drunk, got a pension on the plea that he had lost it in action with the enemy. In another case a man swore to having received injuries in a battle at which he was not present, and described his regiment as supporting a battery, when it was in a thick wood distant half-a-mile from any artillery. In several instances within the editor's knowledge, men who escaped from service by shooting off their fingers have received arrears of pensions as if for honorable wounds. In one case a New England merchant worth at least $50,000, who never was in action, and who resigned after less than three months' service, has mortified his decent comrades by trying to get a pension, on the plea that he could trace his present condition of imperfect health to a catarrh he suffered from while in service.

Mr. Bryce, the publisher of the *North American Review*, last week had a printer committed for trial for offering to sell his subscription list to the *Forum*, a competing magazine, which handsomely informed against the offender. This is the crime which Messrs. Quay and Clarkson tried to commit against the *Voice* during the last Presidential canvass, but nothing was ever done to bring them to justice, though the *Voice* threatened it for some time. Clarkson is now figuring as Assistant Postmaster-General, and delighting the Boys by the enormous number of Democratic postmasters he has removed, instead of being brought up, as he ought to have been, for grand larceny. As to Quay, it would be ridiculous to pursue him for larceny until he has answered that charge of the Philadelphia *Press* of having done something to the State Treasury before which "Republicans would stand dumb." We have several times tried to get the *Press*, and even our esteemed contemporary the Philadelphia *Ledger*, to say what they thought this offence of Quay's was, but they also "stand dumb" about it, and Quay's fame and power in the meantime continue to grow.

The reinstatement of Dr. Sherer in the place as Government chemist from which ex-Secretary Fairchild dismissed him with opprobrium, almost completes the righting process which Mr. Fairchild left for his successor. We doubt, judging from the report of an interview with him in Sunday's *Herald*, whether Mr. Fairchild understands to this hour what was the fault which fair-minded men found with his treatment of Dr. Sherer. It was that on the faith of a ridiculous report made by a paid

and untrustworthy detective in a field with which he was not familiar, he (Mr. Fairchild) not only made a violent attack on Dr. Sherer's character in an official report for which he could not be called to account in a court of law, but followed it up by disgraceful dismissal without trial from a salaried place. This was as gross an abuse of power as ever was perpetrated in time of peace. What Mr. Fairchild would now do, if he understood his position and wished to vindicate himself in his action towards the Sherers and others, is to produce even two or three impartial and intelligent men who do not consider the Byrne report a ludicrous document, and the Secretary's mode of directing Byrne's inquisition un-American, unlawyerlike, and unfair and unconstitutional.

Vermont and New Hampshire are both very anxious to increase their population, which is steadily dwindling outside of a few cities and large towns. Organized efforts are making in each State to bring in people from outside to cultivate the abandoned farms, and it is even proposed to send to Sweden and Norway for immigrants. But why is the most obvious source of supply overlooked? There are tens and hundreds of thousands of negroes in the South who want to leave their present homes, and whose white neighbors want to have them leave. There is serious talk of a movement to transport them in large numbers to the Territories in the Northwest which cover the same degrees of latitude as Vermont and New Hampshire. Why not invite them into New England, and, if they need help to get there, raise money to bring them? New England is perfectly sure that it understands how to solve "the negro problem," and nothing would help the country so much as to see a couple of New England States furnish an object-lesson by filling up their dwindling towns with negroes, doubling the length of the scant school rolls with the names of negro children, turning over to negro postmasters the offices of the pleasant summer resorts in the White and Green Mountains which correspond to such places as Bay St. Louis and Ocean Springs on the Gulf Coast, and generally giving the negroes that perfect equality which they are denied in the South. There ought to be "money in it" to satisfy Yankee thrift, and, quite aside from pecuniary considerations, the chance to show the rest of the nation how perfectly simple any question is when a New Englander tackles it is too good to be lost. Let us hear no more about New England trying to tempt Norwegians and Swedes across the ocean when there are any quantity of negroes within twenty-four hours' railroad ride ready and anxious to come.

There was an unpleasant suggestion made to a reporter on Thursday by a gentleman who is supposed to enjoy "inside" views of city politics, that the proposal to take a slice of the Park was not seriously made, and was to be withdrawn as soon as it had drawn the fire of public disapproval, and that its failure was then to be made an argument in favor of more extensive territory immediately above the Park, which was, when the Exposition was over, to be expropriated and added to the Park, thus doubtless relieving a good many owners of lots in that vicinity of burdens too grievous to be borne and bettering the property of others. We do not know whether there is any foundation for this story or not, but we must express the earnest hope that none of the Committee will do or say, or allow to be done or said in their behalf, anything which will give the public the impression that there is a real-estate ring behind the Exposition. The non-political members will do well to keep this in mind. It must be remembered that Tammany, which is deeply interested in the scheme, has always been noted for its passion for real estate. All its great chiefs have made fortunes in uptown lots. To say nothing of Tweed, John Kelly, who for thirty years had no calling, died the possessor of whole blocks of Harlem property. The public has not forgotten these things. We must have no odor of this sort about the Exposition, and one way to prevent it is to avoid all indirection in communications made to the public, and all appearance of keeping back anything. It seems a great pity that the Committee on Sites cannot make up their minds to go right out to the Harlem River, where they can get all the open space needed close on the water, with limitless facilities for transportation. If they continue talking of attacking the Central Park, or of fiddling with Park lots, we venture to predict they will raise enough hostility by next January to put in peril the whole scheme of an Exposition in New York.

The unfortunate stockholders of the London dock companies are now at last beginning to make themselves heard. The theory of the philanthropists who egged on the strikers and sent them subscriptions was, as usual in such cases, that they were helping a large body of poor men to resist the tyranny of a bloated corporation. The solemn truth is, that they were insisting that a body of poor people who had invested their savings in docks should support for an indefinite period a large body of "casual" laborers, for whose presence in the city and for whose hardships they are no more responsible than Cardinal Manning. When the docks were first made, they were considered a good "widow and orphan" investment, and large numbers of poor women and professional men invested their little all in them. On this class the fall in the shares has come with terrible severity. The London Dock Company has of late only paid 1 per cent., and the East and West India Docks nothing at all. When trade began to revive, these poor stockholders began to hope that better times were in store for them, when suddenly John Burns and Cardinal Manning and other philanthropists appeared on the scene and told them the wages they were paying were shamefully low, and that they must support some thousands of "casuals" now in London in greater comfort, and at the same time make some provision for others still to arrive from the country. To the question whether the burden might not be shared by other classes who were better off, the answer was no, that the casuals lived round the docks and liked the work of unloading ships, and preferred being taken care of by dock stockholders, no matter how poor they were.

So many reballotings will be necessary in the French elections that the size of the Government's majority is still uncertain, but that it has a working majority there appears to be no doubt. The despatches tell us little or nothing as to the fate of the purely Boulangist candidates—that is, of candidates nominated avowedly as followers of Boulanger. Their success has apparently been but small. The great bulk of the Opposition consists of Bonapartists and Legitimists, who as a rule worked together, on the principle of anything to overthrow the Republic. The result of the election, should the present calculations prove correct, really sets the Republic on its legs for an indefinite period. No other Government, since the Revolution of 1789, has received a similar vote of confidence at the end of twenty years' trial. On the contrary, each of them has, at the stage of existence which the Republic has now reached, proved ripe for destruction. The probabilities are, too, that the issue submitted to the electors having been virtually the overthrow or perpetuation of the Republic, the majority now returned will be more homogeneous, and, for the present at least, more disposed to work together than any that the Ministry has had to depend on for many years back.

The contest between the Republic and Boulanger would have been an ignoble and humiliating one for the Republicans, if it were not that the Bonapartists and Legitimists had made common cause with him. Both Prince Victor and the Comte de Paris issued manifestoes in which they advised their following to support the Boulangist candidacy on the ground that it would help bring about a revision of the Constitution. They each have a curious confidence that revision will be sure to bring him good luck. Prince Victor's theory is, that an appeal to universal suffrage would lead to the reëstablishment of the Empire as the true and only democratic government, while the Comte de Paris is equally confident that if the country wants a monarch at all, it will take him. Each, too, expresses absolute confidence that, if he were put on the throne, French troubles would cease, and the new form of government become permanent. But it is difficult for any one who knows the history of France during the last hundred years to read their proclamations without a smile, there is such a Cheap-Jack air about them. Boulanger was plunged in great perplexity as to the effect on his fortunes of his continued absence from the country, and tried to counteract it by offering to come home and stand a trial by court-martial; but this of course the Government would not heed.

THE SCANDAL PROSPECT.

SHREWD, though doubtless cynical, observers are beginning to say that the present Administration will produce a crop of scandals which will place it fully on a level with Grant's second term, of unsavory memory. The air is already, in the first six months, full of signs pointing in that direction. In the first place, Gen. Harrison fatally weakened himself on the moral side by giving Wanamaker a place in the Cabinet after having been fully informed of, and asked to investigate, this worthy's attempt to obtain, by a corrupt consideration, a very large sum of money for campaign purposes from the Pacific railroads in the last week of the campaign. In the next place, a candidate who comes into the Presidential chair by an enormous expenditure of money, through a man of notoriously bad character like Quay, on the tariff issue, is mortgaged to the corruptionists from the beginning.

We mean nothing offensive to honest supporters of the protectionist theory when we say, that the chief supporters of a high tariff must of necessity be men to whom the tariff is an investment, and who will, therefore, defend it, as they would defend any other kind of property, by all the means within their reach. If they cannot get rid of their assailants in any other way, they will buy them off, and thank God they have the means to do it. In other words, a high tariff is sure sooner or later to beget corruption on a great scale. It means definite gain or loss in dollars and cents, to a few rich men, and they will therefore always, as long as human nature is what it is, meet arguments against it by checks in its favor. Our tariff is defended in this way, and will be as long as it exists, and the result is naturally and inevitably the diffusion through the whole body politic of the money view. It introduces the money standard into every public office and puts a price on every vote, and brings into prominence as politicians all the moneyed men of the country *quâ* moneyed men. The consequence is, that Gen. Harrison's Cabinet meetings and consultations during the last six months have really been attempts to satisfy his creditors, the wool-growers and manufacturers, who set him up in business and now want a first dividend. They expect him to pay 100 cents on the dollar, but will take it in instalments. To this state of things we owe the attack on the surplus through Tanner. That Tanner was put in the Pension Office to dissipate the surplus, and so destroy one of the leading arguments for the reduction of the tariff, is, we presume, now believed by nine-tenths of the voters. A shrewder man than Gen. Harrison—Blaine, for instance—would, perhaps, in like circumstances have done the same thing, but he would have done it in a more discreet way. He would not have selected for the work a noisy blatherskite like Tanner, but some quiet, canny lawyer or business man, like Maynard, for instance, who would have eaten into the surplus, on the white-ant plan, without alarming the public.

So, also, a shrewder man, in Gen. Harrison's place, would not have made his chief lieutenant in New York a man like Platt, who was an object of universal ridicule and contempt in 1880, whose capacity as a jobber is notorious, and who is not and never has been associated in the public mind with any politics but corrupt politics. Of course it is as certain as anything of the kind can be, not only that Platt will plunge the Administration into scandals, but that the public will be on the lookout for a scandal whenever they catch sight of Platt. Of this the selection of the Custom-house site is a fair example. That the Bowling Green has been chosen, in spite of the protests of the great bulk of the merchants—that is, of the parties most interested—in order to forward a real-estate speculation in which Platt and Elkins and other Republican jobbers are interested, is to-day the general belief in this city. There is nothing in Platt's career to upset this belief. On the contrary, everything that is known of his history goes to confirm it. He probably would not be the least ashamed of it if it were proved against him in open court to-morrow. In fact, he would probably chuckle over it as a revelation of his smartness.

The sudden raising of duties by appraisers on various articles, in defiance or evasion of the decisions of the courts, was, it is true, an abuse started covertly under the late Administration, but it is being carried on with the utmost boldness by the present one. That the Custom-house here is being managed for purposes of this sort by a set of politicians, among whom Plummer and Platt are the chiefs, for the direct purpose of helping their own private business, is also generally believed, and there are things occurring every day to confirm this belief. There is, in short, every possible sign that the Administration has surrendered the Custom-house and the Pension Bureau to its creditors to enable them to recoup themselves for advances made during the late campaign; and one of the most important of these signs is the gross disregard of his pledges displayed by President Harrison in the selection of his subordinates. President Cleveland gave way to the spoilsmen, it is true, but he did not do so without a struggle, and until he had been two years in office. Gen. Harrison has done so without a moment's delay and without the slightest resistance.

What is, perhaps, most painful in the situation is the exhibition the President is making of that most sorrowful, and only too frequent, phenomenon of our day, the possession of a double conscience, one for the church and the Sunday-school, and another for politics and business. The calm and publicity with which a great many men of his type work this curious moral machinery, is puzzling as well as startling, and suggests the existence of some hideous break in the hold of our modern religion on conduct, which the Church has not as yet managed to discover and deal with. And yet we assert that it is at this moment doing more to sap the faith of the younger generation in Christianity than all other influences combined.

ADVANCES TO DISBURSING OFFICERS.

THE advancing of funds to disbursing officers of the Government, about which there has been so much said in connection with Secretary Windom's recent explanation of the increase of the public debt, constitutes one of the most memorable bones of contention known to the Treasury Department. There was no room whatever in the original Treasury scheme for anything of the sort. The act establishing that department assumes all the way through that a warrant drawn on the Treasurer by the Secretary for the payment of money will be based on an account settled and certified by the Comptroller. But everybody knows that Hamilton, nevertheless, advanced moneys whenever he considered it expedient, and for so doing was most virulently assailed by the Democrats of his day. In his long and interesting "Explanation" (to be found on page 81 of volume 7 of Mr. Lodge's Life), Hamilton frankly confessed that if the proper appropriation act had been passed, he considered it justifiable, as well before as after the service was performed or the supply obtained for which the fund was designed, to make disbursements from the Treasury for the object, if it appeared safe and expedient so to do. Such a course, one can see, was necessarily taken for the good of the service, but surely it was liable to great abuse, and a careful man would have urged Congressional sanction for such a power. The committee of investigation appointed by the House of Representatives inquired very closely into all these matters during the Administration of Jefferson. Gallatin informed them that a custom had prevailed before he became Secretary of paying moneys out of the Treasury not only in advance of a settlement by the auditors, but even of an appropriation by Congress. The Secretary used to write a simple letter directing the Treasurer to pay, and the irregularity was afterwards corrected by securing an appropriation and drawing the formal warrant.

Under Gallatin many of the safeguards were erected which still exist, restricting the discretion of Treasury officials and others in making advances. In 1823 it was enacted that "no advance of public money shall be made in any case whatever." But it was provided that "under the special direction of the President" such advances should be made to the disbursing officers of the Government as the faithful and prompt discharge of their duties and the fulfilment of the public engagements might require. A case arose in 1843 (Williams vs. The United States) calling for a construction of this law. The sureties of the Marshal of the District of Columbia maintained that they were not liable for the large sums due from their principal, because they had been advanced him without the special direction of the President. It was proved, however, that the President had given directions in writing a short time after the act was passed, specially authorizing the Secretary of the Treasury to make proper advances to various classes of disbursing officers—marshals and others

—and the Supreme Court held this sufficient. The language of the decision is worth quoting:

"While it has been doubtless the object of Congress *to secure economy* and regularity in public disbursements, and for that end *to limit*, as far as was proper, *the discretion* of subordinate agents over the public money, it never can be reasonable to ascribe to them a conduct which must defeat every beneficial end they could have had in view, and render the Government an absolutely impracticable machine."

It is generally supposed that prior to the year 1853, when President Pierce furnished a list of officers to whom advances might be made, special directions issued from the President in each case, in literal execution of the statute. But this old case which we have cited turned upon the proof of a similar standing order of the Executive issued in or about 1823, which was among the papers destroyed in the burning of the Treasury. The contents were, under these circumstances, shown by clerks acquainted with them. President Pierce, however, attached a most important limitation to his standing direction. "In no case," he enjoined, "where the agent is to give security, shall the amount in his hands at any one time exceed the amount of his security."

Though subsequent Presidents have modified Pierce's order by including officers not known in his day, this restriction has stood unchanged, and forms the very groundwork of the function of the accounting officers in countersigning requisitions for advances. Comptroller Lawrence especially observed it and continually harped upon it. Every officer, whether stationed in the departments or elsewhere, who disburses public moneys usually gives bond with security. Their requests for advances are scrutinized by the comptrollers in order to determine whether the amount asked for added to the amount at the time in their hands exceeds the penalty of their bonds. This is not always done. It cannot, indeed, in all cases be done, for the very good reason that as the same officer frequently deals with several auditors, and there is no general registry where all balances are brought, it is impossible to determine how his accounts stand. The same disbursing agent may draw the same day requisitions which will go through different hands and be subjected to no intelligent scrutiny, for the reason that each comptroller is distinct from the other, and neither has full means of determining the condition of affairs. But it is true, notwithstanding, that the head of the Treasury Department, under the law and executive orders, is prevented from making advances beyond what is "necessary to the faithful and prompt discharge" of the duties of these disbursing agents, and that the penalty of the bond is the guide. In no case should that be exceeded. If he has no proper means of keeping the check of the accounting officers upon these agents, by reason of a faulty or deranged internal system, it is plainly his duty to bring about, by his own efforts or by the aid of legislation, such a change as will enable him to retain his peace of mind when he attaches his signature to the countless warrants placed before him.

MORE ABOUT THE SITE OF THE FAIR.

If we are to have the Fair in New York, time is of the last importance in making the preparations. In fact, the Committee ought to be able to go before Congress in December or January and say: "We have an organization; we have a suitable site all ready; we have the hearty support of the people of the city and State, and we have a reasonable prospect of so much money. We ask now the pecuniary aid of the National Government, and its sanction and support for the invitations we shall address to foreign nations."

As matters stand at present, what the Committee seems likely to have to say to Congress is this: "We have an organization, and some hope of some money. We cannot yet say how much. We have no site, but we shall have a tolerably good one if we succeed in repealing an act of the Legislature which forbids our occupying the Central Park, and if we can come to terms with some eight hundred owners of real estate outside the Park. To the repeal of the statute we shall, it is true, encounter the fierce opposition of probably three-fourths of the inhabitants of the city, and perhaps that of the Governor; and the arrangement with the private owners for permission to occupy their land will be a task of enormous difficulty, and will take a great deal of time—probably all the time we have for preparation. The sooner Congress makes us a very large appropriation, therefore, the better, for we shall probably need it to buy up the Legislature and settle with the real-estate men."

The extraordinary haste, not to say levity, with which the Committee fixed on the site has been substantially admitted by their principal organ, the *Times*, on Tuesday. It shows that they have marked out for themselves fully twice the space taken for the Paris Exposition, and that two-thirds of this was selected where they must have known the choice would excite violent, if not fatal, opposition—the Central Park. Their attention for the last three or four days has been confined to meeting the objections to the invasion of the Park; but on discovering how formidable this is, they have at last asked themselves the question which they ought to have asked in the beginning, "What have we got outside of the Park?" Well, what they have appropriated in their mind's eye outside the Park besides the Riverside and Morningside Parks, is a large number of vacant lots, the property of private individuals, to the value of $48,000,000, and they seem actually to have assumed without asking that the owners of these would lease them to them for a trifle. This of course is in the highest degree improbable. The great bulk of these owners are doubtless more or less burdened by these lots, and only too eager to make something out of them that will help them carry them while waiting for a sale. If the Committee want them, they will unquestionably have to pay high prices for them, whether they rent or purchase them. Some owners will very likely refuse either to rent or to sell, and the most curious feature of the situation is that the refusal of a single owner, occupying a central position, would stop the enterprise. Each of these 800 owners, in fact, would hold the *liberum veto* of the Polish Diet. That this simple, obvious, and most important fact has at last dawned on the minds of the Committee the article in Tuesday's *Times* shows. Assuming that the Committee would manage to do without the whole, and content itself with a narrow strip north of the Park held by 125 owners, the *Times* says:

"One of the most serious problems with which the Committee on Site must contend will be that of securing this or any other territory in the neighborhood of the Park. With unlimited funds at hand it would, of course, be easy to acquire as much property as might be needed outright by purchase. With everything financial thus far in the air, the question is beset with vexatious possibilities. It is hardly to be hoped that 125 owners could be brought to one frame of mind in respect to a matter affecting their material interests. If their property were not to be purchased from them, it is quite conceivable that they may not all agree to pass it over to the managers of the Fair to do with as the managers may like for the next four years."

The proposed mode of dealing with this difficulty has the same air of mingled eccentricity and levity. The Tammany Corporation Counsel has, we believe, given an opinion that lots might be "condemned" for the use of the Committee and bought at an appraisement, and the *Times* tells us that Mr. W. E. D. Stokes, the Secretary of the Committee on Legislation, "thinks that the Legislature can authorize the appraisement and condemnation of all the land the Fair may require, and that it can then be bought in in the usual way." This is worthy of a Youngster in a Republican newspaper office. The Legislature can take no man's property except for "public use," and the use of a fair got up by a private association to celebrate the discovery of America is not "public use," *pace* the Tammany Counsel. If a man's property could be taken for a large fair, it might be taken for a small one, and we might any of us be legislated out of house and home if any of our neighbors wanted to hold a "fair" on our land. Of one thing the Committee may rest assured, no owner of land who does not wish to surrender it to the Exposition will sit down under this exposition of the law either by the learned Mr. Clarke or the sanguine Mr. Stokes. He will fight their interpretation of "public use" tooth and nail up to the Court of Appeals, and we venture to say no lawyer of repute doubts that he will win; but, win or lose, the litigation would work fatal delay. And then consider for a moment the time necessary for negotiation with 125 greedy owners, each anxious to make what he could out of the occasion.

The apparent failure to consider all these points, combined with the recent great activity in the enterprise of the eminent Tammany contractor and politician, Mr. Crimmins, is leading thousands to ask with increasing earnestness whether the enormous appropriation of land outside the Park, covered with these difficulties, was ever seriously meant; whether in fact the real design all along has not been to select an unnecessarily

large area, part in the Park and part out, and then plead the obstacles to the use of the outside tract as an excuse for a larger encroachment on the Park, until the whole was absorbed; or whether the talk of "condemning" property for the use of the Fair is not really meant to prepare the public for its condemnation for the use of the Park, which even if unnecessary would be legal, and at any rate would relieve a good many owners of unsalable lots at good prices, and run up the value of a good many others. At all events the whole site, with its rocky eminences, numerous sunken lots, with the vast prospects of dumping and excavating thus afforded (filling up the Harlem Mere is part of the scheme), with its jaunty indifference to public opinion, its violent changes of sentiment on the part of some of its prominent advocates, bristles with suggestions of hidden impropriety which are finding very unpleasant lodgment in the public mind, and which the members of the Committee ought for their own sakes to make an effort to dissipate.

It ought not to be forgotten—and we do not offer it as a suggestion, but as a memorandum—that the city owns large open spaces, notably Van Cortlandt Park and Pelham Bay Park—each ready for occupation for any purpose; that they can be had at once for the purposes of the Fair, without cost, without negotiation or litigation; that all the money which would be spent in buying out the Harlem lot-owners or tearing the Central Park to pieces, might at Van Cortlandt Park be spent in providing means of communication to any desired extent, which would retain their value after the Fair was over; that the "noble buildings" which are to be put up and all other improvements made for the Fair might there be retained permanently, to the public advantage and the advantage of the neighboring property-owners, and that under this arrangement the Committee could go to Congress in December and say that it had its site ready and had the people of New York at its back.

COURAGE IN POLITICS.

THE St. Louis *Republic* prints a letter from ex-Senator Ross of Kansas, now a resident of Deming, New Mexico, regarding his course in voting for the acquittal of Andrew Johnson twenty-one years ago. The letter is full of interest, both as recalling one of the most important crises in our national history, and as shedding light upon the character of the man whose vote turned the scales when the future of the Government was trembling in the balance. The future of the Government, we say—for it is now generally conceded by thoughtful students of our institutions that the success of the impeachment scheme would have worked an irrevocable change in the character and operation of the system established by the Constitution. That system was based upon the division of all powers between the executive, the legislative, and the judicial departments, and was intended to secure the independence of each department within its proper bounds. The controlling minds in the Convention which framed the Constitution were especially impressed with the necessity of securing the independence of the Executive. "Experience," said Madison during the discussions, "proves a tendency in our governments to throw all powers into the legislative vortex. The executives of the States are in general little more than ciphers; the legislatures omnipotent. If no effectual check be devised on the encroachments of the latter, a revolution will be inevitable." In the same vein Hamilton wrote in the *Federalist*:

"The tendency of the legislative authority to absorb every other has been fully displayed and illustrated. In governments purely republican this tendency is almost irresistible. The representatives of the people, in a popular assembly, seem sometimes to fancy that they are the people themselves, and betray strong symptoms of impatience and disgust at the least sign of opposition from any other quarter; as if the exercise of its rights, by either the executive or judiciary, were a breach of their privilege and an outrage to their dignity. They often appear disposed to exert an imperious control over the other departments; and as they commonly have the people on their side, they always act with such momentum as to make it very difficult for the other members of the Government to maintain the balance of the Constitution."

This natural tendency of the legislative authority to absorb all power was greatly strengthened just after the war by Andrew Johnson's break with the party which had elected him, and especially by the pig-headedness of the man. The fact that the people of the country sympathized with Congress in its prolonged and bitter controversy with the President, gave a further impetus to the tendency which Madison had observed in the colonies, a century before, to "throw all powers into the legislative vortex." The movement to get rid of an obnoxious President by a prostitution of the prerogative of impeachment was the logical outgrowth of the latent disposition of Congress to usurp the whole governing power, roused into action by a combination of circumstances calculated to insure its fullest development.

It was, of course, essential in framing the Constitution that some way should be provided for getting rid of a President who might try to overturn the Government, trade his authority for money, or behave otherwise like an abandoned wretch. It was, therefore, provided that a President might be tried, and if found guilty by two-thirds of the Senate, deposed for such offences as "treason, bribery, and other high crimes and misdemeanors." This latter clause was interpreted by Story as covering only offences which "may be utterly incompatible with the public safety and interests, or may bring the Government itself into disgrace and obloquy." Nobody now pretends that Johnson had been guilty of any such offences. The trouble with him was that, so far as he could, he blocked the reconstruction schemes of the Thad Stevens school of Congressional politicians, and was "dreffal aggravatin'" about the way he did it. His removal, upon the charges on which he was brought to trial, would have been, as Mr. Ross forcibly characterizes it, "a Presidential eviction under the lash."

If the movement had succeeded, there can be no doubt that the Presidency would have lost for all future time its due weight of authority, and that the Executive would have been merely the supple tool of Congress. The balance thus disturbed, the Supreme Court would logically and inevitably have been the next object of Congressional attack. A partisan majority which resented the use of the Presidential veto to defeat the enactment of laws that it wanted to pass, would not long have allowed a Supreme Court, after those laws had been enacted, to declare them "null and void," as the Supreme Court a few years later did annul such important measures as the Civil-Rights Act. The effect of such a revolution would have been to make Congress the sole repository of power, and to put all the processes of government at the mercy of the majority in a party caucus. The melancholy spectacle presented in France of late years—of a powerless executive, a legislative department pulled hither and thither by tides of popular feeling, and thus a government which inspires neither confidence at home nor respect abroad—would have been seen in the United States. Mr. Ross does not exaggerate when he says that "the logical end would have been anarchy."

From this utter wreck of the republican experiment in America we were saved only by the courage of Mr. Ross and the six other Republican Senators who voted with him for the acquittal of Johnson. The votes of all seven were essential, but at the time Mr. Ross was treated as the man who turned the scales, inasmuch as the verdict of the other six had been foreshadowed, while his course was left in doubt. He may well rejoice that he has been allowed to live long enough to see his action endorsed by the American people, as it is now endorsed by the people without distinction of party. In this respect he has been more fortunate than his more famous associates, Fessenden and Grimes, who died only one year and four years after the trial, before full justice had been done to their conscientiousness and courage.

A striking and impressive feature of this crisis in our national history is the fact that the man who thus preserved the Government as the framers of the Constitution established it, was not a trained statesman, like Fessenden, and Trumbull, and Grimes, and that he had secured this chance to make his name for ever remembered through the accident of death creating a vacancy in the representation of Kansas in the Senate, which he was first appointed and subsequently elected to fill. He had been working as a printer only a short time before his entrance into the Senate, and he is back again at his old trade in New Mexico, after having served as Governor of that Territory under Cleveland. But this quiet, plain man rose to the level of an occasion which called for the highest courage and statesmanship, and, twenty years later, though he approaches old age in obscurity, he enjoys the satisfaction of seeing his services to the republic recognized and confessed by all thoughtful men.

ANAHEIM, RIVERSIDE, SAN DIEGO.—I.

PORTLAND, Ore., September, 1889.

AFTER taking in the sights of Los Angeles, including the palms and orange groves, the cable-car scenery and Chinatown, which have been often enough described, it will repay the tourist to devote a week or two to a round trip through that part of the State which lies south of Los Angeles, as far as San Diego and Tia Juana on the Mexican border. Take a ticket to Riverside, via Orange, and stop over a day at Anaheim, which commands a specially fine view of the snow-capped San Gabriel range and the giant San Bernardino. Anaheim is known as the "mother colony," having been founded as early as 1858 by a party of fifty Germans from San Francisco, in search of a pleasant site for homes and good soil for raising Rhine wine. To-day the population is no longer exclusively German, nor is wine-making the chief industry, for Anaheim enjoys the sad distinction of being the place where the destructive vine disease originated, and now there are few good vineyards left in the vicinity, though the cellars of the hospitable families are still well stocked with a Riesling that unmistakably betrays its legitimate descent from the celebrated Johannisberger stock on the Rhine. Undaunted by their misfortune, the Anaheimers have dug out their dead vines and planted in their place oranges, walnuts, pampas plums, and figs, which in a few years will bear as rich fruit and as big profits as the former vineyards. The fields and orchards are supplied with water through a ditch from the Santa Ana River, sixteen miles long, and lined all the way with willows. A drive along this ditch is interesting, as is a visit to the ostrich farm, two or three miles from the town. If a longer stay is contemplated, there is excellent hunting of wild goose, ducks, and other waterfowl, all the way from Anaheim to the ocean, while in the cactus fields around the town may be found quails and pigeons, and the sportive jackrabbit abounds. In hunting him you not only satisfy the craving for murder of some sort, which still lingers as a relic of savagery in the gentlest human breast, but you do a great service to the farmers, who are sometimes obliged, in self-defence, to organize rabbit drives, at which two or three thousand of the long-eared, fleet-footed robbers are killed.

The town of Orange, between Anaheim and Riverside, already gives warning of the neighborhood of the State's orange centre. The station, in the springtime, is piled up to the ceiling with boxes of oranges, and near by a number of men are busily at work wiping the golden fruit with wet rags and rolling it down inclined boards to dry, preparatory to packing. The fruit is generally bought on the tree by the packing companies, who send round their men with ladders, and sacks suspended around their necks, from which the fruit is transferred to boxes to be repacked afterwards, the bruised or imperfect ones being thrown out, so that three boxes (of the seedlings at any rate) yield only two for the market. Orange-picking is painted by the imagination as the most poetic of all agricultural employments, and nothing, certainly, could look more picturesque than the boxes of luscious fruit scattered through an orchard, under the dark-green fragrant trees; but the orange-tree, like the rose-bush that loves to twine around it, bristles with thorns, which cry for blood, and make orange-picking about as exciting and perilous a pursuit as rabbit-hunting amid the cactus bushes.

The town of Orange still belongs to Los Angeles County, but before reaching Riverside we have entered San Bernardino County, the largest in the United States—"about the size of the States of Connecticut, Delaware, Maryland, and Massachusetts combined." The counties of Southern California are very much larger than those of the central and northern part of the State, and as the population increases they will doubtless be subdivided. Thus a strong movement is now on foot to take the southern part of Los Angeles County and make the new county of Orange out of it. But it is doubtful if San Bernardino County will be divided very soon, for the greater part of it is comprised in the irredeemable Mojave Desert. The region west of the Bernardino range, however, is one of the most valuable in the State, experience having shown that it is the chosen home of the orange. Los Angeles County has many fine and luxuriant orange groves, and more of them than San Bernardino County, yet to see California orange culture in its highest perfection one must go to Riverside. Nowhere else do the orchards seem so luxuriant and so well cultivated, or the fruit and trees so glossy and clean. Here the oranges do not need cleaning with a rag, owing to the absence of the black scale which elsewhere often gives the leaves and fruit a dirty appearance. The white scale-bug, too, which destroys the trees, has thus far spared Riverside groves, and in the business street of the town a notice is posted warning purchasers of orange trees not to import any from infected counties. The orange is not indigenous to California, as it is to Mexico and Florida; it does not flourish here without some care, and becomes remunerative in proportion to the amount of care bestowed on it. A glance at the well-ploughed, weedless, carefully irrigated orchards of Riverside at once explains the enormous profits realized by local growers; and an incident that occurred at Anaheim throws further light on the matter. Noticing a couple of malodorous freight-cars on the side track, I asked a man what they contained. "Manure," he replied, "from the numerous sheep corrals in the neighborhood, and bound for Riverside," adding that this had been found the best manure for oranges, and that in a few years the Anaheimers who now foolishly sold their treasure would be importing it from elsewhere at an exorbitant price. Rows of cypress trees are planted along the edge of every orchard, and sometimes even traverse the orchard in several places, to serve as windbreaks; for though there are no hurricanes to provide against, the desert wind is sometimes sufficiently boisterous to shake down bushels of unripe fruit and break the heavily-laden branches, unless thus protected.

The best way to see the Riverside orange groves, and marvel at their extent, is to ride or walk along Magnolia Avenue, doubtless the finest avenue in America. It is laid out a distance of twelve miles, and seven miles are now finished. Between the road and the houses on each side are four rows of tall eucalyptus and spreading pepper trees, and two rows of fan palms, ten to twenty feet in height, and growing more beautiful every year. Nor is this fine avenue a monopoly of carriage-owners, for the poorest can enjoy its sights by paying ten cents for a ride on the street-cars which have their track under a row of pepper trees, without interfering with the broad carriage drive. In this way Riverside spreads itself out, covering a territory, orchards included, of fifty-four square miles, and almost realizing the ideal of one of those California "rural cities of the future" sketched in my last letter. The grounds of some of the elegant villas which line this road are thrown open to the public, and one of them, which I examined, with its extensive stables, shady walks, hammocks, tennis grounds, and notices of club meetings and *al-fresco* teas, had an air of hospitality and sociability recalling the life on Southern plantations before the civil war. The large adobe house, a relic of the Spanish occupation, was deliciously cool on a warm day, and the owner said he did not find it unhealthy. He showed me through his extensive orchard, and, with a large table-knife, cut open specimens of more than half-a-dozen different kinds of budded oranges for me to taste. They were all sweet and juicy, but he had to admit himself that the differences in flavor were not so pronounced as the differences in the original homes of these varieties led one to expect. California fruit-growers doubtless attempt too much in seeking to raise oranges from so many different countries in the same field without losing their characteristic flavor. This difference in flavor is due to differences in soil and climate, and can only be preserved and reproduced in a similar soil and climate. As California fortunately has an infinite variety of climates and soil, it is probable that the problem of raising Italian, Spanish, Mexican, and Florida oranges all in the same State will yet be solved, but not in one and the same orchard. The Spanish blood-orange, for instance, the most delicately-flavored of all oranges, is rarely seen in California, and when I asked why, I was told that it was inclined to sport and lose its characteristics. There is a fortune in store for the man who finds out under what conditions this variety flourishes in Spain, and seeks out a similar locality for them at home. Another excellent variety, the Florida russet, I never saw on the Pacific Coast. Its appearance is against it, and it is difficult to teach people to select their fruit for the palate rather than the eye.

Riverside is a little too far inland to get much benefit from the ocean breezes, but it is surrounded by mountains, snow-capped till summer, which to some extent atone for this disadvantage, and which make Riverside, from a scenic point of view, one of the most attractive places in the State. This, combined with its horticultural prosperity, causes it to grow rapidly, and among the newcomers and the old there are a large number of English families, who, of course, endeavor to bring their household gods and customs with them. Foremost among these is the fox-hunt; but as there are no foxes to be hunted, the simple-minded plebeian jackrabbit has to take the place of his astute, bushy-tailed colleague. There are no fences to jump or fields to destroy, and everything is in plain sight; but as the riding is much faster than in England, there is no lack of excitement. To come home from one of these hunts with a pair of rabbit ears in her hat is the chief pride of the English damsels of Riverside. Besides, these ornaments take the place of a parasol, much needed here sometimes. In midsummer, no doubt, Riverside is a good place to get away from, but in winter it offers special advantages to invalids.

It is not necessary to stuff your pockets and valise full of oranges on leaving Riverside for the South, for you will find just as good fruit, and plenty of it, in San Diego County. Backing up to a station called Citrus, a few miles north of Riverside, you wait for the train which leaves Barstow on the Atlantic and Pacific, or Sante Fé, Railway, for San Diego, and which, soon after you have boarded it, enters the county of that name, a county not quite so large as San Bernardino, but still, according to the guide-book, covering as much ground as Massachusetts, Connecticut, Rhode Island, and Delaware combined. It forms the south-

western corner of the United States, and owes much of its local color to the proximity of Mexico, or Lower California, a peninsula which a large number of educated people in the East are in the habit of mistaking for "Southern California." The branch of the Santa Fé Road referred to is known as the California Southern Railroad. Between the Bernardino range and the ocean it traverses a region where the spring vegetation, though almost as abundant as in Los Angeles County, is not so luxuriant, owing to the diminished rainfall. Three-fifths or more of the vegetation which carpets the fields seems to consist of compositæ, and the predominant color is yellow—as if to hint at the fact, which has long since been demonstrated, that there is more gold to be got out of the surface of California soil than out of all its subterranean mines. One never tires of looking at these gaudily-colored fields, especially when bordered by foot-hills, whose green garb is ornamented with red, yellow, brown, and blue patches, like a "crazy-quilt," varying in shade and atmospheric effect with the time of the day; or when, as on this route, there is a background of high mountains, with their snow caps drawn half way down their treeless foreheads as late as May. The two chief mountains are too long-drawn-out to be imposing sculpturally, but the great mass of snow on them gains in charm by contrast with the surrounding blue sky and warm sunshine. The best point of view is from Perris, the junction for the short branch road to San Jacinto. Soon thereafter the Laguna is reached, also known as Lake Elsinore; but if the tourist expects to see one of those picturesque mountain lakes for which the State is famous, he will be grievously disappointed. The Laguna is a commonplace, dreary old pond with steep hills on one side and flat on the other. There are ducks on it, but no cover to approach them. In May it was sixteen feet higher than two years previously, and it has a habit of getting very low till the real estate on its banks has been claimed, whereupon it roguishly rises and submerges it for a few years. But the soil in the vicinity is credited with marvellous properties.

We now enter the region of Indian missions and reservations, and expect to see some of the redskins loitering about the stations, as they do at Yuma and elsewhere; but not a single one is to be seen at any of the towns. Those who make pilgrimages in the tracks of novel heroines may find something to interest them hereabouts with their 'Ramona' as a guide, but otherwise the region is dreary and desolate, its only apparent attraction being the snow mountains just described. A pleasant change is afforded by the passage through the Temecula Cañon, in which it is refreshing to follow along a creek though it be but a few inches deep and two or three feet wide. It cools the air and lines the bank with pretty bushes. Presently smoke-like mists begin to rise from the water, as if it were on fire; scattered pools with bulrushes and flocks of birds, and the russet color and rank monotony of the vegetation, indicate the approach to the ocean. A cool saline breeze strikes the cars; the windows of the more sensitive passengers are lowered, and at the same moment the Pacific comes into sight—to many of the tourists their first view of the king of waters. But the outlook is limited, for a few miles at sea hovers a fog-bank which looks as opaque and solid as if a Krupp gun could make no impression on it. For the rest of the way to San Diego the ocean is almost constantly in sight, and new varieties of plants and flowers occupy the attention. Conspicuous among the flowers are a white morning-glory, larkspurs and lupines in several colors, the ice-plant, with red flowers, and leaves that seem to be covered with icicles, and a flowering bush which at a distance resembles the alpenrose. HENRY T. FINCK.

BARBARIAN SIGHTS AT THE EXPOSITION.

PARIS, September 6, 1889.

THE Exposition continues to be a great success; indeed, the success is greater than it has ever been. Every day the railways bring to Paris thousands of people, who come to spend a few days among its wonders. The aspect of the Parisian boulevards is changed at night: the whole city is a sort of Valley of Jehoshaphat: all possible languages are heard, all costumes are worn. M. Melchior de Vogüé, well known in France as the introducer of Russian literature among us, has written some suggestive articles in the *Revue des Deux Mondes* on the Exposition, with his enthusiastic disposition. He has spoken of the Eiffel Tower, of the new style of iron architecture, of the huge Machinery Hall, of the mysterious force which works in the electric dynamos. I am surprised that he has not yet insisted upon what may be called the theatrical and international character of this great congregation of men and things.

During the warm evenings which we have had this year, this theatrical character could be better appreciated than in the daytime. I have sometimes entered the Exhibition by the gate opposite our Foreign Office, and found myself in what is called the Colonial Department. The moon was shining on groves of palm trees, fountains were playing with a soft murmur in square Algerian or Tunisian courts; the white forms of Arabs, Bedouins, Kabyles, dressed in the burnoose, were visible here and there in dark corners, or gliding slowly under the trees; here were the low tents under which were families brought from the provinces of Oran, or Constantine, the little houses, built in wood and plaster, of the Kabyles; some Kabyle child or infant of the oasis or the Atlas was running about or playing. The bazaars, so thronged in the daytime, were shut, and their occupants were enjoying the fresh air of the night. Sounds of drums, of barbarous instruments, were heard in the little cafés. If you entered between curtains thrown aside by a negro, you would fancy yourself in some African town; here the women danced their Oriental dances to the sound of their accustomed music; curious human forms were spread on low divans, servants were going about offering coffee in small cups; ejaculations were heard which you could not understand. The languid children of the East seemed to look with contempt on the Christians, though they were willing to amuse them and to receive their money.

Who brought these people here? Is money-making such a passion that it can destroy the whole order of nature, and bring the children of the desert, or of the Atlas, or of the Lebanon to the banks of the Seine? Or were these people only the dregs of the Mediterranean towns? Was it fair to judge Islam by such representatives? The fire-eating Aissawas were surely disgusting, with all their ferocious tricks, and they pretend to belong to a religious sect. The French colonies are represented by little villages. The French naval officers have taken care of this department, and all here is quiet and orderly. You can make the acquaintance of New-Caledonian life, of the Gaboon, of Senegambia; you can see real idols and real idol worshippers. When you approach Annam you hear extraordinary shrieks; they come from the Annamite Theatre, and it is worth while to enter and take a seat. The best actors of Annam, we are told, have taken the trouble to come here and entertain us. They have brought their splendid silk costumes, embroidered by fairies, their horrible masks—for they never show their faces—the men, at least, for there is a woman who shows hers, and it is plain enough, poor woman! She plays the part of a queen, and, at a given moment, she has to weep, and she really does weep. You can see the tears rolling down her cheek. She weeps every day, at the same hour; is there a Parisian artist who could do that? The men, meanwhile, shriek in a most unearthly fashion; it is their way. Such shrieks I had never heard before. They gesticulate very oddly. I had a friend with me, who explained to me some of their gestures. For instance: The mandarins (for they seem to be all mandarins) often jump on horseback; but there are no horses on the stage; nevertheless, they make all the movements of a man who mounts a horse; when you are not in the secret, the effect is extremely ludicrous. A river is always represented by a carpet thrown on the stage, etc. The author of the play, some Annamite Corneille or Racine, sits there all the time with a big drum between his knees. When he is pleased, he strikes on his drum; the audience is confounded, but the actors are encouraged. On the whole, an Annamite play seems to be one of the wildest forms of amusement; the one I saw and heard produced on me the effect of the most horrible nightmare. But we must be tolerant to the Annamites if we wish them to be tolerant to us. Every time I go to the Opéra I see now some negro king of the African coast, some Persian or Tunisian Prince, looking on from the Government boxes. What do they think of our operas and our ballets? The Shah could not bear for an hour the new ballet, "The Tempest," based on Shakspere's "Tempest"! All theatrical representations are conventional.

Nothing is probably more conventional, more symbolic, than the Javanese village, which is one of the most popular features of the Exposition. It is built entirely of bamboo. Little shops are open, where you can buy various Javanese articles and Javanese tea; under a sort of tent is a small theatre, on whose stage are musicians, all sitting in an Oriental attitude and playing on extraordinary instruments. One of these is made entirely of pieces of bamboo, which strike each other; others are of bronze and remind you of kitchen dishes. The music is odd, not without a sort of charm; it is a rather indistinct noise, to which the sound of bronze gives life. Four female dancers, very young (the youngest is about fourteen), dance to the sound of this music. They wear curious gold helmets, and are entirely painted with saffron; their silk costumes, draped with much grace, are covered with ornaments; they wear huge bracelets on their bare arms and a sword at the back. Their dance is said to be religious; it is very different from anything we call a dance, being a sort of slow march. The legs and the body move but little; the arms and hands are always in motion, and these motions are very odd: the hands seem to revolve freely round the wrist in every direction; they throw about at times, in a spasmodic way, the long pieces of silk tied around the waist. The faces are very grave, almost stern—at least they were so at first, and the first time I saw the Javanese dancers, they executed all their movements with a gravity which gave their dance an original character. Each step,

each motion seemed to be dictated by some thought; but now the Javanese girls have become half-Parisian. They have been lionized; ladies have visited them in the house where they live; *Figaro* has exhibited them in a great soirée given to Mr. Edison, together with the new American star of the Opéra, and with other celebrities. They have been petted by the public. They now laugh, and chat, and utter little French exclamations; they have been rolled in the great cosmopolitan cement of the Exhibition, and have already lost a great part of their originality.

And so it is with many other shows of this kind—for the Exhibition covers a multitude of them. You find them not only in the esplanade of the Invalides, they are hidden everywhere along the arcades of the Exhibition. There is a long street, following what is called the Palace of the Liberal Arts, and going towards the end of Machinery Hall, which is one long perpetual show. The Eiffel Tower may well be called the Tower of Babel. Here you have a theatre, where you can see real Gitanos from Granada, with their *capitan*, dancing all sorts of dances, shouting with sharp southern voices, and clapping their hands as hard as if they were of wood. You can hear the Rumanian orchestra, look at the descendants of the Romans now living near the Danube; a girl who serves you a glass of beer in her Rumanian costume, has the look of a Roman Empress; the man in the orchestra uses the antique pipe of Pan. There is a curious and almost morbid beauty in the strange national airs played by all these half-Italian, half-Turkish looking men, all dressed in white cotton clothes, embroidered with red. Strange also are the Indians, with their turbans, who will serve you mysteriously with a cup of tea, in what is called the Indian palace. But the most curious and the most thronged part of the place is a whole street, copied exactly, with the greatest minuteness of detail, from Cairo, with its donkey boys, mosques, and the muezzin chanting from a high balcony, and the small cafés full of people gazing stupidly on some dancers. The *Rue du Caire* is the first thing which visitors to the Exhibition have to *do;* and when they have left it they think they know the East.

But this is not enough; cosmopolitanism and internationalism have not found the immense field of the Exposition large enough; we have an invasion of Spaniards all over Paris. In one of the circuses are to be seen every night splendid processions of dancers belonging to all the provinces of Spain; they appear in their charming and varied costumes, with their provincial banners; they march, and then execute their national dances. A Spanish company have gone to the trouble of building a real Plaza de Toros, at an immense expense; there are every day real bulls and toreros, and banderilleros, and *Capitanes de la Plaza*, in magnificent dress, with splendid horses. There is room for 20,000 people, but the place is empty; the whole affair will be a complete failure. The Government does not allow the killing of the bull, and what is a bull-fight without it? I entirely approve the action of the Government. Why should we introduce the cruel game of bull-fights into our life? We have already introduced in France the English races: the jockey was one of the forms of the movement which prepared the French Revolution—it seemed to belong to constitutionalism; but nowadays all sensible people would be very glad to be rid of him, and of all that goes with him.

If the Plaza de Toros is a failure, the same cannot be said of your Buffalo Bill; he is an immense success. All French people have a passion for the *Peaux Rouges* and the novels of Fenimore Cooper; they all admire the cowboys; and Buffalo Bill, with his sombrero, his long curly hair, and his handsome face, has become one of the most popular figures of the day.

And so our time goes on: "from sport to sport they hurry me." We shall soon be sick enough of this continual show, and we ask ourselves, will they, the Javanese, the Annamites, the Chinese, etc., be as sick of us as we are beginning to be of them? And what has been the use of all this? Do we feel any better, more humane, better disposed to the rest of the world? We ask ourselves, also, what has been the effect of our civilization on all these minds? What will they think of us? And finally, this grand spectacle, which for the immense majority is a mere show, because ignorance does not allow the greatest number to watch and to understand the development of science—will it be moral or demoralizing? will it have good or bad effects? I confess my doubts. Surely, such a spectacle impresses even the ignorant with a sort of dumb sense of the power of the human intellect; but, on the other side, these races brought together from all parts of the world seem to have nothing in common except blind and brutal instincts, which find their satisfaction in the coarsest spectacles. Men are said to be all equal; they are especially equalized by their follies and their vices.

THE FINE ARTS AT THE PARIS EXPOSITION.

VII.—THE RETROSPECTIVE EXHIBITION.

PARIS, August 16, 1889.

JUST as Henri Regnault was hailed as a coming master and was cut short in his career at the early age of twenty-eight, so Bastien-Lepage, who created a genuine sensation with his "Portrait of My Grandfather," at the Salon of 1874, following it in succeeding Salons with such works as "Les Foins," "Portrait of My Parents," "Jeanne d'Arc," and "The Potato-Gatherers," was looked upon as a rising *chef d'école*, and, after only ten years of painting, died in 1884, just after he had completed his thirty-sixth year. Looking back at the condition of art when Regnault made his advent, and comparing it with the state in which Bastien found it, it is apparent that, of the two, Regnault's influence has been the more powerful, for the "Salon picture" as it exists to-day largely owes its origin to him. The big canvases, with their scenes of carnage and torture, were almost unknown in the Salon before Regnault, and the example he set in the "Execution without Judgment—Tangier," has been followed *ad nauseam* by hundreds of ambitious young painters, many of them with the smallest amount of talent, others with a great deal, but degenerating more and more until it has resulted in the production of mere vulgar atrocities such as the "Vitellius Dragged through the Streets of Rome," or the "Andromache," by Rochegrosse. Bastien worked in a more peaceful field. If his influence has been less far-reaching than that of Regnault, it has been vastly more beneficial. A weak imitation of Bastien is a harmless sort of production, and to resemble him at all it must contain a certain amount of naïveté, which is never a bad quality. There is no opportunity for such carnivals of horror as are possible for a youngster who fancies himself another Regnault, and is bent on out-Heroding Herod.

Bastien's small portraits—the marvellous one of his brother, the architect, seated at a table with his drawing instruments; those of the Prince of Wales and Sarah Bernhardt and Albert Wolf—have had the effect of stimulating this style of portraiture, and we find excellent work in the Decennial Exhibition by Chartran, Friant, and others, which is directly traceable to him. In his pictures of out-door life, those remarkable effects in *plein air*, Bastien no doubt drew something from Courbet and even from Manet; but he is decidedly original, and his work is distinguished from theirs by infinitely better drawing, and by a research for color that goes beyond Courbet and that Manet never approached. In the portrait of his parents, again, Bastien, with the most exquisitely sensitive drawing and an abundant sense of color, reaches a very high level. In the portrait of his mother particularly, there is an exactness that is worthy of Holbein, with an unaffected sentiment that we can find nowhere outside of the great Dutchmen. Painted out of doors, as these portraits are, in the diffused light, there is an original side to them that belongs to nobody but Bastien. The "Portrait of my Grandfather" is equally remarkable, and is the last word in sincerity and truth in the out-door school of painting. The Jeanne d'Arc is too well known to call for comment, but it is worth noting that, surrounded here by the best art that France has produced, it loses nothing of its beauty and is one of the masterly works in the Retrospective Exhibition.

We must now return to Ingres, to establish the connection between such men as Paul Baudry and the art of 1830. Not that Baudry and Delaunay are classicists exactly, but they have not felt the influence of Delacroix to the extent that Courbet and his followers have, and through all the new "movements" they have pushed steadily along on the paths laid out before them—paths which, if we follow them backwards, lead not only to Ingres, but to the great masters of the Renaissance. Baudry is preëminently a stylist. There are eleven canvases here by him, and in the three earliest, "Portrait of Baron Jard-Panvillier" (1855), "The Infant St. John" (1861), and "The Wave and the Pearl" (1863), a delightful nude figure, very fine in color, we find the pure drawing and delicate sense of form that mark the classicist along with a graceful but somewhat conventional execution. In the later ones, notably in the "Portrait of Gen. Cousin Montauban, Count Palikao" (1877), and the "Portrait of Madame B.," we find that, without losing a particle of his masterly drawing, and retaining all his feeling for form, he possesses the most astonishing freedom of execution. The portrait of Count Palikao, a life-size portrait, with the General in uniform, standing beside his horse, with his right arm leaning on the saddle, and his sword held cane-like, with the butt of the scabbard resting on the ground, is such a work as we can only compare with Velasquez or perhaps Van Dyck. Certainly there is nothing in these galleries that is so distinctly a great piece of painting in the sense that Velasquez is great, in the wonderful force of a man who is absolutely sure of himself, and dashes through his work, neglecting nothing, never slurring over a difficult bit of form or adopting expedients to escape hard problems of color, and produces a canvas that includes everything which others attain only in part by patient labor—a canvas that makes us marvel at such technical skill, and charms us by its beauty. There is the same enchanting verve in the "Portrait of Madame B.," a lady seated in a chair with a child on her knees, and the same distinction of character. Unfortunately, Baudry is not represented here by any of his decorative work. In the section of drawings and

water-colors there are some of his studies for his ceiling, "Glorification of the Law," and other decorative panels, but they are studies only. The Opéra contains his greatest work, the decoration of the foyer, and it is absolutely necessary that these decorations should be seen to form an idea of the greatness of Baudry's talent.

Delaunay, classicist in the "Death of the Centaur Nessus," "Ixion," and "David Victorious," is seen at his very best in two admirable portraits, one of a lady in black, and the other of an old lady with the head in three-quarters view. This last is a wonderful piece of drawing, possessing the naïve beauty of Holbein. I have spoken at length of his great merit as a painter of portraits in the account of the Decennial Exhibition. There remain to be mentioned a fine full-length portrait of a lady by Carolus-Duran, "Portrait of Mme. F." (1869), the best of all his portraits, perhaps; three by Cabanel, notably the "Portrait of M. Armand"; four by Paul Dubois, of which the best is the celebrated "Portrait of My Children" (1876); and two by Bonnat, whose "Portrait of Mme. Bischoffsheim" is one of the most strikingly real of the long series he has painted and one of the best of his portraits of women. Bonnat is further represented by his famous "St. Vincent de Paul" (1866) and his equally famous "Christ on the Cross" (1874).

Other notable names in the catalogue of the Retrospective Exhibition that call for special mention after these are Vollon, Falguière, Laurens, Bonvin, Ribot, Merson, Meissonier, De Neuville, and Detaille. The exhibit of the works of these painters is complete and interesting, but, except in the case of Meissonier, perhaps, it is not necessary to go into details. The Meissoniers are nine in number, headed by that remarkable composition, the best of his military pictures, "1814." "The Emperor at Solferino," familiar to visitors at the Luxembourg Gallery, is also here, and there is a fine small portrait of the owner of "1814," M. Delahante, and two marvellous little pictures, "Waiting" and "The Etcher," both of them painted more than twenty-five years ago, and both in the possession of the painter, from which those who are acquainted with the opinion Meissonier holds of certain of his pictures may conclude that he sets great store by these. Leaving that out of the question, they are evidently of his best.

Of landscape painters, the three works by Cazin, "Madeleine," "The Flight into Egypt," and "Nativity," should of course be noted. There are three excellent works also by Lavieille, a painter who has the honors of the Luxembourg, but is comparatively little known outside of France. He died here last year, and his pictures are not very numerous.

Puvis de Chavannes, the great artist whose decorations, "The Life of Geneviève," at the Pantheon, "The Sacred Wood," at the New Sorbonne, the "Pro Patria Ludus," at the Museum of Amiens, and others, have made him famous, and placed him at the head of modern painters of decoration, cannot be seen here as he should be seen to understand the value of his work; but among the five canvases, the "Beheading of St. John" and "The Prodigal Son" show at least partially his excellence, and give some idea of his distinctively individual methods.

The lesson the Retrospective Exhibition offers to the young painters of France is so plainly written that he who runs may read. Remembering that there exist rightly only two forms of painting—the easel canvas and decoration—they can see what wonders may be accomplished in the first by looking at Millet's "Gleaners" or Corot's "Biblis." They will see that there is everything in these pictures—color, drawing, light and air—and they must feel that it is consummate art, while the big canvases in the Decennial Exhibition are vague and empty. They will see that mere size adds nothing to the impressiveness of a picture, and that where the subject is not in itself grandiose it detracts from it. They can see that to make a real work of art, it is not necessary to arrest the attention of the indifferent passer-by, and force him to look, but that the best things are never fully taken in at first glance; and they ought to learn that the reason why the "General Prim" or the "Remise des Chevreuils," "The Gleaners" or "Biblis," the "Count Palikao" or the "Jeanne d'Arc" are great works of art is because the men who painted them had something to say, and brought the whole strength of their talent to bear to say it without thinking of how the picture might look in the Salon, or whether the jury would vote it a recompense or not. These men painted for the sake of painting and for love of the beautiful in nature, and it is because they have been able to express themselves in a language that all can understand, and have triumphed over countless difficulties to make their expression beautiful, that the world accords them homage.

Whether the young painters will take the lesson and profit by it remains to be seen. There is, however, already a reaction against the evil tendencies that have made such headway in the Salon. It is probable that another ten years will see a decided change, and that the *tableau de chevalet* will take its rightful place again in the exhibitions. It is to be hoped that such a change will take place in France, and the sooner it comes the better, for the bad example set in the Salon has spread to the artists of other countries, and the evil will continue there until the reform comes from Paris, the art centre of the world. The young artists have a bright example before them in Dagnan-Bouveret, who has never been led away from his principles, and who has yet attained to the highest honors, though he has never found it necessary to paint a genre subject on an heroic scale.

Looking at the Retrospective Exhibition and the Decennial Exhibition together, although the triumph undoubtedly belongs to the generation that has passed or is passing away, it is nevertheless gratifying to find that at the bottom the same great principles are adhered to in the present day which are the cause of the preëminent superiority of the French school over all its contemporaries in the century that has passed. Sound drawing, the basis of pictorial art, is taught in the schools, and it is not in this particular that the artists of to-day are wanting. This is especially notable in the portraits in the Decennial Exhibition. The marked decadence in landscape painting is due, as has been pointed out in a former letter, to the prevailing fashion for bigness and glare which has almost annihilated color; but in Cazin at least we find a man who fulfils the requirements of a landscape painter, and whose splendid talent must sooner or later make its influence felt. In decoration Puvis de Chavannes is a worthy successor of Delacroix and Baudry, though his work differs widely in its essential characteristics from that of either of these, and there is no doubt of his being a master. Finally, there is in Meissonier, Gérôme, Bonnat, Delaunay, Gervex, Dagnan-Bouveret, Vollon, Laurens, Merson, and a score of others whose place is made and whose reputation is fixed, a strong conservative element that will prevent bad tendencies from overpowering the good; and we can reasonably hope that, with this conservative force, and the lesson that the Retrospective Exhibition so clearly teaches, there will soon be a reaction that will utterly sweep these tendencies away, and carry the French school of art through another brilliant epoch as glorious as the one they are now celebrating in the Champ de Mars. WILLIAM A. COFFIN.

Correspondence.

FRÉMONT AND MONTGOMERY BLAIR.

TO THE EDITOR OF THE NATION:

SIR: In your issue of the first week in July last you refer, in an uncertain way, to the connection between the withdrawal of Gen. Frémont from the Presidential contest in 1864, and the resignation of Montgomery Blair from the Cabinet at the same time. As the relation between the two events does not seem to be generally known, and, indeed, is apparently not understood by the biographers of Mr. Lincoln in the *Century Magazine*, a word of explanation is perhaps demanded from any one familiar with the facts.

President Lincoln was extremely desirous for harmony among Republicans, and that Frémont's withdrawal be brought about; and to accomplish these ends Senator Zachary Chandler of Michigan left Washington early in September of 1864, and proceeded to the home of Ben Wade in Ohio. Senator Wade was soon brought to see that the withdrawal of Gen. Frémont, and harmonious action by the Republicans, was an absolute necessity, and agreed to cease his opposition to Mr. Lincoln on condition that Mr. Henry Winter Davis, his associate in the celebrated Wade-Davis manifesto, should be satisfied. Mr. Davis was next approached, and his assent to harmonious action was on condition that his personal, and, as he thought, political enemy, Montgomery Blair, should leave the Cabinet. To this latter condition Mr. Lincoln consented.

With the progress thus made Senator Chandler next visited New York, where, from his headquarters in the Astor House, he opened negotiations with the immediate friends of Gen. Frémont, for the purpose of procuring his withdrawal. In this work the Senator was efficiently aided by George Wilkes of the *Spirit of the Times*. The leaders of the Frémont movement were ultimately won over to the scheme of reconciliation, and consented that the General should withdraw, and thereby unite all the strength of the party in the support of Mr. Lincoln.

At one time during the negotiations Mr. Bryant of the *Evening Post*, feeling the necessity of harmony, and fearing that the opposition to Mr. Lincoln in certain quarters might prove disastrous to his reëlection, had in type an editorial for his paper advising Mr. Lincoln's withdrawal, and a united Republican support of Gen. Frémont or some other available candidate; but, by the vigorous assurances of Senator Chandler that harmony could better be reached in the support of Mr. Lincoln, the editorial was withheld from publication.

The night after the conclusion of the arrangement with the friends of Gen. Frémont, Senator Chandler returned to Washington, reaching there in the morning, and called promptly at the White House, where he was anxiously and eagerly received by the President. He announced the result of his negotiations, and Mr. Lincoln at once fulfilled his part by addressing a note to Mr. Blair asking his resignation (which was promptly tendered),

thereby closing the dangerous breach and making certain his reëlection.

I was a guest at the Astor House during the greater part of the negotiations, and accompanied Senator Chandler to Washington and to the President's house, and make most of the above statements from personal recollection of the events as they occurred, and the others on the authority of the Senator. That these facts are not more widely known is doubtless due to Senator Chandler's well-known reticence, with all but his intimate friends, as to his own services. DAVID H. JEROME.

SAGINAW, MICH., September 16, 1889.

COLLEGE TEMPTATIONS.

TO THE EDITOR OF THE NATION:

SIR: I desire to return my sincerest thanks for your advocacy of the doctrine that colleges should close their doors against boys who do not earnestly desire to learn. A few years of experience in teaching have convinced me that the average college is suffering more to-day from the presence of such boys than from any other cause whatever. Their lack of preparation causes the teacher to consume valuable time in explanations needless to the remainder of the class, they deprive the class-room work of much of its value to real students by disorderly conduct, they make uninterrupted study impossible in dormitories, they demoralize their associates, and they do incalculable damage to the college by lowering the respect in which it is held by the community.

Probably the difficulty is complicated, in the eyes of many, by the fact that a pretty large proportion of the boys who give the trouble are of wealthy parentage. The college of small endowment must be careful not to alienate men of means without good reason. I shall be very much mistaken, however, if the first college of good standing which advertises to the world that it will weed out all the idle, vicious, and incompetent without fear or favor, and makes good its promises, does not make a distinct advance in financial prosperity by the reform. There are many people who want to send bad boys to college for reformation, but there are still more who want to send boys of good character and studious habits to colleges where they will not be forced into association with the idle and vicious, and where their desire to learn will suffer from no unnecessary interference.

It would also be an inestimable boon to boys who are disposed to yield to the temptations of wealth if it were impossible for them to secure the social advantage of a degree from a respectable college without conducting themselves as gentlemen and students should.

W. H. JOHNSON.

GRANVILLE, O.

[The President of a Western college writes us in the same sense: "Please accept hearty thanks for your excellent article on 'Colleges without Temptation.' We have for several years pursued with good results the policy indicated by you, of getting rid of all young men who need watching and cannot take care of themselves. With them the greater part of the temptations have disappeared."—ED. NATION.]

POETRY AND MANNERS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your excellent editorial on "Manners in the Public Schools," do you not think that the reforms you suggest will be greatly facilitated by a reform in the direction of making our elementary courses of instruction more interesting to our school-children? It seems to me that children must be lifted above the dead, humdrum level of their home life, and that school must be made a pleasant place to them before the counsels of their teacher with regard to manners, or any other points not connected with the routine work of the class, can have any appreciable effect.

But is this element of interest on the part of the children much considered in our public schools? They seem to me to be great "cramming" factories which turn out prodigies in the way of map-drawers and mental arithmeticians, but which utterly fail to present us with what we most want—young men and women soundly trained in mind and body. Let one picture to one's self how a school day passes, and one will cease to wonder that such a state of things exists. Hour by hour creeps past, class after class is heard in a mechanical way, teachers grow cross and despairing, and children more weary and dull or else more flippant and rude—this, I fear, is a day's history for most of our public schools. Could "manners, virtue, freedom, power" be taught amid such surroundings, even though Milton were to come back to us, as the poet wished—even if he resumed his old rôle of teacher?

But these evils have been recited time and again, and one has no excuse for dwelling upon them unless one has a remedy to offer. It seems to me that the late Matthew Arnold offered a remedy when he insisted upon the value of poetry as a part of the curriculum of every school. Nothing will so lift a child above the humdrum level of his home life as hearing and reading good poetry; nothing will make him so plastic to his teachers' precepts of good manners and good morals; nothing will so counteract the bad literature of the present day; and certainly nothing will so influence for good his after life.

I shall be told that the number of studies is too great already; but I reply that it is a thousand times better for a boy to be familiar with "Marmion" than for him to be able to draw a map of Cochin China or to calculate the tenth power of nine in his head. It is fair to say that an hour spent on good poetry will be worth the six hours now spent on the average public-school course.

The want of proper teachers will also be urged; but, if it is once understood that poetry must be taught, proper teachers will be forthcoming. I hear that the Johns Hopkins University is, after all these years, to have a lectureship in poetry somewhat similar to that which Henry Birkhead founded at Oxford. If this experiment proves a success (and to this end I advise the Hopkins authorities to make a careful study of the history of the chair of poetry at Oxford, and to avoid certain mistakes there made), other universities and colleges will feel obliged to follow the example set them. This will mean that professors of poetry, who can train teachers of poetry, will become common, and that the deadly mechanical processes that are crushing the life out of modern education, will be superseded. Matthew Arnold always fought "machinery" wherever he saw it—in religion, in politics, or in education; he never dealt it a heavier blow than when he raised his voice for the proper study of poetry in every school. I mean, of course, the study of poetry as poetry—not as a vehicle of philological or historical facts.

One other point deserves notice. We are worried over the question whether the Bible shall be used in our schools, and we are perplexed at the claims the Roman Catholics are making. It does not seem probable that any compromise will be made by which non-sectarian religious instruction can be given; and so, many good people are aghast at the thought that their children are condemned to receive a purely secular education. But if we are not to have the Bible—and for my own part I see no force in the reasons urged against its use—why should we not make good poetry serve as the next best substitute for it? Assuredly the child who gets continuous instruction in our serious English poetry will not leave school without a moral, nay, a Christian, education. On such a basis the Protestants can join forces, and, unless they do join forces, there is danger ahead for our schools.

The public-school system of this country is on trial, and many thoughtful men have declared against it; but I venture to think that this is not because the fundamental idea of the State's duty towards its children is discredited, but because these thoughtful men have become disgusted with the deadly, mechanical systems of instruction that most of our States have adopted. When these systems have been changed, the defection of one religious body will not cause our educational fabric to totter, and the thoughtful men who turned away will come forward once more with help and counsel.—Your obedient servant,

W. P. TRENT.

THE UNIVERSITY OF THE SOUTH, September 14, 1889.

THE STUDY OF FOREIGN LEGISLATION.

TO THE EDITOR OF THE NATION:

SIR: In the reference to the competition for the prize on the Bluntschli foundation in the literary notes in your columns for August 16, it is forcibly stated that there should be libraries in the principal centres of the country which would afford opportunity for the study of foreign legislation. I venture to state that the State Library of Massachusetts has within the past few years made a modest effort to supply such a demand, and it contains, in addition to the statutes of this country, fairly complete collections of the laws of the following governments and provinces:

Great Britain, Canada, the general Government and provinces of Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, Northwest Territories, British Columbia, and Manitoba; India, the general Government and provinces of Ajmir, Assam, Bengal, Bombay, British Burmah, Central Provinces, Coorg, Lower Provinces, Madras, Northwestern Provinces, Oudh, and Punjab; Queensland, South Australia, Victoria, West Australia, Tasmania, and New South Wales; also the British colonies of Antigua, Bahama, Barbados, Bermuda, British Guiana, British Honduras, Cape Colony, Ceylon, Cyprus, Falkland Islands, Fiji, Gambia, Griqualand West, Heligoland, Isle of Man, Jamaica, Jersey, Leeward Islands, Malta, Natal, New Zealand Straits Settlements, and Trinidad; France, the general Government, together with its dependencies of Guadaloupe, Martinique, Réunion, Établissements Français de l'Inde, Senegal, Saint Pierre and Miquelon, and French Guiana; Austria-Hungary, Belgium, Denmark, Geneva, Germany, Italy, Netherlands, Spain, Switzerland, Argentine Republic, Brazil, Chili, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Peru, Venezuela, the Hawaiian Islands.

Yours respectfully, C. B. TILLINGHAST,
Acting Librarian.

STATE-HOUSE, BOSTON, September 18.

GERRYMANDERING.

To the Editor of The Nation:

Sir: Allow me to say to your correspondent "A. I." that in this State we are perfectly familiar with the performance called *gerrymandering* in the precise sense given to it by the 'Encyclopædic Dictionary.' Whatever may be the correct pronunciation of Mr. Gerry's name in the current derivative, the *g* is always pronounced like *j*. Bartlett's 'Dictionary of Americanisms' gives a concise history of the word "gerrymander." Its pronunciation is doubtless a case of attraction brought about by the familiar abbreviation "jerry" for Jeremiah. There is no occasion for taking our English cousins to task for mispronunciation in this case, though the alternative spelling is clearly without authority. Besides, we should not be too ready to cast stones at them for mispronouncing our proper names, as we sin quite frequently in respect to theirs.

C. W. Super.

Ohio, September, 1889.

[It is rash to affirm, but we apprehend that in New England, of which Elbridge Gerry was a native, gerrymandering is commonly and correctly pronounced with a hard *g*.—Ed. Nation.]

POSTAL SAVINGS BANKS.

To the Editor of The Nation:

Sir: A Government report shows that the aggregate of deposits in the savings banks of the United States on the last day of June, 1889, was $1,364,196,550, and the number of depositors 3,838,291. These constitute only about one-sixteenth of our population, while in the British Islands two-sixteenths of their population (viz., 4,220,927) are depositors in their Postal Savings Bank. As we have more wealth, which, also, is more generally diffused, we should have more depositors in savings banks than the British; the difficulty being, in our case, that our population is scattered over so large an area that corporate savings banks cannot reach the people. If, however, the counters of our post-offices could be used as places for the deposit of the savings of the people, we may anticipate with confidence that at least another sixteenth of our population—4,000,000 more — would become depositors, beginning thereby a career of thrift and self-reliance.

The Government report referred to also states that there was an increase last year of 822,336 in depositors, and of $290,901,595 in deposits. These figures demonstrate how undesirable it would be to concentrate the vast sums that would be deposited at our postal savings banks in the Treasury at Washington; an amount too large for Congress to restore wisely to the channels of circulation. In fact, it is mainly this difficulty, that of providing for the use of the aggregate deposit of our people, which delays the introduction of the postal savings-bank system into the United States.

By transmitting the deposits made at the post-offices (*a*) to the States in which they originate, or (*b*) to corporate savings banks, we at once avoid the concentration of the savings of the people. The forty-two State governments could find use for the money in perfecting internal improvements, or in the loan of it to municipalities (as is done in England). The aggregate amount of deposit would never diminish, but be a constantly increasing sum. A low interest—say 2 per cent.—paid to the depositors, plus the charge by the national Government for the post-office service, would give the States money at a very low rate, while attracting to their treasuries an immense sum through the sense of absolute security which the people would rightly feel in placing their savings in the hands of a legislature which they directly control. Freedom of individual action would be preserved by giving equally cheap access through the post-offices to corporate savings banks as to the State treasuries; and such companies, paying a higher rate of interest than the State governments, would not be crowded out of business.

Horace J. Smith.

Pontresina, Switzerland, August 23, 1889.

HISTORICAL SEMINAR METHODS AT LEIPZIG.

To the Editor of The Nation:

Sir: I have just read the articles of Mr. Fling on the work of the Leipzig Historical Seminar in the *Academy* for April and May of this year. While the picture which he gives of the Seminar and its work is a very accurate one, as far as it goes, and while I agree entirely with his general conclusions, as I believe every American who goes to Germany for advanced history must, the picture is nevertheless a one-sided one. The Seminar work of Prof. Arndt must be added to make it complete. His subjects are always from mediæval history—generally select questions of German constitutional history. He begins with the earliest documents which illustrate German institutions, and comes as far down as time will permit.

It so happened when I was there that the 'Germania' was up for study at the same time under both Prof. Maurenbrecher and Prof. Arndt, but the methods of study were very different. One has been accurately enough described by Mr. Fling. In Prof. Arndt's work topics were almost never assigned to individuals. Some one or two became responsible for the translation of the passages to be taken up each evening, but the discussion was always general. Every student was at any moment liable to be called upon for his opinion, and if he did not have one, he generally made a mental resolution that he would be provided next time. Questions and suggestions came as freely from students as from instructor, and nobody had any idea of going to sleep. Altogether, the scene was not greatly different from that presented in the class-room of a wide-awake American instructor in the 'Germania,' who knows what ought to be done with such a book, as a good many of them do. Nor did the character of the work done seem to me very different, except that the interest was historical, and that a different and wider range of books was drawn upon.

The strong points of Prof. Arndt's method come out still more clearly when he takes up the charters and diplomas of a later period. Let us suppose a case. We are in the eleventh century, we will say. We know the special period to be taken up and the general topics; perhaps a number of subordinate topics with references have been announced—at any rate, enough is known so that very good general preparation can be made in both literature and sources, but no one knows the special topic or the text which is to be studied this evening. As the exercise opens, each man is handed a sheet of paper on which he finds, copied by the gelatine pad, a diploma of the period. Some one is asked to read it while the others follow—it is very rarely translated—and then Prof. Arndt says: "Now, gentlemen, what do you see?" For about five minutes every one tries his best to see something in the document worth mentioning. Then the work begins. "Well, who has it?" or, "Herr R., what have you found?" Suggestions are made by one and another. The usual answer is, "Yes, good, but there's more yet," and the students are gradually led on to extract by their own efforts, with only the slightest suggestions from the Professor, the historical facts directly implied, then those more remotely implied, and, finally, those only to be obtained by an extended process of inference, till the apparently simple-looking document is made to illustrate a range of fact that no one dreamed of at the outset. If the division at any time seems to be at a stand, they are encouraged by such expressions as "Zu, zu, meine Herren!" "Haben Sie Augen?" "Lieber Herr! was für Historiker!" This last is sometimes put in even stronger form, but always pleasantly, not angrily, and good work is certain of full appreciation.

This is only a single evening. Its method may not be repeated during the whole year. The rule is constant variety, but always quickness of work and keenness of insight. Sometimes the documents handed out are taken home for study, with a set of assigned topics, which are, however, very apt to be left behind when the discussion is well under way. Sometimes, after an hour spent on a document, Prof. Arndt will suddenly ask: "Is this genuine or a forgery?" and after more work it will be found to contain signs of forgery which ought to have been seen from the start. Again, a reference will be found to a fact of political history, and the Professor will call for all the sources which mention that occurrence. The books will be brought and opened on the table, and one student will read this and another that account. Questions will bring out the relations of the writers to the time and to the events, and their relative trustworthiness, and the two or three which are pronounced best will be very carefully compared, and everything possible extracted from them.

But it is impossible to describe fully a constantly varying method—only its general effects can be suggested. The things which Prof. Arndt demands that his students shall see in what he puts before them, are often things which it is not possible for them to see with their limited knowledge of constitutional history. But no doubt he understands that as well as any one, and for that very reason no better method could be devised to teach the men, what every student of history must learn, that when you have read a document through once, you have not seen all there is in it, and that after you feel sure you have got all it says directly, there may still be a great deal to be drawn from it by careful inference. The whole object of the work is to teach the best methods of historical investigation, and all the best students of history there gratefully acknowledge their indebtedness to it. The number of Leipzig history dissertations dedicated to Prof. Arndt indicates clearly enough the feeling. The students say that Arndt's Seminar reproduces very accurately the methods employed in similar work by Waitz—that this was recognized by Waitz as more true of Arndt than of any other instructor in Germany, and that Waitz in turn reproduced the methods of Ranke's original exercises, which were so "epoch-making" in Germany.

Whether this genealogy is correct or not I cannot say, but I do know that any American who goes to Leipzig for history, no matter in what branch of it, and does not join Prof. Arndt's Seminar, has missed one of the best opportunities he will find abroad. Indeed, if Americans are going to Germany for history at all (and it is very rapidly becoming unnecessary), I do not see why more of them do

not go to Leipzig. About one at a time seems to be all we can maintain there. One may, perhaps, want to see and hear the great men at Berlin, but for genuine work there is no place superior to Leipzig. Prof. Maurenbrecher is a remarkable lecturer. His audiences are always large, and in speaking he is full of life and enthusiasm, and keeps men awake. On this side of the work he has few equals in Germany. As a teacher Prof. Arndt is equally remarkable. He has a great deal of that power, so very rare in Germany, so much more common with us, which takes hold of students and wins their confidence and awakens in them the desire to do good work, and then shows them how to do it. PRESTON.

THE END OF WOMAN-BURNING IN ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: In the *Gentleman's Magazine* for 1789, under the date of March 18, there is the following account of the last woman-burning in England:

"The nine following malefactors were executed before the debtors' door at Newgate, pursuant to their sentence, viz., Hugh Murphy and Christian Murphy, alias Bowman, for coining; Charles Messenger and Tredway Pocock, William Coliard, and John Norrington, for burglary; James Grace and Joseph Walker, for coining; and William Craddock, for a robbery. They were brought upon the scaffold about half an hour after seven, and turned off about a quarter past eight. They behaved in a decent manner, and seemed fully sensible of their unhappy situation. The woman for coining was brought out after the rest were turned off, and fixed to a stake and burnt, being first strangled by the stool being taken from under her."

On the 10th of May, 1790, Sir Benjamin Hammett, in the House of Commons, asked for leave to bring in a bill to alter the law. He mentioned that it had been his duty as Sheriff to attend on the melancholy occasion of the burning of the female in the preceding year, and that the Sheriff who did not execute the sentence of burning alive was liable to a prosecution; but he thanked heaven that there was not a man in England who would carry such a sentence into effect. He obtained leave to bring in a bill to alter the law; and in that session the Act 30 Geo. III., c. 48, was passed. I have no doubt that the sentence of burning alive was carried out in earlier times. Then it was modified, contrary to law, by the executioner pulling a rope tight about the neck of the condemned as soon as the fagots were lighted. In 1739, at the execution of Catherine Hayse for the murder of her husband, the executioner scorched his hands and let go the rope. After this a low gallows was erected and the woman was first hung and then fagots were piled over her and she was burned.

I have noticed that many persons will not believe that such cruel punishments were ever inflicted in remote times, or at the present time in barbarous districts. They have never seen it themselves, and no evidence can make them believe that any persons can be so cruel.

F. MCCARTHY.

[We close this "inquest" (if we may make an equivocal translation of M. Gaidoz's *enquête*) by noticing, for the honor of American humanity, that the account of negro-burning in Kentucky which a correspondent lately copied for us from the Louisville *Courier-Journal*, has been pronounced a hoax by that paper. Of course the melancholy truth remains, that the conditions of Southern society are still such that probably not a man south of Mason and Dixon's line would have felt justified in denying the alleged occurrence, as any Northerner would have done on reading that a negro had been burned by a mob for rape, say, in Vermont or Michigan, though he might have been lynched in either of these States. The *Courier-Journal's* readiness to be imposed upon is proof of this statement.—ED. NATION.]

Notes.

DE WOLFE, FISKE & CO., No. 361 Washington Street, Boston, have, by the failure of another firm, become the publishers of Mr. William H. Whitmore's 'Ancestral Tablets,' the most ingenious and compact form of "family tree" ever devised—a genealogical blank-book which fairly implores to be filled.

'The Soft Porcelain of Sèvres,' with an historical introduction, by Édouard Garnier, translated into English by H. F. Andresen, has begun to be issued in ten parts by J. W. Bouton, No. 706 Broadway, New York. There will be fifty plates in water-color.

Halliwell-Phillipps left his wood-blocks and electros to the New York Shakespeare Society, which has formally authorized their use in the eighth edition of the 'Outlines of the Life of Shakespeare,' about to be issued by Longmans, Green & Co., who have purchased the copyright from the estate of the author.

The pleasant announcement is made that the "Riverside Aldine Series"—one of the most beautiful in its artistic simplicity ever undertaken by any American publisher—is to be further extended. To the ten volumes (by Aldrich, Warner, Lowell, Harte, Howells, and Burroughs) are now added 'The Gray Champion, and Other Stories,' by Hawthorne, and Thoreau's 'Walden' in two volumes. We should like to see in the series a volume of the European stories of Bret Harte, of which 'Sarah Walker' is the best, as indeed it is one of the best the author ever wrote. And there is no decently printed edition of Mr. James's 'Daisy Miller,' to which might well be added an 'International Episode,' 'A Bundle of Letters,' and its sequel, 'The Point of View.' And why should not Mr. Woodberry follow his admirable biography of Poe with a much needed orderly and annotated selection of Poe's short stories?

To commemorate the first production of an Ibsen drama in English, Mr. T. Fisher Unwin, London, is about to publish, in an edition limited to 115 copies on Van Gelder paper, Mr. William Archer's translation of 'A Doll's House,' illustrated with seven platinotype photographs, including a portrait of Ibsen and six portraits of the performers in the costumes of the play.

Volumes three and four—the last—of the Life of William Lloyd Garrison, by his sons, published by the Century Co., are to be issued October 10.

In view of the forthcoming memoir of Mrs. Stowe by her son, a work announced by Funk & Wagnalls, entitled 'The Life-Work of the Author of Uncle Tom's Cabin,' would seem to be in questionable taste; but the author, Florence Thayer McCray, is said to have had the assent and assistance of both Mrs. Stowe and the Rev. C. E. Stowe.

A. C. McClurg & Co., Chicago, continue their "Great French Writers" series with Paul de Rémusat's 'Thiers,' translated by Prof. Melville B. Anderson. They announce further 'Seven Days After the Honeymoon,' presenting "a model breakfast and dinner bill-of-fare"; and 'The Story of Tonty,' by Mrs. Catherwood.

'Open, Sesame!' an extensive collection of prose and verse for committing to memory, edited by Mrs. B. W. Bellamy and Mrs. M. W. Goodwin, is in the press of Ginn & Co.

The Elder Publishing Co., Chicago, have nearly ready 'Birds and Butterflies,' a book for boys and girls, by M. G. Musgrave.

Thomas Whittaker promises early in October 'Diabolology: the Person and Work of Satan,' being the Paddock Lectures for the current year, by Edward H. Jewett, D.D.

Little, Brown & Co., Boston, will issue directly 'Notes on the Revised Statutes of the United States, and the Subsequent Legislation of Congress,' by John M. Gould and George F. Tucker. The same firm has reprinted the 'Thoughts' of Marcus Aurelius as translated by the late George Long, with his final revision. It makes a pretty volume.

Harper & Bros.' forthcoming books include 'Select Poems of William Wordsworth,' edited by W. J. Rolfe, with illustrations by E. A. Abbey, Alfred Parsons, and others, of which the readers of *Harper's Magazine* have had a foretaste; 'City Legends,' by Will Carleton, with illustrations; 'Summer Holidays: Travelling Notes in Europe,' by Theodore Child; 'The Boy Travellers in Mexico,' by Thomas W. Knox; and 'Chita: A Memory of Last Island,' by Lafcadio Hearn.

The little that is to be told of the life of Jane Austen is repeated from the standard authorities by Mrs. Charles Malden in her volume just added to the "Famous Women" series (Boston: Roberts Bros.). Its merit and usefulness lie in its summarizing with extracts the six novels of the great Englishwoman.

Under the somewhat awkward title, 'The Three Germanys,' Mr. Theodore S. Fay publishes (through A. S. Barnes & Co.) a history of Germany in two volumes and 1,300 pages. It professes to be nothing more than a compilation, but even as a compilation its merit is doubtful: its great length alone would prevent it from taking equal rank with a useful manual like Lewis's translation of Müller. Perhaps the most noteworthy thing to be said of it is, that it is the work of an author in his eighty-second year; and it might be further said that it betrays so great a lack of the literary sense as to explain how it happens that none of the numerous books which Mr. Fay has published during more than half a century have secured a permanent footing in our literature. Motley, in one of his letters, mentions Mr. Fay as a man of most amiable character and of sincere religious convictions. The latter crop out in most irrelevant ways in the work in question, and often remind the reader of the absurd judgments with which the late Dr. Allibone's great piety led him to blemish his otherwise invaluable 'Dictionary of Authors.'

Prof. J. Hirschberg of Berlin made a trip from New York to San Francisco in August and September, 1887, and, for the instruction of his countrymen, has published his diary of the thirty-six days the journey occupied (Leipzig: Veit & Co.; New York: Westermann). His pages are crammed full of facts and figures; he is particular to give precise dimensions, dates, and hack fares, mentions the hour at which he leaves or arrives at a town, stating in parenthesis the population of the place and the omnibus fare from the station to the hotel. In short, he furnishes a useful handbook which will save those who follow in his wake the sad necessity of keeping or publishing a diary of their own.

Mr. William Cary has edited with skill and Mr. De Vinne has printed with taste 'A Record of the Dinner of the New York Graduates of Yale University in Commemoration of Victories in Rowing, Baseball, and other Athletic Contests, February 16, 1889.' The complete text of a dozen or more after-dinner speeches is given here, and thus the 'Record' gains value as a hand-book of American post-prandial oratory. Herein the social philosopher will find the "off-hand address," with its store of anecdotes more or less remote (in origin and in application). And two other things more concrete may be found also. First, a letter from Mr. J. D. Wickham, of the class of 1815, the oldest living graduate, who records that he was well acquainted with Nathan Birdseye of the class of 1736! And second is the significant assertion of Mr. Twitchell, who rowed in the race of 1859, that every member of the Yale crew and every member of the rival Harvard crew went to the war which broke out two years later.

The Clarendon Press, Oxford (New York: Macmillan), has published, in a small quarto, the 'Chronicon Galfridi le Baker de Swynebroke,' edited, with notes, by Edward Maunde Thompson, principal librarian of the British Museum. This chronicle extends from 1303 to 1356, and is a principal authority for, among other events, the battles of Bannockburn, Crecy, and especially Poitiers. A "Chroniculum" appended to the larger work, containing twenty pages, is really an introduction. The notes are very full, and are illustrated with three excellent maps—of the march of Edward III. in 1346, the raid of the Black Prince in 1355, and the battle of Poitiers.

An interesting episode in the history of Spain is narrated in 'Don Carlos d'Aragon, Prince de Viane,' by G. Desdevises du Dezert, a volume of 455 pages (Paris: Colin). This prince, who was born in 1421 and died in 1461, had a life full of strange vicissitudes. The legitimate King of Navarre after the death of his mother Blanche (1441), he was deprived of his inheritance by his father, afterwards King John II. of Aragon, who was lawfully only king-consort of Navarre. The life of Don Carlos was occupied with a long-continued struggle for his rights, in which he was aided by his uncle, Alfonso the Magnanimous, and in which he suffered exile and imprisonment. He was, says his historian, "not only the last national sovereign of Navarre, and the representative of Catalan independence, he counted also among the most cultivated princes of his time." The book is a worthy contribution to mediæval history, especially as giving information of a history so little known as that of Navarre.

Students of Maximilian's ill-fated empire should procure Paul Gaulot's 'Rêve d'Empire: la Vérité sur l' Expédition du Mexique' (Paris: Ollendorff). M. Gaulot has composed this work from the incomplete notes made by the late Ernest Louet, chief paymaster of the expeditionary corps, who was cut off in the midst of researches for a similar publication. As we read in *Polybiblion*, it appears that Napoleon III. entertained the scheme of a foreign establishment in Mexico unfriendly to the United States two years before he offered a throne to Maximilian.

We have received from Prof. Paul Fredericq of Ghent a copy of his 'De l'Enseignement Supérieur de l'Histoire et de la Géographie en Hollande,' a companion to his previously published papers on historical instruction in France, Germany, and Great Britain. The material is rather slight. History is neglected in the universities of Holland, and were it not that the religious history of the Netherlands has been taken up with zeal by the theological professors, there would not be much to say upon the subject. "Shut out from the Faculty of Letters, history has thus found an unexpected asylum among the theologians." The description of the several universities and their professors is in the same graphic style, and illustrated with the same entertaining detail, as in M. Fredericq's previous papers.

The most skilful and humorous draughtsman who calls himself "Caran d'Ache," has just collected half a hundred pages of his comic sketches into an 'Album Caran d'Ache' (Paris: Plon, Nourrit & Cie.; New York: F. W. Christern), which we may recommend heartily to all lovers of pictorial humor. The Franco-Russian artist has an astonishing fecundity of humorous invention, and an extraordinary industry in working out the subsidiary details of his subject. See, for example, the individuality of each of the dogs in the series called "La Plus Belle Conquête de l'Homme," and again in the "Chasse au Tigre . . . à Batignolles." Indeed, dogs—after horses and soldiers—are what M. Caran d'Ache does best. As good as anything in the book is the "Appareil à Duel," arranged first that there shall not be a fatal issue, and then that there shall be. Here again the attendant dogs of the duellists are delightful; but they yield in humor to the attendant surgeon.

A new National University which opens in Chicago on October 1 is to have an organ in the *National Magazine*, devoted to literary, educational, and scientific subjects.

The current number of the *Technology Architectural Review* (Boston) contains some creditable examples of the premiated work of the Institute. Mr. C. A. Cummings continues his "Outline of a Spanish Tour," with architectural indications, and mention even of the railroad distances and fares.

In recent numbers of the (London) *Bookbinder* there have been letters on the bookbindings in the Paris Exhibition, obviously from the pen of an English binder, who knows enough to appreciate the best French work, but not enough to see the vast gap which yawns between that and the best work of the ordinary English binders—among whom we do not include Mr. Cobden-Saunderson.

M. Octave Uzanne gives prominent editorial advertisement in *Le Livre* for August of an ingenious one-man society for producing works by the masters of contemporary French engraving. Every one knows the tendency of all associations of amateurs either to be divided as to the choice of their proposed creations or to fail to keep to a high level. M. Henri Béraldi, author of 'Graveurs du XIXe. Siècle,' makes himself president and treasurer of the society which he designates "L'Estampe Française," fixes the undertakings and pays the cost of the engraving. Those who wish to share the expense with him on these terms may do so, but they will have no vote in the direction. M. Charles Glinel exhumes from the *Keepsake Français* of 1832 a discarded poem of Alfred de Musset's, "Derniers Moments de François Ier," a dialogue between King and Jester, which recalls by association Victor Hugo's "Le Roi s'Amuse." A third paper is by Henri de Rochessauvre, and summarizes a small and little-known work of Machiavelli's—'Ritratti delle cose della Francia' and 'Ritratti delle cose della Alamagna.' One might expect a comment having a bearing on contemporary feeling between the two countries, but such is not the case, and the article is light and pleasant reading, and revives an Italian calculation as to the peace of Europe at the opening of the 16th century.

—The third volume of Mr. Worthington C. Ford's edition of the 'Writings of George Washington' (G. P. Putnam's Sons) has both an historical and a dramatic unity. It covers nine months of the years 1775-1776, from Washington's taking command of the forces about Boston to the evacuation of that city by the British. The episode to the main action is the Canadian expedition of Montgomery and Arnold. Washington's annoyances, in this crude beginning of a contest of which few foresaw the extent, were numerous and constant. There was a dearth of powder, which restricted offensive operations and made the defence of his works precarious. The officering of his command developed the usual jealousies, especially in the collision between Continental and colonial commissions. Soldiers would not enlist till they knew who their officers were to be—with good reason, seeing that some were cashiered for fraud and cowardice—and in the Massachusetts regiments the officers were chosen by the men, and were accordingly remarked for their subserviency to their creators. The absence of class distinctions among these New Englanders, and of what Charles Lee called the "decent distance of officers," struck Washington and the Southern members of his family as something very odd and deplorable. General Greene wrote in December, 1775, that "his Excellency . . . has not had time to make himself acquainted with the genius of this people." Their homesickness when it was a question of prolonging their service by entering the Continental army, so that furloughs had to be given them, was certainly not appreciated. Washington was for enlisting free negroes, but the Southern influence prevailed with Congress to limit this practice to reënlistments. He forwards to Joseph Reed a letter and poem addressed to him by the negro poetess, Phillis Wheatley, which he had been disposed to publish "with a view of doing justice to her great poetical genius"; and in a very civil letter of February 28, acknowledging her "elegant lines," he hopes to have the pleasure of an interview. "Your obedient humble servant," he signs himself. This volume has been very freely annotated by Mr. Ford, who perhaps overlooked an opportunity to point out Washington's indebtedness to Addison for his pet phrase about *deserving* success though one cannot command it.

— We have received from Mr. C. P. Huntington a map of Equatorial Africa, accompanying a circular headed "A Few Words to Americans on the Slave Trade." Mr. Huntington has, he says, for many years felt deeply the wrongs done to the African race, and has been interested in their future, and he now proposes a plan for making the nineteenth century—already preëminent for emancipation on the grand scale—for ever illustrious by the extinction of the slave trade and its attendant evils. In brief, his scheme is for an international policing of the great waterways of Africa on two lines, viz., east and west by the Congo, Lakes Tanganyika and Victoria Nyanza, ending on the east coast at Mombasa; and north and south, by the Nile, the lakes just mentioned, Lake Nyassa, and the Zambesi, ending on the south at Quilimane. Railways do not, as might perhaps have been anticipated, enter into this arrangement to any very considerable extent. The proposed Congo railroad, one from Suakim to Berber, and one from Mombasa to Victoria Nyanza, are all that are delineated on the map; the rest is water. There is, to our thinking, nothing impracticable about this conception, which involves not only the destruction of the infernal trade in human

beings, but also the security of the peoples now harried by it, the establishment of industry, and the indefinite expansion of commerce. Mr. Huntington's map is colored to show the devastated region, the routes of slave caravans, etc. We hope he will take counsel of Mr. Stanley on the latter's emergence from the "dark continent," of which we seem to have authentic promise.

— In a letter printed in another column, Mr. David H. Jerome of Saginaw, Mich., explains the connection between the retirement of Montgomery Blair from President Lincoln's Cabinet and Gen. Frémont's withdrawal as a candidate for the Presidency in 1864. That the two events were connected with each other in some way was made probable by the fact that they took place simultaneously. Together they constituted the most important political event of the year. That Mr. Lincoln's reëlection was put in serious jeopardy by the "Frémont movement" is a fact well known to all persons whose memory goes back so far. Yet this movement is belittled and ridiculed by Mr. Lincoln's biographers in the *Century Magazine*, and Mr. Blair's withdrawal from the Cabinet is ascribed to different grounds—that is, to general dissatisfaction on the part of the Radicals of the period, not to the particular dissatisfaction of one person. This one person, Mr. Jerome tells us, was Henry Winter Davis, not Gen. Frémont, as we conjectured in a paragraph previously referring to the subject. The intermediary in the affair was the late Senator Chandler of Michigan.

— Mr. Jerome's statements are so precise, he having accompanied Senator Chandler in his mission, they harmonize so perfectly with all the facts otherwise known, and they explain so fully the withdrawal of Mr. Lincoln's favorite Cabinet Minister (for Mr. Blair was his favorite, so far as he had one in his official family), that we cannot doubt their substantial accuracy. We hope that Messrs. Nicolay and Hay, in the revised edition of their work, will introduce these important facts, although they may necessitate the recasting of one or two chapters. It will be helpful to the truth of history, and to a correct knowledge of Mr. Lincoln's character, to show that he was not at all squeamish as a politician. In order to carry a point which he considered important to the country, or to his own party, he would make a bargain as readily as another man, but he would not make a bargain distinctly immoral in itself. It was not immoral, under the circumstances then existing, to sacrifice Blair in order to get the Frémont ticket out of the field, but, of course, it would have provoked criticism at the time if it had been known.

—Again we have to deplore the loss of one of our most valued contributors, in the person of William Allan, formerly Lieutenant-Colonel and Chief Ordnance Officer, Second Corps, Army of Northern Virginia (Stonewall Jackson's), and at the time of his death, on September 17, Principal of the McDonogh School near Baltimore. Col. Allan was born near Winchester, Va., in 1837, and was an accomplished mathematician and engineer. The war was no sooner over than he set about writing the history of that part of it which came under his observation. His two works, 'Chancellorsville' (1867) and 'Jackson's Campaign in the Shenandoah Valley, November 4, 1861—June 17, 1862' (1880), in both of which he had Capt. Jed Hotchkiss for his colaborer, won attention immediately by their clearness, accuracy, impartiality, and self-restraint. We doubt if any more truly military or more trustworthy memoirs have been evoked by the civil war. Col. Allan, putting by other offers, accepted the headship of the McDonogh School in 1873, and in 1887 published the third and last of his works (as known to us), the 'Life and Work of John McDonogh,' the founder of the institution. This biography will always remain an interesting memorial of American philanthropy under difficulties, moral and material. We doubt if the writer himself was conscious of the light it shed on the Southern mind and ethics in the old slavery days. In 1882 Col. Allan began his connection with this paper as a reviewer of books relating to the war, whether from the Federal or Confederate side, and he continued to render this service (not wholly confided to him, we ought to add) up to last year—the lack of material alone causing a cessation. As an educator he will be greatly missed, and his memory held in very high esteem.

— Dr. George Hamill Cook, State Geologist of New Jersey, whose sudden death on Sunday, at New Brunswick, we record with unfeigned regret, was born at Hanover, N. J., on January 5, 1818. He graduated at the Rensselaer Polytechnic Institute, at Troy, N. Y., in the not undistinguished class of 1839, and remained as instructor for a number of years, holding the chair of chemistry from 1841 to 1846, and of geology and engineering from 1842 to 1846. After a short experience as a manufacturer, he resumed his teaching, first as professor of mathematics in the Albany Academy, then as its principal, and then, in 1853, as professor of chemistry and natural philosophy in Rutgers College, with which institution he was steadily connected up to the time of his death. He could hardly have had a better training for the main work of his life, which began directly with his becoming an assistant in the Geological Survey of New Jersey (1854 56). To this department he brought fresh energy, and was in 1864 made its head, and he lived to see completed the great Atlas of New Jersey, executed under his direction as an example to all the other States of the Union. His final Geologic Report had advanced one volume towards print when he was taken away. Meanwhile, he had been appointed director of the New Jersey Agricultural Experiment Station, in 1880, and risen to be president of the local water board of New Brunswick, and become a member of the State Board of Health, and chief director of the State Weather Service. He managed the Survey with great shrewdness and the utmost economy, without waste as without display, and always with an eye to the material advantage of the people of the State. He commanded their unbounded confidence, and they freely granted him the modest maintenance which he asked for science. Prof. Cook was a man of perfect simplicity of manner, of real modesty and transparent integrity, certain to be loved, as he was, and to be missed, as he will be. Though past three-score and ten, he died in the harness and in the active exercise of unabated powers.

— The latest report about the unfortunate Erckmann-Chatrian rupture is contained in a brief article which M. Fernand Xau publishes in the *Écho de Paris*. The friends of M. Erckmann consider it necessary to deny the ridiculous charges of his lack of patriotism, which M. Georgel asserted were proved by Erckmann's continuing to live among Germans in Alsace. It seems that he was ordered back to Phalsbourg by his physicians in order that he might breathe his native air, but he lives there in retirement. In fact, he never goes out, except in a carriage, in order to avoid the Germans, and has given up his old joyous evenings at the *brasserie* and the delights of "la chope mousseuse." All this is absurd enough, but perhaps excusable in the present state of French feeling towards Germany. What is of somewhat more importance is the assertion that M. Erckmann has never received what is his fair share of the profits of the literary work in which he has collaborated, and that the referee to whom the case was submitted by consent of both parties gave him an award. Of still more consequence is the announcement that M. Erckmann is about to publish a volume containing a full history of the long partnership, and that this will be for the most part documentary.

THE LOSSES OF THE CIVIL WAR.

Regimental Losses in the American Civil War. By Wm. F. Fox, Lt. Col. U. S. V. Albany Publishing Co. 1889. 4to, pp. vi, 595.

At once, and without preamble or qualification, it may be said that this is a very valuable book, by whose creation the author has made not merely military students, but all patriotic Americans, his debtors. Modestly presented "only as a convenient digest of official publications," with an apology that a private citizen should undertake such a work, it is really an elaborate, painstaking, and apparently accurate discussion from the regimental standpoint of the Union casualty statistics in the late war.

War is force carried to the last extremity. There are campaigns where manœuvres replace battles, but in the end, with armies at all nearly equal, battles must be fought and lives be lost. No general can compel the surrender of his adversary without a trial of strength; no nation will relinquish its pretensions without an exercise of that force to which an appeal has been taken. When the shock comes, some, doubtless many, individual lives are needlessly sacrificed by errors in the field, the victor blundering as well as the vanquished. But at last pressure, which is a euphemism for death, overcomes resistance, and the weakened side gives way. It may be six weeks and one Königgrätz, or four years and the blood that flowed between Gettysburg and the Gulf, that are required to settle the dispute, but the ultimate argument is the same. Col. Fox is right, then, when he lays stress on the tribute of life as the measure of practical devotion each regiment yielded. He does not question what others might have done, he simply records what some have done. And he is right, also, in using the regiment as the standard, for, as he says, the relative importance of the various points on the battle-field where there was contact and where the pressure was greatest, where valor and heroism were most displayed, are best shown by studying the behavior of those units, the military families that encamped about and marched under the same colors. Perhaps, too, the unaccustomed mind can best grasp such facts and the connected conditions when thus grouped. Eighteen thousand men falling from eighty or one hundred thousand Unionists at Gettysburg make a less clearly defined picture than the 224 casualties that occurred among the 262 members of the First Minnesota on that field. The greatest loss of life does not necessarily imply the greatest service, but, as a rule, great military service was marked by great loss of life.

More than two and three-quarters million separate enlistments, representing somewhat less than two million individuals, were made in the two thousand-and-odd regiments called

into the national service for varying periods, with unequal numbers and to different duties. The author's attempt is to reduce these very complex figures to something like a common basis, and he has succeeded in separating their factors so as to make classification possible. But his special object is to determine regimental mortuary losses, and with this aim he consolidates those dying of their wounds with those killed outright. It seems to us that he might have gone a step further and reckoned those discharged for disability on account of wounds, if not with the dead, at least in a separate column. In the field this cannot be done, or, rather, to do it would require time and energy better otherwise employed. The general must know, and know promptly, how many of his men are killed outright, how many are missing, and, especially, how many others are disabled. Hence the field return. He cannot wait to have determined the ultimate fate of the wounded. But to the statistician, and ultimately to the statesman and the economist, it is of great public importance to realize the deaths, whether immediate or remote, and, as we think, the number of those whose fighting days are past. But, disregarding those who were discharged, whether ultimately dying, recovering, or remaining crippled, it appears that, taking the war throughout, the killed outright were to all the wounded as 1 to 4.8, while those who lost their lives from battle were to those wounded but not dying in service as 1 to 2.5. This is approximately correct, taking one battle as a whole with another as well as for the entire war, but it by no means holds good for all the regiments engaged. Close quarters with a resisting foe means a high mortality, both actually and comparatively.

It would be interesting, but it is impossible, to notice all the features of this cyclopædia; but, to cite some of the remarkable statistics here collated, we find, for instance, that there were 45 infantry regiments that lost 200 or more killed or mortally wounded in action, the 5th New Hampshire leading with 295, while of the heavy artillery regiments, which in effect were overgrown infantry, the 1st Maine heads the list with 423, and of the cavalry again the 1st Maine with 174. But actual loss and percentage of loss are not identical. There were 200 regiments whose deaths in action were 10 per cent. or more of their entire enrolment, and of these 22 lost 15 per cent. or more, the 2d Wisconsin leading with 19.7 per cent. (This regiment received in all nearly 900 casualties among its total membership of 1,203). Of course, the percentage of loss to those actually engaged is still higher, as a certain number of men are always on duty other than with the firing line. And the author has added an astonishing table, confessedly not complete, of sixty-nine regiments in twenty-three distinct engagements where the casualties (not the mortality) ranged from 50 to 82 per cent. of those engaged, and in which nearly if not entirely all the missing were known to be killed or wounded. By way of comparison, observe that the Light Brigade at Balaklava lost 36.7 per cent.; the Third Westphalian at Mars La Tour sustained the heaviest German loss at 49.4, and the Garde-Schützen at Metz lost 41 per cent., almost their extreme. Another table gives a list of 260 regiments whose death-rate alone exceeded 10 per cent. in individual battles. This includes the duplication of certain famous commands, where they suffered thus more than once. The 1st Minnesota leads with 28 per cent. at Gettysburg, followed by the 25th Massachusetts, with 23 per cent., at Cold Harbor. It is worth noting that the fire from the muzzle-loading rifles of the rebellion was quite as effective as that from the breech-loaders in France in 1870-71.

The volume contains brief but intelligible and excellent sketches of all the army corps and of a few of the more famous divisions. Then follow 300 pages of regimental statistics, a page to a regiment. These give the figures by companies, the actions and resulting deaths, and a concise regimental sketch in the form of notes. The author carefully disclaims setting these up as the best 300, but he is perfectly justified in his assertion that they were 300 fighting regiments. These in turn are succeeded by a list of 225 battles, with the regiments sustaining the greatest losses in each, and this again by a list by States of all the regiments and batteries, with mortality from all causes, and a running commentary upon them. The book closes with naval statistics and a chapter upon Confederate losses. From this last we cannot refrain from extracting this story of Gettysburg: On the first day Capt. Tuttle's Co. of 26th N. C. "went into action with 3 officers and 84 men; all of the officers and 83 of the men were killed or wounded." On the same day Co. "C," 11th N. C., of the same brigade, lost 2 officers killed and 34 out of 38 men killed or wounded, and on the third Capt. Bird took the 4 remaining men into the charge and brought out the colors himself. Such figures need no eulogy.

The treatise is wisely and absolutely free from all discussion of battles or campaigns in any tactical or strategical sense. It deals with no might-have-beens, but confines itself strictly to a recital of facts without expression of opinion upon the facts. This self-control is the more remarkable because of the author's intimate acquaintance with the family history of the army, developed by the years of study that have gone into this book. This silence adds greatly to the value of the work. But it is a soldierly reticence, not the dulness of ignorance or indifference. He simply does not wander beyond his self appointed lines. When he does allow himself to speak, it is apparent that the military sentiment has well survived the long years that have covered the memories of Virginia and Tennessee. He still feels the injustice and does not hesitate to denounce the stupidity of the War Department in ignoring the sentiment that is such an important military factor, and, by disbanding corps and transferring brigades, disregarding and crushing the *esprit* that is such a stimulant. Enthusiasm is a military virtue always to be cherished. As would be supposed, Col. Fox is an earnest advocate for careful recognition of regimental feeling, and lays great stress upon the distinct duty of complete records, in justice to the enlisted man who cannot expect to win personal fame, but whose honor is bound up collectively with his fellows'. But he is too hopeful when he looks for a working agreement with the enemy to respect the neutrality of such rolls. While discussing these general principles he might have inveighed against the useless multiplication of regiments, against the inane stoppage of enlistments, and then the deluge of new organizations, while the old and disciplined ones were permitted to be frayed out under the unceasing attrition of the field. He might have cried out against the enormous bounties and the consequent rascalities, and against the loose inspections that accepted herds of infirm men to "fill the quota" and then to be discharged, now possibly unworthy pensioners by the grace and generosity of the nation. It is true all this is strictly beside his subject, but it is in the direction of regimental efficiency; and in another edition we hope such an essay may find a place.

This new 'Book of Martyrs' will give its author a very enviable position as a student who has done important work well; it will become an authority, and it adds another to the list of necessary books of reference for military students and for public libraries. The very few errors we have observed are trivial and not worth attention. It is excellently printed and thoroughly indexed.

CHRISTIANITY IN FORMOSA.

Missionary Success in Formosa. By the Rev. William Campbell. London: Trübner & Co.

It is an evidence of the looseness of the political organization of the Chinese empire that, until within the last two decades, China has done little to prove her ownership of Formosa. This beautiful and fertile island, so aptly named by the Portuguese, lies almost within sight of her main shores, and comprises an area of about fifteen thousand square miles, beneath and on the surface of which are bountiful resources. Yet the eastern half is unknown, unsubdued, and inhabited by independent tribes of savage aborigines. These warlike people defy the rule of the Son of Heaven, and look upon the Chinese only as creatures with heads to be taken to adorn their villages. Chinese skulls and hair-queues serve the same purposes in Formosan decorative art as the scalps of white people do in the adornment of the Indian belts and lodges in America. The passion for head-hunting among these Pacific islanders will be ineradicable until conquest or Christianity has greatly modified their ferocious traits.

On old Chinese maps, Formosa is hardly outlined, and even on those printed within a quarter of a century the eastern half of the island is not marked as Chinese territory. Besides the traditions binding together the Formosan, Loochooan, and Japanese (the custom of head-hunting being in primeval times the same), this island was in the seventeenth century the refuge of some thousands of natives of Nippon during the anti-Christian persecution, Formosa at that time having few Chinese inhabitants. Hence it was more than the transient political "capital" of a war-party which led the Japanese to make an armed descent on Formosa to chastise the Bu-tan savages. Their first purpose accomplished—after the Americans, for example, had ignominiously failed—they established a permanent camp, and refused to remove or apologize until the Government at Peking had bought them off with an indemnity. From that time dates the first serious attempt to make the island an integral part of China. Even yet the eastern coast is a menace to civilization, and the prospect of crews being shipwrecked and eaten is by no means an imaginary one. The Chinese pirates—as the recent attack on the American steamer *San Pablo* in the Formosan channel shows—are bad enough; but to have cannibals inhabiting with impunity a long coast of nearly two hundred miles in the very track of the world's commerce is a disgrace to China. True, the eastern side of Formosa is much less traversed than the western or Chinese side, yet it is an inexcusable shame that China has not yet subdued the tribes on the cannibal side of this beautiful island. Our own records of mercantile disaster on this coast, though few, are sufficiently horrible, while the death of our sailors and the loss of the gallant young officer Alexander Slidell Mackenzie, jr., are still fresh in

the minds of naval men of this generation. Whether wholly justifiable or not, the Japanese invasion of 1874 at least aroused the Chinese to action, and in a measure earned the gratitude of the civilized world.

Since 1865 the Presbyterian Church of England, and since 1872 the Presbyterian Church of Canada, have established flourishing Christian missions in the Chinese part of the island. One of the English missionaries, the Rev. William Campbell, has retold the interesting story of Dutch Christianity in Formosa, and modestly narrated that of his own work. Having recently discovered in Holland and reprinted Domine Gravius's translation of the Gospel of St. Matthew, he has followed up that publication by the present 'Missionary Success in Formosa.' The two comely duodecimo volumes from the press of Trübner & Co. contain fine portraits of two Dutch missionaries and of a famous Formosan chief, whose descendant is now pastor of a self-supporting church of over a hundred members. A plan of Tai-wan city and a good colored map of Formosa are added. The rare pamphlet published in London in 1650, descriptive "of the conversion of 5,900 East Indians in the Isle Formosa, neere China," etc., is here reprinted, with valuable appendices, in the form of extracts from Grothe's 'Archives for the History of Dutch Foreign Missions,' a work of great learning and research recently issued in Holland. This part of Mr. Campbell's work, treating of Dutch Christianity in Formosa, occupies 214 pages, and is full of thrilling episodes. The planting of commercial and missionary stations in America, Asia, and Africa, in which the minister and schoolmaster were almost invariably important persons in each colony, was one of the outlets to the fresh energy of the little Protestant republic. While the Spaniards secured the Philippine Islands, and the Portuguese Macao, the Dutch made their lodgment on the Pescadore Islands as a strategic point for the control of the northern Chinese and Japanese markets. The Chinese Government, however, objected to this high-handed measure, and induced the Dutch by bribes, rather than by force, to remove elsewhere and outside of China. Formosa was at that time unclaimed and practically unknown, so the Dutch were allowed to settle in this large and fertile land. They fortified Tai-wan, and began commercial and missionary operations on a large scale. From 1624 to 1662, no fewer than thirty-two ordained missionaries served at various times in the field, and the number of converts, members of churches, was in 1650 nearly 6,000. In the list of domines given, it is interesting to find the names of some who were in all probability relatives of Dutch clergymen contemporaneously in New Amsterdam. Among these was Rutger Tesschemaker, whose kinsman, Domine Petrus Tesschemaker (for whose ordination as pastor at Schenectady, the first ecclesiastical ordaining council in America was called), lost his life in the massacre. Candidus, the pioneer missionary and translator in Formosa — after whom Mr. Campbell in his explorations named a large lake, possibly the only important one in the island—recommended that the missionaries should come out single, and marry the native women; but this does not seem to have been done. Considerable numbers of the colonists from Holland were women. The Dutch language was taught to the most intelligent of the natives; but for most of them the Dutch liturgy and articles of the faith (Apostles' Creed) were done into the Sin-kang dialect. The standard of theology and instruction, the same as that taught in Holland in all the Dutch colonies, including that on Manhattan Island, was the Heidelberg Catechism.

Thus, with ships and trade, fort and garrison, homes, schools, churches, and a Christianized neighborhood, the Dutch settlement at Tai-wan was a scene of peace, prosperity, and promise until all was overwhelmed in ruin by Coxinga. The Manchiu Tâtars, descending out of the north like a flood, had overthrown the Ming dynasty, conquered China, enforced the wearing of the hair-tail or queue as a token of subjugation on the Chinese. In this period of disorder, Koku-sen-ya, as the Japanese call this son of one of their women by a Chinese father, whom foreigners call Coxinga, rose to mighty power as a buccaneer. Driven from the mainland and ports of China by the sure establishment of the Manchius in power, he turned his attention to the Dutch. Having seized certain parts of the island, he sent a flag of truce into the port at five P. M., May 24, 1662, demanding its surrender. He named himself Teybingh Kok-Seng (Tai-Ping Koku-Sen). With a courage that few readers of Dietrich Knickerbocker would suspect in Dutchmen, the Governor and Council refused to surrender. Then followed a siege with artillery. Despite the overwhelming odds, the garrison of Tai-wan held out, until, having seen the fleet sent to rescue them dispersed by tempests or stranded, and 1,600 of their number dead of disease or wounds, the remnant was forced to surrender. The most horrible barbarities, including crucifixion, were then perpetrated, the Dutch ladies being made concubines to the Chinese soldiers; though it was a particular amelioration to the lot of the latter to fall to the single men, and thus escape the life-long persecution of other wives and women. Dutch Christianity in Formosa, save as it survived in the wail of the hopeless captives, was utterly blotted out, and for 200 years the name of Jesus was forgotten in the island.

The story of modern missionary success occupies the last third of the first and all of the second volume of Mr. Campbell's fascinating work. His many journeys through known and unknown parts of the island, and especially among the cannibals and head-hunters; his personal adventures and dangers; the episode of the French bombardment; his visit to the Pescadore Islands, are told with clearness, modesty, and in sprightly style. The book is one of unusual value and interest, and will be read by many who do not habitually seek their literary pabulum in the writings of missionaries. Since Mr. E. H. House wrote of the Japanese expedition to Formosa, we have had no book which gives us so many glimpses of life on this, one of the fairest islands on earth.

HAWAIIAN LEGENDS.

The Legends and Myths of Hawaii. The Fables and Folk-Lore of a Strange People. By His Hawaiian Majesty Kalakaua. Edited, with an introduction, by Hon. R. M. Daggett, late United States Minister to the Hawaiian Islands. Charles L. Webster & Co.

THE volume before us has the unusual interest that its author is himself one of the race whose legends and myths he has recorded. Readers of the *Nation* will not need to be reminded that King Kalakaua is a writer of good and fluent English. He is quite competent, as far as literary handling is implied, to produce this interesting collection of Polynesian stories. But Mr. Daggett's collaboration has been of much service, and his full introduction gives a summary of the geography, the history, the leading usages, and the princely genealogies of the Hawaiian Islands from the earliest date.

The definite history of the group does not extend beyond the middle of the eighteenth century, when the reign of Kalaniopuu began. The remote ancestors of the Polynesians are supposed by some theorists to have moved from some point upon the Aryan plateau. However this may be, they were diffused through the central Pacific Ocean by the way of the Samoan and Society groups, reaching the Hawaiian group about the middle of the sixth century. Fornander thinks that the one point of dispersal was Samoa. During the tenth century a second immigration from these islands reached the coast of Hawaii, "continuing for more than a century and a half, and completely changing the political, and to some extent the social, condition of the people." Here tradition takes up the history of the group, and from the eleventh century to the present time a full conspectus is given of the ruling families as far as tradition has preserved them. Interesting portraits of the leading members of the present ruler's house are added, of the King and his Queen, of his elder sister, the heir apparent, and of the little Princess Kauilani, her own direct heir. Another list has been prepared with unusual care —that of the "elemental, industrial, and tutelar deities" of Hawaii. Of the former group Kane was the organizer, Ku the architect and builder, Lono the executor; while Kanaloa was the Lucifer or fallen angel—an odd suggestion of the personages in the popular religious system. The names of the volcanic deities have about them a certain wild native poetry; among them are: *Hiiaka-noho-lani*, the Heaven-dwelling Cloud-holder; *Hiiaka-kaalawamaka*, the Quick-glancing Cloud-holder; *Kapohoikahiola*, the God of Explosions in the Palace of Life.

A very intelligent sketch of the ancient government and social usages is given, in which one of the most interesting passages is the following: "In the royal families, to subserve purposes of state, father and daughter, brother and sister, uncle and niece frequently united as man and wife. The children of such unions were esteemed of the highest rank, and, strange to say, no mental or physical deterioration seemed to result from these incestuous relations." There seems to be no doubt of the accuracy of the facts here stated. The magnificent physical development, the clear and active minds, and the noble manners of the higher chiefs are matters well within the memory of the present writer and of other former residents of the group. How far these were due to breeding and how far to favoring conditions of life is not a simple question; and the inquiry is one for which sufficiently numerous and accurate data have hardly been gathered; in C. S. Stewart's 'Journal of a Residence in the Sandwich Islands,' 1830, p. 129, some particulars may be found. It is the usual function of foreign civilization to despise aboriginal usages and to destroy aboriginal culture wherever it is found; and it is much to be regretted that the most interesting of data—those which relate to the physical continuance of the species—have been in the main neglected in the record of the undoing of the Polynesian.

We note in this Introduction some inaccuracies, as, for instance, the view that the Hawaiian and other islands of the Pacific are the summits of a submerged continent. This theory, as Mr. Alfred Wallace has pointed out with clearness, is entirely at variance with our geological knowledge. On page 56 the mention is made of the "sea-bird the *mamo*," which supplies the precious yellow feathers of which the Hawaiian royal cloaks are made, and the

usual statement of travellers is repeated, that "a single yellow feather is found under each wing of the *mamo*." This is inaccurate. The *mamo* is the cloak; the bird is a mountain-bird named *uho*. We have shot it ourselves upon the mountains of Hawaii, and have found under each wing not a single feather only, but a small tuft of feathers of varying size, the largest being about an inch and a quarter in length. The king's bird-catchers took the *uho* with bird-lime made from the juice of the bread-fruit tree; from under each wing they plucked one or two of these largest feathers, and then liberated the bird uninjured for the smaller feathers to grow. It took scores of thousands of such feathers to make the royal cloaks which visitors to Honolulu, as late as the sixties, will remember seeing in the coral-built palaces of the last of the Kamehamehas, and of which but a few are now in existence; for the Hawaiians of the old time were capable of the splendid sacrifice of burying one of these priceless cloaks with the body of a king.

Turning now to the body of the work, we find twenty-one titles; they are partly pure legends and partly history intermingled. The author acknowledges especial indebtedness to Judge Fornander, whose account of the 'Polynesian Race' has heretofore been reviewed in these columns, and, though open to much objection upon the scientific side, has yet brought together a large amount of new record in the matter of traditions and history. We cannot outline these stories, which give a fair representation of the sentiment and the poetry, the warlike, the barbarous, and the kindly usages alike of this most interesting people. The alien wildness of the Polynesian imagination will not always hold the reader of our own race, for it takes him into regions too remote from his sympathies and training. Yet in it, frequently, there are touches which, though they are strange to our own imaginative genius, still have a wild beauty that we cannot fail to recognize. Such is the concluding story, that of Kaha, the Princess of Manoa. This beautiful creature is slain by a jealous lover named Kauhi, who fells her to the earth with a cone of *hala* nuts; and, after burying the girl's body, he starts down the valley toward Waikiki.

"He had scarcely left before a large owl—a god in that guise who was related to Kaha and had followed her—unearthed the body, rubbed his head against the bruised temple, and restored the girl to life. Overtaking Kauhi, Kaha sang behind him a lament at his unkindness. Turning in amazement, he observed the owl flying above her head, and recognized the power that had restored her to life.

"Again ordering Kaha to follow him, they ascended the ridge dividing the valleys of Manoa and Nuuanu. The way was beset with sharp rocks and tangled undergrowth, and when Kaha reached the summit her tender feet were bleeding and her *pau* [zone] was in tatters. Seating herself on a stone to regain her breath, with tears in her eyes she implored Kauhi to tell her whither he was leading her and why he had sought to kill her. His only reply was a blow with the *hala* cone, which again felled her dead to the earth. Burying the body as before, he resumed his way towards Waikiki.

"Again flying to the rescue of his beautiful and sinless relative, the owl-god scratched away the earth above her and restored her once more to life. Following Kauhi, she again chanted a song of lament behind him, and begged him to be merciful to one who had never wronged him, even in thought. Hearing her voice, he turned, and without answer conducted her across the valley of Nuuanu to the ridge of Waolani, where he killed and buried her as he had done twice before, and the owl-god a third time removed the earth from the body and gave it life."

It is only after the fifth immolation that the Princess of Manoa is delivered from her assailant and united to his rival; her parents, "the Wind and Rain of Manoa," approving the marriage.

In this we have a note distinctly alien to that of the northern imagination, one that reminds us strongly of the legends of the Mahābhārata; yet it is not so remote as to be lacking in charm. Another noticeable and beautiful story is that of the Sacred Spear-Point. The story of Kaiana, the last of the Hawaiian knights, was told years ago by the late James Jackson Jarves, the historian of the Islands, at greater length. Among other recitals, that of the "Destruction of the Temples" gives the history of the year 1819, when the Hawaiian gods were spontaneously abandoned by the natives themselves; so that when the first missionaries arrived, in 1820, they found that their claim, so to speak, was entirely cleared of theological underbrush.

King Kalakaua has long taken a praiseworthy interest in the history of his country, and his part in the execution of the present work is considerable and creditable. Much of these 'Legends and Myths' is new. The work is a real contribution to the growing literature of the subject.

Early Letters of Jane Welsh Carlyle, together with a few of later years, and some of Thomas Carlyle. All hitherto unpublished. Edited by David G. Ritchie, M.A. London: Swan Sonnenschein & Co. 1889.

THE domestic infelicities of the Carlyles have not occasioned a more entertaining book than this, in which Mr. Ritchie has collected the early letters of Jane Welsh to his grand-aunt, Miss Eliza Stodart, her cousin-confidante, to whom she wrote in the fulness of a heart of twenty years and many lovers, with liveliness equal to her levity, and an abandon in expression which saves the trivial interests and events of Haddington from becoming over-wearisome to the most tried reader. Entertainment at least we can promise him, and also some real illumination of the character of Mrs. Carlyle discoverable in the expansiveness, the sentiment and romance, the vexations and flirtations and tribulations of Jane Welsh. Slight as the material is of which this correspondence was made, it was enough to take and retain the stamp, "the form and living pressure," of a vivacious young girl who, when she dreamed of "marrying a genius," little thought what a world would peep over her shoulder by consequence.

Carlyle, we believe, denied that Jane Welsh was a flirt; his account of the matter was that every one fell in love with her because she was so attractive. Perhaps it was so; certainly we do not see her "setting her cap" at any one—she was too proud for that; but she as certainly had a long train of lovers, and she delighted, woman-like, in this tribute to her charms. She had thoughts bent on marriage, and the chances that time and circumstances threw in her way were an unfailing source of sarcasm or sentiment, as the case might be. She had her ideal, too, of both lover and husband out of Rousseau; she sighs for a Wolmar or a St.-Preux—"George Rennie! James Aitken! Robert Mac Turk! James Baird!!! Robby Angus!—O Lord, O Lord! Where is the St. Preux? Where is the Wolmar?"—and forthwith she declares she will "never marry." But Carlyle was already by her side, and she measuring him by the Rousseau standard: "He is something liker to St. Preux than George Craig is to Wolmar. He has *his* talents, *his* vast and cultivated mind, *his* vivid imagination, *his* independence of soul, and *his* high-souled principles of honor. But then—ah, these *buts!* St.-Preux never kicked the fire-irons, nor made puddings in his tea-cup. Want of elegance! Want of elegance, Rousseau says, is a defect which no woman can overlook," and so she concludes again for a nunnery.

Of all these lovers, George Rennie made the one impression on her heart. He had plainly enough given her reasons—struck adoring attitudes in adjusting her spurs, as she prettily remembers; sent letters, and something had some time happened in "the very room" much too trying in the recollection to be spoken of. But he had gone off without the last committal, light-hearted enough, to Rome and his sculpturing—to "ruin," says Miss Welsh; and she remains to be vexed at seeing how often she remembered him. In this case she delivers her heart up to us, much annoyed at the ungallant conduct of that "false, heartless" wretch; but in the other instances she delivers up her lovers most mercilessly bound:

"I told him among other things, in tolerably plain English, that he was given to lying (and good reason I had for saying so). In reply, he kissed my hand! This was obeying the Scriptures with a vengeance. If I had bid him get out at the door, I suppose he would have taken me in his arms. Drivelling, mean-spirited, 'thrice-doubled ass'! He is sunk immeasurable fathoms in my disdain! '*Mais, doucement, mademoiselle*'!"

So she dismisses poor, impudent "Dugald." Carlyle, meanwhile, kept on scratching the andirons "dreadfully," and sending autographs of Goethe and Byron, and "brilliant letters." The autograph of Byron occasioned a romantic burst, not unnatural to one who had written such lines upon his death as are here published from her girlish pen:

"This, then, was his handwriting! *his* whose image had haunted my imagination for years and years; whose wild, glorious spirit had tinctured all the poetry of my being! . . . All the sentiment in me was screwed up to the highest pitch; I could hardly help crying like a child or Dugald G——, and I kissed the seal with a fervor which would have graced the most passionate lover."

Such bits may serve to indicate the freshness, the natural gayety, sharp tongue, and careless candor that give to these early letters of a period not previously touched by biographers all the interest they have in themselves. They afford, moreover, much light upon the temperament, the inbred ways and views of the woman who, when her "wee existence" was behind her, still carried the old traits into new circumstances in Craigenputtock and London. The later letters give a far pleasanter impression of the life at Craigenputtock, in particular, than Froude has permitted us hitherto to have. She was happy there in work and companionship, and the little events of the day—more contented, she declares, than she had ever been in her life before—and the disagreeable is a small part in her account of it and is lightly borne. This is the principal gain, in the way of really important biography, and it is a correction that could not be so truly and surely made in any other way as it is by means of her own contemporary letters. The interest lessens in the few letters at the end, of London life; were it not for the reappearance of our old friend George Rennie on the scene, who (being married) when he is ill or blue calls upon her, they would be as dull as letters from her pen could be. The dozen letters from Carlyle are not especially notable.

The editing is excellent, but errs by excessive, not to say pedantic, conscientiousness. It is hardly necessary to put in a foot-note to tell us the source of "Angels and ministers of grace, defend us." Altogether we recommend the volume with more cheerfulness than most of the publications upon Carlyle, with the proviso

only that it must be read as if it belonged to the last century and had lost all personality by lapse of time.

Socialism in England. By Sidney Webb. [Publications of the American Economic Association.]

We have here a very lucid account of the origin and growth of the socialist movement in England, showing how widely ideas of socialism have penetrated into every class, and what changes those ideas have already brought about on legislation. Mr. Webb explains the differences between the many forms of socialistic organizations and their varying aims, gives a brief history of their leading men, and an indication of the character and influence of their publications, with some succinct form of programme for future legislation, still very remote from actual possibilities, but towards which he considers everything is tending.

Although as a conscious popular agitation the socialist movement has only had any definite existence in England since the last eight years, the progressive socialism in English politics began to show itself in the early days of this century. The survivors of the collapsed Chartist movement transmitted their enlightenment to their comrades, while French and German refugees diffused the ideas of Marx and Lassalle among the working classes. John Stuart Mill, Carlyle, John Ruskin, and the Positivists all helped to prepare the public mind for necessary changes. Mr. Webb considers that the immense circulation of Henry George's 'Progress and Poverty' "sounded the dominant" note of the English socialist party of to-day. The adherents of George's views developed into socialists. Mr. Gladstone's coercive measures against the Irish Land League alienated the earnest Radicals among his adherents; the Egyptian policy was a further demonstration that so-called "Liberalism" would countenance many political crimes. It was the utter neglect of English social questions that caused the formation of the first socialist organization, in 1881, under the name of Democratic Federation, by the efforts of Mr. N. M. Hyndmann, Mr. Herbert Burrows, and Miss Helen Taylor (stepdaughter of J. Stuart Mill), and others, among whom Mr. W. Morris, Mr. Champion, and Mr. Joseph Cowen were prominent.

Mr. William Morris's Socialist League was founded in 1883 with the development of important differences in its views from those of the Democratic Federation. While accepting the collectivist principle of public control over the instruments of wealth production, the Socialist League insists strongly upon the necessity of this control being exercised by free communal groups, only loosely and voluntarily associated in larger aggregates. On this ground it has often leanings towards the "Anarchist" section in resisting the tendency to an overcentralized administration to which collectivists are prone. The present writer demonstrates that Mr. Morris's repugnance to the political institutions of the day, which leads him to preach ideal socialism rather than the appliance of its principles in any practical way to current social evolution, makes his teachings more attractive to literary workers and students than to the working classes—the wage-workers to whom his lectures are chiefly addressed.

The Fabian Society, the Christian Socialist Society, the "Guild of St. Matthew," the Toynbee Hall Settlement, the English Anarchists, and many other ramifications meet with fair representation in this pamphlet; but Mr. Sidney Webb, who is himself a well-known and ardent socialist, thinks that the cause is very much helped along by those who are unconscious of their socialism, many of whom proclaim individualism, self-help, and laissez-faire as their creed. The socialist propaganda has been widely diffused through the mining and manufacturing districts of England, and has found response and active adherents in all the industrial centres of Scotland; but in Ireland its teachings fall on sterile ground, owing to the backward state of industrial development. Many Christian ministers of different denominations have strong tendencies to socialism: there is a long list of works by ministers in its favor which Mr. Webb gives us. He also points out how Oxford and Cambridge have been affected by socialism without themselves having had any direct influence on the movement.

It is in the general tone of political economy in our day that the most apparent change has taken place. To quote our author:

"The lesson of evolution, at first thought to be the apotheosis of anarchic individual competition, is now recognized to be quite the contrary. We have to learn, Prof. Huxley tells us, to substitute consciously adapted coördination for internecine competition, if the organism which will prove to be the 'Fittest to Survive' is to be also the best. Even the political economists are learning this lesson, and the fundamental idea of a social organism paramount over and prior to the individual of each generation is penetrating to their minds and appearing in their lectures, though it has not even yet affected to any great extent their more elaborate treatises."

As a significant fact, the author mentions that the editors of the 'Encyclopædia Britannica,' requiring an article for their ninth edition on the development and position of political economy, requested a Socialistic Positivist to write on the subject, who supplied a "lengthy survey of the steady convergence of all the tendencies towards a socialist state." Mr. Webb goes on to point out the collectivist character of modern reform, so completely at variance with the individualist principles lately dominant in thought. He quotes Herbert Spencer's words: "The numerous socialistic changes made by act of Parliament, joined with numerous others presently to be made, will by and by be all merged in State socialism—swallowed in the vast wave which they have little by little raised." He shows how the necessities of the time have forced the practical politician into a groove he would otherwise deprecate, remarking that English statesmen are more ready than American to "carry into actual legislative effect the proposals pressed upon them from below." While in America the cry is for good administration, in England it is for new laws.

It would require too much space to follow Mr. Webb through his chapter on "Socialism in Politics," or to quote "The Programme for London" from the *Star* which he considers fairly to represent the demands of the English Socialist party. We are bound to acknowledge the optimism of Mr. Sidney Webb's views, but we strongly recommend his pamphlet to those who desire to know what socialists are aiming at, and what the result of their efforts has been hitherto. It is impossible for any thoughtful person living in England not to perceive that a great class struggle is taking place around him. He would naturally wish to find out the manner in which it is helped along by those who have power to influence the public mind. Mr. Webb's account of the different denominations of socialists would serve this end.

The Tramp at Home. By Lee Meriwether. Harper & Bros. 1889.

Mr. Meriwether, as special agent of the United States Department of Labor, has had a pretty good opportunity of studying many branches of the labor question. He spent upwards of a year, he tells us, "in the kingdoms of the Old World" investigating the condition of the workingman. After submitting a report to the Bureau of Labor Statistics at Washington, he was appointed by the Secretary of the Interior a special agent to obtain similar information in America. His present volume, however, contains not the statistics collected, "but a few of the incidents—amusing and otherwise—that befell me in my intercourse with the working-classes of America, together with a brief account of a journey to the Sandwich Islands, undertaken in connection with an investigation into the condition of sailors."

The book is an entertaining one, and if Mr. Meriwether's statistics are as valuable as his account of his adventures is readable, he must have proved a helpful assistant to the Department. Among the best chapters in the book are those on California and the Sandwich Islands. His explanation of the anti-Chinese movement, so far as the wages question is concerned, is somewhat different from that promulgated by most labor-reformers. According to him, it is not true that Chinese labor is extraordinarily cheap. Chinese hands in fruit-canneries earn, he says, a dollar a day; a Chinese day-laborer on a farm earns $1.50; in San Francisco "a Chinese cook for a small family is paid as high as $35 a month." He does not give all the corresponding wages for white labor, but, while admitting them to be higher, he insists that they are by no means enough higher to account for the popular outcry. His idea is—and certainly there must be some truth in it—that much of the discontent of the California laborer arises from the fact that in comparatively recent times all wages in California were enormously high, $10 or $12 a day. The Chinese were the first laboring people to emigrate to California on a great scale. But had Irish, German, Italian, or negro laborers come instead of the Chinese, the effect would have been the same—that is, wages would have fallen. Of course this does not account for everything, for there is a fundamental race hatred, giving rise to that peculiar loathing which the California blackguard feels for the Mongolian—not unlike the old feeling of the Northern blackguard for the "nigger," but apparently stronger.

Of the Sandwich Islands and its $25,000 King, Mr. Meriwether gives a most amusing account. As the present is an era of corruption, it is interesting to know how "the thing is worked" in the Sandwich Islands. Here is the pathetic letter of Aki, a Chinaman, written for the purpose of getting a license to sell opium:

"O Lord of Heaven! here is a small offering, a small pig for breakfast. It would be a good thing if my royal master would be pleased to accept this. And here is something small which will be laid beside you, a few ten-cent pieces—$30,000—as your servant has remembered and sent it, and may you be so gracious and kind to me, etc., etc."

A few days later, Aki sent another pig, and a few more ten-cent pieces, this time $31,000. The King accepted the offer, took the two pigs and the ten-cent pieces, and then sold the license for $80,000 to another man. This was illegal, and produced much trouble, and finally the Supreme Court decided that the King must refund the money; but poor Aki had meantime died of a broken heart.

Mr. Meriwether has a theory about the so-called labor problem which should not be overlooked by the reader, because it necessarily colors what he has to say. This is, that the principal cause of the decline in wages is the taking up of public lands by "monopolists." He seems to think that, but for this, the laborer would get as wages what he could get out of the land—*i. e.*, a man, on being offered a dollar a day as a farm hand, would immediately say, "But I can get five dollars a day by merely taking up a quarter section close by, and working it myself." Under the present system he cannot do this, because the monopolists, "English syndicates," railroads, and other "land-grabbers," keep the land away from him. On this head Mr. Meriwether gives some rather startling statistics as to the way in which city and town sites and timber land and agricultural land are taken up in advance of population, and "held," so that they are of no use to anybody. How much of it all is within the author's own knowledge does not appear.

Of course there are many objections to this theory. We will mention one or two. In the first place, the principal monopolists—the railroads—only take their immense tracts of land from the Government for the purpose of selling again as fast as possible. Any one who desires to do so, can get all the land he needs from them at a very small cost. It is only necessary to look at the statistics in Poor's Manual to see that they are selling their lands all the time. In the second place, an ordinary laborer, who has no capital, cannot take up and cultivate land any more than he can buy railroad stock, or make any other investment. The great body of laborers are in no position to threaten to become farmers on their own account, no matter how much land there may be. A laborer cannot become a farmer before he has accumulated a fund sufficient to enable him to buy, first, the land; second, the implements; third, the seed-grain; and to have something to live on while he is raising the crop. In the third place, the enormous immigration of laborers is quite sufficient to account for a decline in wages, without resorting to any new and fanciful theory.

C. Plinii Caecilii Secundi Epistulae ad Traianum Imperatorem cum eiusdem Responsis. Edited, with Notes and Introductory Essays, by E. G. Hardy, M. A. Macmillan & Co. 1889. 8vo, pp. 251.

Mr. Hardy's hope, expressed in his preface, that "it is not to remain a law of the Medes and Persians that for school purposes Roman history should end with Augustus," is itself an indication how far the change that he desires has already come about. In the last generation classical students concerned themselves little about the Roman Empire. Even Tacitus and Juvenal were read rather as Latin authors than for any strong interest in the times which they described; and it occurred to few to regard the institutions of the Empire as an organic growth, developed directly out of those of the Republic. The civil wars put an end definitively to free institutions, and absolute monarchy took their place without an interval.

The present generation has learned to look at the Empire with different eyes, and to recognize in it a most interesting and instructive chapter in the growth of institutions. And in order to illustrate the change that has already taken place, and to advance still further our understanding of the period, Mr. Hardy could have done nothing better than place in our hands this exhaustive study of the correspondence between Trajan and Pliny. What is wanted is just such a concrete presentation of the subject. We have treatises upon the government of the Empire and the administration of the provinces; but here we have an emperor—the greatest between Augustus and Diocletian—and a governor—one of the most intelligent and cultivated men of his day—discussing in familiar letters the detail of the administration of a province. That the province is a petty and unimportant one perhaps increases the value of the materials; one can watch the working of machinery better in a small and simple engine than in a great and complicated establishment.

There is an Introduction, of seventy-five pages, containing such general discussions as are necessary. The most important of the subheads in this are "The Imperial Supervision of the Provinces" and "Pliny and the Christians." The hundred and twenty-one letters of the correspondence which follow are illustrated with a great wealth of scholarship—perhaps too much, leaving nothing to be done by the student. For example, it seems hardly necessary to give a lengthy paraphrase of every letter; students of the grade that would take up this book certainly need no such assistance. An appendix of five pages "On Pliny and the Christians" discusses Dr. Lightfoot's view of the persecution under Trajan, that "the events under Nero, Domitian, and Trajan were all persecutions of the Christians as an unlicensed religion." In the Preface (p. 63), he says of Trajan's edict: "That it actually was followed by a persecution there is not the smallest proof"; and he wholly rejects Dr. Lightfoot's view that it was "the most severe of all the persecutions of which we have any knowledge during the first and second centuries." He admits, however, "that the rescript of the Emperor inaugurated a new era. It was, it seems to me, merely the official interpretation, confirming Pliny's previous action, of the law against unlicensed collegia. So far as it went, however, it was an edict of proscription against Christianity, which by its very essence was an association, and therefore illegal; and if it could be proved that the rescript was intended to apply to the whole Empire, which I think was certainly not the case, it might fairly be described as the initiation of an anti-Christian policy" (p. 243).

BOOKS OF THE WEEK.

Andrews, Prof. E. B. Institutes of Economics. Boston: Silver, Burdett & Co.
Baedeker's Conversation Dictionary, in Four Languages: English, French, German, Italian. B. Westermann & Co.
Boscovitch, A. Earthquakes. Geo. Routledge & Sons. $1.75.

VOL. XLIX.—NO. 1266. THURSDAY, OCTOBER 3, 1889. PRICE 10 CENTS.

FRED'K WARNE & CO.'S LIST

Just ready in the "Cavendish Library," in 1 volume, crown 8vo, cloth, gilt top, $1.50.

William Hazlitt, Essayist and Critic.

Selections from his Writings. With a Memoir, Biographical and Critical, by Alexander Ireland, author of 'The Book-Lover's Enchiridion,' 'Memoir of Emerson,' etc. With steel portrait.

"It is unnecessary to speak of this volume further than to say that it is an embodiment of Hazlitt at his best."—*Philadelphia Times.*

"Deserves a place on the book-shelf of every reader who wishes a fair acquaintance with the masters of English literature of the present century."—*Boston Transcript.*

(A limited large-paper edition of the above in preparation; 75 copies only reserved for this country. Write for prospectus.)

Also, uniform with the above, price, $1.50.

Leigh Hunt as Poet and Essayist.

Being the choicest passages from his Works, selected and edited, with a Biographical Introduction, by Charles Kent. With a steel portrait.

"In the charming grace and learning of his essays, Leigh Hunt occupies a sunny spot midway between Addison and Lang. . . . No writer of his day was more steeped in modern and ancient lore. In all he finds sweetness, soundness, and sunniness."—*The Critic.*

In the Chandos Classics, 12mo, blue linen, white title label, price 75 cents; or, Roxburghe style, cloth, gilt top, $1.00.

Horace: the Odes, Epodes, Satires, and Epistles.

Translated by the most eminent English scholars and poets, including Ben Jonson, Milton, Dryden, Lytton, Conington, Sir Theodore Martin, and others.

"Will give the university man an hour of smiling reminiscence; to people of taste everywhere it will afford pleasure."—*Boston Post.*

Invaluable to amateur or professional singer, organist, and choirmaster. In 12mo, cloth, neat, price, 50 cents.

Advice to Singers.

(Fourth edition), by Frederick J. Crowest, author of 'The Great Tone Poets,' 'A Book of Musical Anecdote,' etc.

"If it could be taken in spoonfuls three times a day by many would-be singers, . . . the public would be spared great future torture."—*Boston Times.*

The third volume in the "Victoria Library" is now ready, complete, pocket size, red cloth, price, 35 cents.

On the Study and Use of History.

By Lord Viscount Bolingbroke. Uniform with Vol. I—"BRITISH ORATORY:" Grattan, Pitt, Peel, Bright, Jones on Democracy—Gladstone—and (Vol. II) OLD ENGLISH DRAMAS: The Birth of Merlin, and Thomas, Lord Cromwell.

Of all booksellers, or mailed free, on receipt of price, by the publishers.

3 Cooper Union, 4th Ave., N. Y.

1841. S. DAVIS, JR.'S 1841.

A UNIQUE BOOK.

The Story of William and Lucy Smith.

By GEORGE S. MERRIAM, author of 'Life of Samuel Bowles,' 'A Living Faith,' etc. With a Heliotype (bust) of William Smith. Crown 8vo, gilt top. $2.00.

A record of two beautiful and harmonious lives. . . . The plane upon which these dear companions and mated souls moved was a high one, and their discourse and interest were concerned with the deep problems of existence. . . . The most earnest and the least fettered modern thought is represented with rare fulness and scope.—*The New York Tribune.*

Her letters remind us of Mrs. Carlyle's in a way. They have the same power of picturesque description, the same trick of keeping us interested in trivial details, the same unexpectedness and glint of fancy and humor, but there is a difference. Mrs. Smith's horizon was a far wider one than Mrs. Carlyle's, her sympathies and outlook keener and deeper, and she had that factor of all sweet possibilities, a completely satisfied heart.—*The Literary World.*

It is the revelation of a unique life, and it is [illegible] record of a great love. It reads like an [illegible] *The Christian Union* (*New York*).

[illegible] most remarkable in William Smith was a[illegible]ly spiritual interpretation of doctrines [illegible] commonly supposed to lean to the unspir[illegible] . . . A fine meditative quality was [illegible] excellent gift. . . . We cannot imagine [illegible] better book than this for those who have suffered grievous loss, especially if for them the dogmatic tenure is no longer possible.—*The New York Evening Post.*

We must go to 'In Memoriam' for an equally affecting and inspiring record of a great sorrow.—*The Christian Register* (*Boston*).

Perhaps the most arresting and monopolizing book of the year.—*The Overland Monthly.*

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the publishers.*

The Mother's Register.

*In any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M. D., in Babyhood.*

For sale at the office of the *Nation.*

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

A RONDEAU. Walter Crane.
A HOMELESS LOVE. Violet Fane
WAGNER AT BAYREUTH. G. Bernard Shaw.
THE RING OF AMASIS. Earl of Lytton.

THE ENGLISH ILLUSTRATED MAGAZINE.

PROSPECTUS FOR THE YEAR 1889-90.

The publishers beg to say that from the October number onwards the *English Illustrated Magazine* will be printed in a new type which has been decided upon after much deliberation as being an improvement on that hitherto employed, and *the letterpress will be printed across the page, instead of in double column.* It is believed that the illustrations, to which the conductors of the Magazine attach the highest importance, will look better when introduced into the solid page, while the letterpress itself will be more legible. *At the same time, with a view to further improving the appearance of the Magazine, the thickness of the paper will be increased.*

Among the articles already arranged for, the editor has to mention a series of three Illustrated papers graciously contributed by

HER ROYAL HIGHNESS, PRINCESS CHRISTIAN, the titles of which will be the subject of future announcement.

Social questions of the day will be treated of from time to time, and among the articles on these topics which will appear during the year will be

CHILDREN IN THEATRES. By Mrs. Jeune.

NAIL AND CHAIN MAKING AT CRADLEY HEATH By the Rev. Harold Rylett (a principal witness before the House of Lords' Committee on the Sweating System). Illustrated to show the work done by women and children.

LONDON MATCH GIRLS. By Clementina Black. Illustrated to indicate the difference between Factory and Home Work.

A Series of Papers on various religious movements is contemplated, and the first of these will appear in the November number entitled

CHURCH SUNDAY-SCHOOLS. By the Hon. E. P. Thesiger, C.B.

Illustrated Sporting Articles, written by men who have played a prominent part in the Sporting World, will be produced from time to time, and yachtsmen on both sides of the Atlantic will read with interest

YACHT RACING. By the Right Hon. the Earl of Dunraven, K.T. Accompanied by illustrations of the yachts Valkyrie, Irex, Yarana, and the famous American seventy-footer Katrina.

No change will take place in the artistic character of the Magazine, which is generally admitted to have reached a high level. The Editor will continue to avail himself of the services of the high-skilled engravers on wood who have worked for the Magazine for the past six years, and he has been fortunate enough to receive promises of support from artists of the highest standing. Mr. WALTER CRANE will contribute a series of Drawings illustrating his recent journey through Greece; and articles illustrated by HAMILTON MACALLUM, HARRY FURNISS, HERBERT RAILTON, HUGH THOMSON, REGINALD BLOMFIELD and W. BISCOMBE GARDNER will appear during the year.

Special mention is due to the following articles:

TAPESTRY. By Alan S. Cole. Illustrated from Old Examples in the South Kensington Museum, and from New Examples woven by William Morris after designs by E. Burne Jones, A. R. A., and

THE EMBOSSING OF METALS. By W. A. S. Benson. Illustrated from Old Examples.

In view of the increased circulation of the magazine in the United States, special efforts will be made to interest American readers, and the editor has secured the coöperation of authors and artists whose works have already gained much popularity in this country.

Poetry will play a prominent part in the early numbers, and New Poems will be published from the pens of

ALGERNON CHARLES SWINBURNE.
WILLIAM MORRIS, AUSTIN DOBSON,
LEWIS MORRIS, VIOLET FANE.

Among the features of the Magazine during the next year will be a series of papers on "Girlhood in Different Countries." The Articles already arranged for include:

ENGLISH GIRLHOOD. By Mrs. Molesworth.
FRENCH GIRLHOOD. By Mme. Guizot De Witt.

In view of the growing demand for articles of a purely personal nature, the editor intends to introduce sketches from the lives of men and women whose position before the public fairly entitles them to rank as celebrities of the day.

The series of articles on "Old English Homes" has proved so popular that it is proposed to extend their scope to Wales, Scotland, and Ireland.

A series of papers on The Public Schools of England, written and illustrated from the historical as well as the modern side, is likewise in contemplation. Already arranged are:

ETON. By H. C. Maxwell-Lyte, C.B., and the Hon. Alfred Lyttelton.
HARROW. By Percy M. Thornton and A. J. Webbe.
RUGBY. By his Honor Judge Hughes, Q.C., author of 'Tom Brown's School Days.'

The Editor is also making arrangements to give the readers of THE ENGLISH ILLUSTRATED MAGAZINE a descriptive account of the great routes of travel in the different parts of the globe. The series will begin with an article on

THE CANADIAN PACIFIC RAILWAY and the NEW OCEAN ROUTE to AUSTRALIA. By Sir George Baden Powell, M. P., K.C.M.G.

Sir Donald Makenzie Wallace, K.C.I.E., will contribute a description of his journey home from India through Persia.

Special care has been taken to secure the services of the leading writers in fiction, but only one Serial Novel will run through any considerable part of the year. In each issue, however, will appear a short story, varied so as to suit the interest of different readers,

In October will begin a New Story by the Right Hon. the EARL OF LYTTON, G.C.B., G.C.S.I., C.I.E., entitled

"THE RING OF AMASIS."

Contributions of various kinds have been also promised by

THE RIGHT HON. EARL OF CARNARVON,
MRS. OLIPHANT,
HON. MAUDE STANLEY,
W. CLARK RUSSELL,
D. CHRISTIE MURRAY,
ARCHIBALD FORBES,
SIDNEY COLVIN,

Macmillan & Co.'s

NEW PUBLICATIONS:

INTRODUCTION TO THE LAW OF the Constitution. By A. V. Dicey, B.C.L. Third Edition. 8vo, $3.50.

"Prof. Dicey is already well known as a legal writer of a very high class, and lawyers will easily anticipate the insight, the clear and precise handling of the subject, the lucid statement, the wit, and the quite perfect legal style that mark these lectures. Although the conceptions of constitutional law in this book are in some respects radically different from ours, there could hardly be a better introduction to the study of our own law than it offers; its constant reference to our methods and to those of France, Belgium, and Switzerland bring out the significance and flavor of much in all those systems which would otherwise be only half understood or but feebly grasped."—*The Nation.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 3, 1889.

The Week.

THE platform which "Tom" Platt outlined in advance as the one which his New York Republican Convention would adopt went through without a change on Wednesday week. The platform reads almost in Platt's words by saying that "no step backward will be taken," and that the Platt Republicans in convention assembled, having divided among themselves all the Federal offices in the gift of the President, are in favor of the "purification and elevation of the civil service." The name of high license appears nowhere in the platform, but that is not a step backward from last year's platform, and Platt is strictly truthful on that point. There was no civil-service reform either in last year's platform, so on that point he is also truthful. If his declaration had read, however, that there "has been no step backward," with unrestricted application to the declarations of previous years, it would have been flagrantly untruthful, and that is the reason, doubtless, why the future tense was employed. It is difficult to see how a step any more backward than that of this year can be taken hereafter. If the temperance people object to the vagueness of the platform, Platt and Shook and the *Tribune* can point out to them that the head of the ticket is a genuine Prohibitionist, and can have no end of fun in chuckling over the wrath and perplexity which the Prohibition party will experience because of that fine stroke of politics. Then, too, the ticket is made up of entirely good men from top to bottom, is it not? Of course they have small chance of being elected, but that is all the more reason why they should all be good.

The deliverance of the Convention on the subject of the tariff was about as non-committal as possible, being a bare statement that the party is in favor of protection to American industry. This may mean the existing tariff, or a higher one, or a lower one, according to the notions of the individual voter. It certainly comes far short, in point of definiteness, of the national platform of the party, and this weakness and dubiety must have been intentional. The New Jersey Republicans were even more non-committal, since they did not mention the tariff in the platform at all. In this respect they are matched by the Maryland Democrats, who, under the lead of Senator Gorman, skipped that question altogether. They constitute the sole exception, in the Democratic ranks, to sturdy adherence to the principles of the national campaign, for although they endorsed the St. Louis platform of last year, they omitted to make special mention of tariff reform as the Democrats of Ohio and Pennsylvania did. The Republicans of Massachusetts gave their adhesion in a mild way to the views of Gov. Ames and the low-tariff iron-manufacturers. So we interpret this portion of their platform. It seems, therefore, as far as we can judge from such deliverances, that the Eastern Republicans are getting ready to repudiate the plank of the Chicago platform which demands the repeal of the whiskey tax rather than the sacrifice of "*any part* of our protective system."

We received at this office on Wednesday of last week, through the Associated Press, a despatch containing a very beautiful opening prayer which was to have been offered, or "lifted up," as President Harrison would say, at Platt's Republican Convention at Saratoga on the same day. We were just preparing with proper reverence to put it in type when we got another despatch asking us to "destroy it." The explanation was that the reverend gentleman who had written it out, and expected to "lift it up," was not chosen by the Convention. Somebody else prayed in his place. We have read it with care, and find that its most striking petition is a sort of enlargement of President Harrison's injunction to Tanner to be liberal to the boys. The prayer asks the Almighty, at some length, to incline the hearts of Congressmen to deal liberally with the veterans and their widows and orphans. It also calls attention to Sabbath observance, the liquor traffic, the labor problem, colleges, schools, culture, and a pleasing variety of other matters. In fact, it evidently caused the author a good deal of effort, and does him credit. He is mistaken, however, in supposing that a prayer once written out can be cancelled or withdrawn. In writing it he offered it up, and nothing that Platt or the Convention could do could really substitute another for it. It had passed far beyond Platt's reach, and indeed beyond his ken, when it was flashed to us over the wires.

Mr. Cabot Lodge has distinguished himself, in the drafting of the Massachusetts Republican platform, by the insertion of a plank on civil-service reform which we have never seen surpassed as a piece of mingled brass and simplicity:

> "We desire also to congratulate the President upon the practical wisdom and honest purpose with which he has dealt with the complicated and difficult matter of appointments. So far as our own State is concerned, we have only to ask that, in accordance with what we know to be the purpose and policy of the President in filling the leading Federal offices which are of a political nature, men may be chosen who are not only of the highest character and fitness, but who represent and are thoroughly acceptable to the great body of the party in the State.

The brass lies in the congratulation, and the simplicity in the request. Mr. Lodge's notion that he can get people to believe that there are Federal offices in Massachusetts, "of a political nature," which may be properly reserved for Republicans of "the highest character and fitness," is worthy of the most guileless "mollycoddle" among the reformers. "The scholar in politics" becomes more and more of a joke every day. There are no Federal offices in Massachusetts of "a political nature," a fact of which Mr. Lodge is, of course, perfectly aware.

The platform deserves hearty praise for one feature—the declaration to the Senators and Representatives of the State in Congress that "the Republicans of Massachusetts look to them to defend a sound currency *and resist an increase of the present silver coinage.*" This is the first voice which has anywhere been raised in favor of the true doctrine since that great Southern Republican leader, Mahone, had the Republican party of Virginia declare in its platform, a few weeks ago, for "the speedy restoration of silver to its full monetary functions by its full and unlimited coinage at the national mints." As compared with two years ago, the platform also shows progress in the right direction in dropping the outspoken declaration of 1887 that "we favor liberal appropriations for proper national aid to education," omitting this matter entirely from the list of those pressed upon the attention of the State's delegation in Congress, and adopting a non-committal resolution expressing the "hope that every reasonable and constitutional aid may be given to education by the powers of the nation and the States"—a plain admission of doubt as to whether Federal interference in the matter is reasonable or, if reasonable, constitutional.

The nomination of Lieut.-Gov. Brackett for Governor of Massachusetts is correctly described by that good Republican organ, the Philadelphia *Inquirer*, as "clearly a victory for practical politics," just as the dominance of Quay in the Republican party of Pennsylvania, and of Mahone in the Republican party of Virginia, represents the success of "practical politics" in those States. Not that Mr. Brackett is, either personally or politically, a man of so low a type as either Quay or Mahone, but that he stands in Massachusetts for the same demoralizing tendencies in the party which are seen at their worst in Pennsylvania and Virginia. Mr. Crapo, his rival for the nomination, is in every way far his superior, and is the type of man who used to be made the Republican candidate in the days of Abraham Lincoln and John A. Andrew. Mr. Brackett represents simply the machine element in the party, which, in Massachusetts as in every other State, is coming more boldly and openly to the front every year.

It is amusing to observe the Republican organs of the country, as one by one they fall into line behind the New York *Tribune* and commend the "creditable" action of the Mississippi Republican Convention in nominating that "typical Southern seat-snatcher," Gen. James R. Chalmers, for Governor. The Hartford *Evening Post* expresses the "hope that the Republicans will cordially sustain" this man whom a Republi-

can Congress sent back to Mississippi "thoroughly disgraced and despised." The Cleveland *Leader* has, perhaps, the hardest dose to swallow of any Republican paper in the country. Four years ago, when we pointed out that Chalmers had been trying to edge his way into the Republican party, the Cleveland paper was filled with indignation at the mere suggestion of such a thing. The *Leader* denounced him as "the unhung fiend who massacred Union prisoners," and declared in so many words that "*he cannot and would not be received into our party.*" It is a little hard for an editor to discover that the "unhung fiend" was, after all, really an angel of light; but the *Leader* will not long be staggered by any such difficulty.

Senator Sherman has written a letter to some Republicans in Alexandria, Va., in which he says that he "believes the election of Gen. Mahone will be a bright, auspicious event in the history of the country," especially because "it would do more than anything else to lift the politics of our country above the contentions and prejudices of the past," inasmuch as "the election of so distinguished a Confederate officer by the Republican party would show that we feel that the time has come when the memories of the war should be forgotten." This deliverance recalls the Senator's appearance in the same Dr. Jekyll rôle a little more than two years ago, and assures his early transformation into Mr. Hyde again. In March, 1887, Mr. Sherman went to Nashville, Tenn., and Dr. Jekyll ostentatiously blotted out "the memories of the war," of which he said, "Think not that I come here to reproach any man for the part that he took in that fight, or to revive in the heart of any one the triumph of victory or the pangs of defeat." On the first of June following, Mr. Sherman delivered a speech at Springfield, Ill., in which Mr. Hyde condemned all "rebels" as unfit to hold office under the Government, and declared, regarding the appointment of certain Southerners as ministers and consuls, that "every nation to which these gentlemen are accredited may fairly conclude that it was the rebel cause that triumphed and not the Union cause." The only question now is, how long it will be this time between the "conciliatory" deliverance to a Virginia audience and the bloody-shirt tirade on the Northern stump which is sure to follow it.

Private Dalzell and "Corp." Tanner are a noble pair of brawlers. They remind one of the cartoon in *Punch* where a patient in a dentist's chair opens his mouth to such an alarming extent that the dentist exclaims, "Not so wide as that! I can do it outside." Tanner wrote a letter to Dalzell giving himself away at a tremendous rate, and giving away President Harrison, Secretary Noble, and sundry other officials at Washington. He enjoined Dalzell to secrecy, and said that he hoped the Private would not cause him (Tanner) to regret having written the letter by showing it to anybody. But the Private never could keep a letter or a secret. It is his vocation in life to write to all sorts of public men in order to print their answers, and show that he (Dalzell) is in correspondence with great folks. So it has come about that Tanner's letter has got into the newspapers, and a nice letter it is, showing for the twentieth time, but more distinctly than ever before, that Tanner was grievously unfit to be Commissioner of Pensions or to hold any other place of responsibility.

Russell A. Alger sought the nomination for President of the United States from the Republican National Convention last year, but failed to secure it, his highest vote being 142 out of a total of 827. To-day, however, Russell A. Alger, rejected as candidate of the Republican National Convention, is actually President of the United States so far as concerns the administration of the Government in a bureau which controls the expenditure of $80,000,000 a year. Benjamin Harrison, the nominal Executive, by the confession of those Republican organs most friendly to him, does not dare to appoint any man as Commissioner of Pensions until he has "procured the endorsement of Gen. R. A. Alger, the Commander-in-Chief of the Grand Army of the Republic." The man who by the Constitution is "Commander-in-Chief of the Army and Navy of the United States" is really the subordinate of the man who is "the Commander-in-Chief of the Grand Army of the Republic." The situation is without precedent in our history.

The best-informed and most conservative Washington correspondents agree that the President has decided to appoint his old law partner, Attorney-General Miller, to the vacant place on the bench of the United States Supreme Court. There has never been any reason to doubt Mr. Harrison's desire to make this appointment, or to suppose that a President who gives offices to members of his own family without any compunctions of conscience, could comprehend the flagrant impropriety of bestowing the highest judicial honor in the land upon a commonplace lawyer whose sole claim is that of personal friendship. The only question all along has been as to whether the Republican press would criticise too severely such a shocking abuse of power. There have been some creditable protests from newspapers whose editors do not hold office, but so many of the chief organs of the party have been subsidized, and are ready to excuse and even commend anything done by the dispenser of patronage, that Mr. Harrison has concluded that there is no more reason for hesitancy in giving a judgeship to an old law partner than a marshalship to a brother.

The list of subsidized editors is growing. The Owego (N. Y.) *Times*, under the heading "A New Postmaster in Owego," modestly acknowledges receipt in the following terms:

"An Associated Press despatch from Washington, on Monday last, announced that President Harrison had appointed William Smyth, senior editor of the Owego *Times*, Postmaster of Owego, in place of Frederick O. Cable, removed."

The *Times* is an ultra-partisan newspaper, and the home organ of Mr. Thomas C. Platt. President Cleveland allowed the Republican incumbent of the Owego Post-office to serve out his full term, Mr. Cable not having been appointed until after the beginning of the third year of the Democratic Administration, viz., on April 1, 1887. On September 9, 1889, President Harrison removed Mr. Cable. The editor of the Rahway (N. J.) *Advocate* has just been made Postmaster of that town. The outgoing Postmaster, Mr. Lindsay, was not appointed until December 20 of last year, his Republican predecessor, Mr. Oliver, having been allowed practically to serve through the whole of the Cleveland Administration. His term did not expire till January of this year, but, having accepted the Republican nomination for County Clerk, he resigned his office in October, 1888. Not being elected, however, to the county office, he held on, and Mr. Lindsay was not appointed in his place until December. After only nine months of his term President Harrison removes Mr. Lindsay as he removed Mr. Cable, in the interest of the press-subsidy scheme, and in contempt of his own self-imposed and very moderate rule, that "We must do at least as well as Cleveland did."

The Indianapolis ministers refuse to comply with the request of the Civil-Service-Reform Association that they, in common with ministers in other places, should preach a sermon on civil-service reform. Their excuses are printed in the Indianapolis *Sentinel*, and they are as varied as those of the people bidden to the wedding in the New Testament. But we think it was discourteous to ask them. Such proposals bring before the world, very much like President Harrison's famous prayer, the exact nature of Indianapolis Christianity, which is not pleasant for those who are officially connected with it. It appears to be a strange creed, full of little hiding-places and recesses in which the weak and weary political humbugs can find rest and refreshment.

The resolutions adopted by the woollen-manufacturers at their recent meeting in Boston assert that the existing duties on woollen manufactures afford nearly 20 per cent. less protection than was deemed necessary for the development of the industry when the rates for 1887 were fixed (1887 being obviously, through a typographical error, printed for 1867, as there was no fixing of rates in the former year). It will be interesting, therefore, to look back and see what the woollen-manufacturers really deemed necessary in 1867, the time when the famous compact with the wool-growers was agreed upon, and subsequently ratified by Congress. The information will be found in the "Report of the Executive Committee of the National Association of Wool-Manufacturers," addressed to the United States Revenue Commission, and published in 1866. In this it was shown that the protective influence of the then existing customs duties was largely neutralized by certain other duties and taxes, for which com-

pensation had not been, but should be, given. Now, what were these neutralizing duties and taxes? The Committee made a full exhibit of them, and in a carefully prepared table showed their incidence on the leading articles of woollen fabrics. Thus, for example, on a running yard of cassimere, the average cost of which abroad was 93.70 cents, and the customs duties on such foreign cost, exclusive of charges — freights, interest, and commissions—was 51.47 cents, the protection of these duties, on a corresponding American fabric of wool, was neutralized to the extent of 1.40 cents per yard by the duties on drugs and dyestuffs, 10.12 cents per yard by reason of the internal-revenue taxes, and 16.33 cents by reason of advance of wages and expenses consequent upon the war; or a total of 27.91 cents. And so in respect to doeskins, broadcloths, and other specialties.

In making up the wool tariff of 1867, these neutralizing duties and taxes were accordingly taken into account as a matter of justice, and duties—not regarded as protective—on woollens were enacted to at least an exact equivalent; and, on the substructure thus created, protective duties, pure and simple, to the extent of 40 to 80, 90, or more per cent., were added. But these neutralizing taxes and duties, amounting, according to the Committee's tables, to an average of at least 25 per cent. on the cost of importing foreign woollens, have, in a great measure, ceased to neutralize, the internal-revenue taxes having been entirely removed, and the others, by legislation or change of conditions, greatly abated; and to just the extent that they have disappeared, to that same extent has the protection to the woollen-manufacturers been increased without any direct legislation, and without any general cognizance on the part of the American public. And yet we are now told by the Boston resolutions that the existing duties afford the woollen-manufacturer 20 per cent. less protection than what their representatives declared to be simple and satisfactory when the wool tariff of 1867 was enacted. The prophet Agur enumerated four things that were never satisfied; but if he had lived in our day, he would have certainly added a fifth—namely, a protected manufacturer.

The text of Judge Nelson's decision on the Minnesota Dressed-Beef Law does not differ materially from that of the State court at Duluth which pronounced the law unconstitutional and void. The grounds for the decision in each case were that the police power of the States cannot be employed to destroy or interfere with inter-State commerce, and that the courts will inquire in each case whether the exercise of the police power has been reasonable or not. In the present case it is shown to be both unreasonable and dishonest. There are no facts to show that the Dressed-Beef Law promotes public health or prevents disease. The public health is as good in New York, for example, where there is no such law, as in Minnesota. It is no better in Minnesota now than it was before the law was passed. The law was a measure of "protection to home industry" pure and simple. Every judge who has "got a whack at it" so far has pronounced it such and has declared it absolutely void. Notwithstanding this, the counsel of the local butchers declare that they intend to arrest Mr. Armour's agents every time they sell a joint of beef in Minnesota, "until a decision of the Supreme Court is reached." The St. Paul cattle-dealers, says the *Pioneer-Press*, "all agreed that if the Big Four of Chicago were permitted to come in here at the present time with their loins and ribs, it would be the death of all cattle-markets in Minnesota." There it is again! Not that it would impair the public health in any degree, but that it would "spoil our trade."

Among the resolutions adopted by the Bankers' Convention at Kansas City was one asking Congress to amend the National Banking Law so that the penalty for taking usurious interest shall be simply forfeiture of the excess above the legal rate. A better amendment would be to provide that contracts for the use of money shall be as valid as other contracts—that is, to abolish usury laws; and this would be as constitutional as the one proposed, for if the States may regulate the rate of interest, they may certainly fix the penalty for its violation, and fix it as many different ways as there are States and Territories. Probably Congress will not take so radical a step as that proposed by the Bankers' Convention, but it may, and we hope will, take some step towards uniformity in the penalties for what is called usury. Another resolution proposed to the Convention and referred to the Executive Council asks Congress to abolish the tax on circulation and establish one for the protection of depositors. This proposition is a very weighty one, and there is much to be said in favor of it, although much depends upon the details of the plan which may be devised to carry it into effect.

The proposal of Mr. W. P. St. John to the Bankers' Convention that the coinage of silver on Government account be increased to the maximum of $4,000,000 per month, and that a corresponding amount of greenbacks or national-bank notes be retired and cancelled monthly, and that gold and silver certificates be made legal tender, involves a very sweeping and radical change in our monetary system. It is not likely to be adopted, and we think ought not to be, but it is entitled to very respectful consideration, because it comes from one of the most thoughtful members of the banking fraternity. The first reason advanced by Mr. St. John in support of his plan is, "that the United States legal-tender notes ought to be retired." This is not a self-evident proposition, even if the field were clear. It is open to more serious question if the retirement of the legal-tender notes involves the substitution of silver, which in this case involves taxation to the extent of $356,000,000 for bullion alone, besides the cost of coinage. The public are not in favor of the retirement of the greenbacks; nor is there any good reason why they should be. The greenbacks stand for that portion of the circulating medium which experience shows will always and in all circumstances float at par if backed by a moderate redemption fund. They correspond to the uncovered issue of Bank of England notes, and there is no reason why the Government should not reap the benefit, that is, the annual interest on this portion of the currency. The only reason that has ever been advanced to the contrary is that the existence of $356,000,000 tempts to the issue of more. But this is not so objectionable as the coinage of more silver dollars. The supposition, if it is entertained, that the raising of the silver coinage to $4,000,000 per month will stop the mouths of the silver-men and make them desist from demanding free coinage, is altogether illusory. There is no way to bring them into convention or to make a contract with them. Nor would such a contract be desirable. Finally, Mr. St. John's proposition that the coinage of $4,000,000 per month would enhance the price of silver has nothing to support it, and his idea that such enhancement "would serve to wrest from England an advantage against us which she has now in trade with India, amounting to about 33 per cent. against the United States," ignores the fact that nations do not trade with each other for money, but for commodities, using money only to settle small balances. We judge that the Bankers' Convention will be in no haste to commit themselves to Mr. St. John's plan.

The representatives of the States known in monetary matters as the Latin Union—France, Italy, Belgium, Switzerland, and Greece—are now sitting in convention in Paris, to consider whether the Union ought to be continued or not after January 1, 1891. The Union is simply an agreement on the part of the countries named to restrict within certain limits their coinage of silver. It is, in fact, an attempt to do on a small scale what the bimetallists want the whole civilized world to do on a large scale—keep up the value of silver by coöperation. It is needless to say that the attempt has not been successful. The Unionists have a fine lot of silver coin on hand, but silver is no better off in relation to gold than ever. The Union has, however, got the wolf by the ears, and dares not let go. If the Union were dissolved, France would have to settle with Belgium for the silver she has coined for many years on French account, and which therefore France cannot rightfully send back for redemption, even if it were now known how much it is. Nor, on the other hand, could France redeem all this silver herself without drawing heavily on her sister members, Italy and Belgium, for gold. At the same time, there is a great quantity of Italian silver current in France, and if France were to present this for redemption in Italy, it would precipitate a monetary crisis there. So it would really seem that, although the Union has not fulfilled the object for which it was established, it will have to be kept going lest worse things should happen.

AGRICULTURE IN VERMONT.

THE State of Vermont possesses a good soil, a salubrious climate, abundance of water and timber, and all the advantages of a stable society, schools, colleges, churches, highways, and proximity to large markets. She is essentially an agricultural State, and has enjoyed the advantages of a high protective tariff during the past quarter of a century. Notwithstanding all these things, her public officials tell us that good farming land in Vermont is passing out of occupation. Rumors of this kind have been going the rounds of the press for some time back, but nothing very definite was known until the State Commissioner of Agricultural and Manufacturing Interests conceived the idea of attracting immigration by publishing circulars showing the places where unoccupied land of good quality could be had, and the prices at which it is now offered. The facts are even more remarkable than rumor had given them out, as the circular of September 9 shows.

For example: In the town of Reading, Windsor County, 4,000 acres of land, which are now, or have been in former times, good farms, are offered for sale. One-half of these, says the Commissioner, "are lands which formerly comprised good farms, but with buildings now gone and fast growing up to timber; some of this land is used for pasturage, and on other portions the fences are not kept up, leaving old cellar-holes and miles of stone walls to testify to former civilization. Such lands can be purchased from one dollar to two dollars per acre." In other words, agricultural land in Vermont can be bought at the price of Government land in Washington Territory, or perhaps cheaper, for the same circular alludes to a rumor of "one farm of 200 acres which can be bought for $100, with fair buildings and good soil"; this in the town of Chelsea, Orange County.

In the town of Vershire, Orange County, the case is rather worse, for here, we are told, "there are from thirty-five to forty farms, contiguous or nearly so, abandoned and unoccupied. Many of these farms have a fair set of buildings on them, and others could be made comfortable with a small outlay." There was an encouraging telegram in the papers a few days since saying that twelve or fifteen families of Swedish immigrants had been engaged to settle in Vershire. "All of this land," says the circular, "was once occupied by thrifty and prosperous farmers."

The next town reported upon is Jamaica, Windham County, and here we quote the paragraph entire:

"A gentleman in Jamaica, Windham County, has compiled a list and description of farms in that town, from which is taken the following examples: (1.) A farm of 200 acres, fair buildings, good sugar orchard, plenty of wood and timber, has been one of the best in town, listed at $810. (2.) A farm of 135 acres, good buildings, sugar orchard, fruit orchards, in a good state of cultivation, listed at $700. (3.) Another of 90 acres, with good buildings, vacant only one year; timber enough on this farm to pay for it. (4.) Twenty-two acres listed at $225, with good buildings, vacant one year. (5.) Ninety-seven acres, good buildings, sugar and fruit orchard, listed at $700—a good farm. (6.) Ninety acres listed at $765; this is a good farm in a high state of cultivation—must be sold. (7.) One hundred and fifty-five acres, the finest location in town—has got to be sold. For further particulars write to F. L. Sprague, Jamaica."

It would seem probable that the prices at which these farms are offered cannot be much if any in excess of the cost of the improvements alone, in which case the land is virtually offered for nothing. Here is a prime chance for the disciples of Henry George, and it must not be supposed that they are confined to the town of Jamaica, for the circular goes on to say that in Essex County there are six townships containing 89,491 acres of land "on which there are probably, all told, not more than fifteen or twenty families." These are described as "good lands, lands that will make good productive farms, well watered, and with timber sufficient for home consumption, wanting nothing but the energy, the bone and muscle, to clear them up." In Newark, Caledonia County, twenty-five farms, only three miles from a railroad, can be bought for $3 to $4 per acre.

This is only a partial report on the unoccupied and abandoned farming lands in the State. It is known to the Commissioner that there are 5,000 acres of such lands in the town of Wilmington, although he is not able at present to furnish particulars concerning them.

Taken for all in all, this might be called a startling exhibit but for the fact that it can be matched in the other New England States. The state of agriculture in New Hampshire is no better. The most cursory observation to those who knew the landscape forty years ago, shows that extensive tracts of land in that State that were once dotted with farmhouses are now covered with young forest trees and brambles, the former signs of habitation being visible only to the antiquary.

To what are we to ascribe this relapse of a once prosperous district into neglect and decay? The only explanation offered by the Vermont Commissioner's circular is, that, "of the people who once occupied these farms, some have died, others have gone West and to the cities, and none have come to fill their places." But this cannot be considered an explanation, for it does not tell us *why* none have come to fill their places. That all persons die sooner or later, and that enterprising or discontented ones move to places where they think that their conditions will be bettered, is easily understood, but why in such a struggling world none have come to fill their places is something of a mystery. It is not sufficient to say that the agriculture of the West has crushed the agriculture of the East, unless the fertility of these Eastern farms has been exhausted, and this does not appear to be the case generally, although it may be so in a few exceptional cases. The difference in fertility ought to be compensated by the nearness to market of these New England farms. One thing is certain, the tariff has not saved the New England farmer. The life-long labors of Senator Morrill have ended in the ruin of agriculture in his own State; or, if they have not caused this ruin, they have not prevented it. If any prophet, in the year 1861, had drawn the picture of farming in Vermont which the Commissioner of Agricultural and Manufacturing Interests now sends out, and had said that such would be the outcome of a quarter of a century of protection, he would have been set down as stark mad. We do not undertake to say that all this desolation has been produced by the tariff, but we do say that the tariff works to such ends, since it provides that the farmer shall buy in a restricted market and sell in a free one.

EUROPEAN OPINION ON THE PAN-AMERICAN CONGRESS.

THE State Department has been in receipt, according to the Washington correspondent of the *Herald*, of many extracts from foreign newspapers referring to the coming Congress of the Americas. These extracts express a good deal of concern and even alarm over the dire results for European trade which may come from Mr. Blaine's intention to persuade the South Americans to become our commercial vassals. There has undoubtedly been a display of uneasiness by many foreign journals in view of the approaching gathering. This has arisen in part from ignorance of South American aims and aspirations, only less gross than that common among us, and in part from a desire to stimulate foreign governments to watch the proceedings of the Conference with proper interest, while at the same time these expressions have served as friendly reminders to the Spanish American States themselves that they ought not rashly to break in upon their great settled routes of commerce. All this may readily be granted without at all admitting that the best economical opinion of Europe expects anything very important to result from the debates at Washington.

The *Indépendance Belge* of September 12 devotes a leader to the subject, and comes to the following conclusion:

"The International Congress will give itself to the study of the great questions submitted to it, and will report some sort of solution to the governments interested. Then it will be necessary for these solutions to be examined by the governments themselves, and to be the subject of negotiation between cabinet and cabinet before it will be possible to arrive at a final agreement; and this agreement, finally, before it can be put into effect, will have to secure the approval of all the legislative bodies concerned. It is clear, then, that the dream cherished by the North Americans is still a long way from its realization."

This, it will be observed, goes on the supposition that all will be clear sailing in the Congress itself, which is far from being likely. But if it should prove to be, it is undeniable that the Brussels newspaper is entirely right in saying that years must pass before anything practical can be effected.

An opinion which is even more authoritative and well considered is to be found in the September number of the German technical journal, *Stahl und Eisen*. It is mainly with the project of an American Zollverein that the writer of the article referred to concerns himself, and he certainly discusses it with intelligence and vigor. After showing that this new desire of ours for foreign trade

is a sign that our fiscal policy has broken down of its own weight, and protesting against the absurdity of supposing that we can get over the bad effects of it and of our "stupidity" in foreign commerce as a whole, by such a shift as the proposed customs union, he argues that if it took the small German States, with their common language, similar economic conditions, and homogeneous interests, three generations to mature their Zollverein, such a project can be consummated among the American countries, with their vast territories, differing speech, and conflicting interests, only after the lapse of such a time that no one now living need trouble himself about it. Shrewdly, if somewhat contemptuously, does the writer add:

"It is a characteristic of North Americans to undertake everything on a colossal scale. The immense development of their economic life has brought all regard and sense for the small and limited into contempt, and, as the Yankee can think of a scheme only as realized in gigantic extent, even the political ideas of all of them have been adjusted only to the colossal, the universal. . . . On the very immensity of their conception, the project of a customs union for all the Americas is likely to go to wreck. Meanwhile, in Germany, while expressing our thanks for the compliment to our industrial methods implied in this project, we may serenely wait to see if Uncle Sam will succeed in making trees grow in the sky by simply wishing to."

The leading organ of Spanish American interests published in this country, *Las Novedades*, recently referred to the alleged European terror at the coming machinations of Mr. Blaine, and said that it was grotesque, if not partly feigned. "The principal obstacle to the success of the Conference, we are almost tired of repeating," says this paper, which aims faithfully to reflect the prevailing opinions of South Americans, "is that in fact the North Americans do not really wish to extend their commercial relations with Spanish America, nor do they, if one looks closely, with any country on earth. At least they do not wish to adopt the necessary means to extend such relations." Most truthfully does it add, "The present Administration stands for the continuance of a commercial policy which simply cannot coexist with the ends aimed at in the Washington Conference." As if this were not enough, it asks the Europeans to have more confidence in the wisdom and patriotism of the Spanish American delegates. Is it possible, it asks, that such skilled statesmen as they are going to be deceived and ensnared? With an appreciation of the situation which will be more common hereabouts after a while than it is now, it concludes as follows:

"The countries of Latin America are sending to the Conference a body of distinguished and capable men animated by the most patriotic interest for their respective nations; this country is sending a few millionaires who are hidebound protectionists, and who have scarcely the ability to rise to the height of the discussions which ought to take place in a gathering of such great importance. This being so, who is likely to be the party taken in?"

It is hardly possible, then, that the economists of Europe are lying awake nights in dread of the Washington Congress. They know that we can trade with South America when we admit their wool and sugar and copper free, and not till then; and they probably do not expect the Administration to do what it was elected not to do. They know that the Mexican delegates are coming to the Congress smarting under the petty custom-house war into which Mr. Windom has precipitated them. They know that Chili looks upon the whole scheme with suspicion, and has expressed beforehand her unwillingness to discuss any measure which will affect her public policy. They know that the Argentine Republic is going to ask us outright for free wool, and will never dream of doing anything to imperil her immense European interests, even if we grant her free wool, which we will not. Knowing all these things, and having still some confidence in the validity of the laws of trade, they will imitate the German writer we have quoted, and wait to see our trees growing in the sky before they believe in them.

MEXICO AND THE CONGRESS.

THE news which comes by telegraph from the City of Mexico—that the object of our Minister's rapid journey to Washington is in order orally to acquaint the State Department with the condition of mind into which the toleration by Secretary Windom, and his rerating Treasury *entourage*, of the urgency of a clique which demanded a customs tax to be levied, in violation of law, by Treasury order, on Mexican silver ore, has thrown President Diaz—was not unexpected by those seeing an inch or two before their noses and capable of making correct inferences from what they see. Our Minister to Mexico probably perceives that this Tichenor-Hepburn customs rerating will, unless stopped, like the Tanner pension rerating, play havoc with the coming American Congress in which Mexico, Brazil, Peru, and the Argentine Republic will have a very influential part.

The tax-ridden condition of the republic of Mexico and its twenty-seven States ought to satisfy, and probably does satisfy, the taxing ideals of the most pyramidal among the protectionists (including Mr. Bliss of this city) whom Harrison and Blaine have asked to be our delegates to the October conference of the Governments of the Three Americas. Mexico inherited, and never has rid herself of, the mediæval system of taxation which Spain put upon that country when a Spanish colony. It is based on the protectionist plea that a man can be enriched by delivering over to the Government a goodly portion of his property, in the form of taxes, either to maintain the Government, or for the benefit of privileged individuals who are tax-eaters and tariff-beneficiaries. Probably Harrison, Bliss, Studebaker, and Carnegie of the Harrison-Blaine delegates to the Congress believe the same thing. Mexicans are taxed right and left—taxed by the Republic and taxed again externally and internally by the State or province in which they live. The taxes are not only protective, but, as on certain articles of food, are prohibitory. If one looks back through the volumes of our "Foreign Relations," he finds never-ending spats between Washington and the City of Mexico about customs taxes. Taxing is an important industry in Mexico, as it is among us. A few years after our war with Mexico came to an end, that country found smuggling, depopulation, and decay so general on its border adjoining us, that she established a "free zone"—a happy Delos—where no customs taxes should be levied. It was a sort of outdoor bonded warehouse, where imports from us were untaxed if used in the free zone or if remaining there, but, if carried outside into any Mexican State, then the taxes began in earnest. In 1858 Tamaulipas established such a free zone, where Federal customs taxes could not be levied. At that date the Guthrie Democratic tariff of 1857 was in force in our country. Among the reasons assigned by the Governor of Tamaulipas for his decree establishing the free zone were these: "Whereas, The towns on our northern frontier are in a state of actual decadence, owing to the want of laws to protect their trade; and whereas, being situated in close proximity to a commercial nation *which enjoys free trade*, they need similar advantage in order to avoid losing their population, which is constantly emigrating to the neighboring country, now, therefore, desiring to arrest this serious evil by means of franchises which have so long been demanded by the frontier trade ——."

The ideas of free trade entertained by the Mexican Governor were rather confused, but subsequent protective tariffs of ours have so operated that the free zone has been extended to Coahuila, Chihuahua, Sonora, Lower California, and to a distance of twenty kilometres from the boundary line. Within that zone foreign merchandise can, as we have said, be received and kept, or consumed, without paying any customs tax. Thus in a part of Mexico there is perfect free trade, permitted and established to prevent decay in that portion of the country, and to prevent the population from departing to the United States, where, severe as our taxes are, the taxes are not so severe as in Mexico outside of the free zone. The application to such a condition of affairs of a customs union between ourselves, Mexico, all South and Central America, including Hayti, will require delicate work.

We have had a recent example of the spatting about taxes which goes on incessantly between the City of Mexico and Washington. Our Treasury stupidly started the new spat by listening, in a silly way, to those who wished a customs tax to be levied by Treasury order on silver ore. Mexico then retaliated by a discriminating tax on merchandise arriving in our vessels, and our Custom-house rejoined by an additional tax on what came in Mexican vessels. Our law is mandatory. It says (section 2502 R. S.) that "a discriminating duty of 10 per cent. ad valorem in addition to the duties imposed by law shall be levied, collected, and paid on all goods, wares, and merchandise which shall be imported on vessels not of the United States; but this discriminating duty shall not apply to goods, wares, and merchandise which shall be imported in vessels not of the United States entitled by treaty, or by any act of Congress, to be entered in the ports of

the United States, on payment of the same duties as shall then be paid on goods, wares, and merchandise imported in vessels of the United States."

Secretary Windom has been so occupied with the "spoils" that he, poor man, has had no time to study the customs laws, and so in July last he signed a letter denying the existence of such a law. Col. Tichenor and Capt. Macgregor were probably absent. What in tariff matters would become of the Administration were anything serious to befall both the Colonel and the Captain? But all that will not be so serious a matter for our delegates in the Conference to deal with as will the refusal by our Congress so to legislate as to carry out the stipulations of the Grant-Trescot treaty with Mexico. Mr. Trescot is now said to be charged, among other matters, with supervision of preparations to receive and confer with the delegates to the approaching Congress. Ex-President Grant successfully used his great prestige and popularity in Mexico to get a treaty by which Mexico abandoned relatively a great deal more of her protective system than we did of our own. The treaty slipped through the Senate, but came to grief in the House, chiefly on account of what it did about sugar, the production of which was, of course, decaying in Mexico like the production of everything else under such a mediæval system of taxation outside of the free zone. What will Harrison and Blaine direct their delegates in the Conference to say of that episode? As Congress has thus far refused to execute that solemn treaty negotiated by ex-President Grant, what can we say when South and Central America ask questions about the ability and willingness of Congress to carry out arrangements touching customs taxes or silver coinage agreed to by our delegates in the Conference? The letter of instructions from Harrison and Blaine to our six Republican protectionist and our four Democratic protectionist delegates to the American Conference will be an interesting document. Of course, those delegates are not to be permitted by the President to speak and vote as they please, but as Mr. Blaine tells Mr. Trescot to insist. Congress intended that the President should keep perfect watch and control over the mouths of our ten delegates to the Conference. It is the Emperor of Brazil and the Presidents of the several republics who are conferring through their agents.

STATE AND FEDERAL JURISDICTION IN MARITIME LAW.

In a recent pamphlet, Mr. R. C. McMurtrie, a distinguished lawyer of Philadelphia, discusses "The Legislative Jurisdiction of the Maritime Law of the United States." The Constitution extends the judicial power of the Federal courts to "all cases of admiralty and maritime jurisdiction." It also confers upon Congress the power "to define and punish piracies and felonies committed on the high seas, and offences against the law of nations." But it nowhere expressly confers upon Congress the power to define or to create a code of maritime law for civil causes. The framers of the Constitution evidently intended to adopt the general maritime law, as known and accepted in this country, with modifications, at the time the Constitution went into effect; in that case it would be the duty of the Federal courts, and not of Congress, to ascertain and interpret the law. Yet it could not have been contemplated, say the Supreme Court, in the case of the *Lottawana*, 21 Wallace, 558, "that the law should remain for ever unalterable"; and, in recent cases, that Court has repeatedly intimated that Congress was the proper body to make any needed changes in the law. Congress, however, has confined its legislation upon this subject mainly within the limits of its power, conferred by the Constitution, to regulate commerce. But commercial regulations do not cover the whole field of maritime law, and the result is that, in the absence of Congressional legislation, State legislation has taken possession of the vacant ground.

In the pamphlet under discussion, Mr. McMurtrie criticises this state of things, and points out certain inconsistencies and even dangers of the present system. "Can there be anything," he asks, "more undesirable than to subject such property as ships to the ever-varying law or legislation of the separate States, as respects property, duties, and liabilities?" The case most severely criticised by Mr. McMurtrie is that of Crapo vs. Kelly, 16 Wallace, 610, where, in order to sustain the validity of an assignment, by operation of law in Massachusetts, of a ship on the high seas, the Supreme Court could find no better ground for their decision than the absurd, if not exploded, doctrine of the "territoriality of merchant ships." The ship, said Mr. Justice Hunt, is a portion of the territory of Massachusetts, and the laws of that State follow her upon the ocean, thus implying that the States individually may have their own maritime law. Such was, in fact, the interpretation of this decision by the New York courts in the subsequent case of McDonald vs. Mallory. It is not difficult to foresee the endless conflicts and confusion which would arise if this theory of maritime law were to prevail.

Again, the rule of the common law, as well as of the maritime law, is that personal actions for injuries do not survive the death of the person injured; but England and many of our States have by statutes given a right of action to certain surviving relatives of the deceased. And the question has arisen whether, when death is caused upon a ship on the high seas, these State statutes may be enforced in the admiralty courts by an action *in rem* against the ship. The Supreme Court refrained from deciding this point in its judgment in the case of the *Harrisburg*, 119 United States, 214. In the somewhat analogous case of State statutes which give to material-men a maritime lien for repairs and supplies on domestic vessels in their home ports, the admiralty courts, under the twelfth rule, regularly enforce these liens.

In many cases, such as the two last mentioned, for instance, it would be a comparatively simple matter, if thought advisable, for Congress to create a uniform rule. But we must recognize the difficulty of making any sweeping and absolute division of the legislative jurisdiction between Federal and State governments in the field of maritime law. Congress has advisedly left many things to State control which are undoubtedly maritime questions. The Supreme Court say, in 93 United States, 99, that, in giving Congress the power to regulate commerce, "it was never intended to cut the States off from legislation on all subjects relating to the health, life, and safety of their citizens, though the legislation might indirectly affect the commerce of the country." So in the case of ships, regarded as mere property, they must be to a considerable extent under the control of State laws, although they are also instruments of commerce.

Mr. McMurtrie contends, however, that the test of the right to legislate about matters concerning the high seas should not be the power to regulate commerce, but rather, as Chief-Justice Waite declared in 102 United States, 541, the fact that "navigation on the high seas is necessarily national in its character—a matter of external concern, affecting the nation as a nation in its external affairs. It must, therefore, be subject to the national Government." Mr. McMurtrie finds in article i., section 8, clause 18 of the Constitution a sufficient grant of power to Congress to warrant that body in making its jurisdiction exclusive over maritime law. That Congress has such power will hardly be disputed at the present day; but to what extent it should be exercised may still be a question about which opinions would differ. That there is need of some legislation by Congress is pretty evident, and Mr. McMurtrie's essay is a timely discussion of the subject.

THE PARIS MONETARY CONFERENCE.

The fourth International Monetary Conference opened its sessions in that city on the 11th of September and closed them on the 15th. Unlike the three previous ones of 1867, 1878, and 1881, governments had nothing to do with it. Like all of the others, however, this one came to nothing. It is, we observe, the common criticism of the English press upon the Conference that its discussions were of an academic character entirely—that it did not deal with the subject in a practical way. But, bless us, how can we deal with a subject in a practical way until we have settled the points academically? Once upon a time a Caliph of Bagdad, who was fond of story-telling, offered to give his daughter and the succession to the throne to anybody who would tell a story that should have no end; but if the contestants for the prize failed of the condition, they were to be put to death. After many applicants had tried and failed and been despatched, a candidate came and began to tell how a great king of a distant country, in order to avert a famine, built a granary as large as a mountain and filled it with corn, leaving a small hole on one side for ventilation, and how a flock of locusts that darkened the heavens found this aperture. "And then a locust," he

said, "carried away a grain of corn; and then another locust carried away another grain of corn; and then another locust carried away another grain of corn; and then——" "But what," asked the Caliph, "happened after the locusts carried away all the corn?" "Oh, we can't tell the end of the story till we get there," replied the narrator; "and then another locust carried away another grain of corn," and so on. It is related that after a couple of weeks' steady repetition of this sing-song the Caliph, fearing that he might go crazy, gave up the contest and his daughter. So, too, must we know exactly what the basis of bimetallism is, and what we have been striving for, more than ten years, and are still striving for, before we tell how to do it. Time and frequent international conferences are still necessary to determine precisely how bimetallism would work. This is to be ascertained by voting, and each nation having a separate government should be entitled to one vote.

The first thing that strikes us as noteworthy is, that France did not "show up" in this Conference on the side of bimetallism as she did in that of 1881. In the second day's proceedings M. Fournir d' Elaix, a journalist of repute, said that "while formerly France was earnestly desirous of the re-establishment of bimetallism, yet in the period which had intervened she had other interests which had grown up, and which had made her less anxious for such a consummation." This announcement was certainly sustained by the number and character of the French economists who addressed the Conference, Messrs. Gustave Du Puynode, Frédéric Passy, E. Levasseur, and Clément Juglar, all well known in other lands by their writings, appearing successively on the platform in opposition to bimetallism. On the other side the only French names of note were those of Cernuschi and Magnin, the latter President of the Bank of France, who, whatever else may be said of them, are not known to economists in other countries as masters of the science.

England sent two gentlemen in a quasi-representative capacity, Mr. Fremantle, Deputy Master of the Mint, and Mr. Murray, Secretary of the late Gold and Silver Commission, both being instructed not to commit their country to anything. And this instruction was followed to the letter, for their names scarcely appear in the published proceedings. Mr. Grenfell and Prof. Foxwell (of University College, London) appeared as volunteer representatives from England, and the latter made a speech, the value of which may be judged from the following extract:

> "Mill's treatment of bimetallism amounted to little short of a burlesque of the question; Jevons, whose admiration of the French economists was unbounded, first learned to understand bimetallism from Wolowsky, and he had completely superseded Mill in England. It was not without significance that all his disciples were bimetallists, at least so far as theory was concerned, though some of them might have doubts on political grounds or on the question of ratio."

The last thing that Jevons ever wrote on bimetallism was a letter to the American Social-Science Association, in which he advised strongly that this country should have nothing to do with silver except for subsidiary coins. The letter was distinctly opposed to the contentions of the bimetallists, and there is no reason to suppose that he ever differed from Mill in point of principle on this question. The differences of opinion as to "the question of ratio," which Prof. Foxwell alludes to as a trivial matter and a thing to be distinguished from "theory," is the rock upon which bimetallism is always splitting and always will split. The conferences of 1878 and 1881 would have split on it if they had not split before they reached it. The same may be said of the British Gold and Silver Commission. They, too, split just before they reached it, but the bimetallists on the Commission recognized its dangerous character by refusing to consider it.

Mr. Dana Horton held up the American end of the Conference, as creditably, no doubt, as any bimetallist could. Germany was represented by Herr Koch, who stands for international bimetallism in his own country in much the same way that Mr. Horton does here—that is, in a rather lonesome way. The Conference closed with an offer, on the part of M. Cernuschi, of a prize of $2,000 for the best essay in favor of international bimetallism, to which Mr. Meysey-Thompson, an Englishman, added $500. We hope that our friend Dana Horton may get this prize, for we feel sure that will be the only practical result of the meeting.

ANAHEIM, RIVERSIDE, SAN DIEGO.—II.

PORTLAND, Ore., September, 1889.

ALTHOUGH San Diego has no lack of hotels, most of the tourists cross the bay which separates the city from the thirteen-mile-long peninsula known as Coronado Beach, and take up their abode in the Coronado hotel, covering more than seven acres—the largest in Southern California, and second in size and elegance only to the Del Monte at Monterey. Porpoises sport about the ferryboat, almost within arm's reach, and excite the appetite for seafishing. On the peninsula a steam-dummy connects with the ferry and conveys those passengers for whom the coaches are too slow, to the hotel. Coronado affords an excellent instance of what can be done in this region with irrigation. A few years ago this whole peninsula was a desert, while now there are numerous villas and stores, and good roads, and avenues of young trees, which in a few years will afford welcome shade. The hotel is surrounded by flower-beds as monstrous in proportion as itself, crowded with enormous double stocks, petunias, large pansies, marguerites, etc., etc.; and another superb flower-garden takes up the interior court. Dining-room, parlors, and dance-hall are sufficiently spacious for all emergencies, and simply though tastefully decorated. It may seem a disadvantage that, owing to the position of the dance-hall, there are few rooms facing the ocean, but as it is always cool here, day and night, summer and winter, the site of rooms is not so important a matter as on the Atlantic Coast. No other part of California has so perfect a climate as Coronado and San Diego, the mean difference in temperature between summer and winter being only 12 3°, with an average of only 5 days a year when the thermometer rises above 85°, and, what is still more remarkable, only 12 days a year when it rises above 80°. As only 10 inches of rain fall in a year—just 100 inches less than at Sitka, the other extremity of our Pacific Coast—and clouds or fogs of more than a few hours' duration are rare, it may be inferred that the sun shines almost perpetually, even in winter. When an invalid who proposes to make the Coronado his home for awhile reads in the "rules and regulations" pasted upon his door that a single fire costs a dollar, he is relieved to be told that cold weather is as scarce as fuel, and that, according to official Government records, during the ten years from 1876 to 1885, there were only six days on which the temperature fell below 35°, two on which it fell to 32°, and none below that point! I had also read somewhere that mud is practically unknown, since the little rain that falls sinks into the soil immediately, so that it is safe to lie on the ground a few hours after a shower. I was therefore surprised, on picking up a local news paper, to see an editorial headed "Too Much Mud." But on examination it proved to be a political, not a meteorological article. On politics climate has no effect.

The Coronado beach is well adapted to bathing, which is indulged in all the year round, there being only about six degrees difference in the temperature of the water, winter and summer. When the ocean is too rough, or the tide unfavorable, the bay affords a safe bathing-ground, as at Fire Island. That the ocean is rough sometimes is evinced by the sad havoc it has made with the plank walks between the hotel and the water, and, as at Coney Island, it seems to be encroaching on the hotel premises, and will soon thunder against its very foundations. It is interesting to walk along the beach towards Point Loma, on which a lighthouse is picturesquely situated. Entertainment is afforded on the way by the waterfowl, which stand inside of the breakers waiting for a big foaming wave, into which they plunge headlong, emerging calmly swimming on the other side with a fish struggling in the beak. Twenty miles at sea, to the southwest, are the Coronado Islands, the haunt of seals, occasionally visited by yachting parties. There is always something that appeals to the imagination in the meeting of two countries, and the fact that these islands belong to Mexico makes them doubly interesting.

Twice a week or oftener opportunity is given the guests at the Coronado to put foot on Mexican soil. A steam dummy, with open cars, starts from the hotel, goes down the peninsula and up on the other side of the bay, as far as National City, and then branches off, first to the great Sweet Water Reservoir, and then to Tia Juana. It would be difficult to imagine a more delightful excursion than this seventy-mile round-trip in open cars. The cool, fragrant air is free from dust, and the country is so picturesque that one keeps on choosing one place after another as an ideal site for a cottage and an orange grove. On reaching the Sweet Water Reservoir, which covers 700 acres, it is difficult to believe that it is not a natural lake, so prettily and cosily does it rest at the foot of the surrounding hills. Yet here, where now the wild ducks disport themselves, stood several farm-houses a year ago, surrounded by green fields. The dam which created this lake is about 400 feet long at the top and 46 feet thick at the base, built of solid rock; and the reservoir holds six billion gallons, sufficient to supply National City and San Diego with water for consumption and irrigation for three years, though not another drop of rain should add to its volume. A flume seven miles in length carries the water to the two cities, which now, with abundant and cheap water, can correct their arid, treeless appearance, which at present is their least attractive feature.

After visiting Sweet Water Lake, the train faces about and turns towards old "Aunt Jane," or Tia Juana, in Mexico, passing through the town of Chula Vista, a characteristic Southern Californian enterprise. A tract of 5,000 acres has been subdivided by a land company into five-acre lots, with avenues and wide streets through which the steam motor passes, and ornamented with thousands of evergreen trees. These lots are sold only to purchasers who will agree to build on them houses costing not less than $2,000, within six months from date of purchase; and by way of providing models and starting the ball, the company itself has erected a number of cottages. Such an attempt to force a town by hot-house methods would fail anywhere else; here it will probably succeed. Every time the train stops, a handful of real-estate circulars is thrown into each car, setting forth the unique advantages of that particular locality; while the fine appearance of the residences, with their lovely gardens and orchards, contributes its share towards advertising the region. For the convenience of the scattered settlers, the train-boy throws the daily papers into the yards from the flying train. Near the boundary line are some yellow pools, in one of which a water-snake darted out its angry tongue at a whole carload of tourists and then dived out of sight. A few minutes more, and we were on Mexican soil, and although sufficient of the Mexican element lingers in Southern California to form a gradual transition, the change is distinctly perceptible. Characteristically enough, the first thing I saw after leaving the train was a young burro, with silky hair and no larger than a Newfoundland dog. In Spanish countries, where the railroad ceases the donkey begins. One side of Tia Juana is American, the other Mexican. The dividing-line, where the Estados Unidos meet Mexico, is occupied by a restaurant which bears the modest title of "Delmonico." Opposite is a cigar-store which has the suggestive sign of "The Last Chance." There are more saloons in Tia Juana than buildings. This may seem a paradoxical statement, but it is true, for some of the saloons are in tents, open in front, with a counter in the centre and empty beer-barrels for seats. The sight of the town is the Custom-house, with its polite but pistolled officials, and the rooms filled with rifles which parties crossing the line had to leave behind to await their return. There are also a few curiosity stores, conducted with a true Spanish lack of enterprise. Almost every tourist wants to buy a memento of his hour in Mexico, but there is nothing to be had except some very crude pottery and a few tiny hideous clay gods. Nor does the proprietor's knowledge of English go beyond the ability to say twenty cents or thirty cents.

Looking beyond Tia Juana, nothing is to be seen but lone, low mountains—not a house or hut anywhere—and we gladly return to civilization with the train. On the way back, the conductor pointed out to me the place where the famous Bonnie Brae lemons are grown. I had previously eaten some at San Diego, and found them large and juicy, with fewer seeds and a much less thick and coarse skin than other California lemons. This variety seems destined to retrieve the reputation of the California lemon, which is not equal to that of the orange, or of foreign lemons. But I doubt if any kind of lemon will have much of a future in this country. At San Francisco lemons are not valued nearly so highly as Mexican limes, which are gradually taking their place. The lime has a tougher skin than the lemon, and does not break so easily in the squeezer. In fact, it can be easily squeezed by hand; and besides, there is more juice in a small lime than in a lemon twice its size and twice or three times its cost. Its taste, after a few trials, is more agreeable and piquant than that of any lemon, and I believe that Eastern cities will soon follow the lead of San Francisco in this matter. The lemonade of the future will be made of limes.

HENRY T. FINCK.

THE ENGLISH ART CONGRESS — A WARNING TO AMERICANS.

LONDON, September 9, 1889.

NOT quite a year ago the first English Art Congress was held at Liverpool. Since then, many of the speeches made on that occasion have been carefully revised by the artists who delivered them, and collected together in a volume lately published, called 'Transactions of the Association for the Advancement of Art and its Application to Industry.' From it one realizes the drift of the Liverpool meeting far better than one did at the time from the more or less lengthy newspaper reports. As it is proposed to hold very much the same sort of annual Art Congress in the United States, it might be well to call the attention of Americans interested in the movement to this volume.* It will serve, however, less as a model to follow than as a model to avoid. It curiously illustrates the tendency of the Englishman to seek in art everything but art itself. The Congress, with as much truth, could have been called social or moral, religious or economic. Of course this does not apply to all the speeches; there were artists present who did not mistake themselves to be moralists or social reformers. Men like Sir Frederick Leighton and Mr. Alma-Tadema, if they said nothing specially original or contributed no very promising solution to the problem under discussion, at least understood that they had met together to talk about their own profession, and not to pronounce upon subjects usually confined to the pulpit or political platform. But the general tendency of the Congress was towards that establishment of art upon a moral and social foundation of which Mr. Ruskin is the prophet; and several of the speeches illustrate most admirably the absurdities and contradictions, the cant and mental blindness, to which advocacy of the morality, sanctity, and social and economic value of art seems inevitably to lead.

The Congress opened with a sermon by Archdeacon Farrar, which gives the keynote to the proceedings that followed. He intends to speak, he at once announces, "of the sacredness and the functions of art; of art which is no mere amusement for the idle or ostentatious, for the luxurious, but in past ages has been, and still is, a consummate teacher of mankind. And let me say at the outset that I look on all true and worthy art as a thing *essentially* sacred." One would have been more impressed by this profession of faith had he not given his reasons for it. "True art," he explains, "comes from the spirit of God. It is the outcome of an exquisite faculty which, like 'every good gift, and every perfect gift, cometh down from above, from that Father of Lights with whom is no variableness or shadow of turning.'" The same argument, however, could with equal force be used to prove the sacredness of agriculture or engineering, of medicine or chemistry. One need not question his premises, but his conclusion is only another way of saying that art, essentially, does not differ from all other outcomes of human faculties, since like them it is to be attributed to a divine source. It has just that degree of sanctity which the devout Christian attaches to all the works of God.

Art, however, according to the Archdeacon, is sacred not solely because of its origin, but because of its aim, because of its striving after the ideal. But how is sanctity expressed in the creations of the world's greatest painters and sculptors? What was the ideal of the men whose marbles fill the Vatican Gallery, of Titian when he painted his "Sacred and Profane Love," of Rembrandt when he conceived his "Night-Watch," of Velasquez when at work upon the portrait of Philip? When this talk about the ennobling ideal of the artist is confronted with the actual facts, its shallowness becomes so apparent that it is waste of time to stop to point it out. Still a third reason is found for the sanctity of art—"It is sacred also as the expression of human feeling." I wonder if the Archdeacon realized quite what he was saying. Would he call Swinburne's 'Laus Veneris' sacred because it was the expression of the poet's feeling? And yet how often has the very same feeling which inspired Swinburne been expressed in art. It is all very well to bring forward Fra Angelico as a shining light; but what about the Fra Lippos? And even though one admires "the radiant and love-compelling serenity of Raphael," can one forget that his mistress served over and over again for the Madonnas which were to enkindle the fervor of the faithful? And in the Uffizi was the Archdeacon conscious only of "the stern, sad spirit" of Michael Angelo? And has he never read the life of Turner, that it does not occur to him the Ruskin-made painter would have done better to look after his own conscience before attempting to educate that of the nation?

Such reasoning is so childish one would pass it over in silence, were it not for the influence it exerts on the many, and for the seriousness with which it is accepted by an association formed for the interests of art. These will be served far better when it is honestly admitted that art is without "intrinsic sacredness"; that while at times it has been made use of for religious and moral ends, it is not for that reason moral or religious in itself; and that a man, because he can paint, is not therefore necessarily holier or purer than other men, or above commercial considerations. I have not space to analyze in detail Archdeacon Farrar's illustrations of the noble and idealizing functions of art. In much of what he says he is but a weak echo of Ruskin, while he proves Mr. Hamerton's assertion that the Englishman cannot understand a pursuit which lies outside of morals. To what lengths the Ruskin-taught are carried is shown by his summing-up, which is curious enough when one remembers it comes from a minister of the church which was among the first to protest forcibly against what he calls Christian art:

"What the old Greek passion for Art lost by sensuousness, Christian Art gives back to us bathed in heaven; not only showing us the beauty, and the wonder, and the power, the shapes of things, their colors, lights and shades, changes, surprises—and God made it all—but revealing to us something of the grandeur of our own nature, and of that Eternal Home where He, for whose second coming we yearn, whose Incarnation we soon shall once more celebrate, has taken the Form of Man into the very midst of the great White Throne of God."

But while Archdeacon Farrar dwells upon the sanctifying mission of art, there are others who can consider it only in its economic and social relations, and of these William Morris and his eccentric satellite Walter Crane are the leaders. Very conscious of the present degeneracy of art in England, they are equally

* See the review in the *Nation*, No. 1261.

convinced of the means by which the evil is to be remedied. Walter Crane unhesitatingly declares that there can be no improvement until an economic change is brought about, and until the craftsman is given full credit for his work. But, with all his talents, Mr. Crane has not been blessed with that of graceful, simple speech, and he is too preoccupied in the making of similes to bother about the clearness of his economic arguments; while, as for the craftsman working the better because his name is known, one can but be a little sceptical when one remembers the artisans of the East, or the men who filled the niches and covered with beauty of leaf and flower the columns and capitals of many an English church. "Do not let us deceive ourselves," he concludes, "or expect to gather the grapes of artistic or industrial prosperity from economic thorns, or æsthetic figs from commercial thistles." But are these thorns and thistles wholly a latter-day product? "Unless your artist and craftsman has personal freedom, leisure, and cultivation, and continued access to the beauty of both art and nature, you will get neither vigorous design nor good craftsmanship." Unless the millennium come, art will perish for ever. But for how many ages have men waited for the millennium, and yet how much good work has been given to the world!

William Morris, who is a poet, and has, moreover, the gift of vigorous speech, can afford to say what he means without ornament or flowers of rhetoric. There is no mistaking what he believes ought to be done. This is no time for artists to think of art; the recasting of society is the work now appointed them. Let them realize the life of drudgery which is the lot of all but a few in our civilization, though, indeed, it is only possible to be realized by experience or strong imagination; let them rebel against the great intangible machine of commercial tyranny which oppresses the lives of all of us; let them strive towards the conscious reconstruction of society on a basis of equality; in a word, let them close their studios, and, exchanging the garb of slaves for a blue-flannel shirt, and waving the red flag of liberty, follow William Morris to Hyde Park, to talk red-hot anarchy to the hangers-on of the Hammersmith Socialist League. Or else—is there not a touch of humor in this alternative?—let them take an active interest in, and do all they can to contribute to, the prosperity of "the small and unpretentious society," called the Arts and Crafts, of which Mr. Morris is a conspicuous member.

The objection to the first course of action which at once presents itself is, that, in its greatest days, art adapted itself to social conditions, no matter how cruel they might be, instead of undertaking their reform. Mr. Morris, who is as prejudiced in his artistic as in his socialistic creed, teaches that good work began and ended in the fourteenth century, though a little is still produced to-day by a small saving remnant, of whom Morris & Company are the high priests. But men of broader faith believe that art was not born and did not perish with the craft guilds which he holds up as models, and that craftsmen, whether slaves of the pagan or the Christian world, of the East or West, did the work which was given them to do as well as they knew how, and did not throw the responsibility of their own artistic shortcomings upon the tyrants who ruled over them. Artists and craftsmen may be more comfortable under a society of equals, but social equality is not the first requisite for good art, and to the truth of this long ages bear testimony. As for the Arts and Crafts Society, it is little more than a year old, and has yet to justify the promises Mr. Morris makes in its name.

But more extraordinary than this preaching that an artist, to do good work, must first become an active Socialist, are the vain and egotistic utterances of Mr. T. G. Cobden-Sanderson. Mr. Sanderson is a socialistic book-binder, and the husband of a rich wife. I do not hesitate to be thus personal, because he is entirely so himself. He too, like Mr. Crane and Mr. Morris, looks only beyond art for the regeneration of the artist, whose true aim is "the making of the greatest work of art ever yet dreamed of by man, the creation of a world-wide human society, based upon industrialism, properly directed and properly shared, having for its sweet flowerage beauty, and endowed with all the moral and social energies requisite for its construction and for its maintenance." Two or three pages are filled with this socialistic rhapsodizing and fine writing. But it is the supreme egotism of the man and his sentimental conception of his trade which make his speech at the Congress noteworthy. With him book-binding is homage, the "tribute of the binder to the author; and if it has no meaning, if it say nothing new, original, or fresh, nothing straight from the mind of the binder to the author, the elaboration of the ornament is the measure of its failure. In these days there is elaboration only, and no meaning." The binding of the ordinary book-binder is not homage, because the wretched creature is a slave who toils ten hours a day for a weekly wage, who has not time to read the books he binds, and who works, not from his own inspiration, but always in obedience to orders. But look at me, exclaims Mr. Sanderson in his pride. I am not a slave. "I bind only such books as I think deserve to be bound, and only in such ways as my own judgment determines. . . . And if the public will not pay my price, they can go without my binding, which, sold or unsold, will live, the thing of use, and, peradventure, also the thing of beauty, that, in my striving for the writer's sake, I would fain have made it to be. To do the work is my main object, not to sell it." And why? Because, like so many English Socialists, Mr. Sanderson has plenty of money; because, as he puts it, he is not dependent upon his book-binding, but upon the labors of others. And he tells the unfortunate book-binder who has not married a rich wife: "In so far as I am free, it *is* well for me, and well for the public; and this fact is to be brought into prominence and contrasted with your own state of slavery—for slavery, and of the meanest kind, it is." And the funny part of it all is, that there are people who say that this free book-binder's books cannot be opened without the back giving away. This, however, is a mere detail, to be passed over so long as "homage" is rendered.

But, speaking seriously, if this is the way artists and craftsmen and art teachers talk, is it any wonder that the great British public is, as Sir Frederick Leighton affirms, inartistic? It may be thought that such nonsense is not worth even criticism, and that it would be wiser to dwell on the common-sense speeches of such men as Alfred Gilbert and Francis Bate, the latter of whom, surrounded by Royal Academicians, did not hesitate to speak many hard, plain truths about the Royal Academy. But common sense was the least conspicuous feature of a congress made up of faddists who seize every opportunity to flourish their fads, of successful speculators honored because of their picture-buying powers, of egotists, like Holman Hunt, who saw no better use for a meeting for the advancement of art than the airing of his personal grievances and his very easily understood hatred of French art and, in fact, of all art but his own. If an Art Congress is held at home, do let it prove itself what it professes to be—a meeting of artists, managed by artists, who have come together to talk about art, and not to bore an unoffending public with sentimental moralizing and impossible social theories. Or else let it be honest, and call itself a social, political, economic, or religious experience meeting, as free from the presence of leading artists as will be this year's second so-called English Art Congress, to be held in Edinburgh.

THE FINE ARTS AT THE PARIS EXPOSITION.

VIII.—PICTURES EXHIBITED BY FOREIGN NATIONS.

PARIS, August 21, 1889.

THE influence of the French is very strongly marked in the foreign sections; and in all of the Continental schools, with few exceptions, the best painters are either those who live in Paris or those whose work bears the unmistakable stamp of French training. In the case of painters who have gone back to their own countries, carrying with them a more or less thorough training in the Paris studios, it is common to find that they have deteriorated from the Paris standard, and again that, receiving the influence of a new movement in Paris—like the impressionist, for example—it is exaggerated in their application of it, and the turn it has taken in some instances is curious enough.

It is only in Great Britain that I find a school of painting which has a distinct national individuality, and it should be said of this one that it can hardly be called a school of painting at all. Painting, as it is practised in Great Britain, is, in general, so far removed from what is meant by the word as we use it in speaking of the old masters, or of the modern French school and its imitators, that it will be necessary, when we come to consider British art, to look at it in quite another way if we are to find good in it. In Norway and Sweden I find a certain originality which springs from the commendable habit the Scandinavian painters have of finding their subjects in the life at home; and such originality, with a decided touch of individuality in technique, is noticeable in the section of the United States in some of the works sent here by the home artists.

Manner and method in painting are more closely allied to those of the French school by the Belgians than by any other painters. In passing from the French exhibition to the Belgian galleries, there is little to denote that we are looking at the art of another country. There is a falling off in the average excellence of the work, however, and most of it is little more than French painting done by less clever men than those who work in Paris. Wauters, the author of nearly a dozen portraits, comes forward out of the mass with a style and method that are not quite French, and that are very good in their way; Jan Verhas, with the "Review of the School-Children at Brussels," and two large figure pieces with backgrounds of Belgian sea-shore towns, strikes a local note; and, in the landscapes by Courtens and Verstraete, and the pictures of out-door life by Claus, there is distinctively national character. Some weird-looking pictures by Fernand Khnopff—young ladies in æsthetic gowns, "A Fosset," and an incomprehensible composition of a nude female figure, a great pillar and a crucifix, all placed in a wide expanse of gray-

ish-colored water, "A Beguiling"—betray the influence of a visit to London. The peculiar methods of Jan Van Beers are set forth in fourteen little canvases; and by Alfred Stevens, Parisian by talent and long residence, there are seventeen pictures. "The Visit," "The Lady Bird," and "Chez Soi" are the best of these. In "Before the Stormy Seas," "Lady Macbeth," "Madeleine," and others, I can see little more than the decadence of one of the cleverest of the painters of the day.

In the Italian section there is really very little to note except Boldini's portraits, which are charming. Unfortunately, there are none of those delightful little pictures we are accustomed to see from time to time in New York; and so one side, and the most interesting side, too, of the exquisite art of Boldini is unrepresented. There are some pretty little landscapes by Rossano, and four pictures by Segantini, including a "Virgin and Child," which are without doubt the most curious productions (technically considered) to be found in the entire Exhibition. Some colossal canvases signed by Correlli and Simoni show conclusively that there are *Salonniers* in Rome as well as in Paris; but it is scarcely possible to find anything in the French exhibition so devoid of serious qualities as these.

But it is among the Spanish painters in the Champ de Mars that we find the love for a big canvas and a grandiose subject most prevalent. There are some here that are at least thirty feet long, and, to tell the truth, not a square inch of good painting in any part of them. There is better work of the same kind, indeed a very good sort of Salon picture, in "The Bell of Huesca," by Casado del Alisal. It is a gloomy canvas, low in tone, and is filled with dead bodies and blood and men's heads. It is almost well enough painted to excuse the horrible subject. Another picture of the Salon order is "A Hospital Ward," by Luis Jiminez, resembling one in the French exhibition, "Doctor Péan," by Gervex, but not nearly so good. Domingo does not appear to advantage in the collection of his works here, and the same may be said of Escosura. Jiminez Aranda, whose subjects are akin to theirs, is much better. Madrazo is represented by eight portraits. They are not such as will add to his fame. Much the best things in the Spanish galleries are the pictures by Rico. There are seven of them, all characteristic and one especially interesting from the subject, "View of Paris from the Trocadéro," a sunlight effect painted with all of Rico's cleverness.

There are some excellent pictures in the galleries occupied by the Austro-Hungarian painters. There are four by Pettenkofen, pictures of horses, that are complete and well-painted, and seven by Othon de Thoren, one of which, "Work," a picture of a ploughman with his horses in a field, is remarkably good. Both of these artists have died within the year, De Thoren quite recently. There are some good landscapes by Jettel, and some clever decorative work and pastel portraits by Hynais. Charlemont, a well-known painter of considerable talent, who lives in Paris, has a larger number of works than any other painter in this section. Particularly worthy of notice is a "Portrait de Mlle. de M——," and a picture called "The Pages," which shows four pretty boys in an ante-chamber, and is agreeable in color and soundly painted. A monster canvas is by Matejko, in which the subject of "Kosciusko after the Battle of Raclawice" is made the excuse for a preposterous jumble of countless figures; and a large composition by Brozik represents the imperial councillors Martinitz and Slawata being thrown out of the window of the Château of Hradshine at Prague in 1618. The Count Thurn who ordered this act of violence, is the central figure in the composition, and it is a much better picture than Brozik has ever painted before. It is very much better than the "Columbus" in the Metropolitan Museum, for example. In the picture here there is fair drawing and something like ensemble, qualities which are wanting in the "Columbus." Finally, in the Austrian exhibition are the two pictures by Múnkacsy, "Christ before Pilate" and "Christ on Calvary," both of which are so well known in the United States as to require no description here. They do not look any better here than they did in New York, nor any worse, for that matter, but the works about them are not of such merit as to put them to much of a test.

An interesting exhibition of sixty-four pictures is made by a group of German artists. It does not represent German art so fully as that of some other countries is represented, but it is all that there is in the Champ de Mars. At the Exhibition of 1878 there was a very complete collection. I find here again some of the men who were most remarked then: Leibl is the most prominent of these. The pictures shown by him here are apparently of two periods, and are widely different in technical treatment. To one period belongs a study of two women in black costumes with red trimmings, called "Women of Dachau, Bavaria." It is rich and unctuous in color, hot in the shadows and harsh in the lights, and is broadly painted with a full brush. Of the other period the best picture here is the "Portrait of M. von P.," a man in hunting dress painted out of doors. Here the technique is careful to the point of being finicky, and though there is some excellent drawing and some very good painting in parts, the picture is without ensemble. Liebermann who is quite well known in France by the pictures he has exhibited in the Salon, has a half dozen works here. "The Garden of the Invalids at Amsterdam" and "The Garden of the Orphan Asylum at Amsterdam"—both effects of sunlight falling through the trees on figures, and both showing much truth of observation—are the best. They are disagreeably dry in handling, however—a fault that is found in all of Liebermann's work.

"The Last Supper," by Uhde, which has created considerable comment, I believe, I find disappointing. Some small works by Uhde, such as "The Sermon on the Mount," were so individual in the treatment of the subjects and so naïvely and charmingly painted that I expected to find something resembling them in "The Last Supper." It is only a group of ordinary looking men, in dingy raiment, painted in a very commonplace way. In the choice of his models the artist has apparently not taken the pains to get such as had something like distinctive character, and even with those he has used he has scarcely brought out that most essential requisite in painting such a picture as this. What it is possible to do in this painting of subjects taken from the life of Christ in contemporary surroundings can be seen in some of Veronese's works, or in those of the Dutch or Flemish masters. The rendering of character is the first and most important thing in the picture. In Quentin Matsys's triptych, "The Entombment," for instance, the people and the surroundings are not more incongruous than in Uhde's picture. Yet Uhde's work is only a fairly well painted interior, with some uninteresting looking men sitting at a table, while Quentin Matsys's triptych is one of the most admirable works of art in existence. While Uhde cannot for a moment be compared to Quentin Matsys as a painter, he might nevertheless have given to his picture some of the charm that lies in Matsys's beautiful work had he, like him, attempted seriously to render on his canvas the character, the simple humanity, of the people he took for his models. In Uhde's picture, too, there is more conventionalizing than is found in some of his other works, and the result is that "The Last Supper" is without even the novelty which might be interesting in itself in the treatment of such a subject.

In the Russian galleries there is but little that calls for mention. Here again are some gigantic canvases covered with paint and with very little painting worthy of the name. Indeed, when I have said that there are four pictures by Chelmonski, all of subjects taken from life in Poland, and that "Sunday in Poland" is an interesting and well-painted picture, and the best of the four, there is nothing to add. Some of the other contributors whose names are known in the art world are Harlamoff, Makowski, Pranishnikoff, Georges Lehmann, and Kowalewski.

Among the pictures by the Scandinavian painters which are hung in the galleries allotted to Norway, Sweden, and Denmark, the landscapes by Munthe, Petterssen, Ekström, and Skredsvig are noticeable. These painters have found in their native countries motives that have scarcely anything in common with the landscapes of which there are so many in the French and other sections. They are almost all studies from nature, and bear a look of truth, in spite of the fact that some of the effects are strange and unlike what we are accustomed to in more southerly latitudes. Wahlberg, the Swedish landscape-painter who lives in Paris, is more conventional, but his work exhibited here shows him to be a capable technician and a respectable colorist.

There are further some excellent portraits by Kröyer and Tuxen, some exaggerated effects in pastel, after the impressionist methods, by Zorn, and a large decorative triptych by Carl Larsson in which various groups of figures personify "The Renaissance," "The XVIIIth Century," and "Modern Art." It is a curious mixture of decorative painting following the modern methods of Cazin and Besnard, sculpture and framing. It is the largest work in the Scandinavian galleries, but it can hardly be called a successful one. This artist appears to much better advantage in a number of water-colors which are charmingly painted and are delicate and refined in color scheme.

A Finnish artist, Edelfelt, who lives in Paris, contributes the only works of importance in the small gallery occupied by the exhibition from his country, most notable being portraits of Pasteur and of the poet Topelius, and a very realistic candle-light effect on a seated figure of a young woman with a babe in her arms, called "Virgin and Child."

In the Swiss galleries are found the works of two well-known artists who belong to the Paris colony. Three portraits and the picture called "The Two Sisters," which is well known in New York, constitute the exhibit of Charles Giron, and by Mlle. Breslau are three portraits likewise, and a clever picture of two young women seated in a studio before a window, in which there is truth of observation in painting counter-lights and excellent handling.

In what is called the International Section, a gallery hung with works by artists whose native countries are not represented in the Exhibition, or by other artists who perhaps feel themselves *dépaysés*, there are two good pictures by H. Thompson, "Sheep-fold" and "Sheep," and some very interesting still life by Zakarian, a Turkish artist who lives in Paris and who has evidently been inspired by

Chardin. His pictures are not without originality, however, and are especially remarkable for beauty of tone.

We can pass by the other galleries that remain, those of Rumania, Servia, Greece, the South American republics, etc., as containing nothing particularly worthy of note, or at least useful for our purpose; and when I have spoken of some of the pictures in the Dutch section, we shall have only left for consideration the important exhibitions made by Great Britain and the United States. The painters of the Netherlands have been written about a good deal of late, and it has sometimes been said that in landscape certain of the Dutch painters have left their French contemporaries far behind. While it is plain that the present French landscape school is not what it was in the days of Corot and Daubigny, there is still much that is good in it, and its faults are such as a more artistic public sentiment will speedily correct. At the same time, too, there are among the French landscape painters of to-day a few men of exceptional merit, and in Cazin one who is without a rival. The Dutch painters are fully represented in the Champ de Mars, and there are in the galleries there five pictures by Mauve, five by Maris, and three by Mesdag. Those by Mauve are the best of these, but they are not at all remarkable; the Mesdags, seashore views or marines, are lacking in the essential of a good picture, in that they do not look truthful, and they are certainly not so able, technically considered, to make them worth noting on that account; while the landscapes by Maris are so heavy and clumsy in handling, so loaded down with meaningless lumps of paint, and so wanting in the observation of the subtle values the atmospheric conditions of the Netherlands produce, that they are hardly landscapes at all. Indeed, it is scarcely possible in the whole exhibition to find any pictures in which the most important qualities that are recognizable in all good landscape painting are so utterly wanting.

Of the figure-painters, the one who is best known outside of Holland, Israels, is the one who offends the most. His "Toilers of the Sea" is almost outside of the limits of criticism, and two interiors with figures, "Sleeping Child" and "Peasants at Table," are no better. Paint is piled on and dragged about in these canvases without meaning or sense, form and color do not exist, and of air there is none. Were it not for some water-colors by Mauve that are better than his oils, and the work of a few painters whose names are comparatively unknown, the Dutch exhibition would be a sorry one. In the figure subjects by Vos, Martens, and Josselin de Jong, in a landscape by Bastert, and in some charming oil sketches by the etcher Storm van s'Gravesande, there is happily enough to make it worth visiting, but by no means enough to make it rank along with other exhibitions, such as the creditable and interesting ones of Norway and Sweden, for example.

Correspondence.

THE WOMAN AND THE MACHINE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of Professor Smith's article in the current *Forum*, the following is a concrete case of the work which will be done to obtain a Government position with its small pay and confining routine work. It is also interesting as showing that Congressman Dingley agrees with Professor Smith in the belief that machine appointments are necessary to party government.

The Post-office at Topsham, Maine, is a fourth-class office paying $400 a year, and requiring the presence of the Postmaster from six until twelve in the morning, and from one until eight in the evening every week day in the year. There are no holidays.

There are two candidates for the place, both Republicans—one a woman with experience in the service, the other a former member of the Republican Town Committee, whose chief qualification beyond that is (to quote the words of one of his supporters) that he is just lazy enough to fill the position.

Some time after the 4th of March, petitions were circulated in behalf of both parties and were sent to Congressman Dingley for his endorsement, the major number of signers being in favor of the woman. The petitions were returned with the order that only the names of Republican patrons of the office should be placed on the petition. Again the longer petition was in favor of the woman. Word came from Lewiston that there was still something wrong—that the petitioners should be confined strictly to Republican voters. The voting-lists were carefully scanned, and the revised petition was again sent to Lewiston, with the woman still in the majority, only to be returned with the dictum that the matter must be settled according to the wishes of the Republican Town Committee. Even here the vote failed to decide. Through some failure in the Machine the vote was a tie, but finally the announcement has been made that the professional politician has received the endorsement—a foregone conclusion from the rejection of the first petition. The account reads like a certain portion of the Book of Genesis, only working in a reciprocal manner. Evidently the highly honorable member from the Second Maine District has not forgotten the Congressional elections of 1890.

CHICAGO, ILL., September 20, 1889.

THE PROTECTION OF SHODDY.

TO THE EDITOR OF THE NATION:

SIR: In the discussions on the effect of the tariff on wool, there is one point that I have not seen adverted to, though it bears directly on the quality of woollen cloth in America and accounts for part of the support the tariff receives. Woollen cloth in this country is not made entirely from new wool. There is a large and flourishing industry in various parts of the United States engaged in the manufacture of "wool extract" and shoddy. The first is made by treating rags of any fabric, partly wool and partly cotton, with sulphuric acid, which dissolves the cotton. The residue is carded and mixed with new wool and spun. The fibre is undoubtedly weakened by the process. "Shoddy" is made by tearing to pieces woollen rags and washing the material. The fibre is, of course, shortened by the process, and the yarn into which it enters is consequently weak, and the fabric, when woven, less firm and durable.

The manufacturers of these materials are, of course, strong tariff men, for by the duty on wool the price of their rotten stuff is enhanced. I cannot say how large a proportion of the raw material of our woollen mills is composed of "wool extract" and shoddy—I doubt if any one could ascertain, for no one likes to confess how much his wares are adulterated; certainly it will not be reported in the next census. But I am confident that it is larger than is supposed. I know that "all wool" sometimes means one-quarter "wool extract" and one-quarter shoddy, and one-half "undetermined residuum," as the chemists say.

The farmers are not the only ones to be considered when we talk about the duty on wool, for one of the most certain effects of a protective (?) tariff is the adulteration of the protected article, and the adulterators are invariably the strongest upholders of a tax on genuine material. It is provoking enough to be forced to pay more than we ought for clothing, but it is exasperating to find that the same political machinery which raises the price lowers the quality more than proportionately.

CHARLES F. JOHNSON.

HARTFORD, September 20, 1889.

POOR COMFORT FOR DEMOCRATS.

TO THE EDITOR OF THE NATION:

SIR: A little group of prominent politicians with their families met in the corridor of the Deer Park Hotel during the past summer, and, in the course of conversation, one of the gentlemen ventured the assertion that "No Democrat should be permitted to hold office." His remark was promptly amended by his wife, who declared that "No Democrat ought to be allowed to live!" As many of these poor fellows, dependent upon their offices for their livelihood, have already been beheaded by the indefatigable Clarkson and his colaborers, and more are being prepared for execution, this maxim may be accepted as the keynote of the Administration; and, instead of a Government of the people, by the people, for the people, we shall have a Government of Republicans, by Republicans, for Republicans.—Very truly,

D. S. G.

BALTIMORE, September 28, 1889.

METAL CURRENCY AMONG BARBARIANS.

TO THE EDITOR OF THE NATION:

SIR: The article in *Petermann's Mitteilungen* for August on the money of Central Africa by Gerhard Rohlfs reminds one of a similar instance in antiquity. Tacitus, in his 'Germania,' mentions the fact that the Germans preferred Roman money of certain kinds in their mercantile transactions: "Pecuniam probant veterem et diu notam, serratos bigatosque. Argentum quoque magis aurum sequuntur, nulla affectione animi, sed quia numerus argenteorum facilior usui est promiscua ac vilia mercantibus." The serrated edges and the two-horse chariot stamped on the coins were, from all accounts, just as much a *condicio sine qua non* of its acceptance as the date 1780, and the certain number of points on the diadem and crown of the Empress, on the Mariatheresienthaler which the natives of Central Africa require before they will accept it as currency.

The demonetization of gold in both instances is a little remarkable. Certainly there could be no surer sign of barbarism, and no better proof of the utter stand-still that has hung over the Dark Continent during the lapse of all these ages. The Germans at least have learned better; they do not refuse gold now. Timbuctoo is sadly behind the times.

R. L. PRESTON.

CENTRAL UNIVERSITY, RICHMOND, KY., September 26, 1889.

Notes.

FROM the *Publishers' Weekly* for September 21 we glean the major part of the following titles of fall publications. *D. Appleton & Co.*:—'A Text-Book of Animal Physiology,' by Prof.

Wesley Mills of McGill University; third edition of Charles Darwin's 'Structure and Distribution of Coral Reefs,' with an appendix by Prof. T. G. Bonney; and 'The Town-Dweller,' by Dr. Milner Fothergill. *A. C. Armstrong & Son*:—'How to Catalogue a Library,' and 'The Threshold of Manhood,' by W. J. Dawson. *Cassell & Co.*:—'New Zealand after Fifty Years,' by Edward Wakefield, and a holiday illustrated edition of Tennyson's 'Song of the Brook.' *The Century Co.*:—'Daddy Jake, the Runaway,' stories by Joel Chandler Harris. *Robert Clarke & Co.*:—'History of the Girtys: A Life-Record of Three Renegades of the Revolution,' by C. W. Butterfield. *Dodd, Mead & Co.*:—'Etchings,' twenty-five examples by modern masters; a two-volume edition of the poems of Austin Dobson; a handsome four-volume edition of 'Consuelo'; 'The Letters of the Duke of Wellington to Miss J., 1834 1851'; and 'The Diary of Philip Hone, 1828-'45,' edited by Bayard Tuckerman. *Geo. H. Ellis*:—'Problems in American Society,' by Joseph Henry Crooker. *Fords, Howard & Hulbert*:—'Unto the Uttermost,' by James M. Campbell. *Gebbie & Co.*:—The Marquis de Belloy's 'Christopher Columbus and the Discovery of the New World'; 'Half a Century of Music in England,' by Franz Hueffer; Arsène Houssaye's 'Seven Years at the Comédie-Française,' with portraits of actors; and 'Indian Life, Religious and Social,' by John C. Oman. *Harper & Bros.*:—'Cathedrals and Abbeys in Great Britain,' the text by the Rev. Richard Wheatley; 'London: A Pilgrimage,' the text by Blanchard Jerrold and illustrations by Doré; 'The Quiet Life,' illustrated by Abbey and Parsons; and a 'Life of Martin Van Buren,' by George Bancroft. *The History Co.*:—'The History of Utah, 1540-1880,' by Hubert H. Bancroft. *Houghton, Mifflin & Co.*:—'Origin and Growth of the English Constitution,' by Hannis Taylor; and the eighth and last volume of Winsor's 'Narrative and Critical History of America.' *Lee & Shepard*:—A Christmas gift-book, selected from the writings of Thomas Wentworth Higginson, with illustrations by Irene E. Jerome, 'In a Fair Country'; 'The Tartuffian Age,' by Paul Mantegazza; and 'The Future of Morals and Religion,' by Lawrence Gronlund. *J. B. Lippincott Co.*:—Illustrated editions of Guy de Maupassant's 'Pierre et Jean' ('The Two Brothers'), of 'Rab and His Friends,' of Lover's 'The Low-Backed Car,' and of Tennyson's 'The Miller's Daughter.' *Little, Brown & Co.*:—'A Book about Florida,' by Margaret Deland, illustrated, and 'Myth and Folk-Lore of Ireland,' by Jeremiah Curtin. *Longmans, Green & Co.*:—'A Life of Lord John Russell,' by Spencer Walpole; 'A Selection from the Despatches and Letters of the Right Hon. Sir George F. Bowen,' by Stanley Lane-Poole; 'Cardinal Lavigerie and Slavery in Africa,' a sort of autobiography; 'Clavers, the Despot's Champion,' a biography of Graham of Claverhouse; 'A Memoir of Rt. Rev. F. J. McDougall,' by C. J. Bunyan; 'Russia in Central Asia in 1888,' by the Hon. George Curzon; 'Swiss Travel and Swiss Guide-Books,' by W. A. B. Coolidge; and 'The Skipper in the Arctic Seas.' *D. Lothrop Co.*:—'Our Asiatic Cousins,' by Mrs. Leonowens, and 'Stories of New France,' by Mrs. A. M. Machar. *Macmillan & Co.*:—'Pen Drawing and Pen Draughtsmanship,' by Joseph Pennell, illustrated; 'The Development and Character of Gothic Architecture,' by Prof. Charles H. Moore of Harvard; 'The Pre-Raphaelite Brotherhood,' by W. Holman Hunt; 'Cults and Monuments of Ancient Athens,' by Miss Jane Harrison and Mrs. A. W. Verrall; 'Royal Edinburgh: Her Saints, Kings, and Scholars,' by Mrs. Oliphant; 'The Makers of Modern Italy: Mazzini, Cavour, Garibaldi,' by J. A. R. Marriott; 'History of the Later Roman Empire, from Arcadius to Irene, 395-800,' by John B. Bury; 'Problems of Greater Britain,' by Sir Charles Dilke; 'The Cradle of the Aryans,' by G. H. Rendall; 'Wild Beasts and their Ways in Asia, Africa, America, 1845–1888,' by Sir Samuel W. Baker; 'Letters of Keats,' edited by Sidney Colvin; 'Eminent Women of Our Times,' by Mrs. Fawcett; 'On Style, with Other Studies in Literature,' by Walter Pater; 'The Elements of Politics,' by Prof. Henry Sidgwick; a new volume of Essays by Prof. Huxley, and of Poems by Lord Tennyson; and a new edition of the 'Canterbury Tales,' edited by John Saunders, with the aid of Dr. Furnivall. *G. P. Putnam's Sons*:—'The Life and Work of Charles Darwin,' by Prof. Charles F. Holder, and 'American War Ballads.' *Rand, McNally & Co.*:—'Arctic Alaska and Siberia,' by S. Aldrich; 'Sweden and the Swedes,' by W. W. Thomas, jr., U. S. Minister to Sweden; 'Costa Rica,' by Mrs. Lily Tyner; and 'The Constitutional History of France,' by Col. Henry C. Lockwood. *Roberts Bros.*:—'Louisa M. Alcott: her Life, Letters, and Journal,' by Mrs. Ednah D. Cheney, and a new edition of the Rev. Robert Lowell's 'A New Priest of Conception Bay.' *Charles Scribner's Sons*:—'The Viking Age,' by Paul Du Chaillu; 'The American Railway,' the well-known series of articles from *Scribner's Magazine*, with an introduction by Judge Cooley; 'Among Cannibals,' by Carl Lumholtz, translated from the Norwegian by R. B. Anderson; 'Aspects of the Earth,' being Prof. Shaler's articles from *Scribner's;* 'The First Administration of Thomas Jefferson,' being part of Mr. Henry Adams's 'History of the United States'; 'English Lands, Letters, and Kings,' by Donald G. Mitchell; 'Strange True Stories of Louisiana,' by Geo. W. Cable; 'The Poetry of Tennyson,' by the Rev. Henry Van Dyke; and 'Literature and Poetry,' by Dr. Philip Schaff. *Fred. A. Stokes & Bro.*:—'Between Times,' verses by Walter Learned, a frequent contributor to the *Century*.

Mr. Samuel H. Scudder's 'Butterflies of the Eastern United States and Canada, with special reference to New England,' in three volumes with ninety-six plates, is ready for immediate delivery by the author (Cambridge, Mass.).

After sixteen years, Miss Amelia B. Edwards brings out a second edition of her 'Untrodden Peaks and Unfrequented Valleys: A Midsummer Ramble in the Dolomites,' or the south Tyrol (Routledge & Sons). The illustrations are retained, notes have been added by way of correction or addition, and there is an excellent map; an index would also have been welcome. The curious mountain forms of Titian's country, with their supposed origin in coral growth, appeal to the lover of the picturesque and to the climber. Miss Edwards's new edition may well turn thither American tourists (for she rededicates her book to Americans).

In 1876 there were still in the market two American editions of Samuel Warren's famous novel, 'Ten Thousand a Year,' one of them in three volumes, another (at Philadelphia) in one. A third edition was published in the same city in 1878. Such, however, is the vitality of a work originally contributed to *Blackwood*, and then in 1841 given to the world (quite literally, in view of the translations and the piracies of it), that Little, Brown & Co. of Boston have just reprinted it in the traditional three volumes, through the University Press, Cambridge, Mass. The author's portrait prefixed bears a certain resemblance to another popular novelist, Benjamin Disraeli.

Again we have a case of long life in the late Albany de Fonblanque's handbook of the Constitution, Government, laws, and power of the British Empire, 'How We Are Governed' (Frederick Warne & Co.). More than thirty years have elapsed since it was first composed, but it has been overhauled by a long line of editors till now, in its sixteenth edition, it has been wholly rewritten by Mr. W. J. Gordon, and only the *form* of the Letters—not the arrangement, even—has been preserved. In a measure, of course, the manual marks the changes that have occurred during the period that has elapsed, by incidental mention of the date of acts now in force, by expressions like "until recently," etc., but it would have been worth while to attempt by tabulation some sort of a parallel between the England of Fonblanque and the England of to-day.

Another part—the second instalment of the fourth volume—of Dr. G. Schlegel's Dutch-Chinese Lexicon has appeared from the press of E. J. Brill, Leyden.

A belated 'Intelligence Report of the Panama Canal,' by Lieut. Chas. C. Rogers, U. S. N., has just issued from the Government Printing-Office. Lieut. Rogers wrote on March 30, 1887, and, after a thorough inspection of the canal, could speak in terms of high respect of the engineers in charge and their achievement, but calculated that six or seven years must still elapse before completion. His report is admirably illustrated by process views from nature, by maps, etc., and is valuable for reference.

A careful and valuable study of "The Legal Status of the Indian" is lately printed by Robert Weil, A.M., Seligman Fellow in the School of Political Science, Columbia College. It shows good work, and will be found helpful by students of the Indian question. The writer appears to have overlooked two important cases, Elk vs. Wilkins (112 U. S.) and Callan vs. Wilson (127 U. S.).

The *American Journal of Mathematics* (Baltimore) has made a separate issue of an Index to its first ten volumes, both by authors and by subjects.

A new Boston venture is the *Transatlantic*, a fortnightly "mirror of European life and letters," which will contain, among other regular features, a translated serial European novel, a translated novelette, a piece of European music, and a large portrait of some contemporary European celebrity.

In the current number of the *New Review*, Mr. Archer answers Mr. James's taunt that the plays of to-day are not published like the plays of yesterday, by explaining that the dramatist keeps his piece in MS. now, the more effectually to guard against the pirate. A volume of the late Tom Taylor's plays was printed a few years ago; most of Mr. W. S. Gilbert's pieces are published; and so are a few of Mr. Bronson Howard's. It is now announced that the best of the comedies of the late T. W. Robertson are to appear this fall, with a biographic introduction by the dramatist's son. Mr. Robertson is best known as the inventor of "tea-cup comedy," but he also wrote "Caste," a little play of indisputable merit.

Prof. A. M. Elliott's studies on "Speech Mixture in Canada" are resumed in the *American Journal of Philology*, with an amount of philosophizing not out of place, perhaps, in that learned periodical, yet unfavorable to the progress of the lay reader who wishes to get at the examples. These, when reached, are curious enough. English has imposed upon the French the majority of law terms—a natural result of conquest; the French readily adopted in their own interest the commercial terms.

When nouns have been modified, the motive has been partly to provide for gender and partly to insure the pronunciation—as, *dame, swampe, campe, baute, strappe, poutine* (pudding), *sligne* (sling), *necqu'iouque* (neck-yoke), *jobbeur, shaveur, lofeur, switcheur, proposeur, secondeur*, etc.; partly by way of assimilation to French forms, as *grocerie, informalité*, etc. In a future article on the morphology and syntax of Canadian French we hope Prof. Elliott will trace the instinct by which genders are selected for the adopted words. Superadded meanings are illustrated by *appeler* (a meeting), *appointer* (to office), *charger* (the jury, or for goods sold), *cuisiner* (accounts, etc.), and many other usages.

The Governor of Pennsylvania will preside at the eighth annual meeting of the American Forestry Congress, and fourth annual meeting of the Pennsylvania Forestry Association, to be held in Philadelphia on October 15–18. Notices of intention to present papers or data should be sent to Mr. Herbert Welsh, 1305 Arch Street. The occasion promises to be one of great interest.

—The October *Atlantic* is occupied with topics familiar to its constant readers. Mr. Fiske writes of the Monmouth and Newport campaigns; the classical paper is by Mr. Lawton, consisting of verse translations from the closing book of the Iliad, together with much prose comment, touched by that spirit of scholarly enthusiasm which has made his former Greek studies attractive; the national question taken up in the number is the Court of Claims in connection with the general matter of the Government's obligation to its creditors. Perhaps the most agreeable reading is Miss Repplier's essay upon the didacticism in much of our fiction, in which she lightly and cleverly expresses her discontent with the moral in tales, and adds her own to the increasing number of voices raised in protest against the criticism which would substitute humanitarianism for art in works of imagination. The easy-going reader will meet with little to weary or to stimulate his mind, from cover to cover, unless he should devote himself to find out the excellence of some of the poems; but we bespeak his attention to some sonnets by Dr. Woolsey which are to be found in an appreciative notice of that eminent scholar's character and personal qualities.

—Mr. Austin Dobson's poem in *Harper's* is in the vein in which he works with most pleasure and always with entire success—the revival of Queen Anne forms, but with a transforming touch of modern sentiment. The verses and the illustrations, by Abbey, blend "like the voice and the instrument." The whole, taken together, is curiously perfect and old-fashioned, and illustrates capitally the literary law that in scholastic imitations of bygone tastes technique replaces nature, often without perceptible loss except in the essential point of feeling. An interesting forestry paper, dealing with the growths of the California Coast Range; a traveller's picture of the Nizhni-Novgorod Fair, from the inexhaustible portfolio of Theodore Child; and another of Hierapolis by Mr. Ellis; one of Prof. C. E. Norton's mediæval church-building studies devoted to St. Denis; observations upon the Dunker communities and the neighborhood of North Berwick—together with a bunch of stories—complete the number, with the exception of a specially noticeable account of "Recent Progress in Surgery." In this last paper the introduction of antiseptic surgery and its results are elaborately and clearly set forth, some of the latest and most remarkable operations, which require opening of the abdomen and the brain, are described, and optimistic views of further advance are held.

— *Scribner's* takes its readers to Africa by an article in which Masai-Land is described and illustrated, and it promises more papers of which the scene will be the same continent, under the pardonable impression, perhaps, that the Russian field has been effectually preëmpted by rival magazines. Two companion articles upon "Electricity in Land and Naval Warfare" describe one of the most interesting applications of science to practical affairs, which bears some signs of being revolutionary in its influence. Iceland is the topic of travel and Benvenuto Cellini of art. Prof. Shaler contributes the most immediately useful article in his account of the roads of America, his argument to show the immense importance of the subject to the growth in civilization of the country not under the predominating influence of the centres of traffic and their connecting railway routes, and his suggestions of reform. He calls for a Federal Commissioner of Roads in the Department of Agriculture, to prepare public documents on the condition of roads and on road construction, and similar State Commissioners, at the head of local Commissioners, to prepare maps, etc. The object of this suggestion does not appear to be administrative, but merely the gathering and spread of information, and the stimulation of public interest. Whatever may be thought of this plan, the subject is one to engage attention and its discussion is timely.

— The *Century* is distinguished by a brilliant article by M. Coquelin, sure to interest literary readers, upon Shakspere and Molière. It would not be possible within our limits to follow his admirably managed parallel between these two great masters of the stage of the rival Latin and English races, with their contrasts of mental and moral attitude, of passion, poetry, and thought on the one hand and of observation, intelligence, and real life upon the other, which yield to the author such tempting material for antithesis, definition, and all the phrases of an analytical criticism. He makes full use of his opportunities, and that reader is well grounded in his knowledge who will not gain from this friendly comparison a better understanding of the qualities and methods of the French dramatist, and a clearer appreciation of the distinctive race-power of Shakspere's genius. The biography of Lincoln takes up the subject of the Blair peace negotiations and the Thirteenth Amendment, and has sharp words for both Seward and Sumner. The close of the number is devoted to the subject of education, which is treated of in three articles severally illustrated from the workings of the New York College for the Training of Teachers, the Philadelphia Manual Training School, and the Workingman's School and Free Kindergarten in this city.

—The bibliography of so abstruse a subject as Geodesy, which is mainly a discussion (in terms of the higher mathematics) of problems relating to the geometrical form of the earth, appeals to a class of scholars and investigators who rarely have the time and pecuniary means to become bibliomaniacs. Provided the matter is accurately and clearly printed, they care little, as a rule, about the form in which a memoir is published. Hence it would have seemed hardly necessary for Prof. J. Howard Gore to apologize, as he does in his preface to his 'Bibliography of Geodesy,' because all the refinements of bibliographic science are not observed in his most valuable compilation of some three or four thousand titles. It would be a sad mistake, and one into which the ready facilities for publication now afforded have led some ambitious young writers, to suppose that such a compilation is merely a mechanical task, or one that requires no deep technical knowledge of the subject. The titles here contained are largely extracted from official publications and proceedings of scientific societies which have grown dusty in the unfrequented recesses of the various libraries of Europe and America, where they were unearthed by Prof. Gore and those whose assistance was so generously lent to him. Without considerable previous acquaintance with the literature of the subject, and a knowledge of the various organized and individual investigations that have been undertaken at various times for the purpose of determining some of the scientific elements which contribute towards the determination of the true form of the earth, Prof. Gore would hardly have been able to trace a large proportion of the titles here contained, and the Bibliography would have failed in the essential quality of exhaustiveness, which his personal experience in this class of work on the Geological and Coast Surveys leads us to assume that it possesses in a high degree. It is most appropriately published under the auspices of the Coast and Geodetic Survey in its usual quarto form, and, although forming an appendix (No. 16) to the Report for 1887, has only recently issued from that stronghold of the spoils system, the Government Printing-Office. It is arranged in a single alphabetical series, which includes authors, abbreviations, and subjects. The titles, as a rule, are very full, but, where not sufficiently explicit in themselves, are followed by brief abstracts or explanations. The name of the owner of the work from which the title was taken is given after each full title, but no attempt has been made to show what libraries do and what do not possess given works.

—The first number of a new dictionary of political economy has appeared in Germany under the title of "Handwörterbuch der Staatswissenschaften" (Jena: Gustav Fischer; New York: F. W. Christern, G. E. Stechert). It is more restricted in scope than its title would imply, as the editors announce that they will confine themselves to topics directly related to political economy; but it is laid out on a very liberal scale, the prospectus promising thirty to thirty-five numbers, each consisting of 160 large octavo pages. When completed, which it is to be in three years, it will be an important and valuable work of reference, not merely by virtue of the fulness of treatment which its great size will permit, but as representing the views, on every branch of economic science, of the school which is now dominant in Germany and counts not a few disciples among our younger American economists. In its list of contributors are found all the leading German writers on political economy, with a sprinkling from other countries. The United States are represented by Professors Ely, Patten, and James. A useful feature is its full bibliography at the end of every article of any length. The longest article in the first number is the one on Joint-Stock Companies, which fills the last seventy-five pages and is not yet completed, while about forty-six pages are devoted to a number of articles relating to agriculture. There are also brief biographical notices, the present number containing one of Charles Francis Adams, jr., and one of Charles Kendall Adams, whose middle name is here printed as Kendell; but no mention is made of the two or three other Adamses who write on economic subjects. The mechanical execution of the work would

have been much improved if the publisher had adopted the Roman type instead of the Gothic, which is, at its best, literally an eyesore; but even if his patriotism or his respect for the prejudices of Bismarck forbade so radical a course, he could have rendered his page more readable if, instead of having it set solid, he had used smaller print and leaded it.

—Ever since the publication of "L'Immortel," M. Alphonse Daudet has been urged to dramatize it, or at least to take a play out of it. Hitherto he has refused, on the ground that this would be considered a new attack upon the Academy, and bring on him fresh odium of a sort of which he has already had enough. But he has written a play which appears to be a continuation of his novel, and read it on the 1st of September to M. Koning and the actors who are to interpret it. It is called "La Lutte pour la Vie," and is intended to answer the question: What became of the *ménage* of Paul Astier and the Duchess Padovani after the death of Astier *père*? The play will be brought out by M. Koning at the Gymnase in the course of the winter.

—The Welsh Archæological Association—or, rather, thirty members of it headed by Professor Rhys of Oxford—lately made a little pilgrimage through Brittany, visiting the chief shrines of their *cultus* in Morbihan, Finistère, and the Côtes-du-Nord. Before crossing the Channel on their return, they made a visit to M. Renan, to pay their respects to him as "un Breton assez grand pour représenter tout le peuple." Professor Rhys was naturally their spokesman, and M. Renan replied to his address in an allocution of inimitable grace and lightness of touch, which appears in full in the *Revue Bleue*. Our space is narrow for quotation, and it seems almost a pity to make quotations, or to attempt to "traduce" M. Renan's words into another tongue. However, here is one passage from his address:

"When I went to London a few years ago, I had the honor of meeting Lord Tennyson, who told me this curious story: When on a tour through Brittany like that you are making now, he spent a night at Lannion, whence you have just come. In the morning, when he asked for his bill at the inn, the hostess shook her head: 'Oh no, sir! Have you not sung our King Arthur?' This hostess was evidently a woman of reading; our people in general have few such literary remembrances. But when our sailors go to Cardiff, they can easily understand your countrymen, and find little difficulty in making themselves understood. Mr. Rhys has been talking with our good country-folk now for some days. He does not lose a word of all they say; and they, with some explanations, follow him very well. That is not surprising; for the people of this district, especially about Goëlo (*Golovia*) come from Cardigan. . . . I have often said to myself that if the storms which in this century sweep over our poor land of France should drive me to a refuge in England—it is not likely; I am an old man; and, besides, our country has strong life in her, and we need not be too much moved by passing storms—I should take advantage, were it but to remind the public pleasantly of its existence, of an old law of Edward the Confessor: *Qui de Britannia minori veniunt recipi debent tanquam probi cives regni hujus, quoniam exierunt quondam de corpore regni hujus.* In those days they paid some regard to history. After all, we have not changed much. We are an obstinate race, always a good deal behind our times. Even when we seem to be turning from black to white we are still essentially the same. Our good old saints were very headstrong, too. Those good old Breton saints, all of them of Welsh or Irish origin, are great objects of my devotion. I do not like the modern saints so well. I find them too intolerant."

—France has lost an eminent historian and scholar and teacher in M. Fustel de Coulanges, who died at Massy, near Paris, on the 13th of September. His death was not unexpected, for he had been in feeble health, worn out by overwork, for many months, and yet it is in some sort premature, since he was only in his fifty-ninth year. M. Fustel de Coulanges was far from a voluminous writer—in fact, he wrote but little—but each of his books was widely read, and deserved the praise it got both from the unlearned and from scholars. That he pleased the many as well as the few was probably due to his freshness and suggestiveness as a writer, his clearness of method, and his great precision and neatness of style. Many who would find Sir Sumner Maine's 'Ancient Law' hard reading might read the 'Cité Antique' easily and with pleasure. This and his 'Histoire des Institutions politiques de l'ancienne France' are his two chief works. The 'Cité Antique' has been translated into English and is well known. It is a minute study of the Ancient City in its laws and manners and customs and religious observances, and in its literary and artistic productions. But, the *Temps* says in announcing his death, it is not in his books that the great work and usefulness of M. Fustel de Coulanges are chiefly seen. First as a lecturer at the École Normale Supérieure, and afterwards as professor at the Sorbonne, he formed around him "une véritable pléiade de jeunes savants dont quelques-uns sont déjà presque célèbres." In his later years he went back to the École Normale as its director. His death leaves a vacancy in the Academy, to which he was elected in 1875, succeeding M. Guizot.

GRIMM'S RAPHAEL.

The Life of Raphael. By Herman Grimm. Translated by Sarah Holland Adams. Boston: Cupples & Hurd.

GRIMM constructs the Life of Raphael out of a careful criticism of the principal pictures, a minute observation of the studies and designs for each, and arrives at fixing the probable date of each work by this method. Of actual facts concerning Raphael's life there are very few, almost none, since even the date of his birth is questioned. Vasari's Life is continually shown to be extremely inaccurate. He wrote of Raphael thirty years after his death, making up his biography from the personal narrative of his pupils and of others who had known him; and what wonder that the memories of so brilliant a personality should have been already surrounded by the haze of romance and fiction? Those who care for vivid narrative will always read Vasari with delight; his lucid style and enthusiastic recognition, tempered with sensible criticism, win one's confidence. This the German writer allows, while often finding him at fault.

In a letter from the author to the translator, which serves as preface to this Life, we learn that Grimm, who has devoted himself during thirty years to the study of Raphael's works, and especially to those two frescoes in the Camera della Segnatura, known as "The Disputa" and "The School of Athens," has, for this American edition of his work, rewritten the chapter treating of these frescoes in order to present the result of his studies in a more concise, definite, and vigorous form. Miss Adams also acknowledges in a foot-note that she has omitted certain subtleties of analysis and historical research in order to bring her translation within desirable limits. The aim of the work, in the words of its author,

"has not been to supply with conjectures the lack of information concerning Raphael's actual career, nor merely to satisfy the curiosity of those who, in the knowledge of these outward experiences, imagine they possess the life of a man. The significance of my task seemed to me rather to lie in finding answers to the following questions: How did this artist, inspired with his sunny views of life, stand to the common world around him? How were the radiant pictures received which he gave to the world? Was he assisted in his work or was he hindered? How powerful was this help or this hindrance, and by whom exercised? These questions led me to consider the man as well as the ideas publicly agitated and discussed in Raphael's day to whose influence he must have been subjected."

With unflagging interest and patience, Grimm seeks to find out the meaning of the works of this master through their first designs and studies, thus following the leading theme to the final accomplishment of the picture differing in so many instances from its first conception. In order to make good use of the book, it is necessary to refer while reading it to photographs of the drawings and pictures mentioned in order to note the variations. Grimm's conclusion, "that Raphael's genius, under circumstances still more favorable, would have had still a nobler development," seems, to say the least, very questionable, as also what he says about Raphael's having been affected by the church-reform then agitating Europe. We will see later how Grimm has convinced himself on this point. In refutation of the former argument, we have only to remember that all the circumstances of Raphael's life were peculiarly fortunate for the development of his art. Himself the son of an artist of no inconsiderable merit, his genius was immediately recognized and cultivated by the best masters of his time. At the age of twenty he was already an accomplished painter, since "The Coronation of the Virgin" in the Vatican is proved to have been executed in 1503. From his earliest years to the day of his death he seems to have been successful in everything he attempted; and yet, though so highly gifted, he never allowed himself to fall into the snares which extreme facility and popular appreciation spread before the idol of the hour. His sketch-books, full of notes from nature and innumerable designs for each of his works, testify to his untiring industry and extreme conscientiousness. He had a happy, pleasure-loving nature, and was never hampered by monetary anxiety, since he always enjoyed the patronage of the greatest princes of his time, and orders were pouring in on all sides.

From the time Pope Julius II., at the recommendation of Bramante, invited him to Rome, Raphael lived the life of a prince at the Papal Court, and became intimate with all the learned and famous men of a time when culture and learning were at their highest. Rome was then the most favorable city for the study of antique art and learning. The immense amount of work left by Raphael on dying at the early age of thirty-seven, and its excellence, are evidence that he had put to good use his exceptional gifts and his time, and that the circumstances of his existence had helped his best development in an artistic sense. We cannot see that his work would have been the better for his falling more under the influence of the ideas of Luther, Erasmus, Hutten, and other reformers, whose teachings were known to the few during Julius II.'s Pontificate, and were common property during the years of Leo X.'s reign—the storm-and-stress period of the Reformation. We cannot believe that Raphael could have concerned himself about these things. It is generally supposed that he procured from Cardinal Bembo, Ariosto, or other learned men, the historic details for his frescoes, with the order of precedence in the arrangement of his figures; and his own wonderful power of composition, poetic fancy, and

unlimited invention supplied the rest. He was always ready and able to execute what was required of him in the spirit of the theme, whether the subject was from ancient myth, Holy Scripture, or phantasy. Indeed, his gifts in fantastic representations seem more wonderful to us than any; his winged creatures—flying figures, dragons, and such like—seem so right, so probable, if not possible.

Grimm acknowledges there is little proof of Raphael's having taken active part in the movement which was interesting those around him. He thinks the fact that the painter at intervals withdrew from the court festivities, applied himself to his books, and in his later years had great friendship and solicitude for an old philologist living in Rome in his little chamber, like a stoic, almost emulating Diogenes in his tub—a certain Fabius of Ravenna—proves that he had a serious, thoughtful side to his nature, which received an impulse to spiritual development in the fusion of political, religious, and literary interests. Another evidence of Raphael's having been influenced by the changes going on in the public mind, is the proof he saw that the ideal of Christ which served the Quattrocento artists no longer satisfied the Cinquecento. Grimm supposes that the reason why in his later years he painted no Last Supper, no Last Judgment, no Crucifixion, was because the ideal he would have wished to represent would not have been understood by the public. In the painting of the cartoons for the Tapestries, when he came to the Bearing of the Cross, he seems to have turned to Albert Dürer for the type of head he wished to paint, which, through his interpretation, became the ideal which Guido Reni used for his "Ecce Homo." In the "Transfiguration," his last work, he had a subject offered him which suited his convictions. The figure of Christ should represent matter becoming spirit, and, realistic treatment being out of the question, he resorted to the antique. "Raphael's Christ of the Transfiguration is the Christ of the united European nations, all of whom, in his day, when Luther's influence was just beginning to be felt, hoped, from the universal desire for reformation, to attain through this means to salvation for all." Our author goes on to say that in our day the representation of Christ has become impossible, the plastic arts having lost the living power they had in the Cinquecento. The development of the history of the images of Christ through the Quattrocento and the Cinquecento from the plain and humble man Christ of the democratic Florentines, varying so much in each of the Italian schools of painting, is full of subtle criticism and analysis. We regret that want of space prevents our enlarging on the theme.

Of the six chapters into which the book is divided, and which contain the history of all Raphael's principal works, with their preparatory studies and all the light shed by recently discovered historical documents and letters on their production, we will choose the one on the Camera della Segnatura for further notice, as the subject is especially one on which the great German critic has expended so much labor and thought. In the year 1507, according to Grimm, Raphael came to Rome, at the invitation of Pope Julius II., to take part in the decoration of the Vatican and St. Peter's. This was probably not his first visit to the Holy City, as some first sketches for the Camera della Segnatura exist which were made while his great picture of the "Entombment" was still in progress; in any case, his reputation as a great painter was well established already in Rome, for had not Michael Angelo himself, when first asked to paint the Sistine chapel, recommended that they should give the work to Raphael instead?

Pinturicchio had adorned with infinite originality and beauty a set of rooms for Alexander Borgia; the frescoes on the walls are full of delightful invention, surpassing any other work we have of this master. Julius II. shunned these splendid apartments as though they were plague-stricken; he chose a suite above them, and had already had some of them decorated by Perugino, Sodoma, and others. At first, only one room was assigned to Raphael, the ceiling of which was to have been painted by Sodoma, but, as the work progressed, Julius II. was so much delighted with Raphael that he ordered the frescoes by the other masters to be effaced, and desired him to paint the entire suite of three rooms and a hall. The Camera della Segnatura is in the centre, and is lighted by two high windows on either side. The painted panes of glass by William of Marseilles have long since disappeared from them, as also the rich inlaid wainscoting and seats by Barili which ran round the room about six feet from the ground. The floor alone retains its former splendor, the arms of the Roveres being executed in mosaic in the antique manner. The vaulted ceiling, drooping low at each corner, preserves its jewel-like brightness of color; the restorer's hand has not worked at its frescoes excepting here and there; their position prevented the dust from settling on them. The first impression of the frescoes on the walls is that they have suffered cruelly from heavy repainting and restoration; but when this has once been conceded, the painful impression gives way to intense admiration for the extreme beauty of the designs, their apparent facility of execution, the grace of line, the movement of certain figures, the dignity of others, and the pervading harmony of the whole.

On one side, the left as we enter, we have the "Disputa," covering the whole wall. The composition is divided into two parts; the lower represents an assemblage of illustrious persons grouped around an altar on which stands the Monstrance, the altar itself being on an elevation approached by broad steps. The most important personages of this group are sitting on antique stone benches. The cloud hanging low over the assembly divides it from the celestial beings round the Holy Trinity soaring immediately above the altar; genii at the feet of the Trinity are flying, with hands raised above their heads, carrying open gospels. The figures nearest the altar are alone supposed to see the glory revealed; not all even of these are looking upwards. The Christian Fathers are recognizable by the titles of their books or by their names written round their halos. Dante, Bramante, and others are easily known by their characteristic features; others may only be guessed at. Some are discussing, others are reading, others (on whom the light from above streams) have cast away their books. The heavenly semicircle of figures seated on the cloud above are treated in many different manners. Christ, Mary, and John are represented as transfigured. God the Father hovers above them. The saints, sitting around like cardinals at an ecclesiastical festival, are more realistic in painting: we see Peter, Paul, Adam, Moses, David, and others. Some of these are rather affected in their extreme grace of pose, not in keeping with the solemnity of the moment; Peter and Paul, closing the group on either side, look straight before them, attentive and grave. Upon the vaulted roof above this fresco Raphael has painted a female figure of great beauty, who seems to be gazing in wonder at what is happening below. Her fair head is crowned with olive leaves, and a veil falls in broken folds about her head. "Divinarum Rerum Notitia" (knowledge of things divine) is her inscription.

Vasari supposes the "Disputa" to signify the institution of the Mass. Ghisi's engraving, appearing the same year as Vasari's book, is inscribed "The Adoration of the Trinity." Besides these general interpretations, Grimm has found another, which especially connects the painting with the Pontificate of Julius II. Directly in the midst of the assembly, in the immediate foreground to the right, a massive piece of masonry is seen, requiring explanation. It is the base of one of the pillars to support the dome of the new building of St. Peter's, according to Bramante's design, and, to carry out this suggestion still further, we see in the landscape distance some men on a scaffolding working at a church. Julius II., in the face of the opposition of many of the cardinals, decided to tear down the ancient building of St. Peter's, which the settling of the pillars seemed to make necessary, and to erect in its place a church of superlative magnificence, for which Bramante had furnished the design. The heavens are opening to bless the work. The idea of glorifying the Pope's greatest undertaking evidently crept in gradually, while the composition of the "Disputa" was in progress. To make it still more clear, Pope Anacletus II., the original builder of St. Peter's, is seen leaning on the piece of masonry in the foreground, while Sixtus IV., the first of the Roveres, to whom Julius owed everything, in full pontifical robes, stands gazing aloft with upraised hands. This conjecture, which Grimm offered to the public some years ago, has by this time met with general acceptance as the true signification of this fresco.

We cannot say that his theories concerning the "School of Athens" on the opposite wall have been received with equal favor. In this work he wishes to persuade us that the two central figures of the composition are not Plato and Aristotle, as Vasari calls them, although Vasari proceeds to explain that Raphael meant to depict the union of heathen philosophy and Christian theology. Grimm believes that the inscription on Ghisi's plate furnishes the true explanation—that Paul's entrance among the Athenian philosophers is what Raphael intended; and he shows how the representation of Paul seems to have been continually present in the mind of Raphael, since he painted him so frequently during his career. He also indicates how characteristic is the pose of the figure in question, standing at the top of the flight of stairs with commandingly outstretched hand. In Scripture we read continually of Paul's stretching out his hand to speak; the action also accords with descriptions of Aristotle in Sidonius Apollinaris's letters, which Raphael knew and referred to for some of the characters in the "School of Athens"; and as the figure in question is holding a book inscribed "Etica" supported on his thigh, it seems more probable that it is Aristotle. We have already, some years ago, in the *Nation*, in a review of Grimm's 'Fifteen Essays,' followed the long line of argument on either side which is more condensed in this present work. We quote his conclusion to this important chapter, not having space for further investigation:

"According to the views of Raphael's age, the task of philosophy consisted in this, that it should prepare the way for the elimination of all doubts concerning the nature of the Divine which the material aspect of things awakens. But the solution itself could only be accomplished by religion. And as in the 'Disputa' the heavens open to reconcile dissenting opinions by a revelation of the Trinity, so, in the

'School of Athens,' Paul appears among the Pagan philosophers to declare what he brings is only the final deduction from their own teachings, the sum and substance of all that we to-day call the Renaissance."

Thus this great creative artist, by the influence of Bramante and the favor of Julius II., immediately took part in Rome in works embodying in symbols the high ideals of his time.

In "Four Centuries of Fame," the concluding chapter, we are given an account of Raphael's influence on art from the moment of his death till our own day, with careful analysis of the biographies which have appeared, and everything which relates to the treatment of his frescoes and pictures. The translation of Miss Adams must be a very faithful one. Unfortunately, she often retains the German construction of phrases, which makes the meaning less clear than is desirable. The book is not one that admits of hasty perusal.

THEOCRITUS IN ENGLISH.

Theocritus, Bion, and Moschus. Rendered into English Prose, with an Introductory Essay, by A. Lang, M.A. Macmillan & Co.

Theocritus. Translated into English Verse by C. S. Calverley. London: Bell & Daldy. 1869.

It was a fortunate thought to reprint in the "Golden Treasury" series Mr. Lang's translation, which appeared nine years ago in a less accessible form. Theocritus is an author little known or read in this country even by college-bred men; yet the reader of taste unacquainted with Greek, who is beguiled by this charming little volume, will feel, even through the medium of a foreign language, that "a new planet swims into his ken," that he has discovered a thing of beauty and a treasure for ever. If he is familiar with the literature of modern Europe, he will recognize here the original of many echoes and imitations, from the 'Aminta' to 'Hermann and Dorothea,' from Spenser's 'Shepherd's Calendar' to the 'Idyls of the King.' He will begin to see why, as Mr. Lowell puts it, "the bees of all climes still fetch honey from the tiny garden-plots of Theocritus."

Mr. Lang points out, in his useful and appreciative introduction, how it is that Theocritus so greatly surpassed the host of his successors and imitators. He partly met and partly created the taste of his age. The fashion of short epic pieces already prevailed, under the influence and example of Callimachus; yet to these he added touches of nature and scenery which were all his own. The pastoral life of Sicily was his exclusive discovery. "Sicily," says Mr. Lang, "showed him subjects which he imitated in truthful art. Unluckily, the later pastoral poets of northern lands have imitated *him*, and so have gone astray from northern nature." This remark is nearly as true of Bion and Moschus and Virgil as of later northern poets. Theocritus had the advantage of them all in that he saw with his own eyes, and rehearsed vividly what he saw. Notwithstanding the romantic air of his pastorals, he was what we now call a "realist." His shepherds are as genuine as Mr. Howells's factory girls, and are far more entertaining companions. They were of that lively Sicilian stock which was never at a loss for a jest, and whose love for poetry was so great that, as Thucydides and Mr. Browning have told us, they were literally ready to sell their captives for a song. They lived in the chosen home of the improvisatori, in a country where the professional story-tellers flourish still; they made music and verses because it was their nature and the ordinary diversion of their lives. The pipes they played upon were not stage properties of pasteboard; they themselves were neither the court porcelain of Virgil and Tasso, nor the rather common clay of Spenser's Hobbinol and Colin Clout, and Allan Ramsay's Gentle Shepherd, nor yet the once fashionable bric-à-brac of the Arcadians, and Fontenelle, and Ambrose Philips. The life of this gay, and graceful, and passionate people, their loves, and quarrels, and musical contests, their smiling landscapes, where Proserpine herself picked flowers, arranged themselves into a series of idyls, that is, little pictures, which captivated the pedants and courtiers of Alexandria, and displayed, we may fairly say, the one touch of genius in an effete and artificial age. It is interesting to observe how often since then these masterpieces in their kind have haunted the fancy of poets far greater than Theocritus could pretend to be. They have the quality which characterizes the best Greek art and literature—a freshness and vigor that is "always young enough to bear children."

This last, indeed, is a special reason that should commend Theocritus to lovers of English literature. Most of our pastoral poetry is already stuff for the antiquarian; but the student who examines Mr. Lang's version of the "Song of Thyrsis" (Idyl i.) and the "Lament for Bion" will notice how curiously these dirges have caught the ear of four poets so diverse in gifts and genius as Spenser, Milton, Shelley, and the late Matthew Arnold. The "Lament for Dido," certainly the most important and melodious poem of the 'Shepherd's Calendar,' follows closely the outlines of Idyl i.; the 'Lycidas' imitates with curious exactness the modulations, the phrases, and even the refrain of Thyrsis; Mr. Arnold's beautiful elegy assumes and alludes to the same poem and the elegy of Moschus; while the splendid pageantry and long-drawn subtle music of the 'Adonais' constitute a series of variations on these simple themes. If Burns never read these Idyls in English, it is hard to guess how he happened upon so striking a parallelism of thought as occurs in his elegy on Captain Henderson. Tennyson, too, has not merely borrowed metaphors here and there from Theocritus, but his 'Idyls of the King' may be considered as modelled on the type of the shorter epics, like the "Dioscuri" and "Hercules the Lion Slayer"; while such sketches as "Dora," "Sea-Dreams," and the "Northern Cobbler" bear a remote but definite kinship to the "Syracusan Ladies" and the "Two Fishermen."

Mr. Lang's version is, as might be expected, graceful and idiomatic, as well as scholarly—how exact and felicitous can only be understood by one who compares it line for line with the original. There are occasional mannerisms which border on affectation, and passages where we should disagree with his interpretation; but this is hardly the place for minute criticism, and the state of the text often leaves several choices open. We believe it would be nearer the Greek in Idyl i., p. 8, as well as more consistent with line 139, to translate "smiling in secret but making a show of heavy anger." In Idyl xxiv., p. 127 ("Arise, ye serving-men stout of heart, 'tis the master calls"), it seems inconsistent with Greek usage to suppose that Amphitryon should speak of himself in the third person as the master (αὐτός), and, on the other hand, very natural that the words should be an echo put in the mouth of a handmaiden. On the next page occurs an awkward sentence in the address of Alcmena to Teiresias: "And how that mortals may not escape the doom that Fate speeds from her spindle, O soothsayer Euerides, I am teaching thee that thyself knowest it right well." The text, though doubtful, is not responsible for this tangle of conjunctions and relatives. One reading gives, "Do I teach *thee*, soothsayer as thou art, and very wise?" We are not sure that the pastorals gain anything by a quaintness of style which belongs to no particular period in our language, and corresponds exactly to nothing in the original. The Doric dialect is not suggested by such an expedient—indeed, this is a crux which none of the translators hitherto have attempted to solve. Professor Blackie asserts that there are "whole idyls which would sound ridiculous in any other language than that of Tam O'Shanter"; but 'Tam O'Shanter' is, we venture to say, much harder and stranger to most Englishmen than the Doric of Theocritus was to an Alexandrian Greek.

If we seek for the complement in verse of Mr. Lang's rendering, we shall find ourselves in some perplexity. Theocritus, who was honored by such imitators as Milton and Shelley, has never fallen into the hands of an English poet to translate. Creech (1684) makes the damsel Cynisca blush

> "That you might light a candle from her nose."

Fawkes (1767), who scorns and ridicules Creech, is himself destitute of a spark of inspiration, though he has caught the swing and fluency of an age of Popery, in lines like

> "Say, sacred Phœbe, whence arose my flame?"

or,

> "A vest her limbs, her locks a caul confines."

Chapman (1820) is learned and appreciative, but his verses are worked out painfully with the conscientious awkwardness of a fifth-form boy. It would be unjust to class with any of these such work as that of Mr. Calverley, pronounced by Mr. Lang the best that has yet appeared. It is certainly spirited and vigorous, perhaps a trifle too epigrammatic, and often most successful where Theocritus is inferior to himself. It is least successful in the pastorals, where he essayed the perilous simplicity of blank verse; and Mr. Calverley's blank verse, it must be confessed, is a failure. It has not the capital fault of Sir Edwin Arnold, who leads us to inquire how passages of the Mahābhārata came to be written in the style of Lord Tennyson; but its numbers are somewhat halting and mathematical. It falls far short of the melodious cadences of the song of Thyrsis, and the "Harvest Home," or the passionate rapidity of the monologue of the betrayed Sicilian sorceress.

There remains still, in our opinion, an opportunity for some one to accomplish for this bit of Sicilian life what Fitzgerald does in his "Saláman and Absál" for Oriental manners and scenery; to give some true impression of warmth and tone, without which the beauty of a poem is betrayed and undone in a foreign language; to reproduce, not this or that particular tree or cloud or rock, but the color and atmosphere and enchantment of that delightful pastoral landscape which Mr. Lang has photographed with so much merit and dexterity.

HOWARD'S DEVELOPMENT OF THE TOWNSHIP.

An Introduction to the Local Constitutional History of the United States. By George E. Howard, Professor of History in the University of Nebraska. Vol. I. Development of the Township, Hundred and Shire. Baltimore: Publication Agency of the Johns Hopkins University. 1889. 8vo, pp. 526.

Prof. Howard had a most interesting sub-

ject in the development of our municipal system, and we heartily regret that we cannot express ourselves as satisfied with the result. To trace the formation of those primitive communities which collectively form the State and the nation, is an instructive task, not heretofore accomplished by any one, and yet entirely practicable, since the materials are ample and easily accessible. Especially useful will it be to explain the difference between the New England town and the Southern county, since both systems have contended for preference in the great West, and will continue to influence the construction of States in the future.

We will first examine Mr. Howard's work upon the New England system, as the evidences in this case are most ample, and thousands of competent critics can judge of the correctness of his conclusions. Although Mr. Howard abounds in citations and has used the latest publications, he does not seem to give proper force to certain undeniable facts. In a word, he starts with a theory, and that is one unfortunately contrary to the opinion of all New England writers. His theory is thus stated on p. 51:

"In the transplanting of English local organisms to American soil two remarkable phenomena attract attention. On the one hand, there is so much that is new in constitutional names and functions, so much of original expedient and experimentation, as to render New England town government almost unique, while at the same time its continuity in general outline with that of the mother country can be plainly discerned. On the other hand occurs a most interesting example of institutional retrogression. Many features of the primitive village community are revived. The colonists go back a thousand years and begin again; or, to speak with greater accuracy, new life is infused into customs which, though passing into decay, are yet not wholly extinct in the old English home."

Mr. Howard finds this prototype in the "Mark," a division concerning which little can be known, and therefore a safe exemplar. He brings together, with unnecessary detail and with a mild surprise, the powers, duties, and officers of a New England town, unable, even with the aid of his "Mark," to see why they sprang into existence. In all this he ignores the patent causes which any New Englander would tell him explained the whole system. He has not a word to say of the influence of the Puritan clergy in the early legislation, and hence he fails to understand what is simple and easy. He thinks that the "jealous watchfulness of the community" to control its membership and the disposal of communal rights was "an interesting feature of primitive Teutonic life reproduced in the New World." Every one else is aware that this jealousy in New England was entirely a matter of religious polity. The settlement was made for members of the same faith and church, and all heretics were excluded. But if of the faith, whether English, Scotch, Irish, Dutch, French, or even Indian, they were welcome.

"Finally," Mr. Howard says, "the archaic type of New England society is revealed by its astonishing publicity. The majority in town-meeting assembled, or through their representatives in the general court, exercised a supervision over personal conduct and many of the transactions of private business, almost painfully minute; witness the marvellous subdivision of public duties and the incredible number of local functionaries."

Here Mr. Howard's wonder would be lessened if he were to study Mr. Dexter's books, for example, and see what a Puritan church was. The ruling idea of such a church was, that every member was bound, within certain limitations, to submit his soul, his conscience, and his conduct to the control of his fellow-members. What confession is to the Roman Church, the admission to membership is to the Puritan Church. Any one who reads the confessions made preparatory to admission, will understand that thereafter there was nothing to be concealed. History confirms the statement that, even to the present day, this open brotherhood of souls is the theory of this church, maintained in practice as far as outside influences will allow. It is no revival of Teutonic ideas, but the result of seventeenth-century thought, applied to the theories of the Old Testament, and wrought out by modern logic to utterly absurd conclusions.

When the first code of laws for Massachusetts was proposed, Rev. John Cotton was prepared with a scheme taken entirely from Moses. It was rejected, but the Body of Liberties was prepared and accepted; and this code, though drawn by a minister, was based expressly on the common law of England. This fact is beyond dispute, and should save Mr. Howard from a needless digression backwards for ten centuries. The Rev. Nathaniel Ward of Ipswich drew the code, the citizens examined and perhaps revised it, and five years later, in 1646, the authorities are cited in defence thereof.

So, again, in regard to the number of local officers, Mr. Howard is unnecessarily surprised. The number was great because the pay was small and the duties arduous. Hence a light burden was laid upon many by assigning a few duties to each. The emigrants were men of character and means. They came to an entire wilderness, bringing with them the necessity of reproducing what forms were essential to civilization, or of reverting to barbarism. They did not go back ten centuries, but they simply repeated in substance what was familiar to them. They had no hierarchy, but their church system was no novelty; no armies of the Crown, but they knew enough to proceed from train-bands to regiments, and to appoint the necessary superior officers. They had no squires on the bench, no constables, no custom-house officials, no guilds or merchant companies, but they knew that law must be enforced, that trade must be regulated, fraud prevented or punished; their numerous officers were a necessity merely to carry out these requirements. In fact, there is nothing more certain than that the Puritans invented little or nothing, that they were neither wiser nor more notional than their kindred in England, and that, above all, they intended to live by English laws and customs as closely as possible. This is, indeed, a well-known peculiarity of the English race. Satirists never tire of representing John Bull as demanding "bif-steeks" in Paris, Cross & Blackwell's pickles in Cairo, and Bass's ale in Calcutta. And in more essential matters he is equally prejudiced, immovable, and persistent.

That the New England town as a political factor is well worthy of study is true, but not during the period covered by Mr. Howard's labors. To our mind, the interesting study would be to trace therein the progress of the English nature, after six centuries of development in restricted England, through two centuries of involuntary expansion in free America. When and how the hereditary respect for rank and position was lost; when and how our present conditions obtained; above all, what is to be the probable issue—these are the questions which provoke and baffle inquiry.

Despite Mr. Howard's theory, we should say that the New England township was an accidental grouping of as many church-members as could reside within reach of one meeting-house. Of necessity it received, later on, citizens who were not church-members, but never enough to change the control. This community was governed largely by the theory of that church of the brotherhood of the members, tempered by the sense of educated men, and the effects of the common law of England. Such they were and such they still remain, and a town-meeting, certainly up to the last generation, was a meeting of friends and relatives, ordering for the common good such things as individuals cannot do. The church, the school, and the roads are the main topics, and these are emphatically matters requiring combined action.

As to our political system, it is true that the Legislature in Massachusetts was not a very close imitation of the House of Commons, but its representative feature was evidently taken from the English practice. If the basis of the power of suffrage was widened, it was merely because the electors were exceptionally alike. In England centuries of evolution had arranged a cumbrous and artificial system, but most of the emigrants to New England were of the class that voted for members of Parliament. Hence there was no novelty in the idea of a representative assembly, after the number of freemen and the expanse of settlement prevented a mass-meeting. We must, therefore, consider this portion of Mr. Howard's book as unsound and misleading, and we especially regret that students should be thus encouraged to waste time in tracing fanciful analogies to forgotten Teutonic customs, when they ought to be reading the very words of the founders in Winthrop and Bradford, studying the noble ideas contained in the Body of Liberties, and tracing the course of existing laws through the various codes of the past two centuries. There is ample space for historic search if the student starts no earlier in the past than the English Reformation.

We find also much misapplied ingenuity and reading in Mr. Howard's theories about the counties or shires in New England. History and common sense show that the county is an accident of the representative system. For example, a town can build and take care of a road within its limits; but to secure a proper continuity of roads, and especially to make lines of travel from one point to a remote one, the towns must be aggregated and act in concert. Courts in the same way are graded from the local or municipal court to the Supreme Court, and convenience requires several centres of districts not unwieldy. Hence come the familiar groupings of counties, utterly lacking in symmetry, but convenient in practice. It is a waste of time to compare them with English shires, which served a different purpose and had a different origin. Why force a parallel between a Roman legion and a sewing-circle in Oldtown? Both are assemblies of persons, and Macedon and Monmouth were once pressed into a similar comparison. As to the Southern plan of settlement, making the hundred or county or other division the unit, Mr. Howard tells us less than we expected. So far as we can judge it is now, especially at the West, merely the township diluted, with more territory, fewer inhabitants, and smaller duties.

We are impressed with a feeling that the writer has more industry than assimilative power, and that his materials have mastered him. We find many interesting facts collected, and yet we are at a loss to see the reason of their selection.

Whither? A Theological Question for the Times. By Charles Augustus Briggs, D.D., Davenport Professor of Hebrew and the Cognate Languages in the Union Theological

Seminary. Charles Scribner's Sons. 1889. Pp. xi, 303.

PRESIDENT HARRISON the other day took occasion to speak of the Presbyterians of this country as constituting "a rock of truth against the sword of error." That commonplace finds a startling commentary in this book of a distinguished Presbyterian teacher—a book which will not fail to be dubbed a "miserable interrogatory" by many of his coreligionists—wherein he undertakes to show that the Presbyterian rock is disintegrating into shifting sand. Bringing the most reputable theologians of his denomination face to face with the creed of their church, he asserts (and we must say proves) that they have stiffened some of its doctrines (Dr. L. W. Bacon may find here proof of his favorite contention that unregenerate human nature likes its theology "tough"), have entirely forgotten others, and have departed far from still others. It is not for us, of course, to interfere in what bids fair to be a family quarrel; but Dr. Briggs takes up many more important matters than loyalty to a particular creed. He says of the state of religion in Great Britain and America, that it is in "a very unsatisfactory condition. There is a widespread dissatisfaction with the Old Theology. . . . The ministers are not preaching the distinctive features of the Old Theology, or the peculiar features of their own denominations, because the people are tired of them and will not have them. The ministers do not care to preach to empty pews, and besides not a few of the ministers sympathize with their people in these matters. The ministers are in a feverish condition." This unrest and drifting suggest the question of the book, and the answer the author gives to it is found in his closing chapter, where he advocates untrammelled discussion and investigation, the removal of bondage to creeds, Christian union or alliances at least, and allegiance to the truth alone.

Dr. Briggs, in addition to great distinction in his own specialties, has won recognition as perhaps the first authority on the history of the Westminster Assembly. Some of the pages in this book are echoes from controversial writings of his which appeared in the *Presbyterian Review* and elsewhere, and in which he flung such masses of extracts from original Westminster sources at the heads of his antagonists that they could only gasp out with President Patton: "It does not tend in the slightest degree to reconcile us to these opinions to say that the reformers held them." It bespeaks a great deal of far-seeing strategy on the part of one much of whose own teaching has brought the angry charge of "innovator" against him, thus to have equipped himself so masterfully as to extort the confession of innovation from his very adversaries.

Even rarer than his great learning is Dr. Briggs's boldness, as displayed in this book and on many occasions. Probably a layman cannot at all estimate the audacity required in a Presbyterian professor to lead him to put forth this book, to assert that "it is the theology of the elder and younger Hodge that has in fact usurped the place of the Westminster theology in the minds of a large proportion of the ministry of the Presbyterian churches, and now stands in the way of progress in theology and of true Christian orthodoxy"; to invent the term, "orthodoxism," which "assumes to know the truth and is unwilling to learn; it is haughty and arrogant, assuming the divine prerogatives of infallibility and inerrancy; it hates all truth that is unfamiliar to it, and persecutes it to the uttermost." A few Presbyterian ministers may think as Dr. Briggs does, but who else would have dared to say, as he does, of "not a few theologians":

"They have assumed an unfriendly attitude to science, philosophy, and history, and even the scientific study of the Scriptures. They have refused to taste the fruits of modern methods and modern learning. They have appropriated with marvellous caprice whatever seemed to suit their purpose. They have delighted in any little flaws and mistakes of scholars. They have stoutly resisted everything that was antagonistic to their traditional system. They have been impatient of new truths, and branded them as novelties. They have made Christian theology the enemy of human learning so far as they have been able to exert an influence. They have been the true successors of the Pharisees. They have zealously contended to do what the Roman Catholic hierarchy failed in doing. They have not succeeded in retarding human learning, but they have alienated a large proportion of the scholars of the world from the Christian Church."

Yet some abatement must be made from our praise even of such high courage. One gets here and there in the book an unpleasant impression of mental reserves; it does not seem as if the author were frankly speaking out his full mind on the subjects he is touching. This is notably the case in his allusions to the vexed questions of eschatology now troubling the churches. The explanation of this attitude is given by Dr. Briggs himself: "There is a freer theological atmosphere in England and Scotland, but in Ireland and America orthodoxism and traditionalism are still predominant, and thinkers are obliged to work cautiously." "Cautiously," the only inference is, lest the thinker should all at once find himself put out of the synagogue. This is a painful note in the book upon which we do not care to dwell. As a whole, it is a remarkable work, and is sure to receive the attention which it challenges.

Life of Sir Robert Peel. By F. C. Montague. [International Statesmen Series. Edited by Lloyd C. Sanders.] Philadelphia: J. B. Lippincott Co. 1889.

MR. MONTAGUE'S Life of Sir Robert Peel is an excellent little biography. It gives within a small compass a complete résumé of the events of his career, and such a picture of the times in which he lived as enables us to understand them. This is accompanied by a few extracts from his speeches, as illustrations of his method in debate, together with estimates of him by his contemporaries, his own justification of the leading events of his life, a few characteristic anecdotes, and finally a critical summing up by the author. The small, compact volume represents a very serious amount of work, for the sources of information with regard to Sir Robert Peel, leaving his own speeches aside, are voluminous, and it is difficult if not impossible to say anything very new of him. The object of alternate laudation and obloquy, while he lived, his character has been examined, criticised, extolled, abused, weighed and measured, until the most that can be done is to give a good summary—and this is just what the reader of Mr. Montague's life finds.

The period in which Peel did his work is one of extraordinary interest. It embraces all the great reform movements which brought about the modern English political system—Catholic and Jewish emancipation, the reformed representation, fiscal and poor-law reform, and the establishment of freedom of trade. Sir Robert Peel, strict Conservative as he was by instinct and training, was one of the chief agents by which these reforms were introduced, and he therefore occupies the singular position of a Conservative Prime Minister who is chiefly memorable for the defeats inflicted on his party at his own hand. For this he suffered while living, and his reputation suffers now; but we presume that most people have long since made up their minds that his position was conscientiously taken, and that Disraeli's diatribe upon him as a burglar of other men's ideas was without foundation in fact. The most that can be said to his discredit is that he consented once or twice to take office to pass the measures of his opponents, whereas he might better have let his opponents do their own work. But that Peel did this for the mere sake of power and position, that he was a traitor to his party for base or selfish reasons, is an accusation to which his whole career gives the lie. His case was one of those rare ones in which a highly conscientious and intelligent man is called upon to pass upon measures as to which his conscience continually calls him in one direction and his party allegiance in another. Whatever he does, he is sure to be blamed; and it is the best proof of Peel's consistency and honor that the further we get from the party rancor and hatreds of the time, the dimmer and dimmer become the echoes of the accusations against him, and the more unanimous the verdict as to his disinterestedness. Compare him, for instance, with his successor, Disraeli, extolled to the skies as he was for his party loyalty. How can the real services of the two men to their country be compared? Party loyalty is undoubtedly the sort of service which brings in most immediate returns, and apparent disloyalty to party is the one vice which politicians most execrate. But to accomplish great and needed public objects against the wishes and inclinations of one's party, to make use of the loyalty of party followers for the benefit of the country at large rather than for that of the party—these are services which command more and more respect as time goes on.

Peel can hardly be said to have had an original mind, except in the matters of finance and Parliamentary business, in both of which he was readily acknowledged as eminent. But men of original minds are not usually party leaders, and, with great popular reforms, the more we investigate, the more difficult we usually find it to ascertain from whose brain they first actually sprang. To conscientious conservatives who try to preserve what we already have, and only yield to change when it becomes unavoidable, the sanity and balance of what we know as English civilization certainly owes much, and to none more than to Peel, a man in whom we always feel the presence of a character peculiarly English, as well in its faults as in its virtues.

Calendar of Wills Proved and Enrolled in the Court of Husting, London, A. D. 1258—A. D. 1688. Edited by Reginald R. Sharpe. Part I., A. D. 1258—A. D. 1358. London: 1889. 8vo, pp. xlviii, 834.

THIS work, printed by order of the Corporation of the City of London, is of great value both to the historian and genealogist. "It may fairly claim to possess more than ordinary interest, for the reason that it presents to the reader a *précis* of early wills which, in point of number and antiquity, are unequalled by any others within the United Kingdom." The Introduction gives a detailed account of the history and constitution of the Court of Husting. There is also an appendix containing the only complete lists of Aldermen recorded in the city's archives during the period embraced by this

volume. The work will be completed in a second volume.

The book is ably edited by Dr. Sharpe, the Records Clerk of the City of London, and the Introduction displays much careful research. The earliest reference to the Court of Husting given by the editor (p. i) is taken from the Laws of Edward the Confessor. A more reliable and earlier reference is to be found in Kemble's 'Codex Diplomaticus,' iv, 304, where we learn that Ethelgyfu bequeathed to the monks of Ramsey "duos cyphos argenteos de xii. marcis ad pondus Hustingiæ Londoniensis." This passage shows that the Court of Husting was in existence before the Norman conquest. The editor illustrates the close relationship and interdependence existing between London and other municipalities by an interesting charter granted to Oxford by Henry III. Dr. Sharpe is evidently not aware that a similar charter was received by Oxford from Henry II. It is printed in the later editions of Stubbs's 'Select Charters.' In the archives of London (Letter-Books and Rolls of Pleas) there are other valuable documents illustrating this dependence of Oxford upon London, to which the editor should have called attention.

BOOKS OF THE WEEK.

NEW FRENCH BOOKS.

LES ANTONYMES
de
LA LANGUE FRANÇAISE.

By A. MUZZARELLI, M.A. The idea of the book is to exercise the student's mind and memory by giving him short sentences to which he must furnish similar sentences containing the opposite meaning. Instead of synonymes he has the antonymes to learn or think out for himself, and there is no doubt about the excellent drill such exercises afford. Thus: The work begins with short sentences like the following: "Le *jour* est *clair*." To this he has the body of the sentence to fill in with the opposite idea to the example, thus: "La *nuit* est *obscure*."

The exercises are progressive. They are short and simple at first, but as the student becomes familiar with the work he is led into more difficult sentences, where not only the words but the opposite idea has to be expressed. The work has been carefully prepared and arranged by the author, and noted French authors are frequently quoted, so that the student, at the same time he is exercising his talents on the antonymes, is becoming more or less familiar with the clever sayings of the French writers. Specimen pages on application.

12mo, Cloth (Students' Edition), $1.00

LE TOUR DU MONDE EN 80 JOURS.

JULES VERNE.

(No. 14 of Romans Choisis.)

The addition of this famous novel of Verne's to the series of *Romans Choisis* will have a tendency to renew its popularity, as there are a large and increasing number of French readers, particularly students, who have not read the story and will greatly enjoy the vivacious and exciting relation of the hero's adventure.

Cyclopedia of Music and Musicians.

SECOND VOLUME.

Edited by John Denison Champlin, jr. Critical Editor, William F. Apthorp. With over 1,000 illustrations, including 36 full-page etched portraits. 3 vols., 4to, decorated parchment binding, uniform with the "Cyclopedia of Painters and Paintings." This edition limited to 500 numbered sets for this country and 50 for Europe. $25.00 per volume, net.

This work is comprehensive in scope, being biographical, bibliographical, and descriptive in character. The second volume contains besides scores of text portraits of musicians and singers and facsimile scores and autographs, full-page etched portraits of Gounod, Handel, Haydn, Lasso, Liszt, Lulli, Mendelssohn, Meyerbeer, Mozart, Paine, Palestrina, and Purcell. Like the well-known "Cyclopedia of Painters and Paintings," the first of the important works of reference having this plan and scope, the "Cyclopedia of Music" derives special value from its simplicity for consultation—artists and their works being arranged in the same alphabetical order; from the great value of its references to original works, and from the great amount of biographical and other material included.

ROBERT LOUIS STEVENSON'S LATEST NOVEL.

The Master of Ballantrae: A Winter's Tale.

By Robert Louis Stevenson. With full-page illustrations by William Hole. 12mo, cloth, $1.25; paper (without illustrations), 50 cents.

In theme and in style, Mr. Stevenson's latest work is of a wholly uncommon interest, displaying a brilliant imagination and a strength of diction that are associated only with the masterpieces of fiction.

"It will be pronounced one of the greatest historical novels ever written."—*R. H. Stoddard.*

"There are very few novels which so nearly approach perfection."—*London Times.*

"*Undoubtedly the theological book of the year.*"—The New York Mail and Express.

WHITHER?—A Theological Question for the Times.

By Charles Augustus Briggs, D.D. 1 vol., 8vo. $1.75.

Dr. Briggs's book is destined to create wide and most active discussion on all sides. It is a bold and eloquent demand for a more liberal theology, and advocates what may be thought a radical change in church work as well as doctrines.

"It should have a place in every theological library."—*Boston Gazette.*

"It is well calculated to create quite a stir in the Christian world."—*N. Y. Journal of Commerce.*

NEW AND CHEAPER EDITION OF EX-MINISTER WASHBURNE'S GREAT WORK.

Recollections of a Minister to France.

By the Hon. E. B. Washburne. Fully illustrated. New and cheaper edition. 2 vols., 8vo, $5.00.

The new and cheaper edition of this famous work contains everything that was in the earlier edition, including the sixteen full-page and numerous text illustrations.

"From first to last the book is one of intense interest."—*The Churchman.*

"The most remarkable book of its kind ever published."—*The Independent.*

Lester Wallack's Memories of Fifty Years.

With an Introduction by Laurence Hutton. With numerous portraits, views, facsimile reproductions, etc. Popular edition. 12mo, $1.50.

"A volume of reminiscences singularly rich in entertainment."—*Boston Advertiser.*

*** The limited large-paper edition of 500 copies of this book was entirely sold within ten days of the date of publication.*

A Collection of Letters of Dickens.

1833-1870. 16mo, $1.25.

This collection of letters of the immortal author of 'Pickwick' and 'David Copperfield,' is compiled from already published materials, and is issued in uniform style, both in binding and in press-work, with the popular edition of the 'Collection of Letters of Thackeray.' The two volumes contain the brightest and most characteristic letters of the two great novelists, and will make a popular gift set for the holiday season.

A NEW BOOK BY DONALD G. MITCHELL.

English Lands, Letters, and Kings.

From Celt to Tudor. 12mo, $1.50.

Mr. Mitchell's new book is a combined chronicle and commentary, treating of English letters, the chief figures therein, the places associated with these—towns, castles, taverns, universities, their birthplaces, haunts, and the various scenes through which they passed—and also of the succession of Monarchs, the annals of whose reigns make up the history of the time. The style has all the warmth and sympathetic sentiment of Ik Marvel's earlier writings, and an added maturity of eloquence, sustained and felicitous figures, and sonority of diction.

*** Two of the most popular of Mr. Mitchell's earlier books, '*REVERIES OF A BACHELOR*' and '*DREAM LIFE*,' are issued in the "Cameo" edition, affording examples of the art of dainty and beautiful bookmaking. The heavy paper, wide margin, clear type, flat back, and gilt top make the volumes precious to a genuine book-lover. Each volume has, as a frontispiece, an etching by Percy Moran. (Each, 16mo, $1.25.)

*** A NEW PORTRAIT OF CONSTANCE FENIMORE WOOLSON, with a charming personal sketch of the author, appears in the October number of THE BOOK BUYER. Also, an engraved portrait and sketch of Henrik Ibsen, the famous Norwegian dramatist, who has been the literary sensation of the past London season. Together with sketch and portrait of Blanche Willis Howard, and forty pages of literary articles, reviews, &c. Beautifully illustrated. "*The best literary guide published*," says the N. Y. *Tribune*. If you will mention this paper, and enclose ten cents, a copy of the October number will be sent you.

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

Houghton, Mifflin & Co.'s *NEW BOOKS.*

The Reconstruction of Europe

A Sketch of the Diplomatic and Military History of Continental Europe from the Rise to the Fall of the Second French Empire. With an Introduction by JOHN FISKE, and several Maps. Crown 8vo, $2.00.

The New Eldorado.

A Summer Journey to Alaska. By MATURIN M. BALLOU. Crown 8vo, $1.50.

A fresh book on a fresh subject by an accomplished traveller. Those who have read 'Due West,' 'Due South,' 'Due North,' and 'Under the Southern Cross,' will heartily welcome Mr. Ballou's new book.

Scientific Papers of Asa Gray

Selected by CHARLES SPRAGUE SARGENT.

Vol. I. Reviews of Works on Botany and Related Subjects, 1834-1887.

Vol. II. Essays; Biographical Sketches, 1841-1886. 2 vols. 8vo, $3.00 each.

Professor Sargent says in the Introduction: "Many of the reviews are filled with original and suggestive observations, and, taken together, furnish the best account of the development of botanical literature during the last fifty years that has yet been written." The biographical sketches are every way admirable.

Character and Comment.

Selected from the Novels of W. D. HOWELLS. By MINNIE MACOUN. 16mo, $1.00.

An engaging little book of those noteworthy and delicious sentences which abound in Mr. Howells's stories.

The Nation

VOL. XLIX.—NO. 1267. THURSDAY, OCTOBER 10, 1889. PRICE 10 CENTS.

UP THE NILE.

By Amelia B. Edwards, Ph.D., LL.D., L.H.D., etc. With upwards of seventy Illustrations engraved on wood by G. Pearson, after drawings by the author. Revised edition, with fresh notes, 8vo, cloth, $2.50.

From an editorial review in the *Literary World* of February 2, 1889, by the Rev. Edward Abbott:

Miss Edwards's 'A Thousand Miles up the Nile' is one of the Classics of the literature of Egypt. Her work as an Egyptologist, and deserved reputation as such, began with the expedition of which it is the narrative. Fifteen years ago that expedition was made, and more than ten years ago this narrative was first published. For some time since out of print, it is now reissued, in compacted but not abridged form, revised, retouched here and there with some points of latest research, but remaining in all essentials as it originally was, one of the brilliant, fascinating books of travel for all time.

We know of no work by whose help one can make more instructively, more easily, more agreeably a first acquaintance with Egypt and its wondrous river, its ruins, its history, its romance, its marvellous glow of color, its age, its chronology, its manifold and irresistible charms for the scholar, the scientist, the painter, and the poet.

From an editorial review in *The Critic* of January 19, 1889, by the Rev. William Elliot Griffis, D.D.:

Under her magic pen, the ruins hum with busy life, blossom with color, and echo with chant or dirge. The latest revelations of the spade, and the identifications, readings, and interpretations of scholars, are set before us in abundance. The secrets of chronology, and the reasons why the Egyptians were so different from us as well as from the Greeks and Hebrews, are set forth in few words, as only the facile expert can set them forth. In addition to the notes, which will be "nuts" to the scholar and reader seeking solid information, there is the narrative, lively, piquant, full of fun, and eminently readable.

By the same author, and uniform with the above:

"Untrodden Peaks and Unfrequented Valleys."

A Midsummer Ramble in the Dolomites. Revised edition, with Illustrations and Maps. 8vo, cloth, $2.50.

"It is quite a treat to fall in with this bright, breezy record, in every line of which we seem to hear the ring of that cheery laughter wherewith its author greets every new mishap of the road, meeting scanty food, hard quarters, noise, dirt, rain, bad roads, the buffeting of mountain storms, and the stupidity of mountain peasants, not as a direct personal injury to be avenged by persistent ill humor, but as a kind of rough practical joke, rather exhilarating than otherwise."—New York Times.

**** *For sale by all booksellers, or sent, postpaid, on receipt of the advertised price, by the publishers.*

HANDBOOK OF COMMERCIAL GEOGRAPHY

By G. G. CHISHOLM, M.A., B.Sc. 8vo, $5.00.

"This book is designed to meet a want recognized by all who are interested in adapting our education to the needs of the time. . . . I have endeavored to impart an 'intellectual interest' to the study of the geographical facts relating to commerce, . . . another way of saying that it has been my aim to make the book really educational. In writing the work I have had three classes chiefly in view—first, teachers who may wish to impart additional zest to their lessons in geography from the point of view of commerce; secondly, pupils in the higher schools and colleges that are now devoting increased attention to commercial education; and thirdly, those entering on commerc al life, who take a sufficiently in elligent interest in their business to make their private studies bear on their daily pursuits."—*Extract from Author's Preface.*

THREE LECTURES ON THE SCIENCE OF LANGUAGE:

And Its Place in General Education. By F. Max Müller. Second Edition. 70 cents.

For sale by all booksellers. Sent upon receipt of price by the publishers.

LONGMANS, GREEN & CO.,

15 East Sixteenth Street, New York.

MACMILLAN & CO.'S NEW BOOKS.

DARWINISM.—An Exposition of the Theory of Natural Selection, with some of its applications. By Alfred Russel Wallace, LL.D., F.L.S., &c., Author of 'The Malay Archipelago,' 'The Geographical Distribution of Animals,' 'Island Life,' &c. With Portrait and Map. Crown 8vo. $1.75.

"Mr. Wallace has written what may be accepted as a text-book of Darwinism. He has taken a score of volumes in which Darwin recorded the results of his long and varied researches and the conclusions to be drawn therefrom, and has condensed them into one volume of 500 pages. He has done this in a style which makes his book a delight to read. In language that is absolutely clear, simple, untechnical, and attractive, Mr. Wallace leads us throughout the new world opened out by Darwin. The method and orderliness of the exposition are admirable, the manner in which the facts and conclusions are arranged will strike the most casual reader. . . . No more perfect or more readable exposition of the doctrine as Darwin left it exists than is contained in this volume by one who, more than any one else, is in a position to place himself inside of the whole subject."—*London Times.*

Mr. F. Marion Crawford's New Novel.

SANT' ILARIO. By F. Marion Crawford, author of 'Saracinesca,' 'Greifenstein,' etc. 12mo, cloth. $1.50.

"The author shows steady and constant improvement in his art. 'Sant' Ilario' is a continuation of the chronicles of the Saracinesca family. . . . A singularly powerful and beautiful story. . . . Admirably developed, with a naturalness beyond praise. . . . It must rank with 'Greifenstein' as the best work the author has produced. It fulfils every requirement of artistic fiction. It brings out what is most impressive in human character, and what is most interesting in human action, without owing any of its effectiveness to sensationalism or artifice. It is natural, fluent in evolution, accordant with experience, graphic in description, penetrating in analysis, and absorbing in interest."—*New York Tribune.*

The New Library Wordsworth.

THE POETICAL WORKS OF WILLIAM WORDSWORTH.—Chronologically arranged with the author's various readings, and many new MSS. hitherto unpublished. Edited by William Knight, LL.D. Illustrated with etchings by C. O. Murray from original drawings. Eight volumes. 8vo. $25.00.

Also, uniform with the above:

THE LIFE OF WILLIAM WORDSWORTH. By William Knight, LL.D., Professor of Moral Philosophy, St. Andrew's. With which is incorporated the Solitary Canto of the Projected "Recluse," the Fragments of "Michael," the Poem on Nat Well (originally designed as a portion of "The Recluse"), the Alfoxden and Grasmere Journal of Dorothy Wordsworth, Records of Tours, Letters, &c., &c. Illustrated with an Etched Portrait from the picture by Haydon. Three volumes. 8vo. $10.00.

Temple Library. New Volume.

SELECT ESSAYS OF DR. JOHNSON. Edited by Geo. Birkbeck Hill, D.C.L., Pembroke College, Oxford. With six etchings by Herbert Railton. 2 vols. 16mo. $3.75.

Recently Published in the 'Temple Library.'

THE POEMS AND PLAYS OF OLIVER GOLDSMITH. Edited by Austin Dobson, with etchings by John Jellicoe and Hebert Railton, 2 vols. 16mo, $3.75. Large-Paper Edition (post 8vo). $7.00.

"May fairly rank as an *édition de luxe.* The publishers well deserve the gratitude of all book collectors."—*Athenæum.*

"Two handy and beautifully printed volumes, embellished with delightful etchings. . . . Marked by that perfection of editing which is the most valuable result of minute scholarship."—*Nation.*

DE QUINCEY. A selection of his best works. Edited by W. H. Bennett. Vol. I. Confessions of an English Opium Eater, etc. Vol. II. On Murder Considered as One of the Fine Arts, etc. STOTT LIBRARY. 2 vols. 32mo. $1.50.

New and Largely Revised Edition of Dr. Foster's Text Book of Physiology.

A TEXT BOOK OF PHYSIOLOGY. By M. Foster, M.A., M.D., LL.D., F.R.S. With illustrations. PART II., COMPRISING BOOK II., The Tissues of Chemical Action with their Respective Mechanisms. 8vo. $2.60.

Recently Published:

PART I., COMPRISING BOOK I.—Blood—The Tissues of Movement—The Vascular Mechanism. 8vo. $2.60.

New Edition.

AMIEL'S JOURNAL. The Journal Intime of Henri-Frédéric Amiel. Translated by Mrs. Humphry Ward. New and Revised Edition. 12mo. $1.75.

New Edition.

THE NEW ANTIGONE. A Romance. 12mo. $1.50.

OXFORD UNIVERSITY PRESS—NEW BOOKS.

New Edition. Now Ready.

CHAUCER. The Prologue to the Canterbury Tales; The Knightes Tale; The Nonne Prestes Tale. Edited by R. Morris, LL.D. *Clarendon Press Series.* 16mo. 60 cents.

CHAUCER. THE LEGEND OF GOOD WOMEN. Edited by the Rev. Walter W. Skeat, Litt.D. *Clarendon Press.* 12mo, $1.50.

CHAUCER. THE MINOR POEMS. Edited by the Rev. Walter W. Skeat, Litt.D., M.A. *Clarendon Press.* 12mo, $2.60.

"Our debt to Prof. Skeat for giving us these poems in so accessible a form, and still more in so pure a text, cannot easily be overestimated."—*Literary World.*

"Prof. Skeat has brought to bear upon the elucidation of the text all the great learning he has accumulated in the preparation of the various works with which his name is now so honorably connected. We have little hesitation in saying that there is no student of Chaucer living to whom this volume will not be an absolute necessity."—*Evening Post.*

BURNS' SELECTED POEMS. Edited with Introduction, Notes, and Glossary. By J. Logie Robertson, M.A. *Clarendon Press Series.* 12mo, $1.50.

CHARACTERS AND EPISODES OF THE GREAT REBELLION. Selected from the History and Autobiography of Edward, Earl of Clarendon, and edited, with short notes, by the Very Rev. G. D. Boyle, M.A. *Clarendon Press.* 12mo, $2.00.

WIT AND WISDOM OF SAMUEL JOHNSON. Selected and arranged by George Birkbeck Hill, D.C.L., Pembroke College, Oxford. *Clarendon Press.* 12mo, $2.00.

*** *Macmillan & Co.'s New Catalogue of Publications will be sent to any address on application.*

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 10, 1889.

The Week.

THE two days' meeting of the Civil-Service-Reform League last week in Philadelphia was from every point of view a striking evidence of the growing interest in the subject. The strangest peculiarity of the occasion was the extraordinary amount of ammunition in possession of the League taken from the spoilsmen. Mr. Curtis's arraignment of the Administration, which was in parts almost blasting in its severity, owed a large part of this severity to the quotations he was able to make from Gen. Harrison's pledges and the pledges of the party platform. And we must be allowed to add that the picture he was able to draw of the tergiversations, both of the President and of the party, was considerably darkened by the recollection present to every mind of the professions of piety made both by the President himself and his Postmaster-General, Mr. John Wanamaker. The nails which Mr. Curtis inserted into the consciences of these two worthies were, without any formal mention of them, driven home and clinched on the other side by an admirable paper read by Mr. Charles J. Bonaparte of Baltimore on "Civil-Service Reform as a Moral Question." Nothing more trenchant—indeed, we may say, nothing so trenchant—on this aspect of the question has, we think, been written by any one. We are glad to say it will be printed by the League for distribution, and a copy of it ought to be placed in the hands of every clergyman in the Union.

It says, with a force and vigor which is seldom found in sermons, what every minister in the country ought to have been saying occasionally for the last twenty years. That the use of a public office for any purpose but the efficient service of the taxpayer is a breach of trust; that the payment of your own private debts with it is theft or embezzlement; that lying about the way you will use the public service, or about the way you have used it, is the ordinary lying denounced in Scripture and by all moralists of all ages as one of the worst of vices; that the duty of the citizen towards fraud and falsehood in the conduct of the Government is precisely the same as the duty of the citizen towards fraud and falsehood in the conduct of private business—such were the theses which Mr. Bonaparte maintained and elucidated with remarkable vigor. Mr. Swift of Indiana, too, gave point to the whole by his emphatic and pregnant remark, that "the spoils system could not survive the publication of the facts"—that is, that it contains so many of the villanies which disgrace human nature, so much of the fraud, the falsehood, the cruelty and injustice, that if the facts could be properly laid before the American people, they would kill it as they killed slavery, and as they are trying to kill forgery, embezzlement, and violence.

Mr. Blaine's speech to the Pan-American Conference was a sonorous evasion of the chief ostensible object for which the Conference was drawn together, viz.: "to encourage such reciprocal commercial relations as will be beneficial to all, and secure more extensive markets for the products of each of said countries." Not one word is to be found in Mr. Blaine's speech on this subject, although he had much to say about the beauties of peace and good-will among men, and that sort of thing. Such talk always sounds well, whether in Sunday-school or on the rostrum of a graduating class. There is nothing to be said against it; but it would have had more point and force if we were in the habit of quarrelling with our neighbors of South and Central America. It is true that they do quarrel among themselves sometimes, and that in one instance we came near "mixing ourselves in." That time was when Mr. Blaine was Secretary of State. So far as we may take his speech as a promise not to do so any more, it is appropriate, and should be thankfully received. In other respects it comes far short of public expectation. There was, indeed, an allusion to steamship subsidies, but none to the "reciprocal commercial relations" which are indicated in the first section of the Conference Act as one of the special objects of the Conference. On the contrary, he said that we would "not seek to form any selfish alliances against the older nations, from which we are proud to claim inheritance," thus quieting the fears lately expressed abroad lest this Conference might adopt tariffs to our advantage and to their detriment. The inference to be drawn from this passage in the speech is, that no commercial advantages are sought or expected, since the phrase "selfish alliances" has no other than a commercial signification.

The reason why no allusion was made to this subject is, that reciprocity involves the admission of wool, copper, and sugar from those countries to our markets free of duty. These are the only exports of magnitude from South American countries that are not already on our free list. Coffee, india-rubber, Peruvian bark, hides, and raw dye-stuffs are now admitted free. We have no trading capital for the admission of our manufactures to those countries on better terms than those of Europe, unless wool, copper, and sugar are used as such. But this will not be allowed by the wool-growers, the copper syndicate, or the Sugar Trust, if they can prevent it. Nor will the subject be introduced at all if Mr. Blaine's Arcadian programme of peace and good-will, accompanied by steamship subsidies, is carried out. We shall have a deal of platitudes about the ill consequences and heavy cost of standing armies and great navies, and about the beauties of arbitration as a means of settling disputes—all very proper, but very useless in a case where disputes are rare and where consequently armies and navies are not wanted—but we shall not have the embarrassing topic of reciprocal commercial relations to deal with, although this was the ostensible object of the Conference. The South American delegates will be as much relieved as our own to have this troublesome question shelved, because they would be very reluctant to impose differential duties against European goods.

Gov. Hill has lost no time in assuming full responsibility for the ticket which he had his party nominate at Syracuse. He made a speech at Kingston on Thursday in which he defended the candidates for Comptroller and Attorney-General from the attacks which have been made upon them in connection with the ceiling scandal, declared officially that the platform which he himself wrote for the Convention to adopt "is impregnable," and pronounced the chief acts of himself as Governor to be fully deserving of all the praise that he himself gave them in his platform. The speech was defensive in character throughout, and in this respect it is a true keynote for the Democratic campaign. In losing no time in defending his candidates for Comptroller and Attorney-General for their conduct in the ceiling matter, the Governor is doing no more than his duty in the premises. They were simply carrying out his orders and protecting his interests in the course they followed. He is the man who is primarily responsible for all the Democratic share in the scandal, and it is only just that he should assume the burden of its defence.

We have been requested by several of our readers for "pointers" upon the relative merits of the two New York State tickets to be voted for in November. It is a somewhat difficult task to say which of the two tickets it is most desirable to support. In point of personnel, the Republican ticket is unquestionably superior to the Democratic, taking both as wholes. When the candidates are considered individually, we are not able to see that the Democratic nominees for Secretary of State and for State Engineer are inferior to the Republican nominees for the same offices; but it seems to be incontestable that the Democratic nominees for Comptroller, Attorney-General, State Treasurer, and Judge of the Court of Appeals are inferior in many respects to the Republican nominees for those offices. If a voter wishes to support either ticket entire, we should say without hesitation that he will vote for the largest number of fit candidates by depositing a Republican ballot. There are no smirched candidates upon that ballot, and if the Convention which had nominated it had not been a subservient Platt body, and if support of it did not imply approval of

the course of the Harrison Administration in breaking its most solemn pledges in regard to the distribution of spoils and the appointments to office, and of its pension and tariff profligacy, it would be easy to advise everybody who wished to put good men in office to vote for it.

Nothing more remarkable has been accomplished by President Harrison than his transformation of the despised "Tom" Platt of a few years ago into the respected and powerful Thomas C. Platt of the present day. It is only about eight years since Platt left the United States Senate, after having won by his servile course there the universal title of Conkling's "Me Too." His reputation was poor enough then, but it fell to far lower depths after the revelations were made at Albany which forced him to withdraw his name from the Legislature as a candidate for reëlection. During the years which followed that ignominious retirement from public office and public sight, he did nothing which commanded attention except to organize his rag-disinfecting ring in the Quarantine service. He was still an insignificant and despised politician, so far as the public knew much of his operations, when President Harrison surprised the country by leaving Warner Miller prostrate "outside the breastworks," and turning over to Platt all the Federal patronage of the State of New York. In the twinkling of an eye, all the Republican organs stopped speaking of him as "Tom," and began to mention him as Mr. Platt, or more often as ex-Senator and the Hon. Thomas C. Platt. The *Tribune*, which for years could find no terms too contemptuous to apply to him, prefers now the form of ex-Senator, though that recalls more than any other the title of "Me Too." Since his demonstration of "power" at the recent Republican Convention, Platt has risen to great heights in Republican estimation. We find many such tributes as the following in the St. Louis *Globe-Democrat*, which, alluding to a remark that Platt is the greatest party organizer and manager that New York has seen since Martin Van Buren, says: "Considering that Thurlow Weed, Roscoe Conkling, Samuel J. Tilden, and Daniel Manning have appeared upon the scene in the interval, this is high praise in its way; but there are thousands of persons in this country, Democrats as well as Republicans, who think the estimate not at all extravagant."

The elections in the new States in the Northwest appear to have resulted as had been expected, the Republicans carrying all of the four except Montana, where the Democrats elected Governor and Legislature, and the Republicans the Congressman. The Republicans will thus increase their strength in the Senate by six votes against an increase of two for the Democrats—a net Republican gain of four. South Dakota will have two Representatives in the House, and each of the other States one, all of the five being Republicans. This will increase the membership of the lower branch of Congress from 325 to 330, and require 166 to make a quorum. The Republicans had 164 Representatives before last Tuesday's elections, and are now assured of 169. At the very best, however, they can have at the start only three above a quorum. They hope to increase the size of their majority by turning out Southern Democrats whose claims to their seats are disputed; but any display of outrageous partisanship will be rendered extremely difficult by the fact that the Democrats can at any time refuse to vote, after the example set by the Republicans in the past, and leave the Republicans helpless for lack of a quorum, unless they have their whole strength in the hall, which it is always difficult, and often impossible, to secure. The choice of Republican Senators from North Dakota, South Dakota, and Washington assures that party 45 of the 84 members of the upper branch.

Monday's election in Connecticut was rendered noteworthy by the first trial of the new secret-ballot law which was passed by the last Legislature. This has sometimes been referred to in the press as the Australian system, but only through gross ignorance of its features. It really has only a few of the cardinal features of that system, including the provision of booths where the voters prepare their ballots free from inspection, and the prohibition against the presence of outsiders in the vicinity of the polls. These are great gains over the old system of allowing the briber or bulldozer to follow his victim to the box and see that he deposits the ballot which he has been paid or forced to cast, and the advantages of the change are promptly and generally recognized. The ultimate effect must inevitably be to arouse public sentiment in favor of carrying the reform still further, and securing the further advantages which can be gained only through the provision of ballots by the State. The defeat of Prohibition at this election was the most overwhelming yet encountered in any State, the vote being nearly three to one against the proposed amendment.

The new ballot law for Tennessee, passed by the last Legislature of that State, has been declared unconstitutional by the Chancery Court of Knoxville because it fails to provide for voting by illiterates, and thereby really prescribes an educational qualification. The case will be appealed to the Supreme Court, but the decision is likely to be sustained. The advocates of the measure are much disappointed by this reverse, as they hoped to have their next elections held under the new system, but they have only themselves to blame. They were warned by the promoters of ballot-reform in the North who saw their law when it was before the Legislature, that precisely this fate would befall it if they did not make provision for illiterates, but they refused to profit by the advice. The Kentucky law for Louisville has met a similar fate for the same reason, though the other provisions of it have been held to be constitutional by the Court. Both laws are in other respects excellent adaptations of the Australian system, and the adverse decisions in no way affect the important principles of that method of voting.

The Massachusetts Democrats may not achieve success in the pending campaign, but they have at least deserved it. William E. Russell, their candidate for Governor, is a young and progressive man, who has made an excellent reputation as an executive by his service in the Mayoralty of Cambridge, and is admirably qualified for the higher office. The platform is uncommonly clear and forcible upon all the live issues of the day. It declares for free raw materials, lower duties upon the necessaries of life, and closer commercial relations with Canada and Mexico; opposes the scheme of a national election law, as "an unjustifiable extension of the functions of the General Government, opposed to the spirit of the Constitution, and dangerous to the liberties of the several States"; expresses sound views regarding the civil service; and contains a pension plank so free from the regulation clap-trap, and so full of the proper spirit toward the question, that it may well serve as a model.

The proceedings going on before the "referee" in the Giblin case are of the most extraordinary character. Giblin shot a man in his own store, on whom he had tried to pass a counterfeit bill. He was tried with all the tedious elaboration of our procedure in such cases, convicted, and sentenced to death. He went to the Court of Appeals with the usual number of exceptions, but failed, was resentenced, and the day appointed for his execution. He got a reprieve from the Governor on the ground that he could produce fresh testimony, and an inquiry was ordered before a young and inexperienced lawyer, who is figuring as the "referee." Far from confining himself to an examination of the fresh evidence, however, the referee is actually trying the whole case over again in the usual way, examining all the witnesses, and hearing counsel on both sides. One of the results is, that the chief witnesses for the prosecution are now contradicting their former testimony, either because they have been "got at" or because they feel sorry for Giblin. A more absurd caricature on criminal justice was never seen, and it comes comically close on our severe criticism of English procedure in the Maybrick case. We all, or most of us, felt sorry for the English in that case because they had no "Court of Criminal Appeal." We have one, but we find it will not do, and have set up besides a burlesque of the Home Secretary in the person of a youthful "referee," who is apparently competent to set aside the verdict of the jury, not only on the law, but on the facts.

The burning question at the annual conference of the friends of the Indian at Lake Mohonk last week was the attitude of the Government towards what are known as "contract schools" on the reservations in the West. There are seventy-one such schools under the control of various Protestant de-

nominations and of the Roman Catholics, where buildings, outfit, and teachers are provided by these religious bodies, while the Government contracts to pay annually a certain amount per capita for the board and clothing of pupils and towards the salaries of teachers. Besides these seventy-one "contract schools," there are 159 Government boarding-schools, all of both classes giving some industrial training. Of late years, chiefly, as it would seem, through the greater earnestness of the body at large, aided somewhat by the superior energy of their agent in Washington, the Catholics have been securing control of a larger and larger proportion of the "contract schools," until last year they received about three-fourths of the public money thus apportioned. Some timid Protestants have become alarmed at this activity, and they seem to have infected Commissioner Morgan of the Indian Bureau with their apprehension, for he has announced it to be his policy to allow the starting of no more "contract schools," and to withdraw gradually from those now existing the aid which they receive from the Government. This policy is strongly opposed by such leading Protestants and friends of the Indian as Gen. S. C. Armstrong of the Hampton (Va.) Institute—the son, by the way, of one of the first missionaries to the Sandwich Islands; Gen. Francis A. Walker, formerly Commissioner of Indian Affairs; the Rev. Dr. Strieby, President of the American Missionary Association; and Mr. Herbert Welsh of Philadelphia. They take the ground that every offer of assistance in Indian education should be welcomed; that it is infinitely better to have schools with Roman Catholic teachers than no schools at all; and that the thing for Protestants to do is not to refuse to have "contract schools" for fear the Roman Catholics will get more than their share of them, but to beat the Roman Catholics in this competition of benevolence. This certainly seems the common sense view to take of the question, and it will be adopted by the general public, as it was by the great majority of the participants in the Lake Mohonk Conference.

Pythagoras Hall, that famous home of Labor in which District Assembly 49 formerly held its meetings, and more recently its fights, was sold under mortgage foreclosure some months ago. After the mortgage was paid, there remained about $17,000, which was placed in the hands of a receiver. Since that time, claims have been handed in pretty regularly until they amount at present to about $13,000, chiefly for lawyers' and referees' fees, in the litigation which grew out of the quarrels of the Quinn and anti-Quinn factions for control of the Assembly's finances. It is the intention of the receiver to pay all these claims soon and divide up the remaining $4,000 among the members of the successful faction. When this shall have been done, District Assembly 49, the most active strike agency Labor has had here in recent years, will disappear for ever, and with it the Quinns and other Walking Delegates who got such a good living out of the contributions which real but misguided workingmen were induced to put into it.

Columbia College has at last provided itself with a new President in the person of one of its own graduates, Mr. Seth Low of Brooklyn. His reputation is rather that of an administrator than of a scholar; but as regards this, the choice has probably been governed by considerations which have great and just weight in nearly all our growing universities. Their wealth is increasing rapidly, and so is the machinery of instruction, in the shape of libraries, and laboratories, and museums. The working force of professors and tutors, too, is becoming so large that the head needs a great deal of capacity in the way of tact and judgment which is not to be got from books, and which Mr. Low undoubtedly possesses. He has, too, the merit of being still young for a college president, and has given marked proofs already of his ability to grow up to any responsibilities which may be placed on him and which he may be willing to assume. The danger which besets a successful administrator when placed at the head of a university in our time and in this country, is the danger of getting out of touch with learning, and losing sympathy with those who cultivate it for its own sake; but Mr. Low has been and is enough of a scholar himself to avoid it. And we cannot help hoping that he will be able to do something to make Columbia College still more of a social influence in the city than it has ever been; more of a hindrance to that absorption in the pursuit and worship of wealth for which New York is so remarkable.

We do not like to speak of Mr. Low's politics in connection with his appointment, and yet he has made himself so conspicuous in politics by his independence that it is difficult to avoid it. Nothing that he has said or written contained so much promise of intellectual vigor and power of expression as his address at the Cooper Institute in the last canvass, in which he bid farewell to his old party. And it is worthy of note, by those who care for the signs of the times, that now that he has taken the Presidency of Columbia College, every leading university in the country, we believe without exception, is in the hands of men who believe in tariff reform and civil-service reform, or, in other words, who are opposed to government by corruption, no matter by what fine name it disguises itself. This means that the mind and culture of the country are rapidly drifting away from the Republican party as they drifted away from the Democratic party thirty years ago. The party leaders console themselves with the fact that they still retain the old men who can draw the large checks; but they will find, as their progenitors have found in every age, that the great to-morrow always belongs to youth and hope and free thought and free speech. The young men who are passing through the colleges of the country are like the small yearly battalions which the Prussians drilled after Jena, and which their French conqueror thought he could despise, but which finally made up a mighty host which chased him from his throne. The Boston *Journal* reminded President Eliot of Harvard the other day, when he said that he approved of the tariff principles of the Democratic party in Massachusetts, and should vote its ticket, that

> "had a President of Harvard College given utterance to these sentiments forty years ago, the treasury of Harvard College would not have been the recipient of funds from the wealthy benefactors of the College who, under the protective system, were not only able to give employment to large numbers of workingmen to build up towns and cities in New England, but from their surplus to endow Harvard and other colleges."

This argument might, of course, be used to prevent a college president from denouncing gambling-houses, because certainly the keepers would gladly contribute to college funds to secure the silence or approval of the Faculty. We do not mean to compare manufacturers to gamblers, but assuredly it matters little from what source contributions to a college come, if their object is to bribe the professors to teach doctrines which put money in the donors' pockets.

The recent appointment of Count Thun-Hohenstein as Governor of Bohemia was hailed with great satisfaction by the Germans of the Empire, as he was supposed to be hostile to the Young Czech party, whose increasing strength in Bohemia had filled them with alarm. Their consternation and rage may be imagined when the new Governor took occasion to declare that he was in favor of reëstablishing the ancient kingdom of Bohemia—as an integral part of the Empire, of course—and of the crowning of Francis Joseph at Prague. Partly at this declaration itself, and more at the common belief that the imperial Government favors the project, since it is argued that Count Thun-Hohenstein would never have dared to broach the matter without the private backing of Count Taafe, the German press both in Vienna and Berlin has been greatly exercised. The Government newspapers are rather guarded in their references to the matter, though they admit that the scheme has been thought of as a means of satisfying the Young Czechs and inducing them to leave off agitation. They add, however, that the subject is one requiring mature consideration. Meanwhile the Young Czechs have received the announcement of their new Governor with the greatest joy, but already make it clear that the concession would only whet their appetites, and that they would soon press for bringing back Moravia and Silesia into their old places in the Bohemian kingdom. The Germans point out this intention, and say that if Bohemia is made a kingdom, Croatia will soon be urging her claims to a similar distinction; that Hungary will go on to make her relation to the Empire merely that of owning a common ruler, and that, in fact, no limit to the dismemberment of the Empire can be foreseen. What it all witnesses to is the great predominance of the Young Czechs and their ideas in Bohemia. So desperate have the German representatives grown that they have resorted to the extreme measure of abstaining from all part in the Government.

MR. BLAINE'S OPPORTUNITY.

Mr. Blaine has now an opening for useful service, and to acquire honorable fame for his party and himself, such as has rarely been so distinctly presented to one in the Department of State. So far as his speech at the opening of the Pan-American Conference may be taken as a foretaste of his intentions, he will not improve the opportunity, but will throw it aside. It is not the opportunity presented to Franklin which he had the sagacity and courage so to use as to bring a new nation into being, but it is much the same in importance as that which came to Marcy in 1854, and another which came to Fish in 1870, wherein both of those eminent New Yorkers, Blaine's predecessors in the Department of State, proved themselves adequate for the requirements of the great occasion with which each found himself face to face. What Marcy did and what Fish did for the promotion and enlargement of commercial intercourse between ourselves and British North America, an unappreciative Congress subsequently threw away, so that the problem before Pierce and Marcy for solution in 1854 is, thirty-five years afterwards, in front of Harrison and Blaine. The work which Grant and Fish did in 1870-'71 must be done again in 1889, so far as the Northeastern fisheries are concerned. Everything now favors Mr. Blaine and stimulates his ambition. He needs to obliterate the Chilian-Landreau scandal. His immediate predecessor attempted the Canadian negotiation and failed, but out of that failure has come, even from the New England which so worried and thwarted Bayard, a present demand for closer commercial relations with Canada, which opens wider the field for Blaine. A national wish for the establishment of more intimate and better intercourse with the two Americas at the south of us culminated in a law of the last Congress which was intended, no doubt, by Democrats in the House for the benefit of themselves and Cleveland, but which, by the then unexpected Democratic defeat last November, has placed the character of our future relations with South America, Central America, and Mexico in the hands of Mr. Blaine and of the Republican party, which holds both houses of Congress and the treaty-making power, as Cleveland and the Democracy did not.

The State Department is putting about translations from Vienna newspapers to create the impression that the American conference is an executive contrivance by Blaine. Mr. Trescot should stop such silliness. The conference is the work of the Democratic Foreign Affairs Committee of the last House, promoted in the Senate by Senator Sherman. Marcy had, in 1854, both houses of Congress in party sympathy with him (which even the Kansas-Nebraska Bill was not permitted to rupture), and so had Fish in 1870.

The law of the last Congress requiring the President to make an approach, a drawing nearer, to the Spanish-speaking peoples to the south of us has a comprehensiveness not yet fully appreciated. It declares for a customs-union — a most generic and sweeping demand for free trade with South and Central America. No Congress of nations has been called in our day to consider objects and purposes of more transcendent importance than are the eight specifications set forth by the law which Harrison has to execute concerning some twenty independent States. In a word, Mr. Blaine has now delivered into his hands, and those of the Republican party, by the fortunate possession of power in both houses of Congress, the occasion, the opening, the opportune moment to do for free trade over all this hemisphere that which our Federal Constitution did for the forty-odd States and Territories which it now embraces. What Bolivar, Clay, and Adams attempted, but failed to realize, because they struck on the rock of African slavery—the establishment of close, cordial, and reciprocal commercial relations between Spanish America and the United States of North America—Blaine and his party may now accomplish. The Congress of Panama was not planned by Bolivar, and accepted by Monroe, Clay, and Adams, merely to secure the union of Spanish America against Spain, but also to secure union with the great republic at the north. Our relations with Spanish America—thanks to the destruction of slave-labor and the suspicion of our motives which slave-labor always excited in our neighbors—were never better than in 1870, under Grant, despite his San Domingo escapade. Between then and 1885 those good relations were weakened, and notably by the Landreau business. A special message by Grant to Congress in 1870 concerning the Spanish-American republics transmits an elaborate report thereon by Mr. Fish, which has recently been published in the 'International Law Digest' (vol. i., p. 289). It deserves, and will repay, even at the end of nearly twenty years, a most attentive reading.

No President and no head of the Department of State have ever had such an opportunity to unite the whole of our hemisphere in the beneficent bonds of free trade as is now spread before Harrison and Blaine. Could Marcy, one of the greatest men who have conducted the foreign affairs of the country, have had it, what, with slave-labor out of the way, might he not have accomplished? Blaine has a law of Congress at his back, covering the Spanish-American republics and the empire of Brazil, and New England opinion is loudly clamoring for reciprocity with Canada. At the North and in the West are no party-opposing State governments to vex, hamper, and thwart him. Almost every Northern Governor is a Republican; or, wherever the Democrats have a Governor, as in New York, the Legislature is Republican. Can Mr. Blaine rise to the occasion? Can his party colleagues in the Administration of Harrison, and his party associates in the Senate and Congress, lead the movement for free trade over all our hemisphere? The country will, within a short time, see the test applied. Now is the hour for Blaine to show, if he possesses it, real "magnetism" in real diplomacy. If Harrison, Blaine, and the Republican party in Congress can give the country a customs-union and reciprocal free trade with British North America, Mexico, Central America, South America, as well as the British and Spanish West Indies, their hold on the Government at Washington may be prolonged indefinitely, if that hold be not paralyzed by bondage to the spoils system and to the *Tannerism* of the Grand Army of the Republic.

OUR SHIPPING LAWS AND THE AMERICAN CONFERENCE.

It is to be regretted that no Democratic State Convention, dealing in its platform of resolutions with Federal topics, makes nowadays any mention of a Democratic purpose, or even a Democratic desire, to repeal that ancient legislation of 1792 which forbids a foreign-built but American-owned vessel to be registered, enrolled, or licensed as an American vessel.

That is noteworthy at this moment because, if conversations were actually had which are reported in the daily press, or have been correctly given, our present guests from countries south of the isthmus have come hither to the Conference, either persuaded or told by somebody—who is it?—that the Government at Washington will be willing to levy taxes, or otherwise legislate, to diminish rates of freight by vessels from our own ports to the east and west ports of South America. Communication by steam between those ports (especially those on the west coast) and ours is not all that is wished, yet exports thence to us very largely exceed our exports to South America. The balance of trade between ourselves and all the countries south of us is against us by over $100,000,000 a year. During the last decade of our protective taxes our exports to those countries have diminished in value. Since 1883 they have fallen off over 12 per cent., while imports from thence have increased. There are vessels enough for imports to us in excess of exports from us. Why is that? It is the result of our clumsy and stupid tax laws.

If the delegates now flying over our land in swift railway trains will carefully observe the means and the cost of transportation in our cities—such as New York, Chicago, St. Louis, Memphis, and New Orleans—they will probably find them quite as bad and inadequate as is communication from our ports to South American ports. The streets of our great cities are a disgrace to American civilization, and to any real civilization. The hackney carriages and horses are slow, rickety, and expensive. Were the accomplished delegate from Bolivia to take a cab at his banker's in Wall Street and drive to the Union League Club, he would be required to pay $1.50 or $2, or even more, for a wretchedly bad service. The city tariff rate (six, eight, or twelve English shillings) is enough to pay for a hansom over a large part of London or a fiacre over much of Paris. Were it not for a constitutional impediment, there would be more present justification for taxes by Congress to improve the pavements, the streets, and the transportation in our large cities than to provide transportation by sea to and from South American ports.

But if we would, in return for something South America will give to us, increase the number of vessels between those ports and our own, the best and surest way is to remove the exclusion which now prevents a foreign-built and American-owned vessel from getting an American register. The executive department of the Federal Government, perceiving how unjust and absurd such exclusion is, has done all it can to limit the exclusion. It has decided that our citizens can and may buy foreign vessels, own them, navigate them, and wear on them the American flag. It has declared that, on the ocean, our national flag imparts a verity, and that the nationality of the ship corresponds to that of the flag. It has said (as in the case of the *Virginius*) that a foreign government cannot by us be permitted to inquire into the validity of the papers of a vessel wearing our flag, so far as her conduct on the high seas is concerned. It has repeatedly announced that the Government will, up to a certain point, protect a vessel owned entirely by our citizens, even although built abroad, just as it will protect, up to a certain point, an alien (who has acquired an American domicile), so far as concerns foreign governments. No law forbids an American to buy, own, and use, in a certain way, a foreign-built vessel. He can put the flag on it as on his house. Jefferson and Hamilton in 1793, Buchanan in 1853, Marcy in 1856, Seward in 1868, Fish in 1875, Evarts in 1879, and Bayard in 1885 spoke the same voice. When Russian subjects attached a vessel in the North Pacific owned by an American, but built in a foreign shipyard, and even commanded by a German, the State Department demanded reparation by Russia. Our State Department issues sea letters to vessels which, under our absurd laws, cannot be registered, enrolled, or licensed.

And yet our mediæval law of 1792 does declare that a foreign-built vessel cannot be technically a vessel of the United States, because only registered or enrolled vessels can be such, and those built abroad can neither be registered nor enrolled. The Federal courts, not following the Secretaries of State, deny that a vessel, neither registered nor enrolled, under the law of 1792, can be protected as American. A foreign-built vessel owned by American citizens, but not lawfully documented as American, is certainly liable to forfeiture by our law if she brings merchandise from abroad to one of our custom-houses. She cannot, as every one knows, engage in our coastwise trade. She is subjected to all sorts of disabilities, like one having a New York domicile and residence who happens to be an alien. The exclusion of 1792 should be repealed, and Democrats should agitate therefor. If we wish quickly to have steamers, entitled to American registry, which will promote commercial intercourse with South America, our merchants must be permitted to buy them in whatever market they can find what they wish and at suitable prices. Individuals have not the money to indulge, as our Navy Department does, in the luxury of building ocean steamers in American ship-yards. Probably nothing can be expected from Harrison, or Blaine, or the next Congress, in aid of repealing the law of 1792. They will insist that only American-built vessels shall have registry and enrolment. And yet Blaine and the State Department, as well as Harrison, use foreign-made goose-quills, and foreign-made writing paper, and foreign-made envelopes in conducting the public business and the foreign affairs of our Government. Probably Blaine's speech to the Conference the other day was written on British-made paper which paid no custom-house tax. Why may not our merchants have a register or an enrolment for a foreign-built vessel owned by them? Who will risk his reputation as a political economist, as an American and a man of sense, by detailing and vindicating the present reasons?

SOUTH AMERICAN CORRESPONDENCE.

One of the preparations we ought to make for the Exposition in honor of the discovery of America is the production of something which we can offer to the world as the American view of the nature, advantages, and disadvantages of foreign trade. We must, in other words, get ready some answers to the questions: Is foreign trade a good thing or not? Is it desirable to cultivate it or not? If it is, how is it to be carried on, and on what conditions is it dependent for success? The need of this is impressed on us already by the arrival of the Spanish-American delegates. Nobody is as yet apparently prepared to say what we think about foreign trade, or how we would carry it on if we were to engage in it. All that has been said about it thus far on our side touches simply the question of correspondence through the mails. What we need most of all is, it is said, the means of sending mails directly to South America in American and not in English ships. Our merchants must be able to write freely to South American merchants, and, if necessary, our Government must hire ships to carry the letters.

So far so good. But what are the letters to contain? What is the New York trader to say to the trader of Brazil, or the Argentine Republic, or of Chili, or Peru? The correspondence, we take it, will be strictly of a business nature. The American merchant or manufacturer, when preparing his South American mail, will not send descriptions of scenery, or biographical sketches of leading citizens, or reflections on education, or stories of Mr. Depew's visits to England, or of Russell Harrison's reception by the Queen. He will give some good solid business reason for writing at all. He will not say that he must write a few lines because we have a regularly subsidized line of steamers, or because business is slack and he has nothing better to do, or because his daughter has been learning Spanish and wishes to try her hand at correspondence. He will almost certainly propose some business transaction. What kind of transaction will it be? Will it be a proposal to lend money, or borrow money, or invest money, or sell something or buy something, or all of these things together?

It will in all probability be a proposal to sell something to the South Americans. The letters will say that, hearing that the South Americans make large purchases of cotton, or woollen goods, or machinery, we the North Americans should like to get their custom, and some reasons must be given showing that it will be for the advantage of the South Americans to give us their custom. It will not do to say that they must buy of us because we now have a subsidized steamer to carry our letters, or because we and the South Americans live on the same continent. That argument would hardly hold water, because we do not live up to it ourselves. Macy & Co. do not get the custom of the inhabitants of Fourteenth Street simply because the Post-office is efficient or their store is on Fourteenth Street, nor do Park & Tilford rely on propinquity for the sale of their groceries. We may possibly get a hint in the matter from observing the practice of our domestic traders. What they do to get custom is, to offer their goods at lower prices for the same quality than their rivals in business. Their drummers are not allowed to put sentimental considerations in the foreground. They do not ask us to buy of them in honor of auld lang syne, or because their firm is composed of good-looking men, or because their heart is in the right place. They try to sell the goods by representing them as cheap in all senses of the word—that is, because their price is lower than that of similar goods elsewhere. Is this method applicable to foreign trade?

Then there is the important question whether the South American States can afford to buy our goods at any price. They have, like the rest of the world, but little ready cash. They are enabled to deal with England because England takes payment in goods for what she sells them, and this is the custom of all the other nations of the world. They carry on international trade by exchanging commodities. Are we prepared to adopt this old-world system? Are we prepared, in other words, to allow foreign nations to sell in our markets as well as buy in them? This question will have to be settled almost at the outset. The South Americans will want to know whether we insist on hard cash for our exports, because, if so, they will ask incontinently, where are they to get the coin? They keep only enough now for the use of domestic trade and the settlement of their small yearly balances with foreigners. If we ask them to buy largely from us for "spot cash," or even on thirty or ninety-days bills, they will inevitably ask whether we really mean them to "send all the gold out of the country" and produce a terrible financial panic.

It will be readily seen from all this how much will remain to be settled after we have got our subsidized mail communication. The difficulty of sending the letters promptly will be nothing compared with the difficulty of putting the right things into the letters. If our letters do not contain attractive business proposals, of course the mail matter will rapidly decline in bulk, because the South Americans will cease to answer, and there will, in fact, soon be nothing to write about. Our politics influence them but

slenderly or we might send them accounts of our conventions and the progress of harmony in our parties, and the working of our system of "rotation in office"; but this last is one of the features of our system which does not seem to take abroad. In fact, it is often given as one of the reasons why Canada is reluctant to come into the Union, and the South Americans are said to feel in exactly the same way about it. For business men in any country it has no attractions at all. Even Platt does not introduce it into his express company here. On the whole, we doubt if Mr. Blaine could do a more useful thing than to make a draft of a letter to South America as a model for the use of our merchants.

A "SPOT-CASH" PARTY.

POLITICAL parties have been organized in civilized countries during the last five hundred years for a great variety of objects—to effect a change in the religion of the State, in the form of the government, or in the descent of the crown; to bring about a war or secure peace; to extend or restrict the suffrage, to abolish or impose certain taxes or modes of taxation, to procure changes in the currency or the financial system, to drive obnoxious ministers from power, to abolish slavery, and so on. But history down to our day may be searched in vain for a political party which was formed for the express purpose of getting from the Government a definite sum in cash for each member of it. Such a party, however, we have now "in our midst," and, comically enough, it calls itself the "Grand Army of the Republic."

That it is a genuine political party there is no question. It has a definite policy, namely, the procuring of a certain sum for each member in cash from the Treasury. This policy it promotes by the usual party machinery. It holds meetings at which it hears addresses from leading exponents of the "spot-cash" idea. It has organs in the press which defend its claims on the grounds both of expediency and justice. It uses the usual threat of defeat at the polls in case its demands are not complied with. It proclaims boldly, just as the anti-slavery party did and the tariff party is now doing, its intention to subordinate all other questions of public policy to the question it has adopted as its own special question. It tells the President that it does not care what his action may be touching the tariff, or the currency, or the civil service, or our foreign relations; that it will wage war on him with all the political weapons within his reach if he does not see that each member receives from the United States Treasury a certain sum in "spot cash," and more in monthly instalments. This is, we repeat, an absolutely unprecedented phenomenon in politics. Parties have before now made pecuniary gain their object, as the tariff party now does; but it was always to come to them in indirect ways, and in indefinite amounts, through some real or expected increase in the general prosperity of the community or of some large class of the community. Never before has each voter of a party said openly that what he was voting for was so many dollars and so many cents for his private use and behoof, and that he would overthrow, if he could, any government which refused to pay it.

As we have remarked already, one of the oddest and newest things about this party is its name—"Grand Army" of the Republic. Hitherto one of the greatest boasts of republican armies has been that they did not fight for hire, but for love of country, or for fame, or for the "radiant and adored deceit" called honor. If any one had gone to a trooper in Cromwell's "New Model Army," and told him that he knew what he was fighting for, viz., a round sum in cash, or for the chance of pillage, he would undoubtedly have been seized, and, after having been prayed for, and having listened to an appropriate psalm, would have been soundly cudgelled. A fate somewhat similar, barring the religious exercises, would probably have overtaken the person offering a similar insult to any of the veterans of the "Grand Army" which Napoleon led into Russia. There has never been a time when the term "mercenary," or hireling, was not considered an insult to a soldier, or one in which a soldier who, when the war was over, tried to extort money for his services from his own government, was not put in the category of condottieri or Prætorians. The Prætorian Guard at Rome was, in fact, the last organized military body which acted on the principle which our Grand Army is now laying down—that the Government belongs to those who have served it on the battlefield. It was on this very theory that they used to put the Empire up to auction, and more than once sold it to the highest bidder; but then they did not do this in a free State—they did it under a despotism, after the public liberties had been destroyed.

This theory, too, makes a military strike on the battlefield, of which *Puck* furnished us such an amusing sketch the other day, a perfectly serious and rational thing. If men bear arms and serve in the wars solely for what they think they can make out of it in cash in case they survive, it is but reasonable that they should have the rights and privileges of all other kinds of hired labor. One of these rights is the right of striking at the time most inconvenient to the employer, and therefore most likely to bring him to terms. Compositors strike just as the newspaper is going to press; bricklayers just as the builder has concluded a contract under heavy time penalties; railroad servants when traffic is heaviest; telegraph operators when most people are away from home. Why not soldiers in the presence of the enemy, if it is likely to extort an increase of pay or a promise of large pensions? The sole question, of course, for cash soldiers is, what are their services worth to their country? The answer undoubtedly is, whatever the country is willing to pay to escape foreign conquest or dismemberment. Soldiering conducted on this basis, too, would be the most lucrative business in the world, because there is hardly any sum which a government will not pay sooner than open its territory to an enemy. On this basis, if the French Army had been victorious in 1870, it would have been entitled to the amount in cash which the Germans, when they were victorious, exacted as an indemnity; and by parity of reasoning it would seem as if the German Government ought to have divided among its own troops the sum it actually made the French pay. The acceptance of the system, too, would undoubtedly lead to the adoption in all armies of a regular military tariff, somewhat of this kind:

For outpost duty with the privilege of sleeping on picket, per hour	c.
For do. with wakefulness, per hour	c.
For skirmishing in a wooded country, per hour	c.
For skirmishing in the open, per hour	c.
For charging an enemy's works, each charge	c.
For remaining steady under musketry fire, per hour	c.
For do. under artillery fire, per hour	c.
For retreating in good order, per mile	c.
For ditto in disorder, per mile	c.
For obeying orders without discussion, each order	c.
For obeying orders after discussion, each order	c.
For general soldierlike conduct in the presence of the enemy, per day	c.
For service, exclusive of actions and skirmishes and outpost duty, and with the privilege of plunder, per day	c.

THE NEW ELECTORAL COLLEGE.

THE recent elections in the four new States of the Northwest indicate that ten of their thirteen electoral votes are likely to be cast for the Republican Presidential candidates in 1892, and that the other three, those of Montana, may be cast for either party, with slight odds in favor of their going to the Democrats. The change in the complexion of the Electoral College is obviously, therefore, a gain for the Republicans, and some of their newspapers and politicians are already counting upon it as being of sufficient importance to enable them to carry the country at the next national election without the vote of New York State. In order to get a basis for examining the merits of this claim, let us start with the electoral vote as it was cast in the last election:

HARRISON'S VOTE.

California	8	Nevada	3
Colorado	3	New Hampshire	4
Illinois	22	New York	36
Indiana	15	Ohio	23
Iowa	13	Oregon	3
Kansas	9	Pennsylvania	30
Maine	6	Rhode Island	4
Massachusetts	14	Vermont	4
Michigan	13	Wisconsin	11
Minnesota	7		
Nebraska	5		233

CLEVELAND'S VOTE.

Alabama	10	Missouri	16
Arkansas	7	New Jersey	9
Connecticut	6	North Carolina	11
Delaware	3	South Carolina	9
Florida	4	Tennessee	12
Georgia	12	Texas	13
Kentucky	13	Virginia	12
Louisiana	8	West Virginia	6
Maryland	8		
Mississippi	9		168

The Electoral College at that time numbered 401 votes, and 201 were necessary for an election. The College in 1892, unless there shall be a new apportionment in the meantime, which is improbable, will number 414, and 208 will be necessary for an election. There are certain States in both the Harrison and Cleveland lists given above which are by unanimous consent set down as doubtful in all elections. These are Connecticut, Indiana, and New York, and to them will have to be added, in considering the present outlook, California, Montana, Rhode Island, and West Virginia, making the total as follows:

DOUBTFUL STATES.

California	8	Rhode Island	4
Connecticut	6	West Virginia	6
Indiana	15		
Montana	3		78
New York	36		

Of these doubtful States, California, Indiana, New York, and Rhode Island gave their votes, 63 in all, to Harrison; and two, Connecticut and West Virginia, gave their votes, 12 in all, to Cleveland. Taking these 63 doubtful votes from the Republican column reduces its total to 170, or 38 short of a majority. Taking the 12 doubtful votes from the Democratic column reduces its total to 156, or 52 short of a majority. Here is a great apparent advantage in favor of the Republicans, viewing each of these reduced totals as representing the electoral votes which each party can count upon as certain for its candidates in the next election. This advantage is increased by the addition of the new States, for the certain column of the Republicans will be increased by the ten votes of Washington and North and South Dakota, raising it to 180, or only 28 short of a majority, while the Democratic column remains unchanged at 52 short of a majority. Put in tabular form, this calculation, which is the one to give great encouragement to the Republicans, stands as follows:

Surely Republican votes	180
Surely Democratic votes	156
Doubtful	78
Votes necessary for Republican success	28
Votes necessary for Democratic success	52

It will be seen that the Republicans could lose all the doubtful States except New York and win, with eight votes to spare; or they could lose New York and Rhode Island and win with the votes of California, Indiana, and West Virginia, and have one vote to spare; or, again, they could lose New York, Rhode Island, and West Virginia, and win with California and Connecticut and Indiana, and have one vote to spare. Here are the three combinations:

Surely Republican votes	180	Surely Republican votes	180
New York	36	California	8
		Connecticut	6
Total	216	Indiana	15
Surely Republican votes	180	Total	209
California	8		
Indiana	15		
West Virginia	6		
Total	209		

The key of all these combinations is Indiana. The Republicans cannot win, and lose both Indiana and New York. That is the most formidable fact in all their calculations, for it is undeniable that while Indiana is always classed as a doubtful State, it is nevertheless naturally a Democratic State; and the same thing is true of New York. Furthermore, in 1892 the election in Indiana will be held under the new Secret-Ballot Law, a most comprehensive and thorough application of the Australian system, and the "blocks of five" and other devices for carrying it which were used in 1888, will be of no service to the Republicans or to anybody else. The State will have an honest and unbought ballot for almost the first time in its history, and the result of it will inevitably be less favorable to the Republicans than it was in the last campaign. In this view of the case—namely, that the Republican hopes of success without New York depend absolutely upon gaining Indiana—their prospects are not so bright as the first glance at the figures above given would lead one to suppose.

Turning to the Democratic side, it is to be noted, first, that while the total of votes regarded as certain is much smaller than the Republican, the States which represent the great bulk of the votes in the doubtful column, New York and Indiana, are more likely to be carried by the Democrats than by the Republicans. There is no denial in any unprejudiced quarter that the State of New York would have been carried by the Democrats in 1888 if Gov. Hill had not been a candidate and there had been a straight issue between the two national parties, without "deals" or treachery of any kind. With the fifty-one votes of New York and Indiana combined, the Democrats would be only one vote short of their desired majority. They have a good chance to gain this either in Rhode Island, which will vote with a greatly enlarged suffrage in 1892, or in West Virginia or Connecticut, which were Democratic last year, or in Montana, which they carried in the recent election. Here are possible combinations in favor of Democratic success, both with and without Indiana:

Surely Democratic votes	156	Surely Democratic votes	156
New York	36	New York	36
Indiana	15	Indiana	15
Conn. or West Va.	6	Rhode Island	4
Total	213	Total	211
Surely Democratic votes	156	Surely Democratic votes	156
New York	36	New York	36
West Virginia	6	Connecticut	6
Connecticut	6	California	8
Rhode Island	4	Montana	3
Total	208	Total	209

It will be seen that in all these combinations New York is as essential to Democratic success as Indiana is to Republican success. Neither party can claim that it has an easy fight before it, nor is it apparent that Republican prospects have been materially brightened by the additional electoral votes in the Northwest.

GENERAL ROCHECHOUART'S MEMOIRS.

PARIS, September 19.

THE inedited memoirs of General Comte de Rochechouart have just been published. His father, colonel of a regiment, was married in 1775 to Mlle. de Morsan and had five children. She was an intimate friend of the Duchesse de Polignac, and was admitted to the little circle of Marie Antoinette at Trianon. She made great efforts during the Revolution in order to obtain the liberation of the Queen. She was obliged to hide herself at Passy, and she afterwards fled to Caen, with two of her children. Leaving them there, she went to England and afterwards to Switzerland. After many sufferings, the young Victor and his brother were taken to Fribourg, in Switzerland, and educated there in the Jesuit school. Their mother had returned to England, where she was more occupied with political intrigues than with her little family. When the French troops entered Switzerland in 1798, she sent for the boys, and, in her letter to the curate of Fribourg, put a draft for 2,000 francs, which was to cover all their expenses for two years and the expenses of the journey. The good curate did not complain of the paucity of the sum. The boys left Fribourg in tears, and by way of Berne and Bâle went to Paris, where their mother had just been allowed to return. She laughed much at the rusticity of their dress and their manners, had them dressed by a Parisian tailor, and took them for a while to England, where they made the acquaintance of many members of their own family. Mme. de Rochechouart quarrelled with the Duke of Portland and his secretary, Mr. Wickham, and was obliged to leave England for Hamburg. She settled at Altona, wrote pamphlets against the English Cabinet, spent all her money in printing them, and was obliged to make ladies reticules, little boxes, straw hats. Her children went from house to house, selling these small objects. The Comtesse de Rochechouart had received a dowry of a million, she had lived in the most refined court in the world; she was now in a state of penury. She preserved, however, all her spirit; she was full of life and courage. She continued to see the best company at Altona.

Victor, the author of the Memoirs, heard of the departure of the Comte de Gand for Spain, where he was to serve in a Bourbon regiment; he offered to accompany him. M. de Gand consented to this, but he was himself very short of funds. Mme. de Rochechouart allowed her son to leave her. He started on the 1st of August, 1800, with twenty louis, which had been borrowed from M. de Septeuil. A great storm obliged the ship in which M. de Gand and young Rochechouart had taken passage to put into Falmouth Harbor, and the ship had to be repaired. The travellers were soon in debt, and found themselves in great difficulties. The Comte d'Artois sent some money to M. de Gand, and M. de Rochechouart found a providential friend in the person of a priest who had been placed as a tutor in an English family by his relative, the Duc de Mortemart. Such was the life of the French émigré: he was a wanderer on the face of the earth. The case of young Rochechouart was particularly interesting, as he was only twelve years old when he enlisted in Lisbon in one of the three regiments of French emigrants who had kept the white cockade and were in the pay of England. He spent his first night in the barracks on the 20th of December, 1800. His regiment had for its colonel the Marquis of Mortemart. After a short time our young private became sub-lieutenant, buying his commission with 70 louis which were given to him by the colonel, who said he was "enchanted to render this little service to a cousin of the elder branch of his family."

The three French regiments, Castries, Mortemart, La Châtre (named after their colonels), made the short and bloodless campaign of the Alentejo. Soon afterwards the peace of Amiens was signed, and the French regiments were disbanded at Portsmouth. Rochechouart received on leaving £260. He went directly to France. His father was dead, his grandmother was living in retirement in Rouergue, his mother and his brother Louis were at Odessa, in Russia. He did not feel very safe in Paris. The assassination of the Duc d'Enghien, the conspiracy of Cadoudal, the tragical end of Gen. Pichegru, the trial of Gen. Moreau, had produced a sort of new terror; every man had to be provided with a *carte de sûreté*. Rochechouart wrote to his mother, asking her for advice. After a few weeks he received a letter from his brother Louis, who was an officer at Odessa, and who had been appointed aide-de-camp of the Duc de Richelieu. His mother was in Poland with the Duchesse de Nassau, and insisted upon his coming to join her. Passports were necessary in those times (they are sometimes necessary now), and passports for Russia were no longer obtainable in Paris; Rochechouart took one for Trieste.

He left Paris on the 14th of September, 1804, being just sixteen years old.

The story of his journey reads like the adventures of Gil Blas. There was a most singular contrast between the poverty of the traveller and the quality of the persons he came in contact with. At Lemberg his mother sent him a carriage of the Prince of Nassau's, which took him to the castle where she resided with the Princess, the last descendant of the illustrious family of Sobieski. The Princess, wishing to show her interest in Mme. de Rochechouart, confided to her the administration of two villages which she owned in the Crimea. In the spring, mother and son started together for Odessa; she left for the Crimea at once; he remained at Odessa, waiting for M. de Richelieu.

Richelieu was the grandson of the famous marshal, the friend of Voltaire and Mme. de Pompadour. His grandfather once gave him forty louis, when he was only eight years old. A fortnight afterwards, he entered his room. "Armand," said he, "I must give you some money; your purse must be empty." "No, grandpapa, I still have the forty louis which you gave me." The Marshal opened the window, and, seeing a beggar in the street, threw him the purse. "Here, my good man, are forty louis which my grandson has not been able to spend in a fortnight." Armand de Richelieu, fortunately for him, received other and better lessons. In 1790 he obtained permission to serve as volunteer in the Russian army, and with the Prince de Ligne he took part in the memorable assault on Ismail, as the Duc de Fronsac (he had assumed this title after his grandfather's death). The Emperor Paul made him colonel of a regiment and he became a friend of the Tsesarevitch Alexander. In 1803, Alexander having become Emperor, gave to the Duc de Richelieu (such was now his name) the government of the colony of New Russia, a province as large as France, which had Odessa for its capital, and which extended over three governments, Kherson, Ekaterinoslav, and Crimea. Richelieu made himself beloved and respected in his government, and his name is even now a popular name at Odessa.

Mme. de Rochechouart did not govern her villages as well. She became ill, and left for Kherson, in order to consult an Italian doctor. Her son found her there, dead, in a miserable inn, where she had expired among strangers. She was only forty-eight years old. "My affliction was profound," says the candid Rochechouart, "though I had spent but little time with her." The Duc de Richelieu fixed young Rochechouart near him and almost adopted him as a son. To do justice to Rochechouart, he conceived the greatest gratitude for his benefactor, and became his *adlatus* in the creation of Odessa, in his expeditions to Circassia, in the inspection of the troops and of the colonies. He directed his household, as his secretary, his relative, and his friend; he received and he deserved his fullest confidence.

At the end of 1812, however, Rochechouart was separated from the Duc de Richelieu for eighteen months, during which time he was attached to the person of the Emperor Alexander as aide-de-camp. In that capacity he participated in all the events which followed the crossing of the Beresina, and which ended in the entrance of the allies into Paris. The account of the crossing of the Beresina by the French Army is heartrending. "It is impossible to imagine a more terrific spectacle—the two bridges broken, the peasants, the Cossacks hovering round the dead bodies. . . . I saw on the bridge a poor woman sitting; her legs were hanging outside, frozen in the ice; she had against her breast a child which had been frozen for twenty-four hours. She begged me to save the child, not knowing it was dead. She could not die herself. A Cossack rendered her the service of shooting her to put an end to this distressing agony." On all sides were expiring Frenchmen, asking to be made prisoners and to be saved. "They screamed: 'Sir, have pity on me. I am a cook; I am a valet; I am a tailor; for the love of God give me a piece of bread.' Unfortunately, we could do but little for them."

The Russian vanguard was following closely the retreating French army, and there was a sort of tacit *modus vivendi* between the two staffs for the lodgings. All the houses were burned on the retreat, except those reserved for the *état-majors*.

"For Count Langeron was reserved the chamber occupied by Napoleon; the aides-de-camp and the officers of the *état-major* took the others. We found generally written in chalk on the doors the names of the officers of the Emperor. My comrades showed me the name of the Baron de Mortemart on a door. It was evidently Casimir, Duc de Mortemart. The Emperor only recognized the titles which he had himself given, and had made him baron. This chamber was given to me, so it was occupied first by a Rochechouart, aide-de-camp of the Emperor of the French, and afterwards by a Rochechouart, aide-de camp of the Emperor of Russia. This singular coincidence lasted as far as Smorgoni."

Langeron, who commanded the Russian vanguard, was a French émigré; so was also the Comte de Lambert, who commanded a Russian corps. No country had been as hospitable to the victims of the Revolution as Russia. Richelieu, during these terrible events, was in his government at Odessa; he could not leave it, as the plague was making thousands of victims, and he gave an example of devotion and fortitude in remaining among a terrified population.

We pass over the accounts of the battles of Lützen and Bautzen, which belong to general history. After these great struggles an armistice had been signed, and Metternich drew up articles of peace; but Napoleon would not give back Trieste to Austria, nor give Dantzic to Prussia. He refused to acknowledge that he could not struggle for ever against a coalition of Russia, Prussia, and Sweden—a coalition which Austria was all ready to join. The alliance was concluded, and a new campaign began. Rochechouart made the acquaintance of Gen. Moreau and of General Jomini, who both had offered their services to the Emperor Alexander. He took part in the battle of Dresden, in the retreat to Bohemia, in the battles of Kulm and Leipzig. After Kulm, he received a mission to Bernadotte. The future King, now Prince Royal of Sweden, had inflicted a severe defeat on Marshal Ney, at Dennewitz, but afterwards had remained inactive. The allied sovereigns wished to know the secret cause of his inactivity, and sent him their orders by the hand of Rochechouart, who, as a Frenchman, could better converse with Bernadotte. The interview was very cordial. "Who would have said, twenty years ago, to the poor sergeant, Bernadotte, You will be treated as 'Monsieur mon frère et ami' by the Emperor of Russia, the Emperor of Austria, and the King of Prussia?" Then he said that his position required much prudence; he felt a very natural repugnance to spilling French blood; his fate depended on a single battle; if he lost it, Europe would not give him an "écu de six francs." If there were only Napoleon, it would be very well. Napoleon is a "coquin," he must be killed. As long as he lives, he will be the scourge of the world. The French want a King; but the Bourbons are an exhausted race. "Where is the man better suited to rule over the French than I am?" Rochechouart told Bernadotte that prolonged inaction might cost him his crown, that the Emperor of Russia could not forget that the son of Gustave IV. (who had been dethroned) was the nephew of the Empress Elisabeth, the sister of the last Queen of Sweden. The Emperor of Russia recognized the great military talents of Bernadotte, but he desired that these talents should be used for the great cause. The next day Bernadotte crossed the Elbe.

THE FINE ARTS AT THE PARIS EXPOSITION.

IX.—GREAT BRITAIN.

PARIS, September 27, 1889.

IN passing from the French galleries, or from those of any of the other nations, into the rooms where the works exhibited by British artists are placed, the general aspect of the walls is so different from what we have been accustomed to that we are bound to admit that, whatever may be the faults of the British school, lack of national character is not one of them. If in the Continental schools we have found everywhere a reflection of French methods, we can discover very little of it here. Whereas in Belgium and the Scandinavian countries, for example, the most prominent men are those who have had a Paris training or worked under Paris influence, in Great Britain such men are rare and comparatively unimportant, forming exceptions to the general drift of manner and method; and among the hundred and twenty-three painters who exhibit pictures in the class of oil painting, there is only one who gives a Paris address in the catalogue. There is no permanent English artistic colony in Paris like the important American one or those of Belgium, Russia, or Austria-Hungary. A small number of painters of English birth live here, but they apparently do not affiliate with the home school, and at the Champ de Mars we find two such exhibiting in the International Section.

Mr. William Stott (of Oldham), who is a pupil of Gérôme, and who received a well-deserved medal of the third class at the Salon of 1882, has a studio in Paris, and paints, I believe, both here and in the north country in England. His work is well known in London and Paris. The single picture exhibited by him in the British section, "La Nymphe," is such a piece of painting of the nude figure as is not wont to be found in British exhibitions, and for that matter it shows a tenderness and feeling in painting that is rare anywhere. In the treatment of the flowers and growing plants that form the setting in which Mr. Stott has placed the figure of the nymph, there is a certain rigidity of line that is hard to reconcile with the soft grace of his style in painting the figure and the ample handling of the masses of foliage and the grass. It betrays, perhaps, a *parti-pris* to be original at all hazards; and such a motive, too, may suffice to explain the curious design of the frame—a most disturbing frame of greenish gold, with leaves in outline painted upon it in a neutral tint—which hurts the picture and is in no way beautiful in itself. Nevertheless, "La Nymphe" is a picture by a painter of remarkable talent, and its faults are minor ones. It is above all a sympathetic and beautiful piece of color.

"The Village Philharmonic," by A. Stanhope Forbes, an excellent interior, with figures of old men and boys at rehearsal, is in another way quite as remarkable as Mr. Stott's picture.

Character is admirably rendered, the painting is sound, and the picture is notably good in the preservation of the ensemble under a difficult effect of light coming both from a west window and from the lamps hung from the ceiling. Though the picture shows French influence, it is also marked by individuality. It is thoroughly English, and it is eminently truthful and unaffected. "The Clearness after Rain" and "The Newhaven Packet," by Henry Moore, are pictures of the open sea and sky. Mr. Moore is an artist who paints frankly and soundly. If there is a little hardness in the treatment of the clouds, and a suspicion of "stringiness" in the painting of the water, it is fully atoned for by the fine breadth of the ensemble. These works are so impregnated with the spirit of the sea, the water is such real moving sea water, and there is so much truth of observation in the rendering of the grand yet simple effects, that they are notable among the marine pictures at the Champ de Mars. In the British section there is nothing whatever to compare with them.

Good qualities are to be found in such work as the three pictures by G. Clausen, a painter who has evidently learned from Bastien-Lepage, and who paints honestly and without affectation; in Mr. Hacker's "Pelagia and Philammon"; in Mr. Anderson Hague's "Young Anglers"; and in Mr. D. Murray's landscape, "All Adown a Devon Valley." The painters' motives are here plain enough, and they have worked out their conceptions with simple means. I do not mean to imply that their works are superior ones, but the methods are understandable, and they may be judged by the standards we apply to the works of the French painters and their followers. A picture called "Lioness Defending her Cubs," by John M. Swan, looks as if it would not be found wanting if judged by these standards, though it is so "dried in" and so badly placed that it cannot be seen to advantage; and certainly Mr. Whistler's portrait of Lady Archibald Campbell, which is described as "an arrangement in black," sustains comparison with the good portraits in the galleries of the other nations. A smaller work by this artist, "The Balcony," is a charming piece of color, and is as clever as it is sympathetic. When I have noted further Mr. Alma-Tadema's important work, "The Women of Amphissa," in which his skill in painting inanimate objects is admirably shown, along with less evident success in the treatment of the figure, and his delightful little picture, "Expectation," Mr. Calderon's charming "Aphrodite," and Mr. Orchardson's three pictures, there is but little in the galleries that will stand the tests that have been applied to the works in the French and other contemporary schools.

Sir Frederick Leighton appears as a conscientious and sufficiently able draughtsman in his large picture with numerous figures, "Captive Andromache," and it may be said of him, in short, considering the three pictures and the two pieces of sculpture exhibited by him, all of which evince serious artistic qualities, that he combines in his work about all that is needed, apparently, to obtain a high reputation in the English art world. Yet, compared with the best work by French painters, it must be said that they seem singularly weak and almost amateurish. In Mr. Orchardson's pictures, in the "Mariage de Convenance; After" (a man past middle age, in evening dress, sitting alone in a richly furnished dining-room after his guests are gone), and in "Her First Dance," there is a distinct personality, both of technical methods and of sentiment. There are charming color qualities, too, in parts, and a well-marked refinement in the rendering of character. But it is impossible not to wish that he were more a master of the first essentials of the painter's art, so that we might be spared the disagreeable effect of this dry, tentative sort of brush work, and the inadequate drawing of the figure that almost destroys at times the real charm which we find in his work in spite of deficiencies. When one is so evidently an artist by temperament as Mr. Orchardson, it is to be regretted that he has not developed in a school where sound drawing and simplicity in painting are rightly held to be at the bottom of good art, and the presence of these elements is insisted upon before everything else.

Of "Cherry Ripe," "Bubbles," "The Last Rose of Summer," and "Cinderella"—four pictures exhibited by Sir John Everett Millais—the best that can be said is, that they are painted by a man who has done some good work in his time, and who occupies a high place in the estimation of his fellow-artists at home. No more than this can be said of the portrait of the marine painter, J. C. Hook, and I can only add, in the case of another portrait, that of Mr. Gladstone, that the *facture* is here less disagreeable than in the other pictures, and that, in spite of dryness and flatness of modelling, there is an evident research for the character of the sitter, which constitutes a quality in portrait painting commendable wherever found. Mr. Herkomer, in his portrait of "Miss Catherine Grant," has succeeded fairly well in painting the head of a beautiful woman, but in the other parts of the picture he shows nothing to commend. The white dress is without beauty of tone, and it is painted in a heavy, coarse manner, quite devoid of a feeling for form and line. Another portrait of a lady in black is called "Entranced," and, following a fashion that prevails in England, and is sometimes imitated (I regret to say) in New York, the frame bears a legend designed to add sentiment to the motive of the picture. In this case it is the lines:

> "Entranced in some diviner mood
> Of self-oblivious solitude";

and one wishes there were more poetry in the painting itself. It is drily painted, with hot tones in the shadows, and without distinction of line or color. The figure is cut out against the background, and there is an entire lack of air in the picture.

There is something very like good painting in Mr. Fildes's "Portrait of Mrs. Luke Fildes." The dress of black silk is certainly well painted, and the head and hands are only to be reproached with a tendency to prettiness in texture. In drawing, this portrait is much better than the average among the English painters, and it needs only a little more precision in the more delicate passages to make it quite satisfying. Mr. Fildes is further represented by a genre picture, "The Return of the Penitent," (a title which is accompanied in the catalogue by a couple of lines from Byron), and by a large picture called "Venetians," a group of girls on the steps of a canal, carefully painted, but prettyfied to the point of losing entirely the local color and the character of the Venetian women. But this is a fault that is well-nigh universal among English painters, and it is almost impossible to find one who appreciates and is able to render the character of a head that is not English itself. In the pictures in this exhibition, even where the subjects are English, the type is generally that of the picture books and the Christmas chromos. The "Portrait of Sir H. Rawlinson," by the late Frank Holl, and one of a gentleman in hunting costume, by Mr. J. J. Shannon, should be noted as among the better things of their class in the British section; and there is one by Mr. Ouless of Cardinal Manning that possesses some commendable qualities, but is too hard and dry in painting and too awkwardly constructed to be called entirely good.

The "Portrait of Sir Frederick Leighton" is one of two exhibited by Mr. G. F. Watts; but neither of them is comprehensible if drawing, construction, and color are qualities to be looked for in a portrait, and if a painter be expected to be sufficiently master of the technical means of his art to express on canvas his impression of nature. Including the two portraits, there are eight works by Mr. Watts in the exhibition, and it can scarcely be said that he is not fairly represented. "Diana and Endymion," "Hope," and one or two other pictures familiar to Americans are here, and there is one called "Mammon" that seems to be the last word of pretentiousness in painting. Grotesque and childish in conception, it is without redeeming features in execution, and in general aspect the canvas is ugly and repulsive. I cannot pretend to understand the motive of such travestying of art, and cannot conceive what must be the point of view from which such a work is considered seriously. Perhaps Mr. Watts's reputation in England rests chiefly upon other works than those shown here. At the Metropolitan Museum in New York, some three or four years ago, there were some portraits at least that seemed better than anything shown by him at the Champ de Mars.

By Mr. E. Burne-Jones there is but one picture, "King Cophetua and the Beggar-Maid." It is as characteristic of the painter's curious methods as the "Merlin and Vivian" that was so much remarked at the Exhibition of 1878. While not a picture which in any way attests a healthy sentiment in art, it is nevertheless very personal; and even though we may not agree with the artist's conception of what painting means, nor be able to commend his processes to others, yet we must admit that his motive is sincere, and his desire to produce something beautiful is evident. This is more than can be said of many a better technician than he, and doubtless his example may have a good influence in a country where, if we cannot expect to find the art of painting flourishing in a healthy and congenial atmosphere, as it does in France, we may hope that personality and the love of beauty at least will remain.

WILLIAM A. COFFIN.

Correspondence.

THE MORAL PROGRESS OF ONE HUNDRED YEARS.

TO THE EDITOR OF THE NATION:

SIR: As the centennial year draws near its close, I feel more and more anxious that a good writer, having plenty of historical materials at his command, should write a well-considered paper on the moral progress of one hundred years in the United States—Bishop Potter to the contrary notwithstanding. I mean a sketch of the morals of the men who lived between the close of the French war and the inauguration of Washington, and of those who lived and worked between the firing on Sumter and the inauguration of Benjamin Harrison. A fair treatment of the subject will, I have no doubt, show a considerable rise in the scale of morality. A writer undertaking the task would discuss, among other subjects:

(1.) The slave trade, slavery, and the treatment of the negro during the older period.

(2.) The treatment of white servants, especially servants bound for a number of years, and of apprentices.

(3.) The imprisonment of debtors.

(4.) The cruelty with which persons accused or convicted of crimes were treated.

All these features of cruelty and oppression appeared on the statute books of those days.

Further, the inhuman methods that were used in bringing up children and in teaching scholars; the utter absence of all protest against rum-drinking and rum-selling, the habit of drinking to excess being almost universal.

It is a delicate subject, but there ought to be a comparison of the purity of family life in the days of our great-grandfathers and of our own. Is the greater frequency of divorces in our day a sure sign of decay? Have we not on the other side the well-known fact that nearly all of the foremost men of the Revolutionary period were what we should now call libertines?

Are we quite sure that our politics are more corrupt than a hundred years ago? We know that in contemporary newspapers the leading men were assailed quite as bitterly as now; were all those accusations idle? And if our protective tariff and the new proposed pension laws are corrupt (which they certainly are, in my eyes), are they any worse, for instance, than the Rhode Island legal-tender laws of one hundred years ago? If the Pacific Railroad bills were aided in their passage through Congress by distribution of Crédit-Mobilier stock, how were the Ordinance of 1787 and the grants to the Ohio Company gotten through the Continental Congress? If the ablest men were chosen for high position in the eighteenth century, what kind of men were Lincoln, Seward, Stanton, Chase, Sumner, Fessenden, Grant, Sherman, Farragut, Thomas, or even Alexander Stephens, Benjamin, Lee, Sidney Johnston, and Stonewall Jackson? If politicians nowadays set cliques and factions above party, and party above country, was it otherwise between 1763 and 1789?

These and several other branches of the subject should be discussed, with full historical illustrations. They would, if well handled, fill quite an interesting little volume.

Yours respectfully, L. N. D.

Louisville, September 28, 1889.

PRESIDENT HARRISON'S RELIGION.

To the Editor of The Nation:

Sir: That "moral machinery which works a double conscience—one for church and Sunday-school, another for business and politics," is illustrated in rural communities.

Not far from this village is a valley where there is no village, only a straggling lot of poor farmers. They have no church and no minister; but a Sunday-school and a prayer-meeting are kept up at the little school-house. The "best educated" man of the place is the superintendent of the Sunday-school, and most often the leader of the prayer-meeting; and that man's private life is notorious for scandal, and his transactions with his neighbors not above suspicion. The younger generation in that valley has begun to think, and, with some, thinking has led to scoffing.

The "leading" man's nearest neighbor on one side is an old man who can neither read nor write. This old man and his wife are the peacemakers of the whole valley. No gossip is allowed to be told in their house; and their only child, now a grown man, has said in the presence of those of his own age: "I should have no belief in the Christian religion if I had not seen it in my father and mother."

This old lady has often been heard to say, "Perhaps that man loves God; he thinks he does; but he don't love him enough—he don't love him enough"; and again, "That man's religion is not to blame; his religion is all right; but he hasn't got enough of it—he hasn't got enough of it."

Perhaps that is the matter with President Harrison—"he hasn't got enough of it."

Catskill Mts., October 3, 1889.

THE BIBLE IN THE SCHOOLS.

To the Editor of The Nation:

Sir: Your correspondent W. P. Trent is one of the "many good people" who are "worried over the question whether the Bible shall be used in our schools," and "are aghast at the thought that their children are condemned to receive a purely secular education." The word "condemned" would seem to indicate that Mr. Trent misunderstands the question at issue. The opponents of the "Bible in the public schools" do not wish to "condemn" any man's children against his will "to receive a purely secular education." They admit the right of every man to mix with the "purely secular education" which his children get at the public schools, whatever religious education he chooses to give them. What they demand is, that those who prefer for their children a purely secular education, and those who deem it right that they should be consulted about the kind of religious education their children receive, shall not be excluded from the schools they are taxed to support, or "condemned" to see their children taught doctrines which they believe to be false and pernicious. To say nothing of the difficulty of getting taught in the public schools any system of religion that would be satisfactory even to a majority of those who are taxed for their support, Mr. Trent must be aware that there are among the taxpayers many thousands who reject Christianity *in toto*, not only because its evidences fail to convince their reason, but also because they believe many of its teachings, express and implied, to be pernicious in the extreme. These are not all thieves, forgers, and murderers. To many of them, strange as it may sound to the good people who wish their own peculiar religion taught to everybody's children at the public expense, the moral interest is supreme; and their opposition to Christianity springs largely, if not mainly, from their belief that it is, on the whole, perhaps the greatest organized hindrance to the moral progress of mankind that now exists in the world.

The question, then, is, Shall this respectable minority be taxed for the support of religious teaching which they believe to be false and immoral?

If Mr. Trent realized *how* respectable this minority is, in numbers, in intelligence, in moral and intellectual force, he would probably see some force in the reasons urged against the use of the Bible in schools supported by general taxation. Or, if he thinks that those who cannot accept the religious opinions of the majority (if the majority can be said to have any religious opinions) have no rights that the majority are bound to respect, he should say so in plain terms.

Granville, O., September 28, 1889.

THE CHAUTAUQUA LITERARY CIRCLE.

To the Editor of The Nation:

Sir: Will you kindly allow me to supply an inadvertent deficiency in my late communication entitled "A Force for the Revival of the Reading Habit"? A note addressed "Miss Kate F. Kimball, C. L. S. C. Secretary, Plainfield, N. J.," will secure to any applicant interested in the working of the "Chautauqua Literary and Scientific Circle" all the data of information necessary to an intelligent appreciation of the subject.

W. C. Wilkinson.

Tarrytown, N. Y.

To the Editor of The Nation:

Sir: While recognizing the grand possibilities of the Chautauqua system, I wish to add another word of criticism to your remarks of September 19. Mr. Wilkinson invites criticism and guidance as well as encouragement.

In the first place, the aim is a false and unattainable one—that "of surveying intelligently the ground traversed in the average four years' college curriculum of study." This is expecting people of relatively mature minds, engaged in the active business of life, to spend their time upon that general *disciplinary* course which we think suited to boys of sixteen to twenty, who devote their whole time to study. It is not the kind of work that these people need to do. The prescribed course for the present year, for example, consists of an "Outline History of Rome," "Political Economy," "How to Judge of a Picture," "The Bible in the Nineteenth Century," "Preparatory and College Latin Course," and "Physics"; to which is added the requirement to take the *Chautauquan*—a periodical the very embodiment of that genius of scrappiness which pervades the whole course. What can be the result of a year spent upon this set of books but an intensification of the American fault of pretentious superficiality? A young lady who had spent some time in Chautauqua study assured me that it was the conviction of Chautauqua "graduates" that they had nothing to learn from the most eminent college professors.

In the second place, the aim is not to lay out a course of *reading*, as Mr. Wilkinson intimates, but of *study*. No attempt is made to bring the student into contact with the great creative minds of literature. *Literature*, in the highest sense of the term, finds no place in the Chautauqua courses. I should, of course, make an exception in favor of Mr. Wilkinson's remarkably successful method of placing the principal features of classical literature before non-classical readers; but the great names of English literature—those names which any course of reading should include first of all—are omitted. With few exceptions, the books of the Chautauqua course are made to order by persons who are not recognized as authorities in their several departments.

Again, it is seriously defective, even as a course of study. Its method is the study of *books*, not of *subjects*; the student has a prescribed book which he is to learn—often a very one-sided treatment of the subject—but he is not encouraged to study the subject apart from the book. I do not say that this would be possible; but if it is not possible, it is simply another proof that the aim of the course is unattainable. But I believe it would be possible, and far more profitable, to spend the entire year upon (say) two out of the six courses prescribed—one for discipline and one for culture—and learn them with some degree of thoroughness.

There is another point of view in which the Chautauqua method falls in with a defect of American life—the alleged lack of individuality and independence of mind. Whether this is our national fault or not, it is certain that the Chautauqua plan of setting 60,000 persons all to reading the same books tends in that direction.

You have already spoken of "the manufacture of special text-books"—from which the Chautauqua school has already got the reputation of a vast money-making concern—and of the narrowness of scope, which either entirely excludes controverted questions, or treats them from a single point of view alone. This last defect is, I am glad to believe, being gradually outgrown. MARCEL.

Notes.

T. Y. CROWELL & Co. publish this month 'The Social Aspects of Christianity,' by Prof. Richard T. Ely.

'The Law of Husband and Wife,' by Leila J. Robinson, of the Suffolk Bar, is in the press of Lee & Shepard, Boston.

Harper & Bros. have in press 'The Quiet Life,' fragments of old British song illustrated by E. A. Abbey and Alfred Parsons; 'City Boys in the Woods; or, A Trapping Venture in Maine,' by Henry P. Wells; and 'Redeeming the Republic,' by C. C. Coffin, a third volume in his civil-war series for young people.

'The Elixir of Life,' announced by the J. G. Cupples Co., Boston, will give an authentic account of Dr. Brown-Séquard's famous discovery.

The *Forest and Stream* Publishing Co., New York, announce for immediate publication 'Pawnee Hero Stories and Folk-Tales,' by George Bird Grinnell.

Mr. John S. Farmer, the compiler of the absurdly ill-made book of alleged 'Americanisms, Old and New,' which we reviewed at length not long ago, now announces a three-volume dictionary of 'Slang and its Analogues, Past and Present,' which may contain much matter of value, but which is not likely to be scientifically put together. There is no good dictionary of the slang of our language, British and American; and it seems a pity that an incompetent hand should attempt a task which demands wide knowledge and sound judgment as well as unfailing industry.

Mr. W. J. Henderson, the musical critic of the New York *Times*, has written a brief history of the growth of modern music, which he calls 'The Story of Music,' and which will be published this fall by Longmans, Green & Co. Mr. Henderson's book is original in its brevity, and in its exclusion of merely biographic details not necessary to the history of musical development. The same firm announces 'Russia in Central Asia in 1889, and the Anglo-Persian Question,' by George Curzon, M.P., with maps, illustrations, and a bibliography; and 'Prince Prigio,' by Andrew Lang, with illustrations by Gordon Browne—this fairy prince being great-grandson to Thackeray's Giglio in the 'Rose and the Ring.'

Miss Mary L. Hall has revised her geography known as 'Our World,' and made an 'Our World Reader, No. 1,' of it, or "First Lessons in Geography" (Boston: Ginn & Co.). Her experiment thus begins its second quarter of a century, and in its conception and its present handy form we should be at a loss to name a rival to it. It is, of course, open to criticism. No adequate picture is given of the manufacturing, mining, and agricultural importance of New Jersey; and, for another example, the cause of the civil war is described in vague and misleading terms, so that no child could tell what it was all about, or connect with it the final incidental remark that slavery exists no longer. The euphemism of the old pro-slavery Constitution still clings like a Nessus-shirt to our timid makers of text-books. The book is well illustrated.

Among the recent books of American authorship added to the Tauchnitz series are Miss Howard's 'Open Door,' Mr. Bret Harte's 'Cressy,' Mrs. Deland's 'John Ward, Preacher,' and Mr. Marion Crawford's 'Greifenstein' and 'Sant' Ilario.'

It is nearly half a century since A'Beckett produced the 'Quizzology of the British Drama,' and now we have 'Stage-Land: Curious Habits and Customs of Its Inhabitants,' described by Jerome K. Jerome and drawn by J. Bernard Partridge (London: Chatto & Windus), a delightful study of fourteen stage types—the hero, the heroine, the adventuress, the detective, the lawyer, and their fellows, set off with sketches quite as delightful. Indeed, the artist's presentation of the stage adventuress is far more brilliant than the account of her given by the author, who is himself, by the way, a dramatist, while the artist is an actor. Although very brightly written, there is a distressing slovenliness about Mr. Jerome's style, but the substance of the book is excellent. Nothing could be better than the summary of stage law, beginning with the obvious principle "that if a man dies without leaving a will, then all his property goes to the nearest villain." But we think the author errs in asserting that the stage hero's name is "George"; at least it had hitherto been our impression that he was "Jack."

M. Sarcey is wont to cite M. Jules Lemaitre and M. Émile Faguet as the most promising of the younger French dramatic critics. M. Lemaitre has reprinted the pick of his articles from the *Débats*, and now M. Faguet has gathered into a volume his 'Notes sur le Théâtre Contemporain—1888' (Paris: Lecène & Oudin; New York: F. W. Christern). The effort which the critic makes to be sprightly is a little obvious, but his solid learning and his acuteness are equally apparent. It is greatly to be regretted that a writer so well worth consulting should allow his criticisms to be published without either index or table of contents.

'Bébé Cordon Bleu' is the appetizing title of a cook-book for children prepared by Mlle. Mary Brandès (Paris: Ollendorff; New York: F. W. Christern), but the execution is not equal to the conception. The directions are not as precise as they might be—and the habit of exactness of weights and measures in the kitchen had best begin in the nursery. The illustrations are fanciful rather than helpful. Yet the book is not without value, and it may at least serve to suggest the preparation of a more practical guide for the little cooks of young America.

It is perhaps characteristic of a certain not unusual French attitude that M. George Pélissier's 'Le Mouvement Littéraire au XIXe Siècle' (Paris: Hachette; New York: F. W. Christern) should consider the literary movement only in France; but, despite this little disappointment, the book is welcome. It is what its title indicates—a broad general view of the progress of French literature in this century from the time when Chateaubriand, Mme. de Staël, Lamartine, and De Vigny really began the romantic revival with which we associate chiefly the splendid rhetoric of Victor Hugo, to the present time, when M. Daudet and M. Zola are writing the naturalistic novels which Stendhal and Mérimée made possible. Probably the best existing history of French literature must be pieced out for himself by every reader of Sainte-Beuve, but in these days of collected criticisms it is pleasant to get in one volume a bird's-eye view of a period of French literature as important as this century, and M. Pélissier has learning, acuteness, wide reading, a happy faculty of generalization, and, above all, an admirable sense of proportion.

'Demonological Tales of the Kirghiz' is the title of a volume recently published in Russia of ethnographical materials which characterize a numerous group of foreign tribes in Russia that, like the Kirghiz, have long been in a state of transition, though yielding more and more to new influences. This state of transition renders these materials especially interesting since the collector, Mr. M. Miropieff, has in view the study of Khirgiz antiquity and the remains of their former religion and beliefs. The fact has long been established by travellers and visitors who have observed their manners, that the Khirghiz were greatly under the influence of Mohammedanism. Formerly the Kirghiz were Mussulmans only in name, but in fact remained heathen. But Mohammedanism has been taking great strides around them, and has reached them powerfully from Kazan and Orenburg on the north, as well as from Khiva and Bokhara on the south. Hence they are gradually forgetting their heathen religion, are growing ashamed of it, and the time will soon come when there will be no Shamanism left among them. They are abandoning their bloody quarrels and taking to more peaceful occupations, but are becoming more fanatical under the influence of Islamism, and are losing many of their inherent, sympathetic traits, the more independent Kaza-Kirghiz alone resisting Islamism. The 'Demonological Tales' collected by Mr. Miropieff are from the Kirghiz of the Syr-Daria district, the Central Horde, and in brief but clear-cut lines they throw light upon some inhabitants of Russia who have been but partially studied.

The September Proceedings of the Royal Geographical Society opens with an account of an official visit to two groups of unexplored islands lying off the southeast coast of New Guinea, which have been recently included in the British possessions. The principal object of the expedition was to search for gold, which had been discovered on one of the islands before the annexation, attracting hundreds of miners from Australia. Gold was found on some of the other islands, though not in large quantities. On St. Aignan the explorers came upon a great wall of limestone from which "sprang a stream which, after 200 yards of daylight, plunged into a great cave in the opposite cliff. The mouth was a perfect arch, 150 feet from floor to roof. At the far end the river thundered down into a black tunnel, through which it passed under the range, emerging into daylight after some three miles of darkness." The natives apparently presented no new types, but, in some cases, showed unusual intelligence and industry in the cultivation of the ground. Following this is a description of the hitherto unvisited Cockscomb Mountains in British Honduras, a curious range of sharp-pointed peaks about 4,000 feet high and some twenty miles from the coast. Here also were discovered the evidences of considerable mineral wealth, including gold.

Dr. Guppy continues his elaborate and interesting description of the Cocos-Keeling Islands, in the *Scottish Geographical Magazine* for September, but he reserves for another article his conclusions as to the origin of the atoll, which he describes as "merely a level patch of reef" with a slightly raised border or rim, in contradistinction to Mr. Darwin's definition as "bason-formed reefs." Mr. Rankin describes the Zambesi Delta with especial reference to the Chinde, the only navigable mouth of the river, which he has recently surveyed and claims to have discovered—a claim which, we may add, the Portuguese dispute.

This is followed by the first part of a report made to the late Paris International Geographical Congress on the Scotch travellers and explorers of this century, by Mr. A. S. White. This report, which is a very remarkable record, is accompanied by a valuable bibliography. A similar report upon English achievements was presented by Mr. Keltie, Librarian of the Royal Geographical Society, which will be published at Christmas by the Society as a supplementary volume.

At the last meeting of the Institut International de Statistique an interesting communication was read, comparing all the great expositions in regard of the number of visitors to each of them. Up to now the chief one has been the Paris Exposition of 1878, which counted twelve millions and a half of visitors, or an average of 65,000 a day. Next comes our Centennial at Philadelphia, with ten millions of visitors, or 61,000 a day. Then follow in order the expositions of Paris in 1867, with nine millions of visitors; Vienna, 1873, seven millions; London, 1851, six millions; London, 1862, six millions, and Paris, in 1855, four millions and a half. The enormous success of the present Exposition in Paris is shown in its having drawn to it more than twice as many visitors as any previous exposition. Their average number, so far, has been no less than 150,000 a day.

The godfather of Albert Dürer, Anthony Koberger, is commemorated as a typical publisher of the fifteenth century by M. Louis de Hessem in *Le Livre* for September. Koberger was a great producer, and paid special attention to the ornamental side of the printer's art, employing an agreeable variety of fonts, colored inks, engraved illustrations, etc. He was particular about his paper, too, and had difficulty in satisfying himself. M. de Hessem tells of his quarto edition of the 'Letters of Æneas Sylvius' containing sixty-two leaves, exhibiting (in some copies) eleven different kinds of paper—a fact which throws light on the recent discussion of water-marks in these columns. M. Hessem's paper is accompanied by a facsimile of a colporteur's advertisement of his literary wares, assigned to the year 1487. How public libraries are started in France may be seen, in one instance, in the next paper, on the town library of St.-Germain-en-Laye, whose first librarian was the future Senator Paul Morin, the discoverer of aluminium. What is noticeable is the association of the books with a museum of fine art. Our correspondent Miss Hapgood's entertaining letter on her experiences with the Imperial Library of St. Petersburg is largely reproduced in this number of *Le Livre*, with a credit to the *Library Journal*, which had paid it the same compliment.

— The advocates of weak-mindedness for women will be pleased with the aid and comfort which is brought to their side by Rose Terry Cooke in the last number of the *North American Review*. She urges that some respect should be shown to women by their lords and masters, but not too much. She begs, for instance, that the mother should be consulted as to what school is to be chosen for her children, on account of her more intimate acquaintance with their character and needs; but, by implication, she would not have her consulted as to any other of the important family decisions. The whole article has, to the open-minded student of human nature, a very old-fashioned ring. As matter of fact, there are probably very few families left in this country in which the woman does not bear the responsibility of decision, in matters both great and small, to fully as great an extent as the man. Nor does the statement that those who advocate a larger existence for women accompany their claims by shrieking, have much bearing upon the present state of the discussion.

—Desertion, a matter of much practical importance to the army and to the country, receives further and intelligent discussion by Lieut. McAnaney, Ninth Cavalry, in his graduating essay at the Military School, Fort Leavenworth (*Journal of the Military Service Institution* for September). This officer, who, it appears, served five or more years as an enlisted man, and therefore speaks with unusual authority, attributes the tendency to this crime to the extreme *ennui* engendered by the trivial and constantly "unfinished" work that employs the soldier in garrison, to certain restraints which, under ordinary conditions, he regards as quite unnecessary, and to the bar to rational entertainment and respectable society which the uniform imposes. The points seem well taken. The essayist denies that there is ill treatment, moral or physical, worth noticing, and speaks well, and justly so, of the general character of the average recruit. The weak point seems to be to account for the disregard of the oath of enlistment by these good men. Perhaps that is partly found in the very informal and unimposing way, so unlike the ancient *sacramentum*, in which it is administered, and especially in the popular feeling that a deserter is more sinned against than sinning, and therefore to be shielded. But with it all there must be some lack of moral fibre. Nevertheless, as has been pointed out, in great emergencies the enlisted man stands firm. He does not desert in the face of the enemy, and it will be to the perpetual glory of the United States soldiers that, at the beginning of the Rebellion, when officers by scores discarded their uniforms, not a man in the ranks, although hundreds as unwilling prisoners in Texas were sorely beset, was false to his allegiance. Lieut. McAnaney would remove the minor but irritating restraints, especially the tattoo roll call; would infuse more vitality into the daily exercises of the men, with indulgences for excellence in them; would give men greater liberty out of uniform, and would punish with the utmost severity those offences of the very small minority which bring disgrace upon it. The conspicuous dress marks the wearer, and brands all his comrades when he misbehaves. The essay is written with force and clearness, many of the views are original, and all clearly expressed; and the fact that the author himself has risen from the ranks gives a very favorable conception of the rank and file.

— The opening of the grave in old St. Pancras Cemetery in London in which the remains of Gen. Paoli, the Corsican patriot, have rested for eighty-two years, and the return of his body to his native island, revive the memory of a man whose name is more familiar to most people than his life. Paoli was born in Corsica in 1726, his father being a patriot general and a leader of the Corsicans against their traditional enemies, the Genoese. He entered the military service at Naples when young, but left it in 1755 to head his countrymen in a new revolt, and continued to lead them, as President of their Legislative Assembly for twelve years, until the Genoese, in despair of conquering the island, ceded it to France. The odds then became too great for Paoli to contend against, and after a brief struggle he yielded, and sought refuge in England, where he received a pension. In 1789 the Corsican patriots were invited to Paris, and Paoli was made head of the Corsican Assembly there, but he separated himself from the party of revolution when the monarchy fell, and was proscribed by it. At once he offered Corsica to the English, who accepted it, but failed to make him Viceroy, as he had expected. This and some other disappointments led to his return to England, where his pension was restored, and where he lived till his death in 1807. The English Government have now consented to the removal of his ashes at the request of representatives of Corsica. His memory will last in English literature as long as men read Boswell's Johnson; for its author was "Corsica" Boswell before he became "Bozzy," and it was of Paoli that old Lord Auchinleck made the vigorous remark: "Jamie is gaen clean gyte. He's done wi' Paoli—he's off wi' the land-louping scoundrel of a Corsican; and whose tail do you think he's pinned himself to now, mon? A dominie, mon—an auld dominie; he keepit a schule, and cau'd it an academy."

— 'Russian Antiquities in Monuments of Art,' published by Count I. Tolstoy and N. Kondakoff, promises to be a notable work in archæological science. The first part, treating of the classical antiquities of Southern Russia, and containing 145 illustrations, has recently made its appearance. The editors are fully fitted for their undertaking, and the publication will rank as authoritative. During an historical period of twenty-five hundred years, Russia furnished an abiding place to many widely differing tribes, and people of various nationalities, all of whom have left precious remains. Russia is strewn with thousands of tumuli—eloquent witnesses of antiquity—and is rich in ancient monuments of art, embodying the combined results of the arts from all quarters which flowed into Russia and which the Russians appropriated for the formation of an original, historical, old-Russian style, which lingers to the present day in many local artistic productions. The object of the present publication is to show the formation of this ancient Russian art by accurate illustrations with the indispensable explanatory text. The undertaking is difficult on account of the scarcity of former works in the department of Russian archæology, which has existed but a comparatively short time as a science. Hence a wide and comparative survey is not easy. The recently founded professorships of the History of Art remain unfilled in several universities, for lack of persons competent to occupy them, and the vast material requiring study has been dealt with only piecemeal, chiefly by amateurs, in spite of the efforts to cultivate archæological taste by the foundation of societies, congresses, and expeditions during the last thirty years.

—Both specialists and amateurs have long felt the necessity of access to the existing material as a whole, and this is what the present publication promises to supply. Count I. Tolstoy is an ardent worker in the field of Russian archæology, and Mr. Kondakoff has long been professor of Art in the St. Petersburg University. The first pamphlet, now published, begins with historical facts relating to the initial appearance of the Grecian colony on the shores of the Black Sea, and contains illustrations of the most noteworthy among the artistic remains of this colony—from ancient statues and sarcophagi to small articles of jewelry—accompanied by explanations of their religious, historical, and domestic significance. This issue also contains an account of the archæological investigations which resulted in the finding of these articles. In future parts of their work the editors will have to deal with points which

have been hitherto but slightly touched upon, or which are extremely complicated and obscure, and they will be obliged to cut their own road. Part second contains "Scytho-Sarmatian Antiquities," which have called forth the most contrary opinions.

GARRISON, UNION-DISUNIONIST.

William Lloyd Garrison: The Story of his Life, Told by his Children. 1805-1879. Vol. III.—1841-1860. Vol. IV.—1861-1879. The Century Company. 1889.

THE first half of this historical biography was published four years ago. The narrative broke off at a point, in 1840, when the abolitionists were divided by a combined sectarian and political revolt against Mr. Garrison's leadership, involving some of his warmest friends and ablest coadjutors. The high and somewhat haughty hopes with which the Liberty party was launched as the only effectual instrumentality for the overthrow of slavery, are shown, in the third volume now given to the public, to have been without foundation, and to have been quickly dissipated. The chief promoters of the schism found themselves, once severed from the purely moral agitation, completely dislocated, and within a year were compelled to seek new modes of life in strange places, and to forfeit all organized connection except through a party affiliation contemptible in respect of numbers (where numbers were all-essential), and steadily degenerating in principle. Gerrit Smith, William Goodell, even Birney, felt obliged to come out from it. It was in the last stages of decay when the independent rise of the Free Soil party gave it its euthanasia.

The Garrisonian body, on the contrary, neither lost its spirit nor stood still. It had reached the utmost limit of numerical expansion, but it had yet to develop the logic of its attitude towards slavery as intrenched in the Constitution. The editor of the *Liberator* again took the lead in establishing the doctrine that no genuine abolitionist could vote under such an instrument or take oath of office under it; that anti-slavery amendment of the Constitution was, in the nature of the case, impossible, and that a peaceable separation of the two sections was the only practicable means of freeing the North from complicity with slaveholding. His position was summed up in his famous Scriptural definition of the Constitution as "a covenant with death and an agreement with hell," and his policy in the watchword, "No Union with Slaveholders!"

Nothing could be more considerate or disinterested than the way in which he enforced his views on his associates, until, in 1844, of their own free will and from reasonable conviction, they (with very few exceptions) adopted for the cause the new character which he impressed upon it. The documentary evidences of this are abundant. The policy, of course, excited the holy horror of the South, just then engaged in extending the Union through the annexation of Texas—an act which John Quincy Adams and the Conscience Whigs theoretically regarded as an act of disunion in itself, though they lacked the courage of their convictions. Disunion had also to be disavowed by the Free-Soil and Republican parties, whose policy was wholly defensive; who agreed to let slavery alone if it would let the North alone—beyond the Constitutional obligations; who proclaimed the "irrepressible conflict" while clinging to the instrument which embodied it, and promising a tame submission to every fresh defeat. They took satisfaction in identifying, with equal censure, the Northern and Southern disunionists, by a moral confusion which was clearly exposed by Mr. Garrison.

The paradox of his disunionism was explained on the outbreak of the civil war. He looked upon the secession movement in its early phases as the beginning of the end of slavery, by leaving the masters to reckon with their bondmen without the support of the Federal army and navy as against insurrection, or of Federal marshals and judges for the reclaiming of fugitives. While the representatives of all parties in Congress were in a panic of Union-saving compromise, he held the Union of 1789 to be already dissolved. He did not doubt the right and Constitutional duty of the Government to suppress the rebellion by force of arms, but he saw the risk of a divided North attempting the subjugation of a united South, and he preferred a peaceable relinquishment of sovereignty, and a reorganization of the North as a truly free confederacy. The moment that this preference was overruled by the popular uprising that followed the attack on Sumter, he sought as a patriot to make the object of the war the destruction of its cause, to the end that the old territorial Union might be restored on a sinless and imperishable basis. In the just phraseology of Gerrit Smith: "The 'Garrisonian abolitionist' was formerly a Disunionist, and is now a Unionist; and hence he is charged with being inconsistent, or at least with being a convert. . . . There is a conversion. It is, however, *to* him, and not *of* him. There is a change, but it is *around* him, and not *in* him." And again, in the language of William Henry Channing, writing to Mr. Garrison in 1844:

"The 'People of the United States,' by a Sovereign Right, under God, established this Constitution; the 'People of the United States,' by the same Sovereign Right, having found that this Constitution, in place of 'securing a more perfect Union, and establishing justice,' &c., has *broken our Union*, and *established injustice*, &c. (vide Preamble to the Constitution), can pass on from that Constitution, thus proved imperfect, to a higher and better one, as they did from the Confederacy. AND THE END IN VIEW SHALL STILL BE UNION, NOT DISUNION. . . . This is not schismatic, nor treacherous, nor nullifying; it is legitimate, and right, and reasonable. . . . In demanding that the 'People of the United States' be faithful to their professed principles, they [the abolitionists] assume a Positive position, and throw the odium of mere Negation and Opposition upon the Slaveholder. The Rectitude of this is plain, and the Policy of it is equally so. *It puts the Slaveholder in his true place as the Disunionist;* it exposes to the world that the only actual disturbing element in our Union is our injustice to our colored brethren."

The present generation of readers will be surprised on the one hand to learn, from the final volume of this biography, what aid was given to the Union movement by Mr. Garrison, and on the other how forbearing was his criticism of President Lincoln during his tedious evolution as an emancipationist. A further revelation will lie in the chapters which exhibit Mr. Garrison enlightening the British public as to the true nature of the war, legally and morally, and which reveal the precious fruits of his alliance with British philanthropy thirty years before. A glimpse, necessarily inadequate, is given of the incalculable importance, in averting British recognition of the Southern Confederacy, of the labors of his old friend and co-worker George Thompson, who thus heaped coals of fire on the head of a nation that had hunted him for his life in 1835 and mobbed him afresh in 1851. No romance could surpass the sequel, in which Thompson and Garrison together witnessed as national guests the raising of the old flag at Sumter in April, 1865; and again in which, at the London breakfast of 1867, given to the American, they heard Earl Russell confess the error of his official attitude towards the Confederacy, and welcome Mr. Garrison as the natural ambassador of international reconciliation and future good will.

The historical value of the volumes before us consists especially in a condensed but clear tracing of the course of the several anti-slavery political parties, in connection or contrast with the steadfast aggressiveness of the abolitionists. Mr. Garrison's fairness, moderation, and discrimination are nowhere more visible than in his criticism of these by-products of the moral warfare he was carrying on. Interesting episodes are the application of the anti-slavery touchstone to Father Mathew and Kossuth, in their respective visits to America. The movement of the narrative for the storm-and-stress period is much more rapid than in the next previous volume, a space of twenty years being compressed into volume iii, with a chapter for each year. The successive headings mark as many epochs: thus, following up the climax in the last seven chapters, we have "The Nebraska Bill (1854)," "The Personal Liberty Law (1855)," "Frémont (1856)," "The Disunion Convention (1857)," "The Irrepressible Conflict (1858)," "John Brown (1859)," and "Abraham Lincoln (1860)." The first chapter of volume iv, for 1861, is entitled "No Union with *Non*-Slaveholders!"—the secession point of view.

The personal interest of this half of the narrative will hardly be thought inferior to that which preceded. The Boston mob of 1835 is offset by the Rynders mob in New York of 1850; the founding of the *Liberator*, by its glad suspension when its end was attained; the founding of the American Anti-Slavery Society, by Garrison's voluntary withdrawal from it when rebellion and slavery went down together. There is a third mission to England in 1846, and two delightful post-bellum visits, full of honors, in 1867 and 1877. Unhappy coolnesses and antagonisms on the part of old associates enter into this novel of real life. Family afflictions contribute their share. Theological odium is heightened by an Anti-Sabbath Convention and a Bible Convention. And, through all, the pacific character of the man shines with singular constancy. He cannot bear the spirit in which the clergy are ready to aim their Sharp's rifles at Border Ruffians as at so many wolves or buffaloes: if any shooting is to be done, he would begin rather with the slaveholders than with their degraded and pitiable tools. But he has never wished evil to the slaveholders. When, in 1858, some of John Brown's confidants, who were Mr. Garrison's friends also, were vaguely intimating in convention the impending bloodshed, he protested in these memorable terms, which shed not more light on his humanity than on his disunionism:

"I pray you, abolitionists, still to adhere to that truth. Do not get impatient; do not become exasperated; do not attempt any new political organization; do not make yourselves familiar with the idea that blood must flow. Perhaps blood will flow—God knows, I do not; but it shall not flow through any counsel of mine. Much as I detest the oppression exercised by the Southern slaveholder, he is a man, sacred before me. He is a man, not to be harmed by my hand nor with my consent. He is a man, who is grievously and wickedly trampling upon the rights of his fellow-man; but all I have to do with him is to rebuke his sin, to call him to repentance, to leave him without excuse for his tyranny. He is a sinner before God, a great sinner; yet, while I will not cease reprobating his horrible injustice, I will let him see that in my heart there is no desire to do him harm—that I wish to bless him here, and bless him everlastingly—and that I

have no other weapon to wield against him but the simple truth of God, which is the great instrument for the overthrow of all iniquity, and the salvation of the world."

In the final instalment of their work, the sons of Garrison have again been greatly assisted by inedited sources, and have pressed into their service two such capital letter-writers as Edmund Quincy and Wendell Phillips. Quincy, in his faithful correspondence with John A. Collins and with Richard D. Webb, of Dublin, the Irish Garrisonian abolitionist *par excellence*, has almost written the history of the anti-slavery cause from 1840 on. Lowell rhymed of him in 1846:

> "Good letters are a gift apart,
> And his are gems of Flemish art,
> True offspring of the fireside Muse,
> Not a chip-gathering of news
> Like a new hop-field which is all poles,
> But of one blood with Horace Walpole's."

Their humor, applied not seldom to the subject of this biography, greatly enlivens its pages, and proves, together with Phillips's wit and Garrison's perennial cheerfulness and mirthfulness, how utterly the South and her Northern sympathizers misunderstood the temperament of the prophets of emancipation. The final chapter, "Inner Traits," a summing-up of Mr. Garrison's qualities from the domestic side, will do much to correct the impression which ignorance and malevolence have made traditional regarding him.

The authors intimate in their valediction that they have virtually produced an autobiography —an undertaking shunned by their father equally with a history of what he styled "the most noteworthy moral and political struggle in the annals of civilization." To those who weightily urged him to review that struggle, he replied in 1873:

> "So far as I am personally concerned, I feel no interest in any history of it that may be written. It is enough for me that every yoke is broken and every bondman set free. Yet there are lessons to be drawn from it that cannot fail to be serviceable to posterity. The millennial state, if it ever come on earth, is yet in the far distant future. There are innumerable battles yet to be fought for the right, many wrongs to be redressed, many evil customs abolished, many usurpations overthrown, many deliverances wrought; and those who shall hereafter go forth to defend the righteous cause, no matter at what cost or with what disparity of numbers, cannot fail to derive strength and inspiration from an intelligent acquaintance with the means and methods used in the Anti-Slavery movement."

The original scheme of composition has been adhered to, and everywhere the document, the passage, or the punctilious reference to authority, accompanies the statements of the text. The index has been enlarged to cover all four volumes, and as the items under each entry are arranged chronologically, the career of each individual is shown progressively. The extent of some of the entries is such as to make apparent the richness of these memoirs in subsidiary biographies. As before, a large number of engraved portraits of the leading abolitionists commemorate the Garrisonian group and the age in which they flourished; and the typography remains at the front of American achievement in works of this class.

THE TEXT OF THE DIVINA COMMEDIA.

Contributions to the Textual Criticism of the Divina Commedia, including the complete Collation throughout the 'Inferno' of all the MSS. at Oxford and Cambridge. By the Rev. Edward Moore, D.D., Principal of St. Edmund Hall, Oxford, and Barlow Lecturer on Dante in the University of London; Author of 'Time-References in the Divina Commedia.' Cambridge: At the University Press; New York: Macmillan. 1889. 8vo, pp. lvi, 723.

In Mitford's elaborate edition in quarto of the works of Gray, published in 1816, the second verse of the 'Elegy' is printed:

> "The lowing herd winds slowly o'er the lea."

It is given in the same way in Mr. Ward's well-edited 'Selections from the English Poets,' in Mrs. Wood's 'Second School Poetry Book,' published two years ago, and in Aikin's 'British Poets,' published seventy years ago. But in Mitford's note to the verse and in 'The Golden Treasury' it runs:

> "The lowing herd wind slowly o'er the lea,"

and it was thus that Gray wrote it, and that it stands in the editions issued under his eyes. His fine sense of sound in verse—and few poets have had a finer—would not have endured the sibilation of "winds slowly," and the damaging change which has crept into the verse affords a good instance of the corruption of a text through the oversight or error of editors or printers. Scott's poems as commonly printed are full of like blemishes due to similar causes. Everybody knows the corrupt condition of Shakespeare's text.

If it be difficult to secure the text of a modern poet in its integrity, the difficulty is vastly greater in the case of a poem written before the invention of printing, when the copies were made for the most part by different scribes, and few of them at the best under the revision of the author. Thus, as is well known, not a single text of an ancient or mediæval poet has come down to us in its pure original form. All are more or less corrupt, and all the critical labors of eminent scholars during the last three or four centuries have not succeeded in giving us the text of any one of the great poems of the past exactly as it left the poet's hands.

It might at first sight seem as if there were less risk of serious corruption of the text of the 'Divine Comedy' than of most other mediæval poems, because of the interest taken in it from the first, and because of the special defence against certain classes of errors afforded by the regularity of its verse and its triple rhyme. But there were other sources of error which much more than outbalanced the conditions favorable to integrity of text. Usage, at the time of the publication of the poem, had not yet so established the canons of Italian orthography that there was not much variety of spelling, and still greater in respect to the elision and contraction of syllables, and to the fusion and division of words; punctuation and capitals were often wholly dispensed with, and there was no use of apostrophes or accents. *Perokivegio* is the manner in which one scribe writes *però ch' io veggio; colle* stands for *ch' ho le; adir* may be either *ad ir* or *a dir*. Many manuscripts exhibit dialectic varieties; many the individual idiosyncrasies—not merely the preferences, but also the ignorance and the presumption—of the writers.

Special sources of error lay in the nature of the poem itself. "The 'Divina Commedia,'" says Dr. Moore, "made its appearance at a time and under circumstances in some respects peculiarly unfavorable to the preservation of a correct text. The work immediately attained to a vast reputation." Copies of it were multiplied. "The language in which it was written, the subjects of which it treated, the nearly contemporary interests on which it touched, and the well-remembered incidents with which it abounded, combined with its frequent obscurities and difficulties, all contributed to give the copyist an interest in his work which affected most injuriously its accuracy and faithfulness." He was tempted to alter what he did not understand, and to amend what seemed to him to need correction. Error was thus transmitted from copy to copy. The process began almost from the first. The very earliest commentators, within ten or twelve years of Dante's death, not only exhibit readings unquestionably false, but refer to more than one *various* reading. The commentators of the later part of the fourteenth century frequently note the diversity of readings. "Hoc accidit," says Benvenuto da Imola in commenting on the seventy-first verse of the fifteenth canto of the Paradiso, "propter ignorantiam idiomatis, sicut et in multis locis et vocabulis istius libri."

The first printed editions of the poem naturally partook of the inaccuracy of the manuscripts from which they were derived. Even the two beautiful little Aldine editions (1502 and 1515) are full of errors. Later editors, the Florentine Academy in 1572, for example, endeavored to form a sound text. Manifest mistakes were corrected, but there was no solid basis for the work. Each edition offered a text more or less varying from all the rest. The true critical method was not seriously and consistently applied till Witte, the most learned of the scholars of Dante, set himself to the work, and published in 1862 a text based on the collation of four manuscripts selected because of special excellence, while he gave in notes the more important variants from other sources. He had the learning and judgment requisite to confer authority on his work. His prolegomena contain a vast body of interesting information in respect to the history of the text, and of admirable criticism on the methods of determining it. His text is now practically the *textus receptus*. It was followed by Dr. Fay in making his invaluable Concordance; it has been taken as a standard by Dr. Moore in the work now before us—a work of extraordinary industry, accuracy, and acumen, and by far the most important contribution ever made to the settlement of the text of the 'Divine Comedy,' with the sole exception of that of Witte.

Dr. Moore's work provides the student with exact knowledge of the manuscript readings in sufficient number for all needful study, and to enable him to form independent judgment concerning the correct text. For this purpose he reprints Witte's text of the 'Inferno' with a complete collation of seventeen manuscripts —all that are to be found at Oxford and Cambridge. But besides this most laborious collation, he has examined about half of the 500 to 600 known manuscripts in regard to the more important test passages in the whole poem, and the collation and discussion of these selected passages may be unreservedly commended as the most original and valuable body of critical notes relating to it to be found in English. The comment is as full of good sense and acute discrimination as it is of learning. As Dr. Moore justly says in his preface, "the results and conclusions obtained from such materials would not be likely to be much altered by the examination of an increased number of MSS." His claims in regard to what he has done are modest. "The results here gathered up may seem to some both slight and negative, but if a building is to be secure and lasting, much work must be spent upon its foundations, and though these are not seen afterwards, yet the function they perform is none the less important and indispensable"; and he adds what every student of the 'Divine Comedy' will sympathize with: "I am deeply convinced that, be the tangible and positive results great or small, no labor bestowed on the study or elucidation of this, perhaps the greatest work of human genius in any

language, can be felt to be in vain by one who has expended it."

One result from Dr. Moore's labors is satisfactory and interesting. It is the confirmation of the soundness of Witte's text. In the progress of his work Dr. Moore tells us he has "been continually more impressed with the general excellence of Dr. Witte's text and of its quite exceptional position among all other editions." He gives a list of the principal cases in which it appears to him desirable to adopt another reading than that of Witte. They are forty-seven in all; some of them, as Dr. Moore says, are "of little importance, and many must fairly remain open to question." In thirty of these cases Scartazzini, in his indispensable, though not in every respect commendable, edition, has preceded Dr. Moore in adopting the reading preferred by him. In most of the remaining cases Dr. Moore seems to us to be unquestionably right. One of the most important instances is that of 'Inferno' xv. 29, where Witte and Scartazzini read: *E chinando la mano alla sua faccia*, but Dr. Moore prefers, with good reason, *E chinando la mia alla sua faccia*. Another is that of 'Inferno' xxviii. 135, where, though a vast majority of the MSS. give the verse as *Che diedi al re Giovanni mai conforti*, the reasons for believing that Dante wrote *Che diedi al re giovane mai comforti*, as they are marshalled by Dr. Moore, are so convincing as to outweigh the manuscript authority.

Altogether, Dr. Moore's volume is of the highest value to the serious student of the poet. It is one of the few works with which such a student, desirous to attain thorough acquaintance with the 'Divine Comedy,' must make himself familiar. The year that brings to him this book and Dr. Fay's Concordance deserves to be marked with a red letter.

WRIGHT'S ICE AGE.

The Ice Age in North America, and its Bearing upon the Antiquity of Man. By G. Frederick Wright, D.D., LL.D., F.G.S.A. D. Appleton & Co. 1889.

No epoch in the geological history of the earth is invested with a more intensely human interest, or has had a more important influence upon the material welfare of civilized man, than that known as the Glacial Period, during which the northern portions of Europe and America were covered by an immense ice sheet thousands of feet in thickness. In the floods which must have accompanied its gradual melting and retreat is to be found an explanation of the deluge which is recorded in the Mosaic cosmogony, and which forms a central feature in the myths and traditions of most primitive races. The earliest records which archæologists have yet been able to discover of man's existence upon the earth, consisting of rude stone implements associated with remains of animals of arctic habits, many of which are now extinct, were found in deposits which are shown by geologists to have been formed towards the close of this period. Whether during the earlier ages when, as the geological record shows, a semi-tropical climate must have prevailed far up into the arctic regions of the present day, man already flourished upon the earth, may never be determined, for in the earlier stages of his evolution the records left by him were probably less easy to recognize, and the chances of their having survived the greater changes that have supervened are very small.

The study of this period not only presents problems of deep interest to various classes of professional scientists—astronomers, physicists, and biologists, as well as geologists—but affords a peculiarly inviting field to the amateur scientist, by reason of the ready comprehension of its phenomena, which does not require a preliminary knowledge of chemistry, mineralogy, and petrography, as is the case in other fields of geological research, and because the Swiss glacier region, from the study of which the knowledge of its phenomena was first derived, has now become a favorite summer resort. In the past fifteen years more progress has perhaps been made towards a systematic and accurate determination of the facts of the Glacial Period than had been accomplished in all the time that has elapsed since its original conception in the minds of the far-sighted men who first scientifically demonstrated the movement of the Swiss glaciers. The study of the phenomena of existing glaciers has been extended from the comparatively restricted areas of Alpine glaciers to those of the continental type, such as are still found in Greenland and Alaska, which in their movements, and in the effects produced upon the surface over which they pass, more nearly approach the ancient ice-sheets of the Glacial Period. In the light of these studies a satisfactory explanation has been found for the many and varied phenomena which might be ascribed to the action of glacial ice in the areas it once occupied, and the greatest of these areas has been systematically surveyed and its limits determined.

This has been accomplished in large measure by the labors of American geologists and glacialists, among whose names those of Dana, King, Chamberlin, Dawson, Gilbert, Upham, and Wright occupy a prominent place. Upon the last-named has devolved the task of presenting a record of these labors and the conclusions that may be drawn from them, together with a summary of what was of permanent value in the writings of those who had gone before, and this has been accomplished by him in the present volume in a form which, while thoroughly scientific in its methods, is easily comprehensible and deeply interesting to the general reader.

Dr. Wright is a professor of theology at Oberlin, as well as a geologist, and it is significant of his wise devotion to either profession that in a volume whose ultimate result is to establish an antiquity for man far beyond that usually supposed to be given in the Scriptures, he has refrained from making any allusion whatever to its theological bearings, beyond the brief prefatory remark that he sees "no reason why it should seriously disturb the religious faith of any believer in the inspiration of the Bible." He shows a practical application of his belief that "it is incumbent upon us to welcome the truth from whatever source it may come," in the thoroughness with which he gives all the observed facts that bear upon a given phenomenon before drawing his conclusions, as well as in his scrupulousness in acknowledging the aid he has received from fellow-workers, whether derived from their writings or from personal communications. In both of these respects he presents an example worthy of imitation by fellow-scientists. To Clarence King, whom some American geologists have of late been too apt to ignore, he gives credit not only for the discovery of the terminal moraine of the New England glacier, which gave the original impulse to the systematic tracing of the boundary of the glaciated area in North America, but for correct explanations of the origin of such characteristic features of the area as kettle-holes, kames, and drumlins, and for the early disproof of the ancient theory of a polar ice-cap as applied to this continent.

Although the present work is of necessity largely based on the labors of others, the personal investigations of the author, which, as he tells us, have occupied the greater part of his time during the past fifteen years, have furnished no inconsiderable portion of its most interesting results. His observations on the Muir glacier of Alaska, which, though only one of a group, covers in its present contracted condition an area nearly equal to that of all the Swiss glaciers together, afforded a final explanation of the origin of many phenomena of the glacial area which had hitherto been in dispute. The average movement of the Swiss glaciers in their mountain valleys is only about three feet per day, and it has been difficult for many persons to conceive how the ancient ice-sheets could have moved over areas which, judging from the present configuration of the surface, must have possessed a relatively insignificant angle of inclination. Wright's measurements on the Muir glacier, however, proved it to have a movement of forty feet per day, and Helland's observations showed that the Jacobshavn glacier, one of the many hundred outlets of the great Greenland ice-sheet, which is estimated to cover an area of more than 300,000 square miles, has a motion of seventy feet per day, with an inclination of less than half a degree. Such an inclination for the New England ice-sheet would give a former thickness of more than 10,000 feet of ice in the Laurentian Highlands, which agrees with the estimates made on other grounds by the veteran geologist Dana.

Some of the most interesting facts presented by the ingenious deductions of the author and his associates are those which relate to the pre-glacial drainage of the northern part of our continent and the changes produced in it during the glacial period. Lake Erie is shown to be but a glacial mill-pond formed by the damming by the ice-sheet of northward-flowing rivers; the great lake drainage of pre-glacial times having been from northern Lake Huron through Georgian Bay to Lake Ontario at Toronto, and from Lake Ontario probably through the Mohawk and Hudson Valleys to the sea. The fact, to which probably few have had their attention called, that waterfalls and lakes are almost entirely confined to the formerly glaciated area, is also explained by Dr. Wright as due to the glacial period. Pre-glacial rivers have had so much time to cut down their beds that any waterfalls that may have existed in them have been reduced to rapids or cascades—a fate which will overtake the post-glacial Niagara River within a (geologically speaking) limited time. Some idea of the vastness of the floods that accompanied the retreat of the ice-sheets is obtained from a consideration of the great number of lakes that must have been formed by temporary barriers of ice or transported material that were afterwards removed or broken. One of these, of whose existence Dr. Wright has found evidence, was formed by a dam which the ice threw across the Ohio River near Cincinnati, behind which a lake about a thousand miles in length must have been backed up.

On the soils of our country the ice-sheet must have had a far-reaching influence, for Dr. Wright estimates that an area of one million square miles is covered with glacial débris to an average depth of fifty feet. The loess, that peculiar soil to which much of the interior basin of our continent owes its exceptional fertility, is regarded by Dr. Wright as probably the more finely comminuted material held in suspension by glacial waters, thus differing from the conclusions of Pumpelly and Richthofen in regard to the similar, but vastly deeper, soils of the interior of China, which they regard as of sub-aerial origin, brought in

by dust-storms from the deserts of Central Asia.

The date of the Glacial Period, though not yet definitively determined, is shown to be far less remote than had previously been estimated. The time which it has taken the Niagara River to cut back its gorge from Lewiston to the present falls has, by recent more accurate calculations, been fixed at not more than seven thousand years, instead of 35,000 given it by the earlier geologists. This, combined with estimates made of the rate of recession of the Falls of St. Anthony, and confirmed by other data, leads Dr. Wright to estimate it at not over 10,000 years ago. As regards the existence of an inter-glacial period, or two maxima of cold, Dr. Wright differs somewhat from the conclusions of some of his fellow-observers, considering that while the ice-sheets probably suffered several oscillations of advance and retreat, there was no great single recession to the region of the Laurentian Highlands such as could constitute two glacial periods.

With regard to Croll's well-known astronomical theory of the cause of the Glacial Period, based on the precession of the equinoxes and the variation in the eccentricity of the earth's orbit, which fixes its date as from 80,000 to 200,000 years since, Dr. Wright, while taking no exception to the accuracy of his calculations, considers that some of his premises have been assumed without sufficient grounding in ascertained physical facts, and that this, taken in connection with the discrepancy of its date with that given above, should lead to its rejection. In an appendix, Dr. Warren Upham, also rejecting Croll's theory, proposes in its place one of his own based on physical and geological grounds. He assumes that glaciation was caused by unusually great elevations and subsidences of the land during Quaternary times, resulting from the contraction of a solid crust upon a molten interior. To his premises that the mountain-building force was exceptionally active in these times, owing to its having been quiescent during the preceding Tertiary and Mesozoic ages, he will hardly find many adherents among field geologists.

To the great advance that has been made in late years in the accuracy and cheapness of processes of photographic reproduction is due a further signal advantage that Dr. Wright's work possesses over his predecessors'. He has thus been able to illustrate most of the natural phenomena to which he refers by views taken in the field, many of which have been generously loaned by the United States Geological Survey, in some cases from unpublished material; and he has admirably supplemented them by numerous maps and diagrams.

THE PRECURSORS OF LESSING.

Geschichte der poetischen Theorie und Kritik von den Diskursen der Maler bis auf Lessing. Von Friedrich Braitmaier. Erster Teil: Die Anfänge der poetischen Theorie und Kritik im engsten Anschluss an Franzosen, Engländer und die Alten. Frauenfeld: Huber.

Of Milton it has been said that he is an author more praised than read. Similarly we are tempted to say of Lessing that he is, even in his own land, more praised than studied. Despite the marvellous accretion of knowledge since the days of the 'Laocoon' and the 'Dramaturgie,' we doubt whether modern German criticism is quite up to the level of Lessing in spirit and in method. Certainly it has not always the courage of its convictions. Yet the one lesson above all that Lessing should teach is the lesson of fearlessness. Failing that, of what superlative value are our critical and annotated texts and other helps?

Braitmaier's book, although not conceived *in majorem gloriam*, will enable us to behold the great Lessing in his real proportions. The field covered in these three hundred pages is confessedly arid, not to say repellant. Most of the authors and writings here discussed are mere mile-stones by the road of progress. Bodmer, Breitinger, Gottsched, König, Gellert, with their so-called views and theories, are completely superannuated. Yet the student of German literature (in which theoretical discussion plays so great a rôle) must know them and estimate them correctly, for they are the *milieu* from which sprang Lessing, and many of the critic-philosopher's utterances will be unintelligible without such knowledge. The work of depicting in detail the chaos that preceded Lessing was yet to do. It was worth doing well, and Braitmaier has done it well. His book is not one that will attract the general reader, but it will charm the genuine student. It has the full flavor of scholarship. One feels that the author has not skimmed the surface, but dived boldly to the depths, has caught the gist of many half-forgotten out-of-the-way periodicals and monographs, and presented it in clear readable style. It is something to be grateful for, this insight into German literature of the first half of the eighteenth century. We have now our standard by which to measure not only Lessing, but Herder, Goethe, and Schiller.

There are only two points that seem to call for especial mention. The most pleasing chapter in the book is the ninth, dealing chiefly with the elder (Elias) Schlegel. Is it exaggeration to say that this is the first tolerable presentation of Schlegel's claims to recognition? In truth he now appears as the only critic of the period that can be called clear-headed, sensible, spontaneous, prophetic of the future. His views upon the imitativeness of art, upon French and English poetry, upon the relations of antique and modern, are singularly attractive, even when we may have to disagree. Schlegel is fully worthy to be Lessing's predecessor. Indeed, as Braitmaier points out, his views on some points are more liberal, more truly modern, than even Lessing's.

Our other remark is in the nature of a warning. Criticism in England has never yet been erected into a system, doubtless because we have never had a Lessing. Hence it would be inadmissible to speak of the *foundations* of English criticism. Nevertheless, English opinion in matters of art and letters has had its *beginnings*, and these beginnings antedate by more than a century the Queen Anne period. Braitmaier, like so many of his countrymen, apparently does not go back further than the *Spectator*. Apparently, we say; for, knowing French and German critics to have taken their cue from the *Spectator* and its set, it is possible that he may not have thought it worth while to prosecute his studies further. Yet even this is a faulty method. It has caused him, if not downright error, at least a misunderstanding of the truth. England did not wait for the *Spectator* to teach it to discuss the merits and demerits of its poets. If so, what becomes of the critical studies of Sidney, Ben Jonson, and Dryden? When Braitmaier says, p. 38, "Was er [Bodmer] sonst gegen die Reime anführt, die Gewalt, die sie den Gedanken anthun sollen und dergleichen, zeigt seine Bekanntschaft mit der einschlägigen Behandlung der Reimfrage bei den Franzosen," we ask why we may not rather attribute Bodmer's opinion to Milton's well-known utterance (prefixed to 'Paradise Lost'): "rime, . . . the invention of a barbarous age to set off wretched matter and lame metre," etc. When Gottsched reproaches the English drama with nourishing the two main vices of the English folk, cruelty and lasciviousness, p. 139, it is not enough to designate this as "die übliche verkehrte Ansicht der Franzosen," p. 140. The sharpest taunts of the English stage have been uttered by Englishmen. Thus Jeremy Collier, in his 'Short View,' etc. (ch. i, p. 10, ed. of 1698), contrasts Euripides and Shakspere:

"She [*Phædra*] keeps her Modesty even after She has lost her Wits. Had *Shakespear* secur'd this point for his young Virgin *Ophelia*, the *Play* had been better contriv'd. Since he was resolv'd to drown the Lady like a Kitten, he should have set her swimming a little sooner. To keep her alive only to sully her Reputation, and discover the Rankness of her Breath, was very cruel."

Again, at p. 50, Collier says: "As for *Shakespear*, he is too guilty to make an Evidence: But I think he gains not much by his Misbehaviour; He has commonly *Plautus's Fate*, where there is most Smut, there is least Sense." We have not Prynne's 'Histrio-mastix' at hand, else it would be easy to multiply citations.

True, should Braitmaier give us the quip modest and demand to know why we Anglo-Americans have not written a history of English literary opinions to serve the foreigner as a guide, we should be at a loss for a reply. In the language of *Hamlet*, this thing is yet to do. The man who does it, even if only partially well, may be certain of abundant reward. Meanwhile, Braitmaier's book is a model of how such things should be done. We shall await with pleasure its completion.

Hosea Ballou: A Marvellous Life-Story. By Oscar F. Safford, D.D. Boston: Universalist Publishing House. 1889.

Dr. Safford's title-page is unfortunate and unfulfilled. He should have left the reader to discover for himself whether the "life-story" of his hero was "marvellous." He has not shown us that it was, and he would have made a more favorable impression if he had been less ambitious. The life of Hosea Ballou, whose name is second to no other in the history of Universalism, had been written twice before Dr. Safford entered on his task. He speaks slightingly of his predecessors. One of them was the son of Ballou, and the other was the Rev. Thomas Whittemore, "a spiritual son," says Dr. Safford. He should have said unspiritual. Mr. Whittemore had many good qualities, but spirituality was not among them. His book made an "exceedingly unpleasant impression" on Dr. Safford. He thinks it misrepresented Ballou in an important particular, central to his thought—the saving power of death. It appears that Ballou at first believed in suffering after death for sin, and final restoration. Later he believed in no future punishment. Death was not the cause but the occasion of complete salvation. Whittemore represented him as making it the cause. The distinction is greater than the difference. After so much trumpeting in advance, the final outcome seems ridiculously small.

Throughout Dr. Safford's book there is something very like distrust of the interest and value of the story he is telling. He can never allow the facts to carry their own obvious significance, but he must be always booming them with an inflated rhetoric. He is continually drawing on his imagination to eke out the narrative, and putting speeches of his own into the mouths of his different characters. His confidence that he has written the final and sufficient biography of Ballou has no adequate

foundation. It is to be hoped the followers of Ballou will try again.

There is here no background of the picture such as a brief account of Murray's life and doctrine would properly furnish. Ballou's doctrine is not distinguished from Murray's with sufficient clearness. There is no suggestion of the bearing of modern criticism upon the textual polemics of Ballou and his opponents—polemics in which Ballou had a truly marvellous dexterity. The most forbidding passages only roused in him a keener joy of battle. The assumption that all apparent differences in the Bible must and can be made to harmonize was fundamental to the controversy of Ballou and his opponents, and Dr. Safford leaves his readers to suppose that it is an assumption that could be justly made.

Another aspect of Dr. Safford's work which is far from satisfactory is with respect to the relations of Universalists and Unitarians in the first quarter of the century. Murray had been as Trinitarian as Calvin; Ballou was as Unitarian as Channing. Ballou also anticipated the Unitarian rejection of the doctrines of total depravity and vicarious atonement. But Dr. Safford is extremely misleading when he represents a Unitarian belief in a more considerable future punishment as the only ground of difference. Unitarianism had a critical habit of mind to which Universalism had nothing corresponding. Until very recently Universalism has been as unquestioning in its belief in the infallible inspiration of the Bible as any evangelical Church, while Unitarianism has been foremost in its acceptance of modern critical results. Precisely the same work is now going on in the Universalist body as went on in the Unitarian forty years ago. It should also be mentioned that Universalism and Unitarianism arose in different social strata. Unitarianism was aristocratic, Universalism was democratic. "Universalists," it was said, "think God is too good to damn them. Unitarians think they are too good to be damned." The Universalists, as well as the Methodists, afford a damaging comment on the hasty generalization of Buckle to the effect that Arminianism and like genial faiths are for aristocratic societies.

To-day there are more Universalists in the evangelical sects than in the Universalist body. Ballou was the rude apostle of a once despised, now steadily increasing, faith. He knew the Bible by heart, not much with his head. He had eminent qualifications for his work, was simple and sincere, a man of ready wit and natural eloquence. His most remarkable achievement was in connection with the famous Abner Kneeland and two other ministers. They were appointed to prepare a hymn-book for the use of Universalist societies. They began *de novo* and wrote all the hymns—Ballou 198 of the whole number, which was 417. They were wretched doggerel, almost without exception; but they had in them no future punishment, unless they should be sung in heaven. Dr. Safford's specimens of the best do not make it easy to conceive the worst. They must have been as bad as the woodcuts of Ballou and Chapin and Whittemore and other celebrated Universalists with which a book, otherwise handsomely made, is shamefully disfigured.

Philo Judæus; or, Jewish-Alexandrian Philosophy in its Development and Completion. By James Drummond, LL.D. 2 vols. 8vo. London: Williams & Norgate.

THE notice of these two volumes is recommended more by the recently revived interest in Neo-Platonism than by the intrinsic merits of Philo's philosophy. This interest, however, is due less to any sympathetic appreciation of Neo-Platonic thought than to the growing scientific disposition to consider every system of doctrine at least as entitled to an explanation, and hence, be it profound or absurd, it must be accounted for. As a fact, it occupies as legitimate a place in the world of thought as any more acceptable philosophy, and the consciousness of this right, together with much importance attaching to the relation between Alexandrianism and early speculative Christianity, has insured it scientific investigation in the historical spirit. It is worth remarking, also, that the philosophic idealism of Germany has prepared the way for the perception of merits in Neo-Platonism that must escape the observation of every other form of philosophy.

About the only matter of interest to present thought in the teaching of Philo is the doctrine of the Logos. Every one who is at all acquainted with his work knows that Philo taught this doctrine in all its completeness, and that the views involved in it permeated his whole system of philosophy; so that the only question which remains is, whether he arrived at it independently or derived it from Christianity. A few historical facts throw important light upon this subject. On his own testimony, corroborated by a correct account of contemporary events, Philo was on an embassy to Rome at the end of 39 A. D., or at the beginning of 40 A. D. In the narrative of this mission he alludes to himself as an "old and gray-headed man" at the time, and critics are agreed that this language imports that he was at least between sixty and seventy years of age, making his birth at least 20 B. C., perhaps earlier. Happily, also, the fact that the period of his greatest literary activity terminated before the year 38 A. D. can be determined with a tolerable degree of approximation to certainty. That is, his teaching was mainly completed at a period not later than five years after the crucifixion, while a portion of it, perhaps the largest portion of it, was most probably completed before Jesus began his ministry, since Philo was at this time at least fifty, perhaps sixty, years of age. It is with inferences drawn from this and similar facts that theologians have to contend—inferences that are very much reinforced by the fact that the doctrine of the Logos does not appear in the Synoptical Gospels, but only in the Fourth, whose authorship, according to some of the most conservative critics, dates not earlier than forty years after the crucifixion, and, according to others, in the latter part of the second century. The study of Philo throws a great deal of light on this subject from the standpoint of internal evidence.

We need not take notice of the great hierarchy of angels, supernatural beings, and occult forces which characterize this whole system, and which are so foreign to present modes of thought. But there is one significant feature growing out of these characteristics which is worth very serious consideration. It is the prominence given to abnormal experience, ecstasy, mania, dreams, magic, witchcraft, necromancy, and like phenomena, as testimony for supernatural existence. The old views of religion were on the decline, and, since the scepticism of the New Academy could not be met by ordinary reasoning, the last desperate resort of the religious spirit was an appeal to superstition. Every historian of philosophy considers this tendency an unmistakable indication of moral and intellectual decline. An instructive comparison might be drawn between this state of thought and the present sympathy for spiritualistic phenomena—a feeling not altogether confined to a class of unscientific enthusiasts, but more or less distributed over the whole area of that speculation which has its roots in the supernatural. It is quite possible that it has a modicum of profound truth in it. But very great care and wisdom are required in handling it, if we are to succeed in preventing the higher thoughts of men from running off into that maudlin transcendentalism which was the bane of Neo-Platonic philosophy.

Mr. Drummond, however, has done very little at discussing the larger relations of this philosophy to its own and subsequent ages. Those fine observations are wanting here which make so attractive the work of Zeller and Harnack. The author does not enter into the spirit of his subject in any way to keep up the interest of the ordinary student, or even to instruct any but those who have already seen into the tendencies of the period. The value of the work would have been greatly enhanced if we could meet some discursions into the wider movements of human thought that would help both to interest the reader, to give scholarship and power to the discussion, and to explain an anomalous philosophy whose best apology would be the causes for its appearance.

This system, strange as it appears to us, has some redeeming features in it, if only we can look at the motives and intellectual conditions which originated it. Behind the scenes in the political and moral corruption of the times, this philosophy has a beautiful obverse side, as a despairing attempt of the human mind to reach some ideal which would compensate the consciousness of a fallen nature with the possibilities of a higher life. No man could enter into public affairs without compromising his integrity, and private life was little better. Action of almost every kind was only so much homage paid to selfishness, cruelty, and dishonesty. The better spirits of the age found their escape from this only in a life of contemplation, and their philosophy came out as a personification of their mental experience. It was poetry and mythology in the garb of science, but presented to an age which had been disenchanted of its illusions and which had lost its faith in the earlier impulses of Greek thought. It took the creations of the imagination, however, too seriously, as containing the highest hopes of speculation. Plato knew well how to handle the Myth for what it was worth, but an age less trained by personal contact with philosophic scepticism, as it appeared in Protagoras and his school, could not distinguish between a beautiful ideal and a scientific fact. Yet, after the worst has been said, the influence of that spirit has given color to all subsequent history, whether for good or for evil. Christianity took it up, and if we could estimate the force of the ideal upon human character, if we could at this date fully realize what it was from which early Christianity, with all its philosophic affiliations, had saved the world, our appreciation of Neo-Platonic and Alexandrian attempts at philosophy would be more generous, although this feeling would not necessitate any abatement of our criticism upon its unscientific character.

All this it would have been well for our author to have brought out. It is a defect that he has not done so, for he might thus have given some life to what must otherwise be regarded as a kind of intellectual charnel-house, where those in search of living interests will seek in vain. The permanent significance of Philo's thought is what students and scholars want, and much less the mere narrative of it, as if it were a translation.

The Evolution of the Chinese Language. By Joseph Edkins, D.D. London: Trübner & Co.

THIS essay, which is reprinted from the Journal of the Peking Oriental Society, is designed to show that the Chinese language is "the equivalent of the primeval language, forming with that language a consolidated unity" (p. v). The subject is an abstruse one, and we confess to a difficulty in following the method adopted by the author in its elucidation.

If, in the earliest ages, the philology of (now) separated families "is fused in one general philology," which the author regards as unity, are we to assume that before the separation "which soon followed" (p. vii), there existed a developed speech common to that one primeval family, confined within a defined territorial centre? We think such a supposition untenable, because it is natural to suppose that every member of the family would coin words for the use of his own household (so to speak), independent of the other members of the family. There would be doubtless certain words common to the whole undivided race, especially such words as relate to food, and perhaps conspicuous natural objects; but as to a philology, or any regular grammatical construction of language based on one common and generally accepted system, we doubt the possibility of such an assumption. The formation of different rules and modes of speech, and the invention of words among the individual sections of the "one family," we should argue, prepared the way for and led to ultimate separation, and this disintegrating process was going on from the very first.

Then, again, if language is a physical science, it must depend on physical causes; and such causes would be found in personal peculiarities, leading to family differences of utterance, and these differences would be perpetuated in such families, causing, from the very first, a serious disturbance in the supposed unity of language. We might take as an example, perhaps, a very primitive sound-word denoting "a star." This object would be one of the first to attract observation, and we will assume that the primitive word to denote this object was derived from the ground root "tr," which, according to Dean Byrne ('Origin of Greek and Gothic Roots,' p. 241), "denotes a current of breath over the vibrating tongue, imitating a quivering sound"; as such it would denote the quivering, or tingling, light of the stars, and would form a word like "tar." Now let us suppose a physical defect of utterance in an early generation of some particular family of mankind, a defect like stammering: the word "tar" would then become "star," a word now common in most Western languages. There are other physical defects we might name which would cause early variations of utterance and militate against any unity of long duration.

But, passing on, we observe that Dr. Edkins traces the earliest formation of words to the visible use of labials and the employment of the hand. Undoubtedly the hand, as an index of the working of mind, has an immense influence in the production of language. Even in our day, we are told that some speakers, if their hands were tied down, would be unable to form a sentence of sustained speech. And this reminds us irresistibly of the comical account given by MM. Huc and Gabet of the donkey that was braying all night to their annoyance. The remedy suggested, and successfully used, was simply tying a heavy stone to the tail of the animal: there was no more braying. And so in the human subject, the free use of the hands, either as imitative of objects, suggesting words, or as sympathetic with the movements of the mind, directly creating words—such use of the hands is eminently a word-making power.

With respect to the labial letters being the first used and so standing at the outside door of recognized language, we do not doubt the large use of labials in the formation of a very numerous class of words, especially such words as relate to food and eating. Byrne gives a long list of such words derived from the ground roots, *mn*, *ms*, *mt*, *m*; and, in fact, we may all see this natural expression of mind in the movements of a child's lips when asking for food. But we doubt if the labials in any way led to the evolution of dentals, or palatals, or gutturals; these would seem to be synchronous with the earliest labials, having a ground meaning (*Grund-bedeutung*) in common with the rest. Mr. Davies, in his 'Celtic Researches,' has well explained this matter. He says:

"We have an original propensity born with us to express and communicate certain perceptions or ideas by appropriate sounds; such perceptions and sounds have therefore a natural relationship. Thus, E, I, B, L, N cannot express a thundering crash or shock, as R, G, S, T can. Certain actions spontaneously generate fixed sounds: catching at, or touching, an object is denoted by the sound C or K, hugging by G, pushing by P, tugging by T, and so on."

And then the same writer goes on to speak of the story about Psammetichus and the two children he shut up, to find out from their first utterances the original language, concluding that the Phrygian was that language because they first used the word *Bek*, the Phrygian for "bread." Dr. Edkins, on p. 10 of his Essay, has also the remark that "to some extent the sounds first learned by children may be taken to be an index to the sounds first used by man in primitive language." But, as we said before, there seems to be no reason to suppose that such utterances would be confined to the labial letters.

With respect to the immediate argument, as to "the evolution of Chinese," we have nothing to add to the foregoing general remarks. The learning of Dr. Edkins is undoubted, and in this essay he quite equals, if not surpasses, himself, as we judge of him from his former philological and historical works.

The Modern Chess Instructor. By W. Steinitz. Vol. I. G. P. Putnam's Sons.

THE latest book on chess by one of the greatest of living masters is a matter of interest to a large number of people all over the world. The number of chess enthusiasts—of those who practically devote their lives to the game—is, of course, limited, but such a book as this attracts many readers not sufficiently gifted to become masters, but who have at some time in their lives yielded to the strange fascination of the game. The present volume deals with some of the well-known openings, which are illustrated by a most interesting collection of more or less historic games; and the analysis of the many variations is worthy of all praise. To show the thoroughness of this analysis, it is, perhaps, sufficient to say that it covers forty-two variations of the Ruy Lopez opening, and fifty-four of the Scotch gambit, and that many of the variations are carried out to the 13th or 14th move on each side. Moreover, a flood of light is thrown on the illustrative games by a profusion of critical notes which cannot fail to interest the student. It is to be presumed that in his second volume Mr. Steinitz will deal with the remainder of the recognized openings, otherwise this volume, good as it is, must be regarded as a fragment.

Mr. Steinitz calls attention to the fact that many celebrated men have been good players, but he fails to explain—what to non-players is always a mystery—the peculiar charm that attracted these great men to the game. Perhaps this cannot easily be done. True, it has lately been held that the fame of a great chess-player is better established and less liable to suffer from the withering effects of time than other kinds of fame. And it is probable that Captain Evans, who invented the Evans gambit, will be remembered longer than any other Captain Evans in the British service. It may be that Buckle's games of chess will still be studied when the 'History of Civilization' is permanently out of print; and, without exaggeration, one might go further and say that, thirty years ago, when Morphy was overthrowing all the great European players, he was generally regarded as the most wonderful product of this country. And yet it is an open question whether the great master gets more satisfaction out of his game than the humble amateur. In any case the latter can take comfort in the fact that, whereas it is undoubtedly true that certain great men were good chess-players, it is equally true that the majority of great chess-players are absolutely incapable of first-class mental work in any other direction.

Mr. Steinitz holds that if two fine players make no blunders, their games will invariably be drawn; and the truth of this opinion is to some extent born out by the result of the last American Congress. But surely this is rather a tournament prize-winning view of the game, eliminating the brilliant possibilities of play like Morphy's, and overlooking the fact, to which he elsewhere calls attention, that the combinations of the chess-board are as infinite as those of the piano. After all, perhaps the most striking point developed by this latest treatise is the slow growth of the game in the last two or three centuries; for, in spite of all that the modern school claims to have accomplished in extending the analysis of the openings, there is still room for infinite extension, and Mr. Steinitz is frank enough to point out that modern masters occasionally make extraordinary blunders in important games.

Watts's Dictionary of Chemistry. Revised and Entirely Rewritten by H. Forster Morley and H. M. Pattison Muir. In four volumes. Vols. I. and II. Longmans, Green & Co. 1888-89.

A CHEMICAL dictionary is to a certain extent a confession of imperfect knowledge, since it is an attempt to escape from the difficulty of forming a strictly scientific system of classification. The number of such works, English, French, and German, is a sufficient evidence of the greater convenience of the unscientific method of treating the subject. Watts's well-known work first appeared some twenty-five years since, and met with a cordial reception. Several supplements appeared later, vainly striving to keep up with the progress of the science. The new work is to embrace four volumes, and will not contain Technical Chemistry, which is to be treated in a separate volume by Prof. Thorpe. Prof. Muir has charge of Inorganic, and Prof. Morley of Organic, Chemistry, but there are many contributors—English, American, and foreign—and in the list of these we notice several distinguished names. The work cannot be considered as a new edition of that of Watts, whose name, however, it bears, but as a new work, and one involving immense labor. Each editor furnishes an introduction to his special part, containing necessary explanations of his own plan.

In Inorganic Chemistry the arrangement is perhaps the best which could be chosen. The

description of each element is followed by accounts of its binary and doubly binary compounds, chlorides, oxides, oxychlorides, etc.; but cyanides are placed in one class. There is also for each group—oxides, chlorides, etc.—a general article which greatly facilitates comparisons. Carbonates, nitrates, and other salts are treated in special articles, and not under the metal which they contain. In the Organic part of the work a number of changes are introduced which it is not necessary to specify here. The special articles are usually very brief, various contractions being employed. When it is remembered that the Annual Reports of the German Chemical Society alone now occupy four large octavo volumes, and that by far the greater part of the work is taken up with organic chemistry, some idea may be formed of the rate at which this branch of science advances, and of the difficulty of keeping pace with it in a work the publication of which must extend through several years at least. The progress of inorganic chemistry has been far less rapid, and our present knowledge of many elements is still very imperfect. With many shortcomings, the work is one of great value for reference even to those who, like the great majority of American chemists, are familiar with the German and French languages. The articles naturally vary much in authority. Of special interest we may cite those of E. Ray Lankester on Bacteria, of Lothar Meyer on Allotropy, of Wilhelm Ostwald on Affinity, of Muir on Chemical Classification and Atomic Weights; and of J. J. Thomson on Chemical Equilibrium; but there are others which would deserve mention in a longer notice. It is perhaps not quite fair to compare the work with the much longer and more elaborate dictionaries, as for example with the 'Handwörterbuch der Chemie,' the second edition of which, begun in 1871, "still drags its slow length along"—the fifth volume being not yet complete, while the first is antiquated. But so far as the longer articles are concerned, the English work holds its own. Some omissions will excite the surprise of chemists. Thus, Blomstrand's beautiful theory of the metalamines now generally adopted is not noticed, while a far less simple view is brought forward. But due allowance must be made for differences of opinion on theoretical points. Judging the work by the volumes which have appeared, we can fairly assign to it a high rank and predict for it a cordial reception and a very wide field of usefulness.

Faust: A Tragedy by Goethe. The Second Part. Translated in Verse, with Introduction and Notes. By J. A. Birds. Longmans, Green & Co. 1889.

THE first volume of Mr. Birds's translation of 'Faust' appeared in 1880, and contained in its Preface a somewhat fervid defence of the proposition that blank verse is the true vehicle for an English version of 'Faust.' "Blank verse," he wrote, "appears to me to be the practicable mean between prose and an imitation of the original metres, both of which, though from opposite causes, are inadequate instruments to reproduce the poetry. A translation in prose does not allow full scope to the powers of the language; while one in the original, perhaps in any rhymed, metres exceeds them." Though a little sceptical, we listened to this argumentation in a docile and expectant spirit, thinking that now, perhaps, the circle was really about to be squared. It was, therefore, no slight shock that we felt upon discovering that Mr. Birds's first plunge into his "practicable mean" had resulted in this:

"Philosophy, ah! and Law, and Medicine,
And, woe is me! Theology also,
Now have I studied through with burning zeal.
And here I stick at last, poor fool! and am
Wise as I was before."

This seemed to us decidedly *too* blank even for Goethe's doggerel. Still, remembering that "Aller Anfang ist schwer," we repressed our doubt as to whether Mr. Birds's chosen metre would really have a fair chance in his hands, and read on; and justice compels us to say that we found no other passage quite so suggestive of riding over a corduroy road. In fact, as academic blank verse runs, the product seemed to be pretty good. Nevertheless, as we continued to read and compare his versions with those of Taylor and Miss Swanwick, our verdict became more and more unfavorable to his dogma. It is true that Taylor was often led by the exigencies of metre to do more or less violence to what may be called English poetic idiom; but it is no less true that, taken as a whole, his translation comes much nearer to reproducing the spirit of 'Faust' than does Mr. Birds's blank verse.

And if the impression left by Mr. Birds's work upon the dialogue was to the effect that his translation was without excuse, this impression was only confirmed by his rendering of the lyrical passages, in which, as a rule, he was clearly inferior to Taylor. Take, for comparison, the latter's rendering of Gabriel's chant in the Prologue:

"And swift, and swift beyond conceiving,
The splendor of the world goes round,
Day's Eden-brightness still relieving
The awful Night's intense profound;
The ocean-tides in foam are breaking,
Against the rocks' deep bases hurled,
And both, the spheric race partaking,
Eternal, swift, are onward whirled."

This is musical, idiomatic, and faithful, and reproduces very fully the peculiar sublimity of the original—that which Shelley, in a foot-note to his own luckless attempt at a translation, called "the volatile strength and delicacy of the ideas." An occasional triumph of this sort in Taylor's version tells us plainly enough what the right translation of 'Faust' *would* be if we could only get it. How, then, with such lines before him, could Mr. Birds content himself with this:

"And swift, and swifter than our sense
Revolveth earth's magnificence;
Exchanging Paradise's light
For the profound and dreadful night;
Foameth the sea in whit'ning waves
Along the rock-built mountain base;
And rock and sea are whirled away
Amid the spheres' eternal race."

In the second volume of his translation, which has lately come to hand, Mr. Birds seems to have abandoned his blank-verse theory entirely; at least he does not make use of that metre. The rhythms employed by him in the Second Part are substantially those of the original, save that Goethe's feminine rhymes are very often replaced by masculine ones. These rhymes, so numerous and natural in German, are the great *crux* of the metrical translator. Taylor usually made it a matter of conscience to keep them, and in so doing was driven to all sorts of shifts. Take, for example, these lines from the beautiful *terza rima* passage at the beginning of Part II.:

"Du, Erde, warst auch diese Nacht beständig,
Und athmest neu erquickt zu meinen Füssen,
Beginnest schon mit Lust mich zu umgeben,
Und regst und rührst ein kräftiges Beschliessen
Zum höchsten Dasein immer fort zu streben."

Taylor's version is:

"This night, thou Earth! hast also stood unshaken,
And now thou breathest new-refreshed before me,
And now beginnest, all thy gladness granting,
A vigorous resolution to restore me
To seek that highest life for which I'm panting."

One who can read the German feels how it suffers through the translator's "padding"; and one who cannot must find the English poetically awkward. More natural, at any rate, though it sacrifices the Dante cadence, is Mr. Birds's rendering:

"Thou, Earth, on this night too hast steadfast been,
And breath'st again new-quickened at my feet,
Beginn'st again to make my joy revive,
And strong resolve inflam'st, with noble heat,
After the highest evermore to strive."

In this change, however, he had been anticipated by Miss Swanwick, whose rendering is at least not inferior to his:

"Thou, Earth, this night wast also constant found,
And, newly quickened, breathing at my feet,
Beginnest now to gird me with delight;
A strong resolve dost rouse, with noble heat
Aye to press on to being's sovereign height."

The effect of Mr. Birds's translation of the Second Part is in the main pleasing; it is much more satisfactory than his first volume; indeed, if it stood alone, we should think it worthy of high praise. But it does not stand alone, and, after a careful comparison of many passages both easy and difficult, we have not found one in which he has clearly improved upon both Taylor and Miss Swanwick, whereas he is often inferior to one or both of them. The second volume, like the first, has upwards of a hundred pages of notes which, however, do not take the interpretation of 'Faust' appreciably beyond where Taylor left it. Recent German scholarship is ignored.

Libraries appraised. Libraries and small collections of books purchased.

Roberts Brothers' New Books.

LOUISA M. ALCOTT, HER LIFE, LETTERS, AND JOURNAL.

Edited by Ednah D. Cheney. With portraits and view of the Alcott Home in Concord. One volume, 16mo. Uniform with 'Little Women.' Price, $1.50.

It is edited by Mrs. Ednah D. Cheney, a very intimate friend of Miss Alcott's, from her journals and letters, and gives a close and valuable view of a life that was dear to thousands of admirers.

LULU'S LIBRARY. By Louisa M. Alcott, Volume III. Contains 'Recollections of My Childhood,' written by Miss Alcott shortly before her death. 16mo, cloth, $1.00.

A FEW MORE VERSES. By Susan Coolidge. 1 vol., 16mo, cloth, $1.00.

JUST SIXTEEN. A new volume of stories. By Susan Coolidge. Square 16mo, cloth, uniform with 'What Katy Did,' 'A Little Country Girl,' etc., $1.25.

THE KINGDOM OF COINS. A Tale for Children of All Ages. By John Bradley Gilman. "I pray thee tell me . . . didst never travel in thy sleep?" Illustrated by F. T. Merrill. Small 4to, illuminated board covers, 60 cents.

GRANDMA'S RHYMES AND CHIMES for Children. A Selection of New Nursery Poems by the most popular American Authors. An illustrated quarto volume, illuminated board covers, $1.50; cloth, gilt, $2.00.

Sold by all Booksellers. Mailed, postpaid, on receipt of price, by the publishers.

ROBERTS BROTHERS,
BOSTON.

FIRST EDITIONS FOR SALE.

1. *Ptolemy's* Τετράβιβλος *and* Καρπός. Latin translation. Venice, Ratdolt, 1484.
2. *Philidor's Chess Analyzed.* London, 1750. (Darwin's copy.)
3. *Hours of Idleness.* Byron's. Newark, 1807.

The highest bidder can obtain each or all on Nov. 1, 1889. Address BIBLIO, *Nation*, New York.

Houghton, Mifflin & Co.'s SATURDAY BOOKS.

The Autocrat of the Breakfast Table.

By Oliver Wendell Holmes. A New Edition from new plates, with engraved title-pages from designs by Mrs. Henry Whitman. 2 vols. 16mo, carefully printed and tastefully bound, gilt top, $2.50.

This edition of Dr. Holmes's most famous book has been prepared with the utmost care to meet the demand for so delightful a work in an attractive style suited to its classic merits.

The Church in Modern Society.

By Rev. Julius H. Ward. 16mo, $1.00.

In this book, Mr. Ward, who has given much study to religious and social questions, shows the part which the Christian Church has had in the development of the institutions of society, the position it now occupies, and the work that lies before it, if it is to control the social factors of modern life.

Memoirs of a Millionaire.

A Novel. By Lucia True Ames. 16mo, $1.25.

Miss Ames's novel will in some respects appeal to the same persons who have been deeply impressed by 'Looking Backward.' It emphasizes the responsibilities of large wealth, and indicates how it may be most wisely used, yet is none the less a very readable story, abounding in noble suggestions and presenting beautiful ideals.

Atlantic Index.

An Index to *The Atlantic Monthly*, Volumes I.–LXII. (1857–1888.) 8vo, $3.00.

A full index to all the articles and writers, with their several contributions, in *The Atlantic Monthly* from its beginning to the present year.

Thackeray's Works.

Illustrated Library Edition. In twenty-two volumes. Volumes XIX., XX. Christmas Stories, and Roundabout Papers. 2 vols. crown 8vo, gilt top, $1.50 each.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the publishers.*

WHAT TO DO WITH THE NEGRO?
NOW READY.

An Appeal to Pharaoh

A Radical Solution of the Negro Problem.

"An audacious, ingenious volume. . . . It will provoke thought."—*Boston Traveller.*

"The idea is absurd."—*Chicago Inter-Ocean.*

"The most remarkable contribution that has been made to the discussion of the subject to which it relates. . . . Evidently the work of a careful and intelligent student of the lessons of history and of the signs of the times."—*Charleston (S. C.) News and Courier.*

*** Cloth, One Dollar. At all Bookstores.

FORDS, HOWARD & HULBERT,
PUBLISHERS, 30 LAFAYETTE PLACE, NEW YORK.

Wreck of the Greyhound.

Illustrated by M. Johnson. 12mo, 446 pp. Price $1.50.

It is the story of a home-bound Indiaman, in which an English Ambassador and his daughter embarked and were wrecked. All but Bob Howland and the passengers were swept overboard. Bob escaped on a raft, leaving the others to perish in the water-logged cabin. Lawrence saved the Earl and Lady Seymour on surf boards. He won the fair lady's love and was knighted by the Queen.

"Dr. Newell is an old sailor, and his descriptions of sea life are as vivid and accurate as any that can be found in American literature."—*Boston Transcript.*

"The author is the most graceful writer of his class, and he has written nothing better than these stories of sailor-love and sailor hardships."—*Rochester Herald.*

"From a literary standpoint they are the best stories of life at sea ever published."—*Chicago Inter-Ocean.*

PUBLISHED BY
DEWOLFE, FISKE & CO., Boston.

DR. BRIGGS' NEW BOOK.

"The theological book of the year."—*N. Y. Mail and Express.*

WHITHER?

A Theological Question for the Times. By Charles Augustus Briggs, D.D. 8vo, $1.75.

While the book is loyal to Presbyterianism, it is also grandly catholic. It is as invigorating as the best of tonics, and is as optimistic as Christian hope itself.

"A remarkable work."—*N. Y. Evening Post.*

"It is a notable contribution to the religious literature of our time, and can hardly fail to produce a great effect."—*The Examiner.*

"Plain, candid, and direct."—*N. Y. Journal of Commerce.*

"It should have a place in every theological library."—*Boston Gazette.*

DONALD G. MITCHELL'S NEW BOOK.

English Lands, Letters, and Kings.

From Celt to Tudor. By Donald G. Mitchell. 12mo, $1.50.

Mr. Mitchell's new book is a combined chronicle and commentary, treating of English letters, the chief figures therein, the places associated with these—towns, castles, taverns, universities, their birthplaces, haunts, and the various scenes through which they passed—and also of the succession of Monarchs the annals of whose reigns make up the history of the time.

LESTER WALLACK'S

Memories of Fifty Years.

With an introduction by Laurence Hutton. With numerous portraits, views, facsimile reproductions, etc. Popular edition, 12mo, $1.50.

"A volume of reminiscences singularly rich in entertainment."—*Boston Advertiser.*

*** *The limited large-paper edition of 500 copies of this book was entirely sold within ten days of the date of publication.*

A COLLECTION OF

Letters of Dickens.

1833-1870. 16mo, $1.25.

This collection of letters of the immortal author of 'Pickwick' and 'David Copperfield' is compiled from already published materials, and is issued in a uniform style, both in binding and in presswork, with the popular edition of the 'Collection of Letters of Thackeray.' The two volumes contain the brightest and most characteristic letters of the two great novelists, and will make a popular gift set for the holiday season.

Personally Conducted.

By Frank R. Stockton. With 46 Illustrations by Joseph Pennell, Alfred Parsons, and others. Square 8vo, $2.00.

A fascinating volume of travel by the famous story-teller, the chapters being a series of pleasant, informal talks with an imaginary party of young people to whom the author is showing the curious and interesting sights of the old world—a fancy that Mr. Stockton works out with his customary ingenuity and cleverness. The illustrations give the book a high artistic quality and make it a volume admirably suited for a holiday gift.

CHARLES SCRIBNER'S SONS,
743-745 Broadway, New York.

The Nation

VOL. XLIX.—NO. 1268. THURSDAY, OCTOBER 17, 1889. PRICE 10 CENTS.

HARPER & BROTHERS' NEW BOOKS.

"The Quiet Life."

Certain Verses by Various Hands: the Motive set forth in a Prologue and Epilogue by Austin Dobson; the whole Adorned with Numerous Drawings by Edwin A. Abbey and Alfred Parsons. 4to, Leather, Ornamental Gilt Edges, $7.50. (*In a Box*).

It is one of the books which a beholder would much like to give to a friend, but like more to keep for himself.—*N. Y. Herald.*

OTHER WORKS ILLUSTRATED by Edwin A. Abbey alone, or in coöperation, with Alfred Parsons or G. H. Boughton, comprise OLD SONGS, with Drawings by Abbey and Parsons, 4to, Leather, Ornamental, Gilt Edges, $7.50 (*in a Box*); SHE STOOPS TO CONQUER, with Drawings by Abbey and Parsons, Folio, Leather, Illuminated, Gilt Edges, $20.00 (*in a Box*); SELECTIONS FROM THE POEMS OF ROBERT HERRICK, with Drawings by Abbey, 4to, Cloth, Illuminated, Gilt Edges, $7.50 (*in a Box*); and SKETCHING RAMBLES IN HOLLAND, by G. H. Boughton, A.R.A., illustrated by the author and Abbey, 8vo, Cloth, Extra, $5.00 (Gilt Edges, $5.25).

Bancroft's Martin Van Buren.

Martin Van Buren to the End of His Public Career. By George Bancroft. Crown 8vo, Cloth, Gilt Top, Uncut Edges, $1.50.

The manuscript was seen by Van Buren, who pronounced it, as a record of facts relating to himself, authentic and true. At the time of its preparation the public mind was grievously agitated by party divisions on public affairs and on public men; the manuscript was therefore put aside for publication in times more favorable to a fairness of judgment on the character and career of Van Buren. In my recent revision of the original manuscript I have made no change that could affect Van Buren's approval of it as thoroughly correct.—*From Mr. Bancroft's Preface, bearing date September 2, 1889.*

The Kansas Crusade.

A History of the Kansas Crusade: Its Friends and Its Foes. By Eli Thayer. With an Introduction by the Rev. Edward Everett Hale. 12mo, Cloth, $1.50.

We are glad that the story of "The Kansas Crusade" has at last been told by Mr. Eli Thayer, who, more than any other man, should be credited with the organization of the movement which made a free State of a Territory supposed to be irrevocably condemned to slavery.—*N. Y. Sun.*

Curtis on the Constitution.

A volume on "Constitutional History of the United States," By George Ticknor Curtis. 8vo, Cloth, Gilt Top, Uncut Edges, $3.00.

This is a new and carefully revised edition of Mr. Curtis's earlier "History of the Origin, Formation, and Adoption of the Constitution of the United States, with Notices of its Principal Framers," which, though published thirty years ago, remains to-day the established authority on the subject.

Man and his Maladies.

Man and his Maladies; or, The Way to Health. A Popular Hand-book of Physiology and Domestic Medicine in Accord with the Advance in Medical Science. By A. E. Bridger, B. A., M.D., B.Sc., F.R.C.P.E. 12mo, Cloth, $2.00.

We have no hesitancy in calling attention to the marked excellence of the work, and how by the reading of it many of us (stupid people who are past the meridian of life) may be corrected of our every-day follies by following certain easy directions which the author lays down.—*N. Y. Times.*

Rolfe's Wordsworth.

Select Poems of William Wordsworth. Edited, with Notes, by William J. Rolfe, A.M., Litt.D. Illustrated. Square 16mo, Paper, 40 cents; Flexible Cloth, 56 cents, Uniform with *Rolfe's English Classics.*

The editor has done his work with characteristic thoroughness. The notes, introduction, and other elucidatory matter leave nothing to be desired, and the volume is well illustrated by engravings of scenes in the Lake Country. The selections are made with unfailing taste and judgment.—*N. Y. Tribune.*

CHITA: A Memory of Last Island. By Lafcadio Hearn.

Post 8vo, Cloth, Extra, $1.00.

CITY LEGENDS. By Will Carleton. Illustrated. Square

8vo, Cloth, Ornamental, $2.00; Gilt Edges, $2.50; Full Seal, $4.00. Uniform in style and price with Will Carleton's other works: "City Ballads," "Farm Festivals," "Farm Legends," and "Farm Ballads."

SUMMER HOLIDAYS. Travelling Notes in Europe.

By Theodore Child. Post 8vo, Cloth, Extra, $1.25.

THE FRANKLIN SQUARE SONG COLLECTION,

No. 6. Two Hundred Songs and Hymns for Schools and Homes, Nursery and Fireside. Selected by J. P. McCaskey. Royal 8vo, Paper, 50 cents; Boards, 60 cents; Cloth, $1.00. Uniform in size and price with the *Franklin Square Song Collection*, Nos. 1, 2, 3, 4, and 5.

CHILDREN OF GIBEON. By Walter Besant. 12mo,

Cloth, $1.25.

Walter Besant's Novels now issued in uniform Library form comprise:
FOR FAITH AND FREEDOM. Illustrated.—ALL SORTS AND CONDITIONS OF MEN. Illustrated.—THE WORLD WENT VERY WELL THEN Illustrated.—CHILDREN OF GIBEON. 12mo, Cloth, $1.25 per volume.

Public Library

BOOKS FOR CHILDREN.

A SPECIAL

Tariff-Reform Number

OF THE

WEEKLY POST

Is issued this week (October 17). It contains a list of more than one hundred clubs that are now active in the field, together with the names of their officers, and a brief mention of what each organization has recently accomplished.

Also, a review of the agitation for reform since President Cleveland's message upon the subject in 1887, and various other matters of interest to all who wish to keep abreast of the movement.

Price 3 cents per copy. Address

THE WEEKLY POST, NEW YORK.

METZEROTT, SHOEMAKER.

Anarchy in Chicago—Communism in Paris—Socialism in London and Germany—Nationalism in Boston! The air is full of germs of new thought, which the people are consciously or unconsciously drinking in.

Metzerott, Shoemaker, is a novel written in an unpretentious style, with a masterly blending of pathos and humor, with an extraordinary galaxy of interesting characters, with a rapid movement and dramatic climaxes. A notable work of fiction, yet a wise and intelligent presentation of a practical and practicable phase of *Christian Socialism*.

Absolutely free from cant, it is radical, yet religious and wholesome. A GREAT NOVEL. 12mo. $1.50.

AD LUCEM. A dainty little volume compiled by Miss Mary Lloyd, containing brief selections in prose and verse from St. Augustine, St. Chrysostom, Jeremy Taylor, Luther, Wordsworth, Clough, Longfellow, and others, for the consolation of the "afflicted or distressed in mind, body, or estate." 18mo. Parti-colored cloth. $1.00.

Recent Publications.

War and Peace, 2 vols., 12mo	$3 00
A History of France, by Victor Duruy, 12mo	2 00
Convenient Houses, with 50 Plans for the Housekeeper, 8vo	2 50
Rolf and his Friends, 12mo	1 25

Impressions of Russia, 12mo	1 25

T. Y. CROWELL & CO.,

13 Astor Place, New York.

Wreck of the Greyhound.

Illustrated by M. Johnson. 12mo, 446 pp. Price $1.50.

It is the story of a home-bound Indiaman, in which an English ambassador and his daughter embarked and were wrecked. All but Bob Howland and the passengers were swept overboard. Bob escaped on a raft, leaving the others to perish in the water-logged cabin. Lawrence saved the Earl and Lady Seymour on surf boards. He won the fair lady's love and was knighted by the Queen.

"Dr. Newell is an old sailor, and his descriptions of sea life are as vivid and accurate as any that can be found in American literature."—*Boston Transcript.*

"The author is the most graceful writer of his class, and he has written nothing better than these stories of sailor-love and sailor hardships."—*Rochester Herald.*

"From a literary standpoint they are the best stories of life at sea ever published."—*Chicago Inter-Ocean.*

PUBLISHED BY

DEWOLFE, FISKE & CO., Boston.

CATALOGUE NO. 29, NEARLY ready, will contain a great deal out of the common, in a variety of lines. Box-office now open. A. S. CLARK, Bookseller, 34 Park Row, New York City.

To All Who May Be Interested

IN THE

REFORM

OF

THE TARIFF.

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff, and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a blank form for filling in the desired information.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

THE WEEKLY POST,

NEW YORK.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.,

PUBLISH THIS WEEK:

I. TO THE LIONS.

A story of the Persecution of the Christians under the early Roman Empire. By Prof. Alfred Church. 12mo, illustrated. $1.25. Uniform with this volume by the same author

1. THREE GREEK CHILDREN. Illustrated. $1.25.

"Let the children who are beginning the study of Grecian history be given this delightful book."—*N. Y. Evangelist.*

2. THE COUNT OF THE SAXON SHORE. 12mo, illustrated. $1.50.

*** "A pleasing blending of history and romance, and its historical setting has been most skilfully done."—*Christian Register.*

II. THE STORY OF BOSTON.

By Arthur Gilman, author of 'The Story of Rome,' 'The Story of the Saracens,' etc., etc. Being Volume III. in the series 'Great Cities of the Republic,' octavo, with illustrations and maps, $1.75.

PREVIOUSLY PUBLISHED IN THIS SERIES:

1. THE STORY OF THE CITY OF NEW YORK, By Charles Burr Todd. With illustrations and maps, $1.75.

"Mr. Todd has managed his material with much skill, and he succeeds excellently in putting before the reader very striking pen-pictures of the different plans of civic development. The book is pleasantly written, and we have found it very readable."—*Philadelphia Telegraph.*

2. THE STORY OF WASHINGTON. By Charles Burr Todd. Illustrated. $1.75.

"The text is admirably written, and the history interspersed with historical incidents that make every page interesting."—*Inter-Ocean.*

III. MITO YASHIKI.

A Tale of Old Japan. By Arthur Collins Maclay, author of 'A Budget of Letters from Japan." 12mo, cloth extra, $1.50.

IV. THE WRITINGS OF GEORGE WASHINGTON. Including his Diaries and Correspondence. Edited by Worthington C. Ford.

*** The edition will be completed in fourteen royal octavo volumes, handsomely printed from type, uniform with Bigelow's edition of Franklin's Works. But 750 sets will be printed from type, the larger portion of which are already subscribed for. Those desiring sets should enter their names at once. Vols. I. to IV. now ready. Price per volume $5.00.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.

NO. 59 WALL STREET, NEW YORK.

GRIGGS'S Philosophical Classics,

Issued under the supervision of Prof. G. S. Morris.

Devoted to a Critical Exposition of the Masterpieces of German Thought.

LEIBNIZ'S NEW ESSAYS CONCERNING THE HUMAN UNDERSTANDING. A critical exposition. By Prof. John Dewey, Ph.D., of the University of Michigan. 16mo, 289 pages, price $1.25. Being Vol. VII. in the series.

"Prof. Dewey's book is an able exposition of the thought of Leibniz, broad and generous in view, and scholarly in method. The volume is eminently worthy in association with the others of the series; and the series, as a whole, the best compendium—as far as it goes—of German philosophic thought to be found in the English tongue."—*Chicago Times.*

HEGEL'S PHILOSOPHY OF THE STATE AND OF HISTORY. By Prof. George S. Morris, Ph.D., of the University of Michigan. 320 pages, 16mo, cloth, $1.25.

"Not only students of philosophy, but many others who consider themselves more practical, have reason to thank Prof. Morris for his excellent and painstaking work."—*Saturday Review, London, Eng.*

HEGEL'S ÆSTHETICS. By Prof. J. S. Kedney, S.T.D., of Seabury Divinity School. $1.25.

"It contains the whole essence of the *Æsthetik* in simple and compact form, illustrated by thoughtful, able, and invariably illuminating and judicious comments."—*Boston Saturday Evening Gazette.*

SCHELLING'S TRANSCENDENTAL IDEALISM. By Prof. John Watson, LL.D., of Queen's University. $1.25.

"The studious and intelligent reader of Prof. Watson's well digested and very able treatise will derive therefrom a clearer and more adequate idea of Schelling's philosophy than he could hope to obtain from an unassisted study from the original."—*North American, Philadelphia.*

FICHTE'S SCIENCE OF KNOWLEDGE. By Prof. C. C. Everett, D.D., of Harvard University. $1.25.

"The interpretation is concise, easy of comprehension, and wonderfully true to the spirit and thought of Fichte. Work of this kind could not be better done."—*The Critic.*

KANT'S ETHICS. A critical exposition by ex-Pres. Noah Porter, D.D., LL.D., of Yale College. $1.25.

"It is perhaps the most systematic criticism of the 'Ethics' in the English language."—*The Allgemeine Zeitung, Munich.*

KANT'S CRITIQUE OF PURE REASON. By Prof. G. S. Morris, Ph.D., late of the University of Michigan. $1.25.

"A book like this is almost indispensable to the average student of Kant."—*The Nation.*

THE VALUE OF THE SERIES.

"'Griggs's Philosophical Series' is the most valuable philosophical publication for popular purposes which has appeared in this country. It is not a mere translation or republication of the great German masters, but a critical exposition."—*Christian Intelligencer, New York.*

"One of the most valuable literary enterprises of the day. Each volume is a condensed presentation made by an author who combines thorough philosophical study with literary talent, and who has each made a specialty of the philosopher whose work is interpreted."—*Boston Traveller.*

"The most important contribution that has been made to our knowledge of the greatest philosophic movement in the world's history."—*Chicago Tribune.*

"This series of Philosophical Classics, edited by Prof. George S. Morris of Michigan, and published in the enterprising city of Chicago . . . deserves to be much better known than it has hitherto been to students of German Philosophy on this side of the Atlantic. . . . The exposition of the works taken in hand is full and minute."—*Mind, London, England.*

Bound in uniform style, 16mo, price $1.25 per volume, or $8.75 for the set of seven volumes. Sold by booksellers, or sent, postpaid, on receipt of price, by the publishers.

S. C. GRIGGS & CO.,

87 AND 89 WABASH AVE., CHICAGO.

"No biographical work of greater importance and interest has been published in this country in this generation."—HARTFORD COURANT.

WILLIAM LLOYD GARRISON

1805—1879.

THE STORY OF HIS LIFE TOLD BY HIS CHILDREN.

The publishers take pleasure in announcing the completion of this elaborate and important work, of which the first two volumes were issued in 1885. "It is not more the history of a man than of an age," and no library which would include biographies or histories of the first importance, no student of American history and politics, no teacher of morality or religion, no leader of public opinion, can afford not to possess a work which occupies an absolutely unique place in our literature. It is an extraordinarily *condensed narrative of the great anti-slavery movement*, of which Garrison was the founder and moral leader. The authors have devoted nearly ten years to the task of examining and sifting the enormous mass of printed and manuscript material which came into their possession, and to the composition of the work. The volumes are beautifully printed by the De Vinne Press, richly illustrated with portraits of Mr. Garrison and his coadjutors, and made available by an index of unexampled fulness and excellence.

In four volumes, octavo, illustrated.

Prices: Cloth, gilt-top, uncut, $3.00 per volume, $12 for the set; in half-morocco, $18.

"The Life of Garrison should be a part of every library, not alone for its historical value, but for its influence on the youth of the country."—*Public Opinion, Washington, D. C.*

"The Life of William Lloyd Garrison was so inwrought with the history of his times that his biography, as told by his children, is quite as strong on the historic as on the personal side, and, indeed, contains rich stores of hitherto unwritten history."—*Boston Journal.*

"Among the most important, if not itself the most important biography ever issued in America. The work is . . . in the truest sense a history of the emancipation movement in the United States."—*London Daily News.*

PUBLISHED BY

THE CENTURY CO., New York,

and sold by all booksellers.

B. WESTERMANN & CO.,

The Nation.

NEW YORK, THURSDAY, OCTOBER 17, 1889.

The Week.

POOR Tanner has been publicly humiliated again for having followed in the Pension Office the pledges which he and his superior in the White House had made on the stump. Last year Gen. Harrison declared that "this is no time to use the apothecary's scale to measure the rewards of men who saved the country." In accordance with the spirit of this declaration, Tanner was no sooner installed in office than he tossed out of the window "the apothecary's scale" of a law which fixed the rate of many thousands of pensioners at two dollars a month, and doubled the amount by one of his own orders. This order has now been rescinded by the Interior Department, on the ground that "it has neither the color of law nor the authority of precedent." Now, in order to furnish the most conspicuous possible illustration of the fact that "the apothecary's scale" had been discarded, the Corporal had picked out a well-to-do official, Senator Manderson of Nebraska, jumped the rate of his pension up from $15 to $30 per month, and sent him $4,300 back pay. When this outrageous performance was exposed last summer, all hands concerned attempted to brazen it out, Mr. Manderson himself telling an Omaha reporter that it was nobody's business. But the force of public opinion has made itself felt, and both the Interior Department and the Nebraska Senator have been constrained to bow before it. Secretary Noble recently informed Mr. Manderson that "the rerating, having been without application and without medical examination, was not in pursuance of the usual practice, was not in compliance with rule, and was therefore unwarranted"; and the Senator, finding that there was nothing else to do, has returned the rerated certificate and the $4,300, although he does it with ill grace. So far the experiment of running the United States Government on what may be called the hay-scale basis has not been a success.

The full returns of the Indianapolis election show it to have been one of the most gratifying exhibitions of Mugwumpism ever seen in a municipal election. The *Journal*, the President's home organ, next morning after the voting, said that the result was "largely due to Republican apathy and absenteeism from the polls"; but as the total vote was hundreds larger than in the preceding city election, it is evident that what converted a Republican majority of 774 into a Democratic majority of 1,791 was not the absence of Republicans from the polls, but their presence with Democratic ballots, which they cast to rebuke the gang rule of the last two years. Thus does the Mugwump, so often and so ostentatiously buried by such Republican organs as the Indianapolis *Journal*, suddenly reappear, to the confusion of the enemies of good government.

We notice in the *Tribune's* despatches from Washington that the Rev. Dr. Hamlin of the Church of the Covenant in that city announced from the pulpit on Sunday that a gentleman known to be Mr. Halford, the President's private secretary, was about to start "an adult Bible class," and "solicited applications for membership." Mr. Halford, it appears, is himself a "well-known communicant of the church," but he is also the Mr. Elijah Halford who, before taking his present place, was editor of the Indianapolis *Journal*, and in that capacity, on the 13th of October, 1888, wrote, or caused to be written, and printed in his paper an editorial article charging President Cleveland, by innuendo, with accepting "a check for $10,000" as a bribe for allowing Government deposits to be in certain banks, and adding: "Nothing in his [the President's] character or antecedents forbade the supposition that he would accept that favor." Halford now knows that President Harrison is doing the very same thing in the matter of the deposits that President Cleveland did, and must therefore be fully convinced that his charge against Mr. Cleveland was a disgraceful slander, forbidden by the Ninth Commandment. It seems eminently fitting, therefore, that Mr. Halford, before starting his "adult Bible class," and, indeed, in order to fit him to conduct a Bible class at all without gross scandal, should make some apology or atonement for his offence as public as the offence itself. Did he belong to the Catholic Church, we do not believe—we speak under correction—that he would be allowed to set up as a religious teacher of any description without first purifying himself by some sort of recantation or penance. What aggravates his guilt and makes his present situation all the more embarrassing is, that he cited President Cleveland's failure to live up to his "civil-service-reform professions," in support of the charge of "personal dishonesty"—an argument which, if sound, surrounds his own chief with a nimbus which is anything but Biblical. We respectfully ask the Rev. Dr. Hamlin to look into this matter before allowing Mr. Halford to start as a teacher in his church. There is so much religion in this Administration that it is of the last importance that as much of it as comes before the public should be "pure and undefiled."

Neither time nor political mischance has detracted anything from the ability of Senator John Sherman to make the worse appear the better reason. His right hand has not forgot its cunning, nor eke his tongue. He made a speech at Orville, O., on Thursday, in which the tariff naturally formed the *pièce de résistance*. The dangers threatening the industries of the country if any such measure as the Mills bill should become a law, were feelingly depicted. There was nobody present, apparently, to remind Mr. Sherman that he advocated and voted for a bill in 1872 which made larger tariff reductions in the average than the Mills bill proposed. But if the honorable Senator had been reminded of this fact, he would undoubtedly have scuttled away by showing that the particular reductions that he favored in 1872 were different in some respects from those which the Mills bill proposed. The fact that Mills himself was a Southerner, and the leading supporters of the bill Southern Democrats, was used to good effect again, the pertinence of that circumstance to the economic bearings of the measure being perfectly obvious to all. Having shown satisfactorily that it is the tariff that sustains the industries of the country, including agriculture, and keeps the wages of workingmen up to a high level, Mr. Sherman took up the subject of Trusts and combinations, and said that "they have no connection with tariff laws." But he said subsequently: "If such individuals or corporations combine to advance the price of the domestic product and to prevent the free result of open and fair competition, I would without a moment's hesitation reduce the duties on foreign goods competing with them, in order to break down the combination." The Orville speech having been written and printed and sent to the press before it was delivered, what are we to think of these two incongruous statements, first, that Trusts have *no connection* with tariff laws, and second, that if they do combine to take advantage of the tariff, he (Sherman) will vote to reduce the duties? It is all very mysterious, or would be in the case of a speaker of less known dexterity and facility for dodging and doubling and twisting than John Sherman.

When Messrs. Thurber and Plummer were circulating forged and fraudulent extracts from English papers in the last canvass, we did not know that they were copying a greater man than Thurber and at least the equal of Plummer. It appears that it was the first Napoleon who started the dodge of getting sham extracts from English papers for political purposes. He wrote to Fouché August 28, 1804: "The notes you have sent me upon the powerlessness of Russia are written by a man of sense. Publish them in a newspaper as translated from an English paper; *choose the name of one that is little known*" (Lanfrey, ii., 146). How this last touch reminds one of the device of the Home Market Club of Boston in ascribing one of their forged extracts to an English paper entitled the *Iron Era*, which was not only "little known," but did not exist. We are ashamed of Plummer. We had no idea he was a plagiarist.

The *Electrical Engineer* (October number) has an article on the copper tariff in its relation to our export trade in electrical supplies, showing how this industry has been crippled, and in some cases actually transferred to Europe, by our tariff, which enables foreigners to get American copper at lower

rates than our own manufacturers can get it. A case is mentioned where an American manufacturer of insulated copper wire, which he was exporting to foreign markets, observing that the price of copper in the United States was several cents a pound higher than in Europe, concluded that his trade in the American-made wire could not be permanent, because the Europeans would soon imitate his wire and run him out, having their copper cheaper. So he sent machinery over there and started the manufacture in Europe. Then the price of copper in the United States fell to the European price and he sent his machinery back. Then the French copper syndicate collapsed and the European price went down, but the American combination held together and maintained the price here at four to five cents above the foreign. So the machinery was sent over a second time, and is now in operation, and the country has lost whatever advantage it possessed in the manufacture of this wire for export. "A difference," says the *Electrical Engineer*, "in the price of copper between the United States and Europe of 20 per cent. is enough to swallow up all the profit in the export of many electrical supplies, such as insulated wire and cables, while it places American makers of dynamos, and of any other apparatus containing copper or brass, at a decided disadvantage in the markets of the world. The recent drop in the American price improves the situation of manufacturers in the United States; but let us not complacently assume that the copper-miners have experienced religion."

The decision of Judge Day in the Kemmler case, affirming the constitutionality of the Electrical Execution Law, must have been anticipated from the beginning. To set aside a law of the State, passed after more than the usual deliberation, merely because some people think one way and some people think another way, would be a very fantastic method of carrying on a government, and one which the judiciary would not be likely to lend countenance to. That electricity will kill, and kill suddenly, is attested almost daily in our streets. This is a fact which everybody except electrical experts interested in overhead wires understand. Whenever a man is instantly killed in this way, a desperate effort is made to show that the insulation was defective, or that the weather was damp, or that there was a leak somewhere, or that the converter was put in the wrong place. But when it is proposed to apply electricity directly to a murderer under sentence of death, without any insulation at all, and in the most scientific state of dampness, and so that all the leakage shall go into the body of the condemned, and so that the converter shall be in exactly the right place, then learned counsel and learned witnesses come forward by scores to tell us that it is extremely doubtful whether electricity will kill instantly, and so doubtful that we ought to go back to hanging, which, as everybody knows, will kill in the course of one to twenty minutes, according to the state of the machinery in use, the strength of the rope, the skill of the Sheriff, and the state of his nervous system.

The final tests of the Zalinski dynamite guns on board the cruiser *Vesuvius*, which was built for the purpose of carrying them, were remarkably successful, and official word to that effect has been communicated to the Navy Department. It was demonstrated that the three guns, mounted at the bow of the cruiser, were capable of throwing fifteen shells, each carrying 200 pounds of dynamite, a distance of more than a mile within about seventeen minutes. The three guns were tried in succession. The first discharged its five shells in less than five minutes, the second did the same work in about the same time, and the third in a little more than six minutes. As the contract with the Government required a discharge of fifteen shells within thirty minutes, this was giving almost double what was required. There was sufficient air pressure remaining in the guns at the close of the experiments to show them capable of throwing fifteen more shells without replenishing the air reservoirs. Each shell contains 200 pounds of high explosive, and the guns are therefore capable of carrying 6,000 pounds of the most powerful explosive matter a distance of over a mile with no danger of explosion till it reaches its destination. Here is indeed a new and awful terror added to modern warfare.

The *Twentieth Century*, edited by the Rev. Mr. Pentecost, has discovered that Mr. Henry George is not the true inventor of the Single Tax philosophy, but that the credit belongs to the late Patrick Edward Dove, a Scotchman, who published in 1850 a book entitled 'The Theory of Human Progression,' which contains all the leading ideas that are embraced in Mr. George's 'Progress and Poverty,' set out in much the same way. The article in the *Twentieth Century* is headed "A Collapse of Henry George's Pretensions," and is written by J. W. Sullivan. Copious extracts from Mr. Dove's book and from Mr. George's are printed, to show the similarity of views and of forms of stating them. We shall not attempt to pass judgment upon the charge of wholesale plagiarism (for that is what it amounts to) which is thus preferred against the author of 'Progress and Poverty.' It is admitted by Mr. George's accuser that his (George's) style of putting the great truths of the single tax before the world is more captivating than Mr. Dove's, and to this is attributed the fact that while Mr. George's book is to be found everywhere, Mr. Dove's is to be found only in the Astor Library and the Mercantile Library. The obvious suggestion is, that Mr. Dove's book ought to be reprinted at once and put into the Seaside Library.

One reason why Mr. Dove's book produced such barren results, we venture to say, was because there was nothing in it that was of value to the human race, for, however defective his style might be (and it does not strike us as so very bad), if it held the live coal of truth it would have made a blaze before now. The writings of the late Mr. Darwin are certainly not attractive in point of style. Except his 'Voyage of a Naturalist Round the World' (in the *Beagle*), which possesses the interest of narrative and travel, his books are extremely dry and crabbed in point of diction. He is much behind his contemporaries Wallace and Huxley in this regard. Yet Wallace and Huxley and nearly all modern naturalists have come to acknowledge him as their master, while all the world has been reading his books these twenty years despite his infelicities of style. Is it not reasonable to suppose that if there had been any sound logic in Dove's treatise—still more if it had showed how to expel poverty from the world—the world would have found it out before now, and crowned it with garlands, and adopted it as a kind of new Bible? Can we imagine anything more important than the abolishing of poverty? Next to the saving of souls, it must be accounted the most transcendent achievement that the human intellect ever has attained to or ever will. If we could tell in black and white, in any kind of diction, how that end might be gained, we should feel sure of greater literary fame than that of Shakspere, greater than that of all the poets that ever lived. And we should be sure, too, of some general recognition before the lapse of forty years.

Ex-Mayor Oakey Hall's action in bringing in London a suit for $50,000 damages against James Bryce for publishing, in his 'American Commonwealth,' a chapter on the Tweed Ring in which Hall is spoken of as a member, has caused considerable surprise to American readers of the book. The chapter was written for the book by Prof. F. J. Goodnow of Columbia College, and is a calm and moderate statement of unquestioned historical facts. In one place it speaks of Hall as a politician who "proved extremely useful to Tammany Hall," and in another it quotes Samuel J. Tilden's comment on Hall's election as Mayor, that by it the "Ring became completely organized and matured," adding: "It (the Ring) controlled the Common Council of the city and the Legislature of the State, and its nominee sat in the Gubernatorial chair; Hall was Mayor; Sweeny was City Chamberlain or Treasurer of both city and county; Tweed was practically supreme in the Street Department; Connolly was City Comptroller, and thus had charge of the city finances; the city judiciary was in sympathy with these men; and finally their control of the Tammany organization made it an extremely difficult if not an impossible thing to dislodge them from their position by opposing them at elections." Mention is also made of the fact that when Tweed had the Board of Apportionment created, Hall became a member of it, with Connolly, Tweed, and Sweeny, and that thus the "Ring obtained the entire control of the city"; and of the other equally important fact that Hall became with Connolly and Tweed the *ad-interim* "Board of Audit" which, through Watson, audited and paid

within three months and a half $6,000,000 of claims, the greater part of which were to reimburse the Ring for its expenditures in getting the charter of Tweed in 1870 through the Legislature. Hall's reëlection is spoken of as having "strengthened" the Ring, and considerable space is devoted to the Ring's subsequent operations in getting laws through the Legislature to increase the amount of the public money which it could expend. The Big Four of that day were Tweed, Hall, Connolly, and Sweeny, and in one place Prof. Goodnow says of them: "The methods which the Ring adopted to fill the pockets of its members were various in kind and of different degrees of immorality." We believe that this is one of the grounds upon which Mr. Hall bases his demands for damages, he having always declared that none of the money went into his own pockets. That he was the fourth member of the Ring, or the "Big Four," is, of course, not to be denied; neither is it to be denied that if he had not been a faithful ally of Tweed, he would never have been put into the position.

What Mr. Hall is trying to accomplish by libel suit in London—that is, to rehabilitate his reputation—another of the Big Four, Peter B. Sweeny, is trying to accomplish here by long statements in the newspapers. He has made many of these, and the latest fills nearly six columns of Monday's *World*. Mr. Sweeny, like Mr. Hall, was acquitted in court of complicity in the Ring frauds, but both men have learned by many years of bitter experience that the court of public opinion has refused to acquit them of moral guilt in all the Ring's doings. They were Tweed's allies throughout all the Ring's transactions, and if none of the money which was taken from the city treasury could be traced into their pockets, they were the means by which millions of it went into other people's pockets, for the prosperity and glory of Tammany Hall. It is well to have the doings of the Big Four of other days recalled now, for their operations may serve to give our public a warning of what the Tammany Big Four of to-day would like to undertake provided they could get the power.

Five "bye-elections" have recently taken place in England. In two of them the Tories have lost seats they already held. In one they have increased their majority by seven. In the remaining two the Liberals have retained their seats by increased majorities. The latest defeat of the Tories in North Buckinghamshire, an agricultural and Tory county, where, under absolutely similar conditions, the figures of the last election have been reversed, has naturally spread a panic through the Liberal-Unionist ranks, and is leading some people to expect a dissolution of Parliament. But it is plain enough that the more certain the Liberal-Unionists become that they will be evicted whenever the voters get a chance at them, the more strenuously they will oppose a dissolution. They have now the certainty of sitting and legislating until 1892, and why should they relinquish it? We may be sure the Tories agree with them on this point. Besides this, Mr. Balfour is, in their opinion, trying a most important experiment in Ireland, which he says will win the Irish over to English rule within a brief period, and he must not be interrupted. But if the bye-elections continue to go in this way, "the sweets of office" will consist mainly of the salaries. These elections do not, of course, prove that the triumph of home rule is either assured or close at hand, but they effectually dispose of the notion that there is any reaction going on among the voters either favorable to the Conservatives or discouraging to the Gladstonians. They also put a stamp of positive silliness on such lucubrations as those of Judge Hughes in a late number of the *Forum*, in which he calmly assures the American public that all supporters of Gladstone palliate or connive at murder and robbery, or, in other words, that all the political wisdom and morality of the United Kingdom is lodged in the heads of one party.

The departure of Gen. Boulanger for the Island of Jersey, in order to reduce his expenses, "with a female companion," is a ludicrously characteristic exit for a French pretender of this stamp. The supplies of money are, of course, stopping, and the Royalists and Bonapartists have now no further use for him, and have formally dissolved connection with him. He still maintains that the people will call for him by and by, but he is doubtless much more occupied about his pecuniary future than about any prospective calls from the people. The probabilities still seem extremely strong that his friends will have finally to set him up, either in London or Brussels, in a café and billiard-saloon. One can see him now, without much strain on the imagination, in his shirt-sleeves, very fat and pasty-looking, leaning on his cue waiting for his stroke, or looking on over his absinthe at the games of his customers, and rolling a cigarette while he tells wondrous tales of the knaveries of the Republican Government, and of the secret demands he receives from a disgusted people to come back and turn the rascals out.

The usual annual war alarm has just been started again in Europe, but will probably subside under the influence of the Czar's visit to Berlin. It owed most of its strength to the rumor that the Czar was delaying his return visit to the German Emperor to a discourteous degree, and that, in conjunction with continued concentration of Russian troops on the German frontier, it meant trouble in the near future. It also derived some strength from the result of the French elections, because, it was said, now that a stable government has been set up in France, Russia will no longer hesitate about the alliance. But if Boulanger had succeeded, it would also have been said that, now that there was a one-man power in France, Russia would no longer hesitate. In truth, when the time comes for a war scare, every event of the day is made to support it. The most serious feature of the situation is, however, the undoubted fact that Bismarck is failing physically, and evidently no longer exercises his old influence at the court. The Emperor has apparently emancipated himself pretty thoroughly from tutelage of all sorts, and, though cultivating friendly relations with the other Powers, is evidently full of fight, and is said to have Frederick the Great on the brain. Some little sensation has been infused into the matter by an article in the *Contemporary Review*, attributed to Mr. Gladstone, in which he strongly condemns any participation of either England or Italy in the pending dispute between Germany and Austria on the one hand, and France and Russia on the other; but it contains nothing else of moment.

In so far as any European "war cloud" can be said to exist, it lies over the eastern Turkish frontier in Asia Minor, where the Armenian Christians are being harried unmercifully by the Mussulman Kurds, with the connivance of the Turkish officials. The Armenians have appealed in bitter terms to the Powers, and have sent a deputation to tell the story of their wrongs in the various European capitals. The wrongs are the usual wrongs of Christians living under Turkish rule—murder, robbery, and the abduction of women. Of course this is making a good deal of impression everywhere, and Gladstone has taken up the Armenian cause in London with some of his old fire; but it makes nowhere so much impression as in Russia, and accordingly we hear that there are large bodies of Russian troops cantoned on the Armenian frontier, who, it is said, may any day march across and occupy the country in the interest of humanity. This for the Armenians is not altogether a pleasant prospect. They dislike, of course, being robbed and murdered and having their women carried off, but they have always cherished the hope of seeing the old Armenian kingdom revived on the break-up of the Turkish Empire. Help from Russia would undoubtedly mean annexation and the complete extinction of their political hopes. Consequently, they are half prepared to bear with a little more violence if it will end in bringing them under the direct protection of England and Germany.

One of the incidents of the banquet given to the Czar by Emperor William in Berlin last week will undoubtedly strengthen the war scare. When the Czar's health was proposed by the Emperor, in German, which the Czar speaks fluently, and had been speaking through the dinner, he responded briefly and drily in French, a language now tabooed at the German Court. That this was done intentionally there does not seem to be any doubt. Its object was, of course, to show that he was still dissatisfied with Germany, and that France was his best friend. That such little freaks of one man should have immense political importance in our day seems odd enough, but immense importance they will have as long as there are men whose individual word can put a million of soldiers in motion.

SUCCESSFUL BALLOT LAWS.

WITHIN the past few weeks elections have been held under three different ballot-reform laws, in Montana, in Chattanooga, Tenn., and in Connecticut, and in each instance the law has worked smoothly and with entire success. The Montana test was the most thorough because the law of that new State is a complete application of the Australian system in its most essential principles—that is, in requiring secret voting by the use of exclusively official ballots. Under this law, which has all the "complications" that have so alarmed the opponents of the Australian method, the Montana election proceeded without difficulty, with no annoying friction, and with unusual rapidity, as the apprehension of possible delay in voting caused all the party leaders and workers to urge everybody to go to the polls early. It was the unanimous verdict from all parts of the State, after the election, that the law had worked well; and though the result was close and doubtful for several days, no complaints of irregularity or of unfairness in the result because of complexity have been heard.

In the discussions concerning the Australian system, a great deal has been said about the illiterate voter, and about the best method of providing him assistance in marking his ballot. In the Tennessee law, and in the Kentucky law—which applies only to the city of Louisville—no provision whatever is made in regard to illiterates, and the courts of those States have declared the laws unconstitutional in that respect, the failure really amounting to the fixing of an educational qualification. The Montana law prescribes that a voter who is unable to read "shall, upon request, receive the assistance of one or two of the election officers in marking his ballot, and such officer or officers shall certify on the outside thereof that it was so marked with his or their assistance, and shall thereafter give no information regarding the same." The election judges are given discretion as to whether a professing illiterate shall be put under oath as to his illiteracy. The party workers in Montana hit upon an ingenious device for helping the illiterate voter and at the same time gaining a knowledge of how he had voted. They provided him with a card having upon the top the printed words: "I want to vote for all the candidates on this card." He presented this to the election officers, who required him to sign it, after which they marked his ballot as requested. This is a clear violation of the spirit of the law, since it completely destroys the secrecy of the ballot, and it is doubtful if it could stand the test of legality in court. It enables the voter to have assistance outside the polling-place in marking his ballot, whereas the intention of the law is that he shall get that assistance only on the inside, and from officers who are sworn not to reveal the nature of his ballot. Any corrupt voter by professing illiteracy could in this way keep faith with his corrupter, and could furnish evidence that he had done so in the signed card. The device shows the ingenuity which the working politicians everywhere will employ to defeat the law. It is never likely to be a very serious evil, as few voters are willing to make profession of illiteracy, pride restraining most men from such an exhibition.

The trial of the Tennessee law in Chattanooga was in many respects similar to that in Montana, for, with the exception of no provision for illiterates, the Tennessee statute is in all essential particulars much like that of Montana. It has been declared unconstitutional by a local court of Knoxville, and an appeal has been taken to the higher courts. It was decided by the judicial authorities in Chattanooga that, pending this appeal, the law was in force, and on this decision it had its first trial in the municipal election. The general verdict was that the election was one of the quietest and smoothest ever held in the city, with little or no attempt at illegal voting or intimidation, and entirely satisfactory results.

The trial in Connecticut must be considered from a different point of view. It will be remembered that a carefully drawn law, embodying the approved principles of the Australian system, was passed by the Legislature of that State last winter and was vetoed by the Governor. A new law, hastily patched up in caucus, and never considered deliberately in either house, was subsequently enacted and approved by the Governor. We said of it at the time of its passage, that it was "in no sense an application of the Australian system"; that it provided for a secret ballot, and forbade ticket-peddlers to approach within one hundred feet of the polls, and that these were "important advances in the direction of honest elections." Its provisions in regard to the furnishing of ballots were always looked upon by ballot-reformers as the weak point in the law. They simply require that the State shall furnish the official paper for the ballots, and allow the political organizations to print and distribute them. The State is also required to furnish official envelopes into which the voter may put his ballots before depositing them. Almost the only features taken from the Australian system are the use of booths in the polling-places and the exclusion of ticket-peddlers and workers from about the polls. In practical use on Monday week these two provisions accomplished the most satisfactory results. Indeed, all the benefits which the new law bestowed can be traced to them. The envelope provision opens the door for the familiar "Tasmanian dodge," and other devices, by which a dishonest voter can take into the polling-place a ballot prepared and sealed for him outside, and, obtaining another envelope inside, may bring that out as proof that he has deposited the first one. With an exclusive official ballot, there would be no need of an envelope, which is a clumsy device and a needless element of perplexity to the voter.

The great gain of the Connecticut experiment is the showing it has made of the really simple working of two important features of the Australian system. The contention that the average American elector is too dull to be able to vote under a system which the Australian, Canadian, and English electors have had no trouble in understanding, is, like all the other objections to that system, founded upon error.

THE TWO-PRESIDENTS SYSTEM.

ONE of the first questions which arose in the convention that framed the Constitution of the United States was, whether the national Executive should consist of a single person, or of two or three. There was a sharp division and an animated discussion. James Wilson of Pennsylvania and Charles Pinckney of South Carolina led off with advocacy of a single person. Roger Sherman of Connecticut took the other side. "The Legislature," he said, "are the best judges of the business to be done by the Executive, and should be at liberty, from time to time, to appoint one or more, as experience may dictate." Edmund Randolph of Virginia sustained this view, holding that unity in the Executive would lead ultimately to monarchy, and that "the requisites for the Executive department—vigor, despatch, and responsibility—can be found in three men as well as in one." Madison calmed the excitement by proposing that, before choosing between unity and plurality in the Executive, the Convention fix the extent of the authority which should be intrusted to that department of the Government; and, after this had been done, the Convention readily agreed that this authority should be wielded by one person, to be called the President.

Hamilton, in the *Federalist*, marshalled the arguments which sustained this conclusion. Premising that "all men of sense will agree in the necessity of an energetic Executive," he ranked unity as first and most important among the ingredients which constitute such energy. "Decision, activity, secrecy, and despatch," he said, "will generally characterize the proceedings of one man in a much more eminent degree than the proceedings of any greater number." He showed that the experience of other nations, so far as it cast any light upon the subject, "teaches us not to be enamoured of plurality in the Executive. We have seen that the Achæans, on an experiment of two Prætors, were induced to abolish one. The Roman history records many instances of mischiefs to the Republic from the dissensions between the consuls, and between the military tribunes who were at times substituted for the consuls. But it gives us no specimens of any peculiar advantages derived to the State from the circumstance of the plurality of those magistrates." Considering the question purely in accordance with "the dictates of reason and good sense," Hamilton discovered much greater cause to reject than to approve the idea of plurality in the Executive, saying on this point:

"Wherever two or more persons are engaged in any common enterprise or pursuit, there is always danger of difference of opinion. If it be a public trust or office in which they are clothed with equal dignity and authority, there is peculiar danger of personal emulation and even animosity. From either, and especially from all these causes, the most bitter dissensions are apt to spring. Whenever these happen, they lessen the respectability, weaken

the authority, and distract the plans and operation of those whom they divide. If they should, unfortunately, assail the supreme executive magistracy of a country, consisting of a plurality of persons, they might impede or frustrate the most important measures of the Government in the most critical emergencies of the State."

During the past month, for the first time in the history of the Government, the country has had an exhibition of how plurality in the Executive really works. It is now the 12th of October. On the 12th of September, Tanner resigned the office of Commissioner of Pensions, and Benjamin Harrison, the Executive at Washington, who is Commander-in-Chief of the Army and Navy of the United States, accepted the resignation, "to take effect on the appointment and qualification of your successor." The successor has not yet been appointed, and the sole reason is because Russell A. Alger, the Executive at Detroit, who is Commander-in-Chief of the Grand Army of the Republic, has differed in opinion from the Washington Executive as to the merits of the various candidates for the vacancy who have been suggested, and as to the policy on which the Bureau shall be conducted. Immediately upon Tanner's resignation it was agreed by the Republican organs that, in the words of the Boston *Advertiser*, "it now remains for the President [at Washington] to appoint some other member of the Grand Army." A few days later it was announced by that good Republican organ the New York *Press*, that the Commander-in-Chief of the Army and Navy of the United States wished to appoint Gen. George S. Merrill of Massachusetts, but that, as an essential preliminary, "the General has been asked to secure certain G. A. R. endorsements." On the following day it was announced by the same excellent authority that the "reason why the President has hesitated to appoint Gen. Merrill is that he has as yet failed to procure the endorsement of Gen. R. A. Alger, the Commander-in-Chief of the G. A. R." A week or two ago the Washington correspondent of the Indianapolis *Journal*, the Washington President's home organ, reported that "the appointment of a Pension Commissioner seems as far away now as it has at any time since the resignation of Corporal Tanner was received," and explained that the difficulty was to find a man who will "meet the approval of Gen. Alger and the Grand Army." The correspondent declared that "the only reason for not appointing Judge Rea of Minnesota was the objection of Gen. Alger," and explained that the Detroit Executive insisted upon "a man for the Pension Bureau more like Tanner than Judge Rea, or who will at least carry out Tanner's policy."

One month's trial of this two-Presidents system has fully vindicated all the arguments of the *Federalist* against it. It has proved, as Hamilton expected, fatal to the "decision, activity, secrecy, and despatch" so essential in an Executive. That "danger of difference of opinion" which he apprehended has been realized. The effect has been, as he anticipated, to "lessen the respectability" and "weaken the authority" of the Washington Executive certainly—however it may be with the President at Detroit. Worst of all, these dissensions between the two Presidents "impede the most important measures of the Government"; a bureau which controls the expenditure of $80,000,000 a year being left to run at haphazard for weeks, while the Washington and Detroit Executives try to agree upon the policy on which it shall be conducted in future and the commissioner who shall carry out that policy.

One such experiment should suffice for all time. Heretofore the American people have had only the warnings of statesmen to deter them from trying the plan of having a President at Washington who would divide his authority with another Executive somewhere else in the country. A month's working of the Harrison-Alger system should make for ever impossible the choice of any man to sit in the White House who will not himself be the sole President.

A PRELIMINARY BLUNDER.

We have given little credence to the reports of discontent with the choice of Mr. Blaine as President of the Pan-American Congress on the part of some of the South American delegations; but there are some other particulars in which the management of the Congress has thus far been decidedly unhappy. One of these is the prominence given to Mr. W. E. Curtis, at present assigned by the State Department to take charge of the delegates while upon their travels, and to be hereafter, so it is said, made one of the secretaries of the Congress. His appearance in these functions might properly be taken by the South Americans as a direct affront to them, did they not stop to reflect, as they probably do, that the State Department is thus pushing him forward in innocent ignorance of his serious disqualifications.

Mr. Curtis was appointed Secretary to the South American Commission of 1885, on the ground, so it was understood at the time, of the enthusiastic despatches in favor of President Arthur's renomination which he sent from Washington to the Chicago *Inter-Ocean*. Afterwards, when two of the Commissioners fell by the way, he was made Commissioner, and as such figures in the final report made to the Secretary of State. Mr. Blaine is therefore displaying considerable magnanimity in taking up with this old political antagonist—if a Washington correspondent deserves to be so called—but is showing at the same time an unfortunate lack of acquaintance with the views of South Americans about the man he is favoring in this way. They had no occasion for feelings other than those of amusement at the performances of Mr. Curtis as a Commissioner, but when he turned author, as in an evil hour he did, he became to them most distinctly a *persona non grata*. His book, 'The Capitals of Spanish America,' is an offence in their nostrils. A recent magazine article of his aroused the indignation of the ex-Minister of Colombia to the United States, as was made clear in the letter which that gentleman sent to us on the subject; but it is his book which excites the greatest ire. As an historical work, it was merely absurd; but as a book of travels, as a record of observations, it was so ignorantly contemptuous of the people and governments of South America, so coarsely intolerant in referring to their dominant religion, so outrageously personal in retailing gossip and scandal, as permanently to disqualify its author for having any dealings whatever with a people so punctiliously courteous as the South Americans of the educated classes. That this is not simply our assertion is seen from the fact that a distinguished South American, whom we are not at liberty to identify except by saying that he is an accomplished scholar and statesman, has just published in a Spanish paper of this city a series of scorching articles about this very book, under the title, "How We are Treated by Those who Desire Our Patronage."

As we have already said, the prominence given Mr. Curtis doubtless springs from the best intentions on Mr. Blaine's part. Here was an ex-commissioner, a writer of a large book on South America, an expert, it would seem—the very man for the place. But the fact is that many of the South Americans look upon him as a man who has heaped gratuitous insults upon their people. They probably understand that his appointment is not really meant as a slap in their faces, though it might look like it; for they have learned to make great allowances for the serene ignorance of South American ideas displayed by many of our public men—an ignorance well instanced, by the way, in the glowing eulogies of his book which Mr. Curtis secured from United States Senators and other high functionaries. But it is to be hoped that their patience will be tested only during the period of their travels, and that some one having Mr. Blaine's ear will advise him of the indelicacy of making such a man a Secretary of the Congress.

Of the trip itself, under Mr. Curtis's conduct, it may be said that its planning showed other motives than delicate consideration for the nation's guests. Most of them are men of mature years, for whom six weeks of life in railroad cars, in a changeable climate, is not exactly a luxury. Besides, there is in the thing almost an implication against their intelligence—as if it would be a good thing to treat them as the Government used to treat the Sioux chiefs Red Cloud and Crazy Horse—take them to Washington, show them the sights, and so impress them with Uncle Sam's power that they would see no hope in opposing him. These delegates are travelled gentlemen, who are not easily awe-stricken. They have seen the finest workshops of Europe; they are already acquainted with the immense ingenuity with which American manufacturers have prepared themselves to supply the demands of a foreign trade which they declare they don't want, and so they will probably more and more relinquish the advantages of this educational journey to their private secretaries, who appear to be enjoying it to the full.

FAME AND NOTORIETY.

FRANCES POWER COBBE has an interesting article in the last *Forum* on the decline of a desire for fame, and the corresponding rise in the love of notoriety, as a human motive. She says that "among the vast changes which have passed over the civilized world within the memory of living men, one comparatively insignificant has hitherto escaped observation: it is the disestablishment of fame." After giving some illustrations or proofs of this, she adds:

> "Such a change in the common estimate of a once universally applauded passion is, of itself, noteworthy. It becomes still more singular when we find, growing up in the vacant place, a bastard-brother sentiment, the love of notoriety, and observe that though no man yet openly avows harboring this last in his breast, multitudes are credited with it both by friends and foes, and not thought much the worse of in consequence. To confess to the ambition for fame would be to fall into mock-heroics and bathos and become the mark of satire. To betray the love of notoriety may be slightly vulgar, but readily passes muster as a rather amiable weakness by no means ridiculous, but, on the contrary, possessing many advantages, political and commercial."

She then describes notoriety at some length, and dwells with much emphasis on the fondness of Americans for it as compared with the English dislike. She contrasts the English love of privacy with what she alleges is the American love of publicity, of course greatly to the disadvantage of the former.

But she has not apparently got at the philosophy of the matter, which is, after all, simple enough. Fame is essentially an aristocratic motive. It is in its very nature something which can only be reached by the few. It is, in the sense in which the word has always been used since it left the Latin, something to be won by some sort of high endeavor, great achievements in war, or in literature, or science, or art, or politics. It is, in short, something which only a very small portion indeed of any one generation can attain. But for this very reason, perhaps, it is something which even the noblest natures allow themselves to think enviable. It was the heathen Themistocles who said "the trophy of Miltiades would not let him sleep," but the best Christian in our day feels no hesitation in wishing that the greatness he admires in his brother man had only come his way. Still, we all sorrowfully acknowledge that greatness is the fortune, and must always be the fortune, of the few. Every one cannot go to Corinth. Fame is not and cannot be for the mass of mankind. Until our day, when ordinary men saw the battles, sieges, and fortunes by which it was won, they resigned themselves to obscurity, so that famous men of necessity constituted a sort of aristocracy—an aristocracy of the best sort, to be sure, one that must always form the upper house in the parliament of man, but still an aristocracy.

Now, democracy finds it hard to bear with an aristocracy of any kind, and it finds it harder still to see any of the delights of life confined to one small class. A democracy likes to have all sweet things widely diffused. It is hostile to all monopolies, even the monopoly of greatness. It acknowledges that it is only the few who can be great, but it saw very early in its history that that element in fame which consists in being widely known was capable of being enjoyed by great numbers through other channels than those of heroic effort. For fame men have to

> "Scorn delights and live laborious days,"

but for notoriety they need only do odd jobs. The means of reaching this supreme democratic pleasure of being taken out of the crowd and made conspicuous was at last furnished by the newspapers, and the multitude has rushed on it hungry and thirsty. From this has come that sudden rise of notoriety which puzzles Miss Cobbe. It is fame diluted, cheapened, and made accessible to the million, or at all events the hundred thousand. Very few indeed feel themselves capable of great deeds with either sword or pen, or ever expect the opportunity to perform them; but there is nobody who does not feel notoriety to be within his reach—that is, does not feel that, with a very small expenditure of effort, he may become the talk of the town, or of the State, or even of the Union. Every newspaper office is to the lover of notoriety what the cheap-clothing store is to the poorly clad man. He cannot get silken doublet and hose in it, and fit himself out to play the gallant in fashionable society, but he can get what will enable him to cut a very decent figure in the streets and hotels.

Before newspapers, notoriety was hardly to be had without the commission of some atrocious crime. But it can now be had by jumping off a bridge, marrying a woman of the town, buying a large house, eating thirty quails in thirty successive days, keeping a fast trotter, writing an erotic book, fighting a duel, owning forty pairs of trousers, editing a silly or indecent newspaper, giving a large donation to a campaign fund, sending clergymen to Europe, walking a hundred miles in twenty-four hours, knocking a man out in two rounds, preaching sensational sermons, denying the rotundity of the earth, and so on. It is the modern newspaper which has diffused this great happiness among the multitude. Without it we should have to jog on without anything more picturesque than great soldiers, scholars, statesmen, and artists. By the aid of the newspaper our streets swarm with men who have that one note of fame which consists in being recognized and talked about, and which has probably been productive of far more quiet pleasure than fame ever was. Any journalistic "Stroller" or "Lounger," as he "walks down Broadway," sees more notorious men in one hour than probably existed in the whole of Europe a century ago—meaning by that, men who have made their way out of the crowd, are individualized, and now pass for "somebody," and bask in the sunshine of publicity. The notorious man is not always an admirable person. In fact, he is apt to be a very odious person in nine cases out of ten. But there is nothing mysterious about him. The sudden multiplication of him may be one of the "vast changes" of the modern world, but it is not an inscrutable one. He has come in with steam, and we fear, to use the slang phrase, "has come to stay." Every newspaper breeds him in great numbers, and he in his turn has done much to produce "the great editor" who distributes notoriety from his sanctum. For one of the differences between Fame and Notoriety is that Fame can only be obtained wholesale, in great quantities, while Notoriety can be had at retail, and, in fact, is peddled, and the man who can peddle it out is necessarily a great personage to the multitude who stand waiting with their pails and bags. He can inflict on them the keenest suffering by erasing their names, or "ordering them out of the paper" (in the technical phrase) from the lists of guests at rich men's houses, of occupants of the platform at meetings and lectures, of mourners at funerals, of friends at weddings and receptions, and of spectators at races. And it is a suffering for which there is no remedy. The injured man cannot go to him and say, "'Sdeath and fury, sir! what do you mean by not printing my name among the guests at the Smith dinner or the pall-bearers at the Jones funeral?" He has to bear his obscurity in silence, to smile a ghastly smile, and affect a peace which no lover of notoriety ever knows.

The subject is an interesting and broad one. Miss Cobbe has only touched its surface, and, in fact, has apparently only taken it up for the purpose of making an odious comparison between English and American manners. We trust some one will shortly treat it with a firmer touch and deeper insight.

WASHINGTON'S PEDIGREE AT LAST.

"ANGEL OF DEATH, there will the man be found," says Solomon, in Leigh Hunt's tale of "The Inevitable." With a like unerring finger, our countryman, Mr. Henry F. Waters, engaged for some six years in genealogic research in England, has pointed out the transatlantic haunts and relationships of John Harvard and of Roger Williams; and now, on the hundredth anniversary of Washington's assuming the Presidency, he eclipses all other centennial commemorations by fixing the descent of the Father of his Country for ten generations.

We anticipate, by courteous permission, the delayed publication of the particulars of this discovery in the *New England Historical and Genealogical Register* for October, and in a reprint bearing the title 'An Examination of the English Ancestry of George Washington, setting forth the evidence to connect him with the Washingtons of Sulgrave and Brington, by Henry F. Waters, A.M.' This connection had been conjectured as far back as 1791 by Sir Isaac Heard, Garter King of Arms, guided by the Heraldic Visitations of Northamptonshire, in which he found a John and Lawrence Washington, whom he provisionally identified with the brothers, emigrants to Virginia about 1657, known to be the immediate ancestors of George Washington. But Mr. Waters's great predecessor, Col. Joseph L. Chester, produced evidence which effectually disproved this theory, and which left the question an open one.

"At first," says Mr. Waters, "I gleaned over the whole field for Washingtons," or, in other words, over at least nineteen counties in which they were met with. The field was quickly narrowed, however, by his ascertaining that though Lawrence Washington died in Virginia, letters of administration were granted in England on May 30, 1677, he being described therein as formerly of Luton in Bedfordshire

("Laurentii Washington nuper de Luton in Comitatu Bedford sed apud Virginiam in partibus transmarinis decedentis"). For four years Mr. Waters accordingly kept his eye on the little tongue of Bedfordshire in which Luton is situated, and on the adjacent Hertfordshire which it invades, scrutinizing every will which proceeded from that quarter. The next clue he owed to the kindness of a friend, and it took the shape of a bond, formerly in the Hitchin Registry of the Archdeaconry of Huntingdon. By this instrument, dated Jan. 29, 1649-50, John Dagnall, of Grove, in the parish of Tring, in co. Herts, Yeoman, and William Roades of Middle Claydon, in co. Bucks, Gent., were held in a thousand pounds for the proper administration of the goods, etc., of Andrew Knowling, of Tring, Gent., lately deceased, and as guardians of "Lawrence Washington, the younger," during his minority, he being then fourteen years of age. The parish of Tring is about a dozen miles westward from Luton, and about midway on the direct line from London to Northampton, as also on an east-and-west line from Oxford to Hertford. It was probably the early home of the Virginian emigrant.

Mr. Waters now took up the pursuit with energy, and with the sureness of instinct for which he is remarkable. He first sought the will of Andrew Knowling, annexed to the bond, and dated January 13, 1649-50. This contained a considerable bequest of lands and tenements in Tring and elsewhere to his godson, Lawrence Washington, and sundry bequests to the lad's mother, Amphillis Washington, Knowling's "daughter-in-lawe," or, as we should say, step-daughter, he having married her widowed mother, Mistress Roades. Mention of other persons in the same relation, William Roades, Elizabeth Fitzherbert, and Susan Billing, furnished so many fresh scents to Mr. Waters, who was still further cheered by the naming of four other children of Amphillis, headed by *John*, the needful complement to Lawrence.

A visit to Tring was next in order, whose vicar was most ready to assist the American investigator; and here the "Regester Booke" beginning with 1634, and bought by "Maister Andreu Knolinge" and other churchwardens, revealed the baptism on June 23, 1635, of Lawrence Washington as well as of a younger brother and sister, children all of "Mr. Larrance Washenton" (to choose one of the three forms in which the name is recorded). The father's Christian name was a foregone conclusion from the expression in Knowling's will with reference to his son Lawrence ("the younger"), which also intimated that the father was still living in 1649. The Tring Register further noted the burial of "Mrs. Washington," in January, 1654 55, and Mr. Waters's search for the letters of administration was rewarded by finding that they were taken out on February 8, 1655, by her son John, who was thus shown to be her eldest and at least twenty-one years of age, while it equally followed that the father was already dead.

But who was the father? Did his being styled "Mr." mean that he was a clergyman; and was he "that parson of Purleigh about whom," says Mr. Waters, "I have for years had the suspicion that, if he could only be hunted down, we might possibly be able to dispel the mystery enveloping the lineage of Washington"? He resolved to examine with the utmost care everything connected with the probate of Andrew Knowling's will, and it was in the course of his opening a bond made by John Dagnall as guardian of the children of his wife's sister, Susan Billing, deceased, that—but we must give the explorer's own words:

"I then saw a little bit of paper, doubled or folded upon itself, which upon opening seemed about three inches long and from an inch and a half to two inches wide, and covered with writing. Seeing, at a glance, that it was evidently an official memorandum of the issuing of the letters of guardianship and of the oath taken by Mr. Dagnall for the faithful performance of his trust, I did not read it through, but at once set about copying it in full, little realizing the start of surprise and gratification I should experience when I should come to the end of what proved to be the most valuable and important bit of genealogical evidence that I ever saw, or ever expect to see, in the course of my gleanings."

The memorandum, in Latin, was signed by "Laurentio Washington," A.M. and temporary surrogate in the Archdeacon's Court at Whethampsted, therefore in all probability a clergyman, and concerned in the proceedings because of his wife's and especially his son Lawrence's heavy interest in Andrew Knowling's will. The only known Lawrence Washington who was at once a clergyman and a Master of Arts was the "son of Lawrence Washington of Sulgrave, brother of Sir William Washington of Packington, and of Sir John Washington of Thrapston. He was student, Lector, and Fellow of Brasenose, and in 1631 Proctor of the University of Oxford, and afterwards Rector of Purleigh. The long search after the true line of ancestry of our Washington, begun in 1791, was practically brought to a successful close when that little paper was discovered on Monday, the 3d of June, 1889."

Let it not be supposed, however, that Mr. Waters's inquest stopped here, for a postscript shows that even on the 19th of last month he visited Middle Claydon with good results. Still less let it be assumed that we have half exhibited the strength of his argument, for his mode of procedure, by establishing collateral relations, ends, as in the case of Roger Williams, in a moral certainty even when some links of demonstration remain to be unearthed. As Mr. W. H. Whitmore, who annotates his brother genealogist, observes, "we lack *positive* proof" to identify the Lawrence baptized at Tring in 1635 with the emigrant; and we are not *absolutely* certain that the father was the Rector of Purleigh. Our English cousins should now take up the parable. Mr. Waters spreads before us a great mass of information concerning the Royalist connections of the Washingtons; Henry Washington, nephew of the Rector of Purleigh, having been a colonel in the Royalist army and Governor of Worcester in the civil war. The Rector himself was classed among "Scandalous, Malignant Priests," in a publication having the imprimatur of Parliament in 1643, and was deprived of his living as "a common frequenter of Alehouses, not onely himselfe sitting dayly tippling there, but also incouraging others in that beastly vice, and hath been oft drunk." But from this Puritan libel on the diversions of Purleigh he was vindicated the next year by a writer who reported that he "was a Loyal Person, and had one of the best Benefices in these Parts; and this was the Only cause of his Expulsion, as I verily believe"—much in keeping with our partisan dismissals from the civil service. At all events, this Rev. Lawrence Washington was the son of Lawrence of Sulgrave, who died in 1616, and whom Sir Isaac Heard rightly guessed to be an ancestor of George Washington, though he dropped a generation in so doing; whose memorial stone in facsimile was presented by Charles Sumner in 1861 to the State of Massachusetts, and may be seen in the State-House in Boston, beside Chantrey's statue of the first President of the United States. The printed pedigree accompanying Mr. Waters's essay takes us back to John Washington of Whitfield, County Lancaster, at a date not determined; and it was John Washington of the emigrant brothers who, through Lawrence (died 1697) and Augustine (died 1743), grafted upon the Royalist stock the arch-rebel of the American Revolution.

Our readers have now some idea of the brilliant achievement which adds a new laurel, and the brightest, to Mr. Waters's wreath. While life and strength hold out, and a generous support is not withheld, we may be confident that he will again and yet again signalize his laborious devotions with discoveries precious for the people of the whole country, if not *so* precious; and valuable, too, in cementing that only genuine "imperial federation" of peace and good-will which Anglo-Saxon blood has provided for the whole English-speaking race.

SANTA CATALINA ISLAND.—I.

PORTLAND, Ore., September, 1889.

EASTERN people have no idea how fast things grow in California. Everybody, of course, has heard the story of the farmer who in the morning planted watermelon seeds in his field, and in the evening found that the vine had grown to his kitchen door and deposited a ripe melon on the steps. But this is nothing compared with the way in which the cities grow. Thus, on page 216 of Drs. Lindley and Widney's valuable work on 'California of the South,' we read of "San Diego's fifteen thousand inhabitants," while on page 218 (and it surely cannot have taken more than a day or two to write these two pages), they say that "San Diego is growing with most wonderful rapidity. Its population is doubtless twenty-five thousand." Most wonderful, indeed! San Diego did seem quite a lively place last April, although this may have been partly attributable to its being the headquarters of the miners going to the Santa Clara mines in Lower California. 'Tis an ill wind, etc., and the losses of these duped miners were the gain of the San Diego merchants, who sold almost a hundred thousand dollars' worth of victuals and tools to the gold-hunters. The temptation to follow the latter and get a glimpse of a genuine California mining-camp was great; but on hearing of the hardships to be endured, of the two hundred dollars duty laid by the Mexican Government on a single wagon and team crossing the border, and the taxes on provisions equal to their full value, which raised the cost of food in camp to prices considered fabulous even by miners accustomed to starvation prices—not to mention the tropical rains just then prevalent, which made tenting an invitation to catarrh, rheumatism, and pneumonia—I concluded to move northward sixty miles or so, and spend a few weeks instead on Catalina Island.

Before leaving the Coronado I had an opportunity to note a curious way of settling urban questions in California. It had long been in dispute whether or not Coronado Beach belonged to San Diego, so it was determined to settle the matter on election day. There being a law that no liquor may be sold in San Diego on an election day, the barkeeper at the Coronado Hotel was instructed to keep open, for which he was promptly arrested. This was to compel the courts to decide the question at issue. What the decision was I do not know, as I left the next morning. Retracing my steps as far as Oceanside, I took the California Central direct back to Los Angeles. This road

continues to skirt the ocean as far as San-Juan-by-the-Sea (a few miles from the famous San Juan Capistrano mission), where the tourist bids good-bye to the Pacific, not to see it again till he reaches San Francisco, unless he takes a branch road to one of the numerous seaside resorts of Los Angeles or to Santa Barbara.

San-Juan-by-the-Sea was called by Dana, in his 'Two Years before the Mast,' "the only romantic spot in California," which is probably the most absurd statement regarding California that has ever got into print. But it certainly is one of the most charming points on the coast for those who love solitude, and every tourist ought to stop over at least between two trains and see it. If they decide to spend the night at the "hotel," I wish them better luck than befell me. Early in the morning, having paid the (really) big sum of one dollar for supper, lodging, and breakfast, I went down to the beach, about half a mile from the station, across an immense field of wild mustard, buried completely in a sea of fragrant yellow flowers waving over my head, and then had to cross a lively little creek on a narrow plank—a creek which enjoys the satisfaction, rare in this region, of reaching the ocean without being tapped, or absorbed by the thirsty sun. The view from its mouth contrasts delightfully with the uninterrupted, flat sandy beach all the way up from San Diego. A high, precipitous rocky shore rises abruptly, and presents itself as a bulwark against the restless waves. It leads up to hills from which fine views may be enjoyed, and which give room for daily varied rambles which one misses so much at a flat place like Coronado Beach. As there is a fine beach a short distance below, it would be a splendid place for a hotel, and is already much frequented in midsummer by campers. When I was there, a deserted hut was the only visible evidence of human agency, and the solitude was emphasized by four monstrous pelicans sitting motionless and majestic on an isolated rock half a mile at sea. Below the precipice, where the waves in low water tumble gently over the rocky débris jutting far out into the sea, may be found quantities of shells, not dead and deserted specimens lying bleaching on the beach, but shells and cockles alive and wide awake, and moving about like little pagodas with wheels and clockwork. On the way back to the station I cut off one of the tallest mustard plants—bushes they might well be called, so thick and tough are the stems at the base—and asked the station master how high he thought it was. He measured it and found it eleven feet in height! Then for the first time I felt convinced that the narrative of an Anaheimer who told me how, thirty years ago, he once got lost *on horseback* in a wild-mustard field on the fertile soil near where Fullerton now stands, was not a "California story." To-day many of these fields of wild mustard are mowed down, yielding a crop which is the more profitable as there are no expenses for ploughing and sowing. I cannot see why there should not also be money in the castor bean, which, elsewhere cultivated in gardens as an ornamental shrub, is here a weedy nuisance hard to exterminate when it once gains a foothold. I have seen it grow as high as a second-story window in Los Angeles, side by side with a fuchsia *tree*, so to speak, still higher; while roses often cover a whole house, roof and all, and would aspire to the moon if there were a connecting link.

To reach Catalina Island we take the train at Los Angeles for its old harbor town, San Pedro, whence a steamer makes trips to the island three times a week. San Pedro is considered good fishing ground, has numerous duck ponds in the vicinity, and appears to be the headquarters of all the sea-gulls on the Pacific, the beach being completely fringed by them at times. The chief article of import seems to be timber, the wharves being covered with acres of boards and planks, brought from Humboldt County and from Oregon and Puget Sound. A part of the town lies in a hollow which forms a complete kettle and must be an ideal breeding place for typhoid fever. Hotel accommodations are very primitive, but the Southern Pacific is completing a hotel near the light-house, where the sea breeze can never fail. The little steamer *Hermosa*, specially built for the traffic between San Pedro and Catalina, is new and comfortable, but has the great fault of rolling on the slightest provocation. However, the distance is but twenty miles, so that even those inclined to sea-sickness need not dread the passage. Santa Catalina Island is the second in size and the most interesting of the large number of islands which lie along the coast of California, beginning with the Coronado group, just below San Diego, and ending with Santa Cruz and Santa Rosa, off Santa Barbara. As it is the only one which has steam connection with the mainland, it has for many years been visited every summer by thousands of campers, and the hotel erected there lately has added to its popularity, although for sanitary and scenic reasons the site chosen for it is not the best that could have been found. The island is visible from the mainland all along Los Angeles County, even far in the interior, as it has mountains which rise to a height of about three thousand feet. Indeed, as the boat approaches, we see that it consists entirely of mountains, being a sort of floating Highlands, like a section of the Coast Range rising abruptly out of the ocean, without any gradual slopes or foothills; presenting a solid front of perpendicular rocks except in a few places where the wall is broken by a little cove or harbor, with a pebbly beach, as at Avalon, where the hotel stands. A study of the map of Southern California leaves no doubt in the mind that these islands at one time actually did form a part of the Coast Range, being connected with each other and constituting a peninsula extending from Point Conception to below Coronado, with a wide channel or sound between (like that which now extends for about a thousand miles from Olympia to Sitka), and navigated by the Pineugnas Indians, who in the time of the early Spanish voyagers inhabited Catalina Island, and were noted for their fine physique and skill in shipbuilding. Though they are now widely separated and scattered, these Channel Islands continue to affect the climate of Southern California by breaking the force of the wild Pacific waves and winds.

This fact can be vividly realized by climbing the hills on Catalina till the Pacific is sighted, dashing its huge billows against the naked rocks that rise perpendicularly to 2,000 feet or more above it, the home of eagles who build their nests in these inaccessible heights—monstrous birds, measuring sometimes twelve feet from wing to wing. In striking contrast to this turbulence on the west side is the calm of the eastern side, which is hardly ever disturbed, even in stormy weather. Here the campers and hotel guests bathe in the bay every day in the year, the temperature of the sea water in August being about 66°, and only four degrees lower in midwinter, while in Rhode Island, for example, the difference between midwinter and midsummer temperature is about thirty-five degrees! The Kuro Siwo, or Japan current, three to four hundred miles in width, which is deflected by the Aleutian Islands southward along the coast of Washington and Oregon, becomes so far cooled off by the time it reaches San Francisco as to make sea bathing in that neighborhood unpleasant even in summer. But this current is deflected by Point Conception; and between the Channel Islands and the mainland south of this cape there is a return ocean current from the south, which partly accounts for the higher temperature of the water at Catalina, as well as along the main shore of Southern California.

The temperature of the air on Catalina Island hardly ever rises above 85°, and, thanks to the twenty miles of water which separate it from the main land, it is never visited by the hot, parching desert winds. Yet, though thus surrounded by a vaporous sea, fog is almost unknown, being shut out by the mountains, and, what is stranger still, the air is said to be drier than on shore. With such conditions and with constant sea-breezes and an immunity from dust as complete as on shipboard, it is no wonder that Catalina is beginning to be looked upon as standing to Southern California in the same relation as Southern California does towards other States. I met several invalids afflicted with rheumatic or lung troubles who had failed to find relief at Los Angeles or Santa Barbara, but found it at once on Catalina Island; and convalescents make more rapid recovery there than elsewhere. He must be fastidious indeed who is not satisfied with the climatic conditions of this island, and, notwithstanding its mountainous structure, I am convinced that before the end of another decade it will be covered with hundreds of handsome cottages and several hotels and supply villages. There is room for a considerable number of health and pleasure-seekers, for the island is about twenty-three miles long and from one to seven wide.

A few miles from its northern end, Catalina presents a curious contrast to its usual appearance. Here the mountains terminate abruptly, and the island becomes reduced to a narrow isthmus, about half-a-mile wide, on one side of which are the turbulent Pacific breakers, on the other the calm sound. Here are the ruins of Government barracks erected during the civil war and now deserted, but no other signs of human habitation, though a hotel will doubtless be erected before long. The only way of reaching this interesting point is by an occasional excursion on a little tugboat stationed at Avalon, the only village on the island at present. It consists of the Hotel Metropole (what a name for a hotel in such a position!) and a row of shanties, half wood and half canvas, in which bread and provisions and shells can be obtained. The hotel is built on the site of an old Indian burial ground, which is not a pleasant thought to those who know that invisible ghosts in the shape of typhoid-fever germs have been exhumed from European graveyards which had been undisturbed for several hundred years. For this and other reasons, the hotel ought to be removed part way up the hill just south of Avalon, whence a fine view of the island and the sound can be obtained. But do not fancy that from the top of this hill, or the higher one to which it leads, you will catch sight of the illimitable Pacific. The higher you climb the higher do the mountains, that were previously hidden from sight by the lower intervening crests, loom up, and shut out the view westward. But these curved ridges, rising one behind the other, like seats in a cyclopean amphitheatre, are in themselves a fascinating sight, especially in spring, when the hillsides are green with high grass and abundant shrubbery. Looking down from this hill, we can see the large fish swimming about in

the crystalline water, several hundred feet below us. To lie here on the grass, in the balmy sunshine, taking in the view and inhaling the ocean breeze, mingled with the floral perfumes that rise around you, is the very luxury of existence, and every deep draught of this air is a day added to one's life. Thanks to the breeze, no shade is needed, and thus all the healing virtues of the sun's rays can be utilized.

Should the labor of climbing this steep hill be dreaded, equally romantic spots may be found by following up the cañon or gulch which leads from the hotel into the midst of the hills by a gradual but steady ascent. The road follows a dry brook-bed, which probably once in a while becomes a torrent, though heavy rains are rare here, even during the "rainy season." An endless variety of shrubs and flowers lines this road, becoming more rarely beautiful in color and shape the higher we rise. Climbing up one of the side-gulches, I was frequently obliged to cut my way with my cane through bowers most gracefully built by the poison-ivy (or oak), which is so abundant throughout California, afflicting some people, if they only pass near it, with a painful swelling of the face, while to others it is as harmless as is real oak or ivy. From one of these lovely bowers a humming-bird arose and darted up into the air as fast and straight as a rocket, till almost out of sight; then down again like a lump of lead; then circling in a wide curve about me, humming all the time like a spinning-wheel. To an observer who stands perfectly motionless, these birds afford no end of amusement by their wonderful swiftness and curious caprices. Often, when I watered my flowers during the winter, one of them would hover over the stream from the hose, take a foot-bath for a minute, then alight on an orange tree for a second, and return to the sport again and again. They are very abundant in California, these butterflies among birds, as if to atone for the rarity of real butterflies, which is one of the most curious defects of this State; for one would think that a country so crowded with wild flowers would be the very paradise of butterflies. Another kind of bird very abundant on Catalina Island is the quail, which, even without the advantage of color, vies with the humming-bird in beauty. Being seldom hunted, the quail are much tamer than on the mainland. One couple had a nest in a cactus bush not more than a hundred yards behind the hotel, where they remained undisturbed till a heartless young idiot from Los Angeles killed them with his shotgun. Walking up the cañon, one or two pairs repeatedly ran along leisurely in the middle of the roadbed, not a hundred feet ahead of me. At other times I came within a few yards of them before they saw me, for the ground in many places is covered with a velvety kind of grass, noiseless and delightful to walk upon. Far up the gradually narrowing gulches we come upon patches of lovely maiden-hair and other ferns, guiding us to tiny brooklets of clear cool water. Water is not abundant on the island, so far as explored, and last summer only one of the springs near Avalon, that which supplies the village pipes, was alive. But it would be easy to secure all the water desired by damming up one of the gulches.

HENRY T. FINCK.

GERMAN UNITY IN THE TYROL.

BOTZEN IN TYROL, September 20, 1889.

SUNDAY, the 15th of September, was a great day for the little town of Botzen. On that day it celebrated two events, both of which are likely to be of permanent interest and value for its future. One of these events was the unveiling of a statue of Walter von der Vogelweide, and the other was the foundation of a Tyrolese Sängerbund by the union of various local choral societies.

The statue of Walter is the result of long-continued effort on the part of the Germanic elements of southern Austria, supported with more or less energy by their relatives from further northward. The idea of the statue goes back to the year 1874, and may properly be regarded as a part of the general Teutonic enthusiasm growing out of the great events of 1870-71. The project found widespread approval, but no very substantial help until within the past five years, when, under the leadership of a rich wine-merchant of Innsbruck, Andreas Kirchebener by name, it has been pushed forward to a triumphant completion.

The selection of Botzen as the fitting place for a Vogelweide memorial seems at first a singular one, but it is justified by two considerations: first, because, according to the most recent investigations, it seems to be established, with a reasonable degree of certainty, that the great minnesinger was by birth a Tyrolese. The so-called "Vogelweider-Hof" lies in the neighborhood of Klausen, between Brixen and Botzen, and is the object of many a pious pilgrimage. Many passages in Walter's writings point to his connection with the princes of southern Germany, and show an intimate acquaintance with the political relations between Germany and Italy. The second consideration was that Botzen is the last important place on the way from the lands of the German tongue to the lands of the Welsch. Even here the Italian element begins to be very prominent. One-half the population of Botzen is Italian, but it is the lower half. The German tongue still dominates, and is very conscious of its position. Indeed, one seems to feel in the soft Italian air, and to see in the pronounced Italian character of the houses, shops, products of the soil, people, and cattle, a warning that only by vigorous assertion can the *Teutschthum* hold its own against the *Welschthum*.

Such an assertion the Walter statue is intended to be. It stands here, on the southern border of the German tongue, as the great "Germania" of the Niederwald stands upon the western, as if to mark the limits of a sacred inheritance. There the suggestion is one of bold defiance towards an enemy who may at any moment be expected to begin the attack; here it is of peaceful insistence, through song and word, upon a national unity stronger than all political ties.

We came over from Switzerland to Tyrol on the eve of the celebration. Even along the new Vorarlberger Railway in Feldkirch and Bludenz and Imst, we began to see signs of the approaching festivities in the groups of men wearing the badges and carrying the banners of "Sängervereine," "Liedertafeln," or whatever other names the local singing-societies may be called by. Beyond Innsbruck these demonstrations became louder and more frequent. At Franzensfeste our train was received with a rousing salute from the singers in waiting; and an impromptu reception, with an immense amount of hat-doffing, beer-drinking, and speechifying, was held upon the station platform. At Botzen the societies, received again with song and speeches at the station, marched to the square to receive their assignments for lodgings.

The festivities began on Saturday evening with a grand concert in the new Bürgersaal, a surprisingly good hall for so small a place. The music was a new composition, by Director J. Panbaur of Innsbruck, for chorus, orchestra, and soloists, based upon selections from Walter's poems freely adapted by Professor Ignaz V. Zingerle. It was a capital performance, worthy of a larger stage.

Sunday morning was magnificent—such an air and such a sky as the New Englander knows on a few divine days in October. Hotels and private houses poured their guests at an early hour into the quaint Johannesplatz, where the veiled statue stood in the midst of waving banners, decorated tribunes for musicians and invited guests, booths gay with flags and pictures. The official programme began with a grand mass in the beautiful Gothic church at the corner of the Platz. From the church the musical societies marched in procession to the place assigned them within the enclosure, and grouped themselves in front of the statue. Archduke Henry of Austria, his wife, the Baroness Waideck—formerly the well-known actress Frl. Hofmann—and their daughter were the most prominent persons in the assembly, but we were assured that their presence was entirely unofficial, and was meant only as a sign of personal interest in the occasion. At the given signal the coverings fell, and the beautiful statue stood out clearly against the blue sky.

The figure of the minnesinger, of heroic size, is in the purest of white marble, and stands upon a pedestal raised, perhaps, twenty feet above the level of the square. It represents a man in the prime of life, dressed in the simple singer's gown and cap, standing lightly but firmly poised, with one foot slightly advanced beyond the base. His left hand holds the lute, the symbol of his profession, and the right is folded over it as in repose. The knightly sword girded at his side indicates his double character as singer and soldier at once. The bearded face wears a sweet and serious expression, as if the artist had meant to show us the Walter who mourns over the sorrows of Germany, or assails the vices of the clergy, or summons his people to the crusade, rather than the singer of springtime and the joys of youthful love. It is a beautiful piece of work, simple and impressive, thoroughly worthy of its subject, and reflecting the highest credit upon the sculptor Natter, himself a Tyrolese.

The statue rests upon an octagonal base, supported by eight short Ionic columns of very light gray stone, and these are carried again, by a larger square block, increased gradually by several members, until it reaches the ground. From the front and rear of the pedestal project very graceful swans' necks, through which streams of water are poured into small basins and again discharged through lions' mouths into larger basins of a soft yellowish stone below. At the sides of the pedestal are large marble lions, sitting and holding by one paw the arms of Tyrol and of the Empire. One is especially impressed by the simplicity and unity of the design and by its harmony with its surroundings. From the Johannesplatz one sees over the roofs the circle of hills which hold Botzen in their midst, so that from whatever point one views him, the singer stands against the deep blue of the Italian sky or against the dark green of his native hills.

The ceremonies of the unveiling were much of the usual sort—an oration by Prof. Karl Weinhold of Berlin, of which one heard nothing, and a poem, by Hans von Vintler, read by an actor from Vienna, of which one heard a little too much. Interesting, however, was the ceremony of laying wreaths about the base of the statue by the different musical organizations.

Thus far the whole affair had been in no sense a popular celebration. That element

(what there was of it) was reserved for the evening. The whole square was enclosed by barriers, which it cost thirteen cents to cross, and was pretty well filled by improvised tables. Here beer flowed plentifully, and begot the proper condition of mind and body for listening to the singing of the societies in friendly rivalry, and to the music of various brass bands. Excellent singing it was, too, such as would have done credit to any city organization.

The following day was to be devoted to a pilgrimage to the Vogelweider-Hof in Laien near Klausen, but we learned that the attendance was very small indeed. The final act of the celebration was a Commers of students in the Bürgersaal. This gave expression more distinctly than any other part of the "Fest" to the specifically German character. The originators were Botzen Germans who had studied or were studying at Austrian universities. Their entertainment was expressly intended to improve the occasion by emphasizing in every conceivable form the unity of Germans wherever they might be. One might easily have fancied one's self in Berlin. The allusions of the orator to Germans, and to those lofty qualities described collectively as "Deutsch," were applauded most vigorously. The Austrian national hymn was played by the band without special notice, but "Die Wacht am Rhein" was greeted with great enthusiasm. "We are not rebels," said a Vienna professor who sat next me, "but we Germans do not propose to let ourselves be crowded out by the Jews and Slavs who are now playing the great rôle in Austria." The Commers was properly concluded by the students surrounding the statue and singing "Die Wacht am Rhein" again.

Another bit of side-light was thrown upon the subject next day by an old monk in the monastery at Gries, who, in referring to the celebration, spoke of it as a pronounced failure, a perfunctory affair carried through without any basis of real enthusiasm. Certainly it was not a popular demonstration. For the mass of Tyrolese peasants who thronged the side streets of Botzen, it had no meaning whatever. If they know who Walter was, they know him only as the enemy of the priests, and that is enough for them. Still, the substantial fact is, that there he stands, the representative to the German mind of all that is best in the history of his race—of poetic insight, of patriotism, of resistance to priestly oppression—and he will prove a rallying point whenever in this distracted State the forces of light are called upon to ally themselves against the forces of darkness.

E. E.

THE FINE ARTS AT THE PARIS EXPOSITION.

X.—THE UNITED STATES.

PARIS, October 3, 1889.

IN point of size, the exhibition of works of art made by the United States ranks first among the foreign nations. With a total of 572 works in the five classes of Group I, the only rivals that approach it in this respect are Great Britain, with 552 works, and Belgium, with 450. There are 336 oil paintings, 117 paintings of different kinds and drawings, 16 pieces of sculpture and medallions, 1 architectural drawing, and 102 engravings. The exhibitors in the five classes number 356, and the recompenses awarded by the International Jury consist of two medals of honor (or *grands prix*), seven medals of the first class, twenty-one of the second class, and forty-three of the third class. Thirty-four exhibitors received honorable mention.* Four artists who exhibit both oil paintings and drawings received two awards. The exhibition occupies four galleries in the north end of the Palais des Beaux-Arts.

In accordance with the wishes of the majority of the members of the jury of American artists appointed by the officers of the United States Commission to select works offered for the exhibition at the headquarters of the Commission in New York, the works of art sent by the home artists were placed by themselves, and occupy the entire wall space in one of the four galleries and a portion of that in another. The other rooms are filled with the works exhibited by American artists residing permanently in Europe, or by those who by right of temporary residence submitted their works to the decision of the jury, also appointed by the United States Commission, that held its sittings in Paris. The general aspect of the galleries would without doubt have been better if this distinction had not been made; and, as it happens, the works exhibited by the home artists are seen at some disadvantage, for the gallery in which the greater part of them are placed is more poorly lighted than any of the other three, while the largest gallery of all, and the one in which the light is best, is occupied exclusively by the artists resident abroad. In so far as comparisons may be instructive between the tendencies at work among the artists at home and those abroad, the present arrangement makes such comparisons a simple matter even for casual visitors; and for the more attentive and inquiring ones it has some advantages, though every one who is really interested in our national progress in art, must regret that the great advance made since the Exhibition of 1878 could not have been shown in its ensemble, without distinction as to the mere place of residence of the artists. For in art originality proceeds from the individual; and though the question of surroundings is an important one, in that the artist is more apt to develop successfully and give tangible shape to his idea in a place where he is spurred by the activity of his fellows, and by the healthful influence of an art atmosphere about him that invigorates and keeps him constantly at his best, yet it by no means follows that an American artist in Paris, for example, where such an atmosphere exists, will surpass his contemporary in New York, where there is but little of it. The home artist, indeed, has an advantage of another sort in living in his own country, in being one who, if not a prime mover in whatever direction art progress takes, is at least an active participant in the development of that progress, and not, like the American in Paris, only associated with it as a foreigner who follows the movement from the outside. And though the American at home will not become an original painter simply because he comes upon types of character that others have not seen, or transcribes landscape motives that no one has thought of painting before, yet, whatever is to be gained in art in feeling one's self in a place that has been familiar from childhood, and receiving the impressions that associations produce—in feeling in sympathy with one's own skies and one's own race—is his.

The artists in Europe, especially those in France, are more completely represented in this exhibition than those at home. This was to be expected, for their interest in an exhibition on their own ground, in a place where their works are seen by their fellows, and where the recompenses voted by the juries mean more to them than they do to those at home, was naturally greater. Consequently, we find the best men represented by some of the best of their earlier and later work—earlier and later comparatively speaking, that is, for it must not be forgotten that the exhibition only includes works of art executed since 1878. In these ten years, however, so much has been accomplished in the way of sound progress at home and abroad that the history of the new American art is contained in them. It is to be regretted that the achievements of the home artists could not have been shown more completely; that a half-dozen works of such men as Mr. Winslow Homer and Mr. George Inness, for example, could not have been brought here and hung together in the gallery where there is nothing to represent the one and only one not very satisfactory canvas by the other, and that more of the works that have been among the marked successes at the exhibitions of the Academy and the Society of American Artists in recent years could not have been procured from their owners and brought here, to show more adequately than does the collection sent from New York last spring the real progress that has been made at home, and put more plainly in evidence the fact that there is an earnest body of men in New York who are following art for art's sake, and who, in spite of difficulties, are every day making their influence more felt, and every year receiving more substantial encouragement from the public. The jury charged to select works in America, however, did all that it was possible to do, and were even obliged to cut down the limits first set for the number of works to be accepted; and so, as I have said, it must merely be a matter of regret that the representation is not more complete, and it may be hoped that another occasion will afford an opportunity to do what it was not possible to do here.

The exhibition of American art at the Champ de Mars is a most creditable one, and I have no hesitation in affirming that in interest, in technical excellence, and in individuality, it is second to none except the French. The number of artists who are well trained in the *métier* is surprisingly large in proportion to what it is in other countries, and there are so many who are masters of technique, and so many others who, though they are not always that, are remarkable for well-defined originality of conception and individuality in their methods of expression, that the exhibition is one well worth seeing on account of its importance in this vast collection of the world's art; while for the American it is one that is more than gratifying, as showing how much we have been able to do without traditions, and with comparatively little of the powerful influence of a civilization that knows the value of art and encourages and honors it. There can be no doubt that we are on the right road, that we are laying sound foundations, and that some of the superstructure already to be seen is well built and beautiful; and we are justified in hoping that the day is not far off when it will be admitted that American art can hold its own with any other, and that it will then be supported and encouraged at home as it deserves.

The six portraits by Mr. John S. Sargent adequately represent him. Mr. Sargent is one of the most brilliant painters of the day, whose work as a whole is better known in Paris and London than it is in New York and Boston; but, as it happens, at least four of the portraits here exhibited have been seen in America, and

* The figures are taken from the official catalogues, and from the list of recompenses as published in the *Journal Officiel* of September 30.

the best of them all are among these four. There is such infinite skill in painting, such delightful individuality, such freshness and delicacy of color, and such an admirable ensemble in the "Portrait of Mrs. B.," that it may justly be pointed out as one of the very best works of this talented painter. No less admirable is a somewhat more sober canvas, the "Portrait of the Misses B.," in which four little girls are seen in a hall, two forming a group near the middle, a third seated on the floor in the immediate foreground, and the fourth standing at the left of the picture. It is excellent as a picture-portrait, and it is the cleverest sort of painting. Its great merit, however, lies in its fine harmony of quiet color notes and in its breadth of conception, so effectively carried out without losing the marks of individuality which the portrait painter has to keep constantly in mind. In the "Portrait of Mrs. K." are the same qualities that were noted in the first-mentioned portrait; in the "Portrait of Mrs. W." is a delightful piece of painting in light tints and great refinement of treatment, and in "Portrait of Mrs. S." a fine piece of color in the red robe and a dexterity of handling that is marvellous.

The most striking picture in the American galleries is Mr. W. T. Dannat's "A Quartette," well known to visitors to the Metropolitan Museum, where it has been for the past year or two, and where it will return at the close of the Exhibition, as it is the property of the institution. It was one of the most remarkable works at the Salon of 1884, where it was first exhibited, and is certainly one of the best pictures in the great gathering at the Champ de Mars. Mr. Dannat is further represented by his well-known and excellent picture, "A Sacristy in Aragon," by an admirable portrait head of a young girl with blonde hair, "Portrait of Eva H.," and four other pictures. "A Study in Red" and "Une Saducéenne" are of his latest work. They are both life-size figures of young women, painted in full length; both are marked by some personality of conception and treatment, but both are decidedly inferior to the other works mentioned above. Neither is distinguished in color, and the "Study in Red" is especially lacking in solidity and *envelope*.

Mr. Alexander Harrison, whose reputation as an enlightened follower of the *plein air* movement and whose admirable achievements in this field are shown in "Le Crépuscule" and in "In Arcadia," contributes six pictures. "Castles in the Air," "The Amateurs," "The Wave," and "Evening" are the four which, with the two above mentioned, compose a most brilliant exhibition. "In Arcadia," that surprisingly truthful study of the effect of outdoor light on nude figures, with its beautiful sunlight filtering through the trees and making checkered shadows on the grass at the river side, stands as one of the most original and thoroughly personal works that have come from the brush of any painter in recent years. "Le Crépuscule" is in another way equally remarkable, and is a work of great beauty marked by much truth of observation, and by the complete success with which the artist has rendered a difficult effect. In "The Amateurs," which, next to these two pictures, is the most interesting of Mr. Harrison's works in this exhibition, especially to be noted are the fine general tone, which is sustained and harmonious throughout, and the delicacy of tint in the color notes of blue and yellow and grayish white in the clothes of the children in the boat, in the reflection of the evening sky in the water, and in the boat itself. Though comparisons are sometimes invidious, it is only just to say that in this exhibition of American art the works of Messrs. Sargent, Dannat, and Harrison are especially notable, and no one, I venture to say, will dispute their supremacy, though there is more than one painter who presses them hard, and many whose qualities are as worthy of praise. The judgment is formed solely on what is shown in the galleries at the Champ de Mars, where they are all three represented by some of the very best canvases they have ever signed.

Mr. William M. Chase has eight pictures, of which three are full-length portraits of ladies. The "Portrait of Mrs. C.," first exhibited at the autumn Academy Exhibition a year ago, is fortunate in being placed in a fairly good light, an advantage that has not been given to the other two. It looks well here, and creditably represents one of the best of American painters. The small pictures of city scenes about Brooklyn parks and docks, than which nobody has painted anything better in their way, do not show here at their full worth. The little canvases are lost on the big walls, and the light is so high that the pictures are in the shadow cast by the frames. For all that, enough may be seen to leave no doubt of their merit; and their cleverness and artistic quality are incontestable. Mr. George Hitchcock's excellent picture, "Tulip Culture," with its charming color notes and its skilful painting of detail without loss of ensemble, is exhibited here with two other works, "The Annunciation" and "Maternity." The latter, which represents a fisherwoman coming from the sea, with her child on her arm and the hoop of a seine net that she carries on her back forming a sort of halo about her head, is ostensibly affected in conception, but it is a picture that contains good painting. The "Annunciation" is more simple and straightforward—a young maiden of the Dutch peasant type, with a foreground of tall white lilies—and is technically excellent. By Mr. J. Gari Melchers there are four pictures. Two of them, "Communion" and "The Sermon," of unusual size for genre subjects (but this is a fault that has been learned from the French, and is one of the bad results of the struggle for prominence in the Salon), represent scenes of life and manners in Holland. There is sound drawing, as there is always in Mr. Melchers's work, and a great deal of deliberate, solid painting in these pictures, and they are as well done as they could be in their way. The search for character and the attention given to the rendering of the *couleur locale* are their chief merits.

Mr. Dewing's charming little picture, "Lady in Yellow," Mr. Millet's excellent "A Difficult Duet," Mr. Thayer's beautiful "Winged Figure," Mr. Robinson's clever out-door study, "The Bread Carrier," Mr. Weir's "Preparing for Christmas," Mr. Blum's "Venetian Lace Makers," Mr. W. S. Allen's delightful "Evening by the Lake," Mr. Blashfield's "Inspiration," Mr Hassam's "After Breakfast" and "Rue Lafayette—Winter Evening," Mr. Simmons's "The Farmer," Mr. Stewart's brilliant "Hunt Ball" and "Hunt Supper," Mr. Ulrich's "In the Land of Promise," Mr. Denman's refined little nude "Offering to Aphrodite," and the pictures by Messrs. Benson, Carr, Ward, Webb, Eakins, Hennessy, Moeller, MacEwen, Reid, Tiffany, and Turner, are notable among the contributions by figure painters. Mr. Pearce's "Shepherdess," Mr. Vail's "Ready About" and "On the Thames," Mr. Walter Guy's "Le Bénédicité" and "The Spinners," Mr. Knight's "Calling the Ferryman" and "Mourning," Mr. Weeks's "The Last Journey—Souvenir of the Ganges" and "The Rajah of Jodhpore," Mr. Mosler's "The Last Sacraments" and "The Last Moments," Mr. Reinhart's "Washed Ashore," Mr. Bridgman's "Horse Market at Cairo" and "On the Housetops, Algiers," Mr. Boggs's "Place de la Bastille" and "St. Germain-des-Près," and Mr. Howard R. Butler's "Seaweed Gatherers," are the most important pictures among those that are already well known, and have achieved reputation for the painters at the Salon and at some of the exhibitions in the United States.

In portraits there is a most creditable exhibition by the painters on both sides of the Atlantic. Of the best among the very good are Mr. Brandegee's "Portrait," Mr. Cox's "Portrait of Augustus St. Gaudens," Mr. Tarbell's "Portrait of Mrs. T.," Mr. Beckwith's "Portrait of William Walton," Mr. Blashfield's "Portrait of a Lady," Mr. Weir's "Portrait of the Artist's Child," Mr. Vonnoh's "Studio Comrade," Mr. Wiles's "Portrait of a Lady," Mr. Pearce's "Portrait of Mrs. P.," Mr. Stewart's two pastel portraits of ladies, Mr. Bridgman's "Portrait of Mme. B.," and those signed by Messrs. Eakins, de Meza, Wyatt Eaton, Rice, Forbes, Fowler, Anderson, and Misses Beaux, Klumpke, and Throop.

But little room, comparatively, has been found for landscapes, but there are some excellent canvases nevertheless. Landscape is such an important feature of the home exhibitions that we might expect to find a fair proportion of it among the works sent from New York; but even in the gallery where these works are hung, the preponderance of figure subjects is almost as noticeable as in the others. Mr. Bolton Jones's "The Old Pasture," Mr. Ruger De Coho's "La Marcellerie," Mr. Cox's "Flying Shadows," Mr. Davis's "A Winter Evening," Mr. Pearce's "Evening," Mr. Weir's "Lengthening Shadows," Mr. Inness's "A Short Cut to Watchung Station," and Mr. Wyant's "Landscape," all works of value and individual in style, show at least that we have landscape painters who are lacking neither in artistic quality nor in technical ability to express their impressions. In addition to these, there are characteristic examples of the methods of such well-known painters as Messrs. Gifford, Whittredge, Foxcroft Cole, Parton, Van Boskerck, Minor, Macy, Gay, C. H. Eaton, and Miller, and water colors by Messrs. W. H. Drake, Gibson, Platt, F. H. Smith, and Whittemore.

In drawings the exhibition is especially rich. Mr. Abbey is represented by a dozen of the best examples of his charming talent. There is an equal number by Mr. Low, the originals for his illustrations of Keats's poems; and there are others by Messrs. Cox, Reinhart, Wiles, Pennell, Blum, and Blashfield. Mr. Bartlett's fine figure in bronze, "Bohemian," a masterly work, and Mr. MacMonnies's "Diana," are most notable among the works of the sculptors. Messrs. Warner, French, Adams, Kitson, and Waldo Story are other exhibitors in this department, in which, though the representation is not large, it is in quality at least above the average of similar displays made by most of the other foreign nations. The absence of any work by Mr. St. Gaudens is to be regretted. In architecture there is only a single exhibit, a fine perspective drawing of the reading-room of Bates Hall (Public Library), Boston, by Messrs. McKim, Mead & White. The exhibition of wood-engravings is complete, and of a high degree of merit. Among the best-known exhibitors are Messrs. Kingsley, Closson, Cole, Johnson, French, Wolf, Davis, Putnam, Kruell, Davidson, and Aikman.

WILLIAM A. COFFIN.

Correspondence.

CLEVELAND AND HARRISON.

To the Editor of The Nation:

Sir: In numerous recent issues the *Nation* has cited Mr. Harrison's declaration, "We must do at least as well as Cleveland did." In your last you speak of his action in displacing Mr. Lindsay as Postmaster of Rahway, N. J., "in the interest of the press-subsidy scheme," as "in contempt of his own self-imposed and very moderate rule," to wit, the one above mentioned.

Are you not misconstruing Mr. Harrison's declaration? It is alleged that Mr. Cleveland sometimes removed Federal officials because of their political faith or affiliation. Did not Mr. Harrison mean that he would try to do *at least* as well as Mr. Cleveland in the matter of such *removals?* Such a construction would relieve you somewhat of your embarrassment in trying to understand the President, and to make his line of action coincide with "his own self-imposed and very moderate rule," etc.

Yours, OILYGAMMON.

Richmond, Va., October 4, 1889.

To the Editor of The Nation:

Sir: The official report of the Civil-Service Commission shows that of 367 employees of the Baltimore Post-office, all but 11 were removed during Mr. Cleveland's Administration. It is furthermore well known that all his appointments there were of a very low order, and that reputable Democrats vainly demanded a change through a committee who visited him in person, with ample proofs of their charges. If the present Administration, which has certainly as yet nowhere sinned so flagrantly, is deserving of the unsparing denunciation and condemnation which you visit upon it for its civil-service shortcomings, will you inform a reader how you could consistently support Mr. Cleveland's reëlection?

Yours respectfully,
Geo. N. Jones.

Washington, October 8, 1889.

[Our correspondent seems to think that the Baltimore revelations are news. They are so only in detail, not in principle. Every reader of the *Nation* for the past five years knows whether we tried to conceal the fact of Maryland's having been delivered over to the spoilsmen, or to relieve President Cleveland of his responsibility for it. As for the reasons which we gave in favor of his reelection, we can only refer to our files for 1888. What we are doing now is, to test the morality of President Harrison, who gained office on the (as now appears) false pretence of meaning to correct the very abuse which Cleveland stood charged with.—Ed. Nation.]

To the Editor of The Nation:

Sir: Can you tell your readers what your esteemed correspondent Mr. H. C. Lea thinks of President Harrison as an administrative reformer? As Mr. Lea severely condemned President Cleveland, and expected much from Mr. Harrison, his opinions just now would be interesting reading.

Senator Hoar was likewise very wroth over President Cleveland's incompetence and hypocrisy, but seems to be quite well satisfied with the progress that reform is now making.

If Mr. Lea still agrees with Senator Hoar, I hope he may state at length why he does; for if the optimistic condition of mind regarding this present Administration is the correct one, there are many signs to show that civil-service reformers generally are in sad need of proper instruction. A. M. G.

Waltham, Mass., October 6, 1889.

INTERNATIONAL IGNORANCE.

To the Editor of The Nation:

Sir: Will the subject of "American reputation for illiteracy" bear still further illustration? In the same line as the story of Wordsworth and his college told by "American" in your paper of September 5, is the following: Not long since a member of my family was talking with an Englishman, who quoted the hackneyed verses beginning, "Believe me, if all those endearing young charms." Finishing, he said, "Those lines, you know, are by Moore." No response seeming necessary, none was made; whereupon, after a slight pause, he added: "Moore was one of our better-known poets." The somewhat sarcastic tone of the "Oh, was he?" was entirely lost upon the Englishman.

Apropos of Wordsworth, I was in the English lake district a few weeks ago, and, after my evening meal at a hotel in Windermere, I went into the smoking-room. There sat an Englishman, and, knowing how exceedingly pleasant Englishmen almost invariably are when once the ice has been broken, I immediately entered into conversation. This naturally turned upon the beautiful scenery we were then in, and, after some remarks upon Grasmere, Rydal Water, and Rydal Mount, the Englishman said: "I did not go to Rydal Mount; I believe Mr. Wordsworth was formerly rector of the parish there?" And that absurdities and displays of ignorance are also committed by Englishmen can be still further shown. While at table-d'hôte one day last January in Naples, an English clergyman sitting next to me was asked by a countryman of his who was opposite, whether "Sicily was part of the Italian kingdom?"

Still, while one such story of an Englishman can be told, there are probably a dozen of Americans; and though the number of these is unfortunately already unduly large, the following is too good to be omitted: An American lady was recently in Redfern's shop in this city, and overheard a countrywoman making an allusion to the "piccadillies." Supposing that she had not caught the word aright, and that the famous street in London was referred to, imagine her astonishment on learning, from some further remarks, that the speaker was describing to a friend a Spanish bull-fight, and that by the word in question she meant the "picadors"! Albert Matthews.

Paris, September 10, 1889.

COLLEGE TEMPTATIONS.

To the Editor of The Nation:

Sir: Your editorial in reply to the anxious mother who wanted for her son a college without temptation, was so inimitably excellent that you deserve more and heartier thanks than your correspondence column has yet shown. I took pains that nearly every member of our Faculty should read it; I showed it to various students; I gave my Bible-class at the opening talk of the session the benefit of it; and I wish it could be published in all religious papers (I intend to send it to mine) and in all college magazines (I am going to try to have it put in ours). I should also like to see it given a permanent and prominent place in all college catalogues, so completely and overwhelmingly does it meet the points in the case.

The present writer has never seen why college faculties themselves should do so much to encourage the idea that it is always a disgrace to a boy to be withdrawn from college. It depends entirely on circumstances. To do good and get good in a college, a boy needs certain things, the lack of which need be no disgrace at all, nor even mortification. If he has no taste for books, or at least for text-books, and no desire for an education, there are still many spheres of usefulness open to him, in which he can be a benefactor to his race and a source of comfort and joy to his parents. And the kind thing to do to such a boy, and to his parents, is to urge them to try him at something more suitable for him. But whether parents look at the matter in this common-sense way or not, I have always held that the kind thing for a faculty to do is to be relentless in disposing of students who have had a fair trial, and yet show that they are *not* at college for the purpose of studying. It is kind to them, and to their parents, but kind, above all, to the other students who do want to study. The seeming hard-heartedness, as some call it, is in reality true tender-heartedness; at least, so thinks

Yours gratefully, Æ.

Notes.

In addition to the announcements already made by Little, Brown & Co., Boston, they promise next month Alfred de Vigny's 'Cinq-Mars,' translated by Wm. Hazlitt, and illustrated with thirteen full-page etchings, besides smaller designs incorporated in the text. This will be published in two editions—a more and a less costly one.

Roberts Brothers, Boston, will shortly publish 'Belief,' a series of discourses, by the Rev. George L. Chaney; 'Lil,' a story, by the author of 'Miss Toosey's Mission'; 'Their Canoe Trip,' by Mary P. W. Smith; 'Flipwing the Spy,' a story for children, by Lily F. Wesselhoeft; and 'Kibboo Ganey; or, The Lost Chief of the Copper Mountain,' a story of travel and adventure in the heart of Africa, by Walter Wentworth.

Estes & Lauriat have nearly ready an illustrated edition of Owen Meredith's 'The Earl's Return'; 'Feathers, Furs, and Fins,' stories of animal life, also illustrated; and 'Queen Hildegarde,' a story for girls, by Laura E. Richards, with designs by E. H. Garrett.

A number of dainty reprints lie on our table. We begin with the solitary English contribution, the latest addition to the "Stott Library" (New York: Macmillan), namely, a selection from the best works of De Quincey, in two volumes. The size, the exemplary binding and clear typography of these little books, make them almost ideal pocket companions. The selection consists of the "Confessions of an Opium-Eater" and "Suspiria de Profundis," with "Murder as One of the Fine Arts," "The English Mail Coach," "The Vision of Sudden Death," "The Last Days of Kant," and "Recollections of Charles Lamb." A portrait and a photogravure adorn them.

The contingent furnished by the Riverside Press (Houghton, Mifflin & Co.) embraces, first, six thin booklets (in a box) with parchment covers, being selections from the prose of Hawthorne, and from the prose and verse of Lowell, Longfellow, Whittier, Emerson, and Holmes. The excerpts are all arranged under the days of the year, and frequently fit the person or the event celebrated—which, by the way, is repeated *ad libitum* in the several

volumes. The set taken together makes a very pretty and substantial gift. On a larger scale is the Riverside Aldine Series, bound in a smooth dark-blue cloth and legibly and beautifully printed, one volume being made up of 'The Gray Champion, and Other Stories and Sketches,' by Hawthorne, and two others giving the whole of Thoreau's 'Walden.' Still a third series is that of the "Dollar Classics," the price not mounting with the style, though the white and gold back and half-green sides seem more costly to produce. We have here a very desirable grouping of 'Ballads, Lyrics, and Sonnets from the Poetic Works of H. W. Longfellow,' the sonnets being massed at the end; and a companion volume of 'Interludes, Lyrics, and Idyls,' from Tennyson. Not so distinguished in appearance as the foregoing is the 'Character and Comment selected from the Novels of W. D. Howells, by Minnie Macoun.' We observe that 'Silas Lapham' furnishes the greater number of extracts, followed by 'April Hopes,' 'The Undiscovered Country,' 'A Woman's Reason,' etc. As one might not (in the present stage of the world) have expected an index, it is an agreeable surprise to find one here. Love, People, Society, Men, and Women are the chief rubrics.

Still keeping on the same line, we come to the 'Literary Gems' put into six flat side-pocket volumes, each with its case, by the Messrs. Putnam. Here the binding is a dark leatherette, perhaps, the type generously large, but the tastefulness something short of the Riverside standard. Arnold's 'Sweetness and Light' and Brown's 'Rab and his Friends' are the freshest of the gems. Goldsmith's 'Good-Natured Man,' Poe's 'Gold Bug,' Drake's 'Culprit Fay,' and Curtis's 'Our Best Society,' complete the set, which is provided with frontispieces.

Little, Brown & Co. continue their handsome library edition of Dumas, in English (the D'Artagnan romances preceding), with the Valois romances, leading off with 'Marguerite de Valois,' in two volumes. Historic portraits accompany them. The binding is in a richly stamped wine color, the print (of the University Press) very clear and attractive.

From Dodd, Mead & Co. we have a presentable edition of 'Consuelo,' in a new translation by Frank H. Potter, in four volumes. It is upwards of forty years since the first, and, so far as we know, hitherto the only American translation, by the late Francis George Shaw, was published. Mr. Potter's version is fluent and idiomatic; we have not compared it with the original, but it makes the impression of competency.

Though an index might be classed with the books that are no books, it is pleasant to meet with one honored externally as well as typographically. Such treatment has been accorded to the new '*Atlantic* Index' (Boston: Houghton, Mifflin & Co.), which is tastefully bound in green cloth, and will be an ornament in any collection. The only other index to the magazine issued by this firm extended from 1857 to 1876; the present (which includes the former) ends with the year 1888, and is under one alphabet. A brief history of the magazine is prefixed, but it remains for the reviewer to say that the *Atlantic Monthly* stands for the continuity of Boston's literary activity (we waive the often mooted question of primacy), has abjured the aid of illustrations, and has made its appeal to those who are fond of "polite literature." An index to sixty-two volumes of such a publication is something to be thankful for.

Some curious data as to library duplicates are given in a "symposium" in the *Library Journal* for September. Fifty copies of 'Ben Hur' represent a pretty constant demand, but 'Robert Elsmere' (which at the New York Mercantile Library started off with 140 copies) has suffered from a collapse of the boom, and the Brooklyn Library reports two shelvesful and four or five calls a week. Of Beaconsfield's 'Lothair' 700 copies were ordered by the New York Mercantile; 18 of Darwin's 'Life and Letters.' While Gen. Sherman's Memoirs were advanced to 52 copies, Grant's in the same library did not get beyond 15.

A *Magazine of Christian Literature* has just begun to be published by the Christian Literature Company in this city (No. 1, October). Its contents are eclectic, but the novelty of the venture lies in this, that "an original and popular work of 500 pages" is published in connection with it, of course in instalments. Thus, the number before us contains *Aachen-Ansgar* of a 'Concise Dictionary of Religious Knowledge, Biblical, Doctrinal, Historical, and Practical,' edited by the Rev. Samuel Macauley Jackson, assisted by the Rev. Talbot Wilson Chambers and the Rev. Frank Hugh Foster.

The *Revue de l'Histoire des Religions*, edited by M. Jean Réville (Paris: Ernest Leroux), enters upon its tenth year and nineteenth volume. It eschews dogmatic discussion and ecclesiastical controversy, and is independent of sectarian influences. It has leading articles and reviews, a *Chronique* and a bibliography. Its contributors embrace men like Renan, Albert Réville, Derenbourg, Goblet d'Alviella, etc. American contributors are welcomed, and the editor will provide translations from English into French. Prof. Morris Jastrow, jr., of the University of Pennsylvania, Philadelphia, will forward subscriptions.

In the *Portfolio* for September (Macmillan), Walter Armstrong summarizes in very short compass "Fine Art at the Paris Exhibition." The American contribution he pronounces a miracle of evolution since 1877. Amateurish then, "now, after the French, there is no section to rival it in the directness of vision, in the dexterity of hand and general accomplishment, which it is the gift of the French to teach." And, "there is scarcely in the whole show a contrast so violent as that between the American and English sections. It is stronger than that between the English and French; stronger even than that between the English and the Spanish or Italian rooms." Mr. Armstrong takes no notice of the American triumphs in wood-engraving. Mr. Hamerton discusses the Eiffel Tower from an artistic point of view, warding off some of the censure bestowed upon it, without allowing it ("a land lighthouse") to be beautiful. But he thinks it may permanently affect our criticism of iron architecture.

The *Centralblatt für Bibliothekswesen* contains the conclusion of Ortroy's Bibliography of Military Works published in Belgium during 1887, and the second part of the catalogue of Cologne incunabula in the Darmstadt Library, enumerating twenty-one works printed in the type used by Arnold ther Hoernen. In a note, the editor takes exception to the statement, recently made by A. Giry, the French historian, that the university libraries of Germany show a tendency to become too exclusively circulating libraries, and asserts that the tendency is in the opposite direction, as is shown by general provision, in recent years, of larger and more convenient reading-rooms for students, and the efforts which are made to encourage the use of books in the library rather than to increase the circulation outside.

In the *Library* for August and September the most noteworthy papers are F. Norgate's "Caxtoniana," recording the changes of ownership and prices of such specimens of Caxton's printing as have come into the market since 1863; an interesting account of the Library of the Royal College of Surgeons, by J. B. Bailey; an instructive analysis of a day's reading at the Mitchell Library, Glasgow; and a paper by G. R. Humphrey, maintaining that it is the duty of governments to provide free libraries for the people.

Mr. Robert T. Swan, Massachusetts Commissioner on Public Records of Parishes, Towns, and Counties, whose first publication we recently noticed, has issued a list of missing church records which will doubtless stimulate research and lead to recovery.

—Mr. W. A. Clouston, whose 'Popular Tales and Fictions' and 'Book of Noodles' we have already noticed, has just added to his publications on Oriental fiction an interesting volume entitled: 'A Group of Eastern Romances and Stories from the Persian, Tamil, and Urdu. With Introduction, Notes, and Appendix' (privately printed, 1889. 8vo, pp. xl, 586). The volume contains eleven stories from the Persian, and one each from the Tamil and Urdu. One only has not appeared before in English, but the others are found in books not easily accessible. The contents of the work are valuable to students engaged in tracing the Oriental origin of stories popular in Europe, and at the same time interesting to the general reader. The stories cover a wide range, and give a good idea of Eastern tales in general, some dealing with common life and containing nothing supernatural, others being full of enchantments, magical transformations, and good and bad fairies and jinn. The volume is beautifully printed, and the edition limited to 300 copies, plus 20, numbered, on large paper. The few remaining copies may be procured of William Hodge & Co., 26 Bothwell Street, Glasgow.

—To those who are familiar with Dr. Waldstein's interesting manner of bringing out the points which make the minor Greek sculptures valuable to the archæologist, his 'Catalogue of Casts in the Fitzwilliam Museum' (Macmillan) will be somewhat disappointing. While it aims to "make the Museum of Archæology an object-lesson in Greek art," and is intended for the general reader, the descriptions of many of the objects are far too brief to be of service in this direction, and do not explain the reason for their presence in the collection—that is, the especial point in the development of sculpture which they illustrate. This is a very important function of a descriptive catalogue, particularly in the case of archaic works, because it helps the visitor to see and appreciate the qualities which he is least likely to distinguish for himself; and its lack is hardly made good by the summaries with which the author introduces the sculptures of each successive school or epoch, admirable as these are. Dr. Waldstein has evidently put the most of his labor into these, and at some cost to the rest of the book; for we notice occasional slips which are apparently due to carelessness or haste, such as the statement that the stele of Aristion (43) is now in the Theseion, it having been removed to the National Museum two years since; the confusion of Iakchos with Triptolemos in the description of the Eleusinian slab (246); and the statement that the Praying Boy was found at Herculaneum. The origin of this statue is obscure, but its history has been traced back to the seventeenth century, when it was in France, while Herculaneum was not discovered till the early part of the century following. Dr. Waldstein is also mistaken in

saying that Michaelis places the third metope on the southern wall of the Parthenon "in the third or highest division of the metopes with regard to its freedom and perfection," because Michaelis divides these metopes into four, not three, groups, and assigns this to the third, thus agreeing with Waldstein that it should be assigned to "the division immediately preceding the highest group."

—Dr. P. F. Aschrott of Berlin is now printing the results of his visit to this country. A judge and an expert in matters of penology and charitable organization, the author of exhaustive works on the English prison systems and the English poor laws, he made an official examination of kindred institutions in the United States. He has already printed an account of our prisons, and he has now reprinted from Conrad's 'Annual of National Economy and Statistics' an article on Poverty and Charity in the United States ('Armenwesen und Wohlthätigkeit in den Vereinigten Staaten von Nordamerika.' Jena: Gustav Fischer). He shows that these are matters entirely regulated by the States, and with which the Federal Government has nothing to do, so that it is not easy to make comparisons between the paternal and centralized administration of foreign countries and the purely local regulations of the States so dissimilar in their conditions. He points to the establishment of a Board of Public Charities in Massachusetts in 1863 as leading to similar centralization in other States, until now thirteen States have similar organizations. He remarks the differences in their powers and organization, and the advantage of such elasticity over the uniform system of the English Poor-Law Boards. The recognition of the right of the minority party to a representation on these boards he finds suggestive of the right use of government by parties. The facts that the members are unpaid, and that among them some of the most useful are women; that these boards voluntarily join in general conferences for discussion of methods and comparison of results; and that private associations have been organized to support the official bodies, are all carefully dwelt on. Dr. Aschrott made a special appeal to the German overseers of the poor, in their Congress at Carlsruhe last year, to apply some of the practical lessons that he brought home from his visit to America, as, the advantage of the principle that the State Board is in no sense executive, but simply advisory; the value of individual as distinct from official organization, of voluntary as contrasted with paid care of the poor. He especially commends to the German Women's Charity Societies the work done by Mrs. Josephine Shaw Lowell, Miss Louisa Schuyler, and Mrs. Richardson.

—The long and repeated delays in the publication of the posthumous memoirs of Prince Talleyrand (which have been serious enough to cause misgivings in the mind of many a middle-aged reader), and perhaps also some renewal of interest in their author, due to M. Henry Houssaye's '1814,' have set M. Edmond Plauchut upon a pilgrimage to Valençay, Talleyrand's château and tomb, of which he gives a very readable account in the *Temps* of September 20. The whole of the article is interesting, but we note in it especially some particulars about the marriage of Talleyrand, and an anecdote or two which, if not absolutely new, have an air of freshness. The marriage was a queer one, to begin with. Talleyrand, although an eldest son, had taken holy orders, on account of his lameness, as it was said, and wholly without vocation to the priesthood, and had been made Bishop of Autun. When he came back from America, he was followed by a Mrs. Grant, who had been his mistress during his exile, and with whom he lived publicly in Paris. This shocked the sensitive morality of the First Consul, in whom

"Déjà Napoléon perçait sous Bonaparte,"

and he insisted that a marriage should sanction the connection. Talleyrand did not wish to be married, but he did wish to keep his place as Minister of Foreign Affairs and to avoid a quarrel with the head of the State. A dispensation was therefore obtained from Pope Pius VII., and the wedding was celebrated both civilly and in church. Mme. de Talleyrand had the name of being as stupid as she was handsome, and her husband took a manly pleasure in leading her on to the commission of the most amazing blunders for the amusement of their guests. One day, for instance, when Denon, one of the savants whom Bonaparte had taken in his train on the expedition to Egypt, was to dine with them, Talleyrand told his wife that he was a traveller of note whose last book he would give her to read. At dinner Denon was at first delighted by the accuracy and discrimination of the compliments which Mme. de Talleyrand paid him, but she soon gave such feelings pause by saying: "*Et ce bon Vendredi*—what a comfort he must have been to you!" Talleyrand had given her 'Robinson Crusoe' to read. The château of Valençay is *triste*, now, M. Plauchut says, and the woods around it are sombre; they are no longer lightened by the delicate humor of their former owner. He lies in the chapel in a marble coffin that has his titles in letters of gold on the lid. Nuns take care of the chapel, and a priest comes and says mass there every day.

JONATHAN EDWARDS.

Jonathan Edwards. By Alexander V. G. Allen, D.D., Professor in the Episcopal Theological School in Cambridge, Mass. [American Religious Leaders.] Boston: Houghton, Mifflin & Co. 1889.

Dr. Allen's book is the first of a new series of which several volumes are announced, the most promising in subject and in treatment being a study of Theodore Parker by Mr. John Fiske. It is to be hoped that he at least will not be bound by the express intention of the series—to give thought-histories, not personal biographies. There would be something monstrous in such a treatment of Theodore Parker. In the case of Jonathan Edwards, the man's thought was so nearly exhaustive of the man that the limitation does not seriously harm, and yet we could wish that Dr. Allen had been more forgetful of it and given us a more personal presentation. Nothing could be more intangible than Edwards's personality as it moves through these pages. We are in a region of abstractions nearly all the way. It is, perhaps, a matter for regret that this subject did not fall to some one of a less abstract and speculative turn of mind. Edwards himself was not more of such a turn than Dr. Allen, whose "Eternal Christ" is as far removed from anything positive, or historical, or human as the most vague of Edwards's theological conceptions.

Dr. Allen's 'Continuity of Christian Thought' was so pronouncedly anti-Augustinian and anti-Calvinistic that it prepared its readers for a much more polemical treatment of Edwards than he has given us. If he has erred, it certainly is not on the polemical side. If anything, he is too apologetic. The proportion of exposition to criticism in his book is that of ten to one. Throughout the earlier chapters we have so little criticism mixed with the exposition that we begin to be impatient, but there is more as we go on. Then, too, the author's art becomes apparent: his exposition is a criticism that would be weakened by any pointing of the moral. In other words, to state is to condemn.

There was much more in Edwards than his development and defence of Calvinism. This Dr. Allen endeavors to bring out. His treatment is extremely sympathetic. We find ourselves thinking of Edwards as of a spirit in prison, and wondering what he would have been if he had not felt it necessary to conform his thought to the traditional creed. It would not be difficult to make up from his writings an anthology that would be as little suggestive of the Jonathan Edwards of our habitual conception as anything could well be. It would abound in sentences and passages of the utmost tenderness and spirituality. Critics before Dr. Allen have noticed Edwards's predilection for the words *sweet*, *sweetness*, *sweetly*. Dr. Allen thinks the word *light* was equally a favorite with him. That here was an apostle of "sweetness and light" more than a century before Matthew Arnold's time will certainly be a surprise to many. So respectful and so reverent is Dr. Allen's treatment of Edwards, that he never invites us to a laugh or even a smile at his expense, as he might easily and innocently do. Rather than do this, he abridges Edwards's account of his infirmities in his letter replying to the invitation to the Presidency of Nassau Hall, now Princeton College. He had, he says, "*a constitution in many respects peculiarly unhappy, attended with flaccid solids, vapid, sizy, and scarce fluids;* and a low tide of spirits, often occasioning a kind of childish weakness and contemptibleness of speech, presence, and demeanor; with a disagreeable dulness *and stiffness*, much unfitting me for conversation, but more especially for the government of a college." Dr. Allen omits what we have printed in italics, and there were certain humorous aspects of the "Great Awakening" to which he has been too considerately blind.

Dr. Allen divides his matter into three sections of six chapters each, with a brief general conclusion. The first section, "The Parish Minister, 1703–1735," sketches Edwards's youth and training, his marriage with Sarah Pierrepont, his settlement in Northampton, his characteristics as a preacher, and his imprecatory sermons. Of course the exquisite description of Sarah Pierrepont, written when she was thirteen and Edwards seventeen, is not omitted, though it is better known than anything he wrote except certain passages in the sermon "Sinners in the Hands of an Angry God." It cannot be too well known, for we must go to Dante's 'Vita Nuova' for anything more delicately sweet. Of course, too, the wonder is renewed that from the marriage of these saintly persons came in the second generation such a scamp as Aaron Burr. We might also wonder that with his conception of children as "young vipers, and infinitely more hateful than vipers," he chose to warm eleven of these vipers in his bosom.

Dr. Allen's second section has for its subject "The Great Awakening, 1735-1750." That period of religious excitement was fraught with serious results for Edwards and for the New England churches. At first it was a local matter, beginning in Northampton, with Edwards's own parish, where, after sweeping in 300 converts, it died away, God withdrawing his spirit and letting loose the devil, in the language of the time, only to break out again everywhere, stirred by the eloquence of Whitefield into a

fiercer flame. Its different stages appear in a succession of Edwards's writings, pathetic in their transition from the glorying over the earlier aspects to the apology for the later, in which there was much of condemnation. In his treatise on "Distinguishing Marks of a Work of the Spirit of God," it is pitiful to see him endeavoring to prove a divine character for the physical manifestations of his own converts, while denying such a character to Whitefield's "impulses" to speech and action. It was with the consent of Whitefield, not with that of Edwards, that the authority of the clergy was broken by the invasion of itinerant preachers and lay exhorters. Against such invasion Edwards set his face in vain. The destruction of the parish unity of towns was one of the most obvious results of the revival. With much of transient interest, except for the religious historian, Edwards contributed to the Awakening one of the loftiest expressions of his spiritual genius, his 'Treatise on the Religious Affections.' Dr. Allen finds in it the Miltonic sign of a good book—"the precious life-blood of a master spirit." Its leading purpose was to show that Christian character and practice are the only adequate tests of the presence of the divine spirit; that in the life alone can be made manifest the sincerity of Christian faith. The depreciation of miracle, in this treatise, as compared with spiritual insight as a testimony to religious truth, is one of those anticipations of Transcendentalism which others before Dr. Allen have remarked upon. There was, however, this important difference, that the spiritual insight of Edwards was the special gift of the Almighty to his own elect, while that of Emerson was the most natural operation of the mind.

It was an application of the principles of this treatise to parish life in his 'Qualifications for Full Communion' that brought Edwards's connection with the Northampton parish to an unhappy close. The understanding has generally been that Edwards demanded assurance of conversion as a condition of church membership. Dr. Allen makes it plain that he did not. His standards of conversion were so subtile and exacting that he might well have doubted his own, as Hopkins and Emmons, the great continuators of his line, did theirs. What he demanded was "a lively hope" instead of the mere formal baptism of the "half-way covenant" by which the New England churches had endeavored to make citizenship easy, when one must be a church member to be a citizen. The matter was complicated with some question of discipline for the reading of "obscene books," meaning Richardson's 'Pamela,' suggests Mr. Leslie Stephen. When the vote was taken on his expulsion, there were only twenty to sustain him. Two hundred were in opposition. The Stockbridge Indians must have been a pleasant change from the Northampton saints. But before this refuge had been offered, friends in Scotland had tendered him a settlement. Then it was that the "Father of Modern Congregationalism," as Dr. Allen calls him, wrote that he had "long been perfectly out of conceit of our unsettled, independent, confused way of church government in this land, and the Presbyterian way has ever appeared to me the most agreeable to the word of God and the reason and nature of things." Dr. Allen may well conceive that this language only expressed the alienation of a passing mood. Certain it is that the stone his Northampton parishioners rejected became the head of the corner of Congregational polity. His offending treatise was the beginning of the end of half-way covenants and of that mixture of the affairs of Church and State which had been suffered over-long.

The third period of Edwards's life, corresponding to the third section of Dr. Allen's book, was preëminently that of "The Philosophic Theologian." Its most significant product was the treatise on the 'Freedom of the Will.' The real object of this was to save God's foreknowledge, which seemed to be imperilled by the Arminian doctrine. Into the particulars of Dr. Allen's suggestive if not entirely satisfactory treatment of this formidable theme we cannot enter. What is certain is, that, to save human responsibility, Edwards made so much of the "freedom to do what we will" as distinguished from the "freedom to will what we will," and was followed up in this so closely by his followers, that he did much to advance the Arminian doctrine which he would fain have utterly destroyed. What is also certain is, that his most precious doctrine, that of the sovereignty of God, went utterly to wreck in the logic of his argument. There was no more place for divine freedom in that than there was for human. "The Augustinian idea of God as arbitrary, unconditioned will" gave way to another conception—that of "God as the one substance, of whose thought the world of created things is the necessary manifestation." This means that, after a lifelong endeavor to subject his personal thought to the traditional dogma, the latter finally succumbed. Mr. Leslie Stephen has called Edwards "a kind of Spinoza-Mather." His intellectual experience resolves itself into the conflict of these opposing elements, a philosophic pantheism and the traditional theology. It was the former that came off victorious.

We have heard much of late of a "Christocentric" doctrine of religion. It is the favorite doctrine of the progressive orthodoxy, so called, of Andover. Edwards knew it not. His theology was God-centred. For him there was hardly anything but God. "Where man should be, there is only a fearful void." It was the reaction from this method that brought the Unitarianism of Channing, with its doctrine of the dignity of human nature, to the front, while leaving God the supreme object of thought and worship. But in the last analysis it is neither the direct nor indirect influence of any special thought of Edwards that constitutes his value and significance for religious thought. It is his thinking that does this. "When God lets loose a thinker on the earth," something remarkable is sure to happen. However wrong-headed Edwards's thinking was at times, it was still thinking. It was an appeal to reason. The beginning of all scepticism and infidelity, says Cardinal Manning, is the attempt to prove the reasonableness of revelation. Edwards made this attempt. "He who believes principles," he said, "because our forefathers affirm them, makes idols of them; and it would be no humility, but baseness of spirit, for us to judge ourselves incapable of examining principles that have been handed down to us." Edwards never wrote anything more characteristic than these Miltonic words. The impulse which he gave to rational thinking was not wholly spent till it had produced results quite different from those which he believed he had established for all time.

THE NEGRO RACE IN CENTRAL AFRICA.

Les Nègres de l'Afrique sus-équatoriale. Par Abel Hovelacque. Paris: Lecrosnier & Babé. 1889. Pp. 468.

ANY work on ethnology by the distinguished author of 'La Linguistique' cannot fail to merit the attention of all who are interested in that "science of man" which, in its modern phase—since the time of Boucher de Perthes, of Darwin, and Broca—has assumed such a novel importance. The present work forms one of a series, composing the "Bibliothèque Anthropologique," which, commenced as lately as 1885, numbers already ten published volumes, with five more announced as in the press. Their authors—Thulié, Duval, Letourneau, Hervé, Vinson, Lacombe, Bordier, Mortillet, Manouvrier, Sabatier—will be recognized as among the masters of this science in its various branches. Each of them is capable of giving a complete report of the present state of knowledge in his own particular department. If the report in each case involves certain special theories of the writer, this fact, far from being a defect, must be deemed not merely a merit, but a decided advantage to the reader. No account of any inductive science is really satisfactory which is not based on a "working hypothesis" clearly set forth. When we know the author's point of view, we can scrutinize his facts and weigh his conclusions with a confidence which would be otherwise impossible.

Central Africa and its people have lately acquired a peculiar interest. The commercial nations of Europe, overflowing with population, capital, and enterprise, and looking far and wide for fields of trade and colonization, have suddenly become conscious of the fact that the greatest of these yet unexploited fields is just at their own doors. The New World of the coming century is to be found in the very heart of the Old World. In this old New World, moreover, there is an immense population which cannot possibly be "improved off the earth." A climate fatal to the white man protects it; and the race itself is full of vitality, the toughest and most fertile of all races, except perhaps the Chinese. Hence the question of the future of this race, and of its capacity for improvement, becomes of the greatest importance.

Prof. Hovelacque does not include in the scope of his work the people of southern Africa, the great "Bantu race," among whom the explorations of Livingston and Stanley have been chiefly carried on. He considers them to belong generally to "a more elevated type" than the "north-equatorial tribes." These latter, extending, with some interruptions, from Senegambia and the Guinea coast to the regions of the Upper Nile, compose the typical negro race, and are portrayed in his work with a fulness and accuracy which leave little to desire. Beginning with the people of the Atlantic coast, and proceeding eastward, he describes minutely the physical traits, character, social life, arts, government, and religious belief of each tribe. He draws his descriptions from the narratives of the best explorers, carefully weighing and comparing the different reports, until the reader feels satisfied that the picture presented to him is thoroughly trustworthy.

In the second part of the work the whole of the descriptions are summarized, and the author's conclusions are set forth. These conclusions are given, for the most part, in the words of other authorities, whom he cites with general approval. According to these opinions, the most notable qualities of the negro are his light-hearted disposition, his good-nature, his indolence and his improvidence, his fickleness and his vanity. He is untruthful and thievish, but not addicted to great crimes. He is exceedingly generous and hospitable, but is at the same time indifferent to the sufferings of others. He has an excessive curiosity, but little inclination for learning; is intelligent to a

certain degree, but is incapable of permanent improvement or of a high civilization. He is, in fact, a child with the stature of a man. "During childhood," affirms Sir Samuel Baker, "the negro surpasses in intelligence the white child of the same age; but his mind does not develop. The fruit is there, but it does not ripen; the body grows, but the mind remains stationary." "It is now demonstrated by experience," writes Bérenger-Féraud, "that there is a point, very near the semi-savage state, beyond which the negro cannot pass, whether we leave him to wander or whether we cultivate his mind with care." It is a race, declares Vallon, marked with the stamp of immobility and incapable of change.

These opinions are of the kind to which we in America were accustomed in bygone days, when anthropology was a branch of politics. It will be noticed that there are certain inconsistencies in the qualities ascribed to the negro race, whose members are at once intelligent and thoughtless, generous and selfish, inquisitive and disinclined to learn. What is still more noteworthy is the fact that a phase of mental development which belongs to the whole human race is treated as peculiar to the negro. Everywhere—as Broca's eminent successor, Dr. Topinard, has well pointed out—children are notable for their singular eagerness and capacity for acquiring knowledge. This readiness lasts while the brain continues to grow and gain strength rapidly, as it does in childhood. At the period of adolescence this rapid growth ceases, and with it the eagerness for learning declines. Where necessity stimulates to exertion, as in cold climates, or where custom and ambition urge the youth forward, as among the higher classes in civilized countries, the effort for improvement continues—not, as before, by spontaneous desire, but through a direct exertion of the will. In a genial and fruitful region like tropical Africa, this exertion is less required. If, nevertheless, the exertion has been, as the present work shows, really apparent in the negro race to a marked extent, we have evidence of a decided natural capacity and inclination for improvement in this race.

The abundant facts adduced by Prof. Hovelacque show that the negroes have attained a higher grade of civilization than had been reached by the German tribes in the time of Tacitus, though these tribes had then probably occupied the fertile plains of central Europe, under a stimulating climate, for more than three thousand years. The negroes everywhere cultivate the soil, and raise a great variety of products, including rice, maize, millet, sorghum, leguminous plants, indigo, tobacco, and cotton. In some of the mechanical arts they have made notable progress. The tanners of the Soudan are "renowned" for their skill. Weaving is everywhere practised. The women spin the cotton thread, which the men weave, dye, shape, and sew into garments. Pottery, of native make, is everywhere in common household use. Iron-forgers are numerous, and, though their implements are primitive, often display much skill, both in smelting the ore and in working the metal. There is an extensive commerce, with regular markets, and an established currency of shell-money. Flourishing and populous towns, such as the Germany of Arminius never knew, are the centres of this traffic. The country is "constantly traversed by caravans of negroes, carrying their goods to the coast, and bringing to the interior the products of the coast-lands and of Europe."

One of two conclusions is inevitable. Either the negroes have invented all these arts, or they have learned them from others. In either case their natural capacity for improvement is made clearly evident. Nor is there any reason for supposing that this improvement has reached a limit at which it has become stationary. Two of the chief products of their agriculture, maize and tobacco, have come from America, and in less than four hundred years have been diffused through nearly the whole breadth of Africa. The judgment which pronounces the entire population to be dishonest and thievish is at once shown to be baseless and absurd by their extensive commerce and their industrial arts; for without mutual confidence and general respect for the rights of property, no trade or manufacture can exist. As little can we accept the opinions which pronounce these intelligent and active artisans, cultivators, and traders to be thoughtless and improvident children. Such dicta we perceive to be merely the outcome of those race-prejudices which make it so difficult for the average traveller to judge any foreign people impartially.

Prof. Hovelacque, however, is an enlightened and liberal scholar, far above such vulgar prejudice. He is evidently misled by his "working hypothesis." This hypothesis supposes that the negro belongs to a more primitive grade of humanity than the European, approaching nearer to the anthropoid ape. Such was, in fact, the older Darwinian theory, which Darwin himself is understood to have renounced in his later years. The better theory holds that the qualities, physical and mental, of each race depend chiefly on its environment, including, of course, in this term, the influences exerted upon it by other races. It has been mainly through these external influences that the Germanic tribes have been lifted, within two thousand years, from a barbarism lower than that of the negroes to the height of modern civilization. If the climatic obstacles are more serious in Africa, it must, on the other hand, be admitted that the facts recorded in the present work show in the people a peculiar aptitude for improvement, warranting strong hopes for the future of their race.

One evidence of great scientific value remains to be noticed. Prof. Hovelacque is a philologist of the first rank, and he justly considers that the language of a people furnishes one of the best tests of their mental powers. If he had chosen to apply his own learning and discernment to this test, the result would have led him to an unexpected conclusion. Unfortunately, he has had recourse, not to the languages themselves, but to the opinions of travellers who knew nothing more of those idioms than they could pick up in passing through the country. On their authority, he pronounces of the negro that "abstraction is absolutely beyond his faculty of conception." There are, we are assured, "no abstract words in his language. Only tangible things have the power of touching him. As to generalization, as to deducing from the sense of material phenomena any systematization whatever, we must not demand it of him."

How widely the author has been misled by his untrustworthy guides will appear by a glance at the analyses of African languages comprised in Dr. Friedrich Müller's work on 'Linguistic Science' (*Grundriss der Sprachwissenschaft*), the highest authority on this subject. The languages of the Mande (or Mandingo) family, comprising the Mandingo proper, the Susu, Vei, and Bambara, may be deemed typical negro idioms. Every one of these languages has a suffix (*ya*, *nya*, *dza*), of which the special office, we are told, is "to form from substantives, as well as from adjectives and verbs, nouns of abstract signification." Thus from *bong*, friend, we have *bongya*, friendship; from *mo*, kinsman, *modza*, relationship; from *wuru*, brief, *wuruya*, brevity; from *ketu*, to deceive, *ketunya*, deception. In the languages of an entirely different family, the Yoruba, the same result is attained either by a peculiar form of reduplication, as, in the Nupe dialect, from *wo*, dry, *wiwo*, dryness; from *mo*, sweet, *mimo*, sweetness—or by a prefix, as from *ta*, to betray, *ita*, treachery; from *wu*, to teach, *iwu*, doctrine. Another language, the Wolof, pursues these abstractions into refinements rare even in European tongues. Thus from *dunde*, to live, are derived the forms *ndunde*, life, and *dundite*, "the having lived"; and from *sopa*, to love, we get the nouns *nthyope*, affection, and *sopite*, "the having loved"—affection, as it were, in the past tense. The languages of central Africa are of very varied types; but none of them, it may be affirmed, are so low in the linguistic scale as the speech of the civilized Chinese, while many of them show powers of word-formation and capabilities of expression which will easily fit them for literary uses. Thus the language-test confirms, in a striking way, the many other evidences of the good natural capacity and improvable qualities of the central African population.

Finally, reference may be made to a scientific authority far higher than any of those cited on the other side—that of the eminent naturalist and anthropologist, Prof. A. de Quatrefages, who, in his great work just completed, the 'Introduction to the Study of the Human Races,' has demonstrated by physiological data the falsity of the notion that "the negro is a white man in a state of arrested development." Few writers, indeed, have done more than this illustrious leader of science in France to dispel the unscientific prejudice which holds that all barbarous races are proved by the mere fact of their barbarism to be inferior in capacity to civilized races, a prejudice which, twenty centuries ago, would have ranked Germans and Gauls in natural intelligence below Egyptians and Chinese. Accepting the facts of Hovelacque and the philosophy of Quatrefages, there seems no reason why we should not hold that within much less than two thousand years—for events march rapidly in these later times—middle Africa may become (as northern Africa has twice been) the seat of powerful and civilized nations and the centre of a world-enriching commerce.

RECENT NOVELS.

Zit and Xoe. By the author of 'Lady Bluebeard.' Harper & Bros.

A Crooked Path. By Mrs. Alexander. Henry Holt & Co.

A Sage of Sixteen. By L. B. Walford. Henry Holt & Co.

Isaac Eller's Money. By Mrs. Andrew Dean. London: T. Fisher Unwin.

'ZIT AND XOE' is an evolution story, cleverly conceived, and laid out on original lines. The execution is hardly equal to the design, but this is said rather in praise of the latter than

in detraction from the former. To a history of the first human beings, an archaic language would have lent itself more suitably than do the flippant phrases of the period. A sense of jarring occasionally mars the enjoyment of the pretty fable, as one comes upon a paragraph that might be taken from a notebook nourished at a summer boarding-house. Facts in such cases are not strictly verifiable, but the author has clearly testified to his own belief in the early development of feminine complexities of mind. Xoe, first of women, cannot be outdone in subtlety and labyrinthine quality by Henry James's most involuted heroine.

A book by the author of 'The Colonel's Opera Cloak' is sure of a public, and those who venture 'Inside Our Gate' will find wholesome cheer. The book is not a story like the former one—in fact, it is not a story at all, but a chronicle of home life, such as must appeal nearly to all who are set in families, and must give to the solitary a sense of domesticity. One would like, provided one had not maltreated an animal, to be shriven at the hands of so gentle and so humorous a priestess as presides over this home altar. The story of her housekeeping, her children, her maid-servants and their lovers, her cats and dogs and birds, is full of naturalness and charm. A humorous realism gives the book its leading motive, although pathos is not wanting. The chapter describing the scene between the Scotch servant, Tibbie, and her braw wooer, the baker, is as amusing a presentment of Caledonianism as has found its way into print.

After the delicate texture of this book, that of 'A Woodland Wooing' wears a somewhat cheap air. New England eccentricities have been described so often and so well in recent years—better than here, we think, by Eleanor Putnam herself, in an earlier, charming volume—that one grows fastidious, and can enjoy only the cream of the cream. The Woodland part of the book is pretty; the drama and the Wooing lack the distinction one must hope to find in a story by the author of 'Old Salem.'

Mrs. Moulton's book of stories—notwithstanding that "Miss Eyre from Boston" heads the procession, followed by many other Bostonians, like the bright seraphim in burning row, and that the collection is dedicated to five Boston girls—has neither the wit, fibre, nor Attic flavor to be looked for in such high association. In vain do the pages reek with Reveres and Quincys; in vain is the atmosphere rarefied with Amorys and Sargents; the Commonplace, which should shrink affrighted, rears its head in every chapter, and, hand in hand with the feebly Sentimental, minces through the book. There is a great deal about "quivers of pathos," "the woman-heart," "sweeping dead hopes down the gale"; about girls like "flowers o' the peach," and "laces like sea-foam"—all of which has the ring of the days we hoped were dead. Less familiar is the spirit of touching gratitude with which large numbers of young men receive refusals at the hands of the peach-blossom girls. This setting forth of altruism is perhaps destined to have a great influence over our gilded youth, and to secure for the book an otherwise hardly attainable immortality.

Mr. Lathrop's book of stories is something better, but causes one to reflect with sorrow how rare an achievement is one good short story, how thousand-fold more rare a book of such. Many a one which passes muster singly, and gives itself easily to the trivial mood of the hammock, wears a sadly limp appearance in a volume with others of its family, and challenging an hour's attention instead of the passing moment's. Mr. Lathrop's stories show as much invention as many, have more imagination than most, yet such pearls as they afford are strung in unequal fashion along with stones of little value. A quality for which there is no better name than home-made overlays the fancy, and produces often an impression of collapse where one has been encouraged to expect an original flight. The style is clear and flowing. It is the matter of the book, rather than its form, which, spite of able touches, carries a hint of the callow.

'Miss Marlow' is quite the most raw piece of work that has blundered into print in a long time, and a book to make one thank the gods that he is not poetical. The dedication speaks of it as "an indifferent offering," which, under the circumstances, is fulsome praise. The story rises in the every-day atmosphere of tennis-playing, fox-hunting young America. It sets in a lurid light which has shone more often in the Bowery Theatre than on land or sea. But not to be classified at all is the language that the characters speak. The lofty periods are those of a Lord Orville, but a Lord Orville of defective education. This is what a mother says, haranguing her daughter upon the behavior of man in the abstract as a husband: "His life he devotes to her happiness and maintenance, his person he commits to tedious labor, to watch and strive by night and day, in winter and summer, to keep his wife secure at home." Not, however, to force the girl into accepting the particular man who has inspired this preachment, the mother adds, and one can fancy her smacking her lips over her own eloquence, "Because your intellect is pleased, your heart touched, it is not a logical sequence that your life shall be affluent in the blessings of contentment and peace." Is not this near to being funny and to entitling the book to a place among the Portuguese phrase-book classics?

Mrs. Alexander's novels are always exceedingly cheerful reading. Her paths lie in well-lighted places, or, if there is an occasional dip into gloom, the reassuring click of a lantern is always at hand. Her villains are not very naughty, her catastrophes not very distressing. Her heroine is always a person of great energy and good spirits. She is usually involved in a little money trouble and a little love trouble, but she secures a secretaryship, or keeps a shop, with unfailing sunshine in her temper, and emerges triumphant and wealthy on the arm of a lord, who is always dark and has a "grave, sweet smile." But in 'A Crooked Path' the gospel of the debonair has been pushed too far. The sonsy lass whom Mrs. Alexander's readers know so well, commits felony, and trips lightly through life with only the most intermittent remorse. She is never found out, except by the reader and by the man she has robbed, who smiles pleasantly at her and marries her. The reader will be less lenient, and will hope that Mrs. Alexander will henceforth keep to her little sins, where her blitheness is not out of place.

'The Sage of Sixteen' is a charming young girl with a considerate disposition towards all mankind, and an especial turn for philanthropy towards the not very poor, but what are called the half-and-halfs — school-teachers, tradesmen's daughters, "persons one does not know"; the class which in English stories is so difficult of management, so inadmissible, so grateful for a little notice. The sage of sixteen reforms two worldly families to the point of making them invite the half-and-halfs to their houses, and England is happier for her presence. As her experiences form scarcely a novel, rather a girl's book which will assuredly be pronounced "splendid," and perhaps be dramatized by a world that makes a cult of Lord Fauntleroy, it is well to remind the young girls who will wish to emulate Elma Alfreton's example, that they should fix their attention not only on her lofty station in life, but on her unselfish sweetness. Being a book by Mrs. Walford, it is needless to say that it is written with practised grace and is easily read.

If Beresford Hope had postponed to the next century his scathing epithet for Disraeli of "the Asian Mystery," the chances are that he would never have used it. The mystery of the modern Jew in England is undergoing such thorough investigation by the novel-writers that solution must be at hand. In the case of 'Isaac Eller's Money,' Disraeli's answering reproach of "Batavian grace" is not applicable. It is one of the cleverest books of its school, and contains some exceedingly telling portraiture. Here are, of course, sordid Jews and Jewesses. They wear yellow and fine brocade; they sit in the crimson-plush seats of the scornful, and are strictly pachyderms. These are more or less familiar figures, but to them are added a quite original person or two, drawn with a good deal of vigor. The Hebrew æsthete and the Hebrew "masher" of Mrs. Dean are her chief successes. Types of exaggeration they are, and caricatures they would assuredly have become under unskilful treatment; but a cunning hand and a shrewd has wrought, and the result is full of quality. The workmanship of the whole book, indeed, is firm and sinewy, and it will be found to yield an entertaining hour's reading.

CLIMATES AND WEATHER OF INDIA.

A Practical Guide to the Climates and Weather of India, Ceylon, and Burmah, and the Storms of Indian Seas. By Henry F. Blanford, F.R.S., late Meteorological Reporter to the Government of India. Macmillan. 1889. 369 pp., 8vo.

The Meteorological Department of the Government of India was established in 1875, and from that time until within a year or two has remained in charge of its first director—or "meteorological reporter," as he is styled—Henry F. Blanford. During his term of office, a large number of well-equipped stations have been established in all parts of the great peninsula. Annual reports have presented long tabular statements of high value to the specialist, and folio memoirs have contained excellent discussions of Indian data; but the need of a more general account of the results has led to the preparation of this admirable book on the climates and weather of India.

Mr. Blanford is as successful in popular exposition as in scientific administration. We have already enjoyed his text-book, the 'Indian Meteorologists' Vade-mecum,' in which the physical principles that lie at the basis of the science find much greater recognition than has generally been allowed them in English writings; and he has written a valuable primer on the 'Rudiments of Physical Geography' for the use of Indian schools, where so much of the stock material of English books would be irrelevant. His scientific writings are chiefly in the memoirs above named, and are particularly concerned with the winds, rainfall, and cyclonic storms of India. His associations are of a high order, he being a member of the Royal Society, and his brother President of the (London) Geological Society, after a term of service on the Geological Survey of India. It is from such a man as this that we are most fortunate in having a popular exposition of scientific results. The book will at once take place as a standard, and will serve excellently as a source for quotation of material concerning one of the

most interesting meteorological regions of the world. The aboriginal home of the monsoons and the scene of Piddington's studies of cyclones, India is often cited in our text-books; but the statements commonly current are now somewhat stale, and will be greatly freshened by renewed contact with the conclusions of a practical investigator.

Mr. Blanford's book consists of two parts and an appendix of climatic tables. In the first we find chapters on various meteorological topics, for which brief illustrations or numerical tables are given from various parts of India; in the second, the different parts of the country are taken up in succession, and the weather and climates of each described in turn. The author does well to insist on the use of the plural in recounting the wonderful variety of conditions that prevail from the desert plains of the Indus to the humid delta of the Ganges; from the temperate promontory on the south to the torrid lowlands in the north; from the open highlands of Ceylon to the mountain-walled vale of Cashmir. Just as Strachey has lately emphasized the importance of considering the "peoples" of India when describing the wonderfully complex native population, so Blanford calls attention to the variety of its "climates." The book is full of quotable passages. Here are two, slightly altered and condensed. The first describes the climate of the Punjab, the "five-river" region of the north-west:

> Like the rest of India, the Punjab has but three seasons, the hot season from March or April to June, the rains from July into September, and the cold season from October to February. From April to June, as a rule, there is no rain: the hot west wind holds sway, blowing from the sandy wastes of the Indus region. A dweller in the temperate zone can hardly realize the desiccating, truly scorching heat of this wind. The thermometer rises above 120 degrees in the shade. In order to enjoy fresh air at this season one must take exercise at early dawn, for no sooner has the sun risen than the heat sets in again. Then the houses must be closed, only a small door being left for passage. So long as the hot winds blow strong and steady, rooms may be kept in some measure cool by means of grass screens sprinkled with water in front of the doorway, or by some mechanical "thermantidote." Man and beast languish and gasp for air, while even in the house the thermometer stand between 95 and 113 degrees. All green things wither, the grass seems burnt up to the roots, bushes and trees seem moribund, the earth is as hard as a paved highway, the ground is seamed with cracks, and the whole landscape wears an aspect of barrenness and sadness. At length in June the hot winds are followed by a calm, and now the heat is truly fearful. Thermantidotes avail naught, and all things pine for the rains; but no rain, not even a shower, can one hope for till the south and east winds shall have set in. These winds first bring clouds and frequent showers, and finally the summer rains. In July the trees begin a second time to burst into leaf, grass springs up once more, and soon a vegetation is developed that is scarce to be kept within bounds. Grateful as is the coolness brought by the showers, the more oppressively hot and sultry is it when the rain holds off, if only for half a day. The atmosphere weighs on one like a heavy coverlet. Insect and reptilian life is active; of evenings it hums, and buzzes, and croaks all around; frogs find their way into the houses, and, with them, scorpions and snakes, making it unwise to go about in the dark. Woodwork swells, doors and windows can only be fastened with difficulty. Shoes become thickly coated with fungus, books become mouldy and worm-eaten, paper [brittle in the dry season] perishes, linen becomes damp in the presses, and, despite the oppressive heat, one must light a fire to neutralize the dampness.
>
> And so on through a feverish October, to a fine, cool season, in which life is worth living. Curiously enough, the most agreeable contrast to this oppressive climate is found nearer the equator, on the table-land of Southern India. Ootacamund, the summer residence of the Madras Government, is in the Nilgiri hills, over 7,000 feet above the sea, where the eastern and western Ghats converge southward. Among all the pleasant memories of more than thirty years of Indian life, as Blanford courteously phrases his recollection of this generally torrid country, he can recall no more charming scene and climate than those of the Nilgiri hills. Many an old Anglo-Indian, whom choice or necessity has led to fix his home in India, has found in these hills scenery as beautiful and a climate as enjoyable as any in the most-favored lands of the Mediterranean shores. Its striking characteristic is the comparative uniformity of its temperature throughout the year. Its mean annual temperature is 55 degrees, the same as that of Simla, the summer residence of the Calcutta Government on the ridge of one of the outer ranges of the northwestern Himalaya; but May, the warmest month, is only 59 degrees, and January, the coolest, is 48 degrees. The daily range is great, as is usual on table-lands, but in 1880 the highest reading was only 77.3 degrees, and the lowest 25.3 degrees. The annual rainfall averages only 45.8 inches, with an average of 143 rainy days. Such a climate deserves the high praise given it.

Other subjects of special interest are the description and charts of the winter and summer monsoons, the samples of daily weather charts issued from Calcutta and Simla, the accounts of the extraordinary rainfall of certain stations, and the history of the cyclones and cyclonic storms, all of which we would strongly recommend to the attention of our meteorologists.

The only serious drawback in the make-up of the book is the absence of an outline map, on which the stations and their outlandish names might be entered. Masulipatam, Coimbatore, Thyet-Myo, and the rest may be familiar enough to Anglo-Indians, for whom truly the book was primarily written; but a work of such sterling value will have readers abroad as well, and to them these names are a mystification. The proof-reading is not beyond praise, as Sir Proby Cautley is printed Cantley (p. 141), and Lieut. Finley appears as Finlay (p. 90), and a brief examination of the climatic tables in the appendix discovers that the headings "monthly" and "daily" are interchanged for Simla (p. 292). But it is only force of habit that leads a reviewer to mention these trifles in a book so generally excellent. We should be glad to see similar accounts of the other colonial possessions of Great Britain.

The Colonial Laws of Massachusetts. Reprinted from the edition of 1660, with the supplements to 1672. Containing also The Body of Liberties of 1641. Published by order of the City Council of Boston, under the supervision of William H. Whitmore, Record Commissioner. Boston. 1889.

THE publication of this handsome volume is a proof that Boston has not yet sunk to the rank of a mere aggregation of men and houses —describable, in summary Ciceronian phrase, as *domicilia conjuncta, quas urbes dicimus.* The members of its City Council are perhaps not greatly superior in virtue to officers of like position elsewhere, but they cannot altogether resist the atmosphere of civic pride which enfolds them and recalls even to the stranger the illustrious history of the place. They have at least allowed a portion of the funds under their control to be applied to antiquarian research by a most competent and devoted commissioner, and no one that has beheld the squalid condition of the city library of New York will be inclined to carp at their probable motives.

Although the records of Massachusetts from 1629 to 1686 have been published by the State, they do not supply the necessary information in regard to the laws. The Body of Liberties enacted in 1641 seems never to have been entered on the records. The compilation of 1812 made by Dane, Prescott, and Story, under authority of the Legislature, and known as "Ancient Charters and General Laws," has been practically rendered obsolete by the elaborate investigations of later scholars. But with the aid of the other publications of the State, and of this volume and its companion, the Revision of 1672, the progress of legislation may now be conveniently studied from the earliest days of the colony. The collection of laws issued in 1649 is apparently lost beyond recovery, but it is possible, by a careful comparison of the collections that have been preserved, to reconstruct it in a nearly perfect form. For the study of the development of the General Court into a Parliament, Mr. Whitmore's introduction is of much value. His notes are principally upon bibliographical and textual matters. The evidence bearing on the rival claims of John Cotton and Nathaniel Ward to the authorship of the Body of Liberties is thoroughly sifted, and substantial reasons are given for the rejection of Cotton's code as spurious. Upon many other points Mr. Whitmore's patient scholarship lightens the task of the critical reader. We will only add that the laws are reproduced by the photo-electrotype process, and that a facsimile of the manuscript Body of Liberties is given.

Although we cannot here undertake any extended comment upon the substance of this volume, it is impossible, when we consider the far-reaching influence of the Massachusetts colony, to refrain from noticing some of the features of its primitive jurisprudence. The Body of Liberties was a veritable magna carta, and seems in fact to have been obtained by the people from their rulers only after something of a struggle. It forms at once a singularly complete Bill of Rights, and a Constitution. In one sense it is only a reproduction of the English "Common-Law Liberties," but it presents them as a code, and it includes some notable additions. The penal provisions are in the main enlightened, and the offences punishable with death are few. This was owing in part to the circumstances of the commonwealth, but chiefly, it seems probable, to the controlling influence of the Hebrew code; yet the spirit of the Dark Ages had not entirely departed, as the following declaration shows:

> "45. No man shall be forced by Torture to confesse any Crime against himselfe nor any other unlesse it be in some Capitall case where he is first fullie convicted by cleare and suffitient evidence to be guilty, After which if the cause be of that nature, That it is very apparent there be other conspiritours, or confederates with him, Then he may be tortured, yet not with such Tortures as be Barbarous and inhumane."

In one respect there seems to have been a retrogression since the time of this code. It was then provided that no man should be rated for any estate or revenue that he had in foreign parts, upon the ground that it would be double taxation. The present law of Massachusetts is not so scrupulous. It is certainly remarkable that cruelty to animals was so early forbidden; the institution of human slavery also was regulated by a number of merciful provisions. Here again the Hebrew law had its effect, and the "Liberties of Servants" seem to contemplate that their term of service should be limited to seven years, and that then they

were not to be "sent away emptie." Very liberal, too, is the provision for political discussion:

"12. Every man whether Inhabitant or fforreiner, free or not free, shall have libertie to come to any publique Court, Councel, or Towne meeting, and either by speech or writeing to move any lawfull, seasonable, and materiall question, or to present any necessary motion, complaint, petition, Bill or information, whereof that meeting hath proper cognizance, so it be done in convenient time, due order, and respective manner."

It is a little strange that with the profusion of capital letters that characterizes this code as well as the other writings of the day, the name of the Deity should be begun with a small "g." In the code of 1660 the usual spelling is employed, and religious matters receive much more attention. It is plain that clericalism was showing its cloven foot, and a mean and meddlesome spirit appears in these laws that was wholly absent from the earlier code. Everything that the ruling caste disliked was denounced as tending to the dishonor of God, and numberless minute and exasperating regulations were introduced and sanctioned by savage punishments, to the confusion of all who were disposed to indulge in damnable or blasphemous heresies or to behave themselves contemptuously towards the "messengers of God's word." To the growth of the clerical influence, no doubt, was due the creation of two new capital crimes—that of being a stubborn son and that of cursing or smiting a parent. But the characteristics of this period have been abundantly proclaimed in modern days, and we content ourselves with calling attention to the conspicuous difference in the spirit of the two codes as a proof of the speed with which the possession of arbitrary power corrupts rulers.

Almost equally striking is the development of legal procedure that had taken place within these twenty years. The earlier code, although evidently drawn up or revised by lawyers, prohibited the employment of paid attorneys. That of 1660, on the other hand, discouraged suitors from obtaining advice from magistrates, and testifies, by the technicality and precision of the system of practice which it contains, to the existence of an organized legal profession. This and certain other features are conclusive proofs of an extremely rapid growth of wealth and commerce, and indeed produce the opinion in the mind of the professional reader that the times were not altogether so primitive as we are apt to suppose. Certainly the system of jurisprudence is suitable to an advanced and complicated civilization. The volume is perhaps of especial interest to few but lawyers; but all who recognize the importance of the history of Massachusetts will be glad that these records have been made permanently accessible.

Korean Tales. By H. N. Allen, M.D. G. P. Putnam's Sons.

It is astonishing how little is yet known about Corea. Despite the fact that her people claim a civilization nearly as old as China, and see in Kishi, the ancestor of Confucius, the founder of their social order, she is less known than any other of the nations in the Chinese Asiatic family. She has furnished a large contingent of population to the Japanese archipelago, besides being the medium through which the civilization of China reached the island empire. Though over and over invaded by both Japanese and Chinese armies, and visited constantly by people from either country, there are, in the voluminous literature of these neighbor nations, surprisingly few books about the Land of Morning Calm. Western nations until the sixteenth century scarcely knew of her existence, despite the fact that the Arabs traded with the far-off peninsulars. Even when Japan was being so well advertised in Europe in the sixteenth century, and Japanese armies, during this same period, were overrunning Corea, her name, except among the Portuguese, was next to unknown in the West. While a very respectable library of books about Japan, during the period from 1539 to 1637, was formed in the languages and libraries of southern Europe, and in Holland and the North from 1630 to 1853, Corea, except in the narrative of Hamel, was a strange name, suggesting ignorance on the one continent and hermit-like isolation on the other. When Japan was reopened in 1853, her people and country were not unknown to Europe; whereas, even when Corea signed treaties with the United States and Europe in 1883 and later, there was no body of knowledge either to stimulate or to satisfy curiosity. Still more remarkable does it seem to us that, despite the number of merchants and missionaries, travellers and newspaper correspondents, who have entered or traversed the peninsula, an interested seeker after knowledge can, with the severest industry, glean only pitiful fragments of knowledge.

Dr. Henry N. Allen, the foreign secretary of the Corean legation in Washington, tells us in his preface that American curiosity to know about our Western or ultra-Oriental neighbors is very great. Notwithstanding four years' residence in the capital Séoul, and a few journeys into the interior, he has denied himself the pleasure or the labor of writing a book of observations, and instead gives us specimens of folk-lore. He is the first, probably, to translate them into English, though in the appendix to the 'Grammaire Coréenne' of the French missionaries may be found about two dozen Corean folk-tales literally translated into French, without comment or embellishment. Many will regret, with us, that Dr. Allen has not made his collection more comprehensive. Corean folk-tales are especially interesting as showing the peculiarities of the variations in the peninsula of the root-stocks common to the nations of Chinese Asia, and especially China and Japan. Of the seven here collected, "The Rabbit," "The Trials of Two Heavenly Lovers," "The Swallow King's Rewards," are distinctly variations only of the well-known favorites told for centuries on the *kangs* of China and by the *hibachi* of Japan. Two of the tales, "The Faithful Dancing-Girl Wife" and the "Dutiful Daughter," illustrate the political and social life of the hermit nation, while that of "The Adventures of an Abused Boy" reminds us of Japanese counterparts from fairy land. These seven 'Korean Tales' will take the reader into the thought of the people more swiftly and easily than books written about the white-robed people who live under their big hats and smoke such anomalously long pipes.

Indeed, the only fault we have to find with Dr. Allen's work—yet a serious one—is that he has not confined his remarks and general information, valuable and delightful in its place, to the two introductory chapters. Folk-lore ought always to be translated with as little foreign coloring, interpolation, or disturbing element as possible. In his renderings and presentation in English, however, we fear the transfuser of Corean thought has been too benevolently mindful of those Washingtonian inquirers who thought Corea was an island in the Pacific, or could be reached from Europe, in A. D. 1889, by railway. It would have been better, also, to have left out some of the pronounced Americanisms, which do not add to the value of an otherwise excellent book, for which we must be grateful. Nor ought the term "coolies" to be applied to free Asiatics who have no Hindu caste in their system. In further attempts to let the Coreans speak for themselves, the translator will render science, literature, and the reading public greater service than even in his present essay, by more rigid adherence to the native texts. Like the printer, the alien folk-lorist should "follow copy."

A Treatise on Linear Differential Equations. By Thomas Craig, Associate Professor in the Johns Hopkins University. John Wiley & Sons. 1889.

This book should mark, if not make, an epoch in the history of mathematical study in America. If we except Peirce's 'Analytic Mechanics,' published thirty years ago, it is the first special treatise on any of the subjects now recognized as belonging to advanced mathematics that has appeared in this country. And advanced enough it surely is. It assumes on the part of the reader a knowledge of the theory of functions of an imaginary variable which, though not extensive, cannot be derived from any book in the English language, and can only be acquired at a few of our leading universities, or by the study of French or German text-books. Having acquired this preliminary knowledge, which, after all, is neither difficult nor abstruse, the student of mathematical tastes will find in Professor Craig's book all the precision and clearness of the practised teacher. We earnestly hope that the instructors in our leading colleges will find it helpful in redeeming our country from the reproach of being, among enlightened ones, that in which there are fewest students of modern mathematics.

One word ought to be said in appreciation of the publishers who have been willing, at their own expense, to bring out a work of which the returns can never be expected to balance the outlay. In this respect the Messrs. Wiley have continued a policy which they inaugurated in the case of several other works of an advanced character which bear their imprint, and for which they are justly entitled to the thanks of all our students of advanced mathematics.

John Bachman, D.D., LL.D., Ph.D., the Pastor of St. John's Lutheran Church, Charleston. Charleston, S. C.: Walker, Evans & Cogswell Co.

It is only to a very limited circle that this biography makes its appeal. The relatives and friends of Dr. Bachman will, no doubt, value the record of a long and busy life, endeared to them by many kindly traits; and though he died in 1874, there must still be a good many who knew him as their pastor in Charleston who will prize this affectionate tribute to his worth and think it well deserved. The grandson who collected the material for the biography did not live to write it. We should have had from him a more rhetorical and effusive piece of work than this, but, judging from certain fragments, a less agreeable performance, though this has no literary merit, and the intrinsic interest of the subject-matter is not so great as to make us indifferent to the form. There was about as much excuse for writing Dr. Bachman's biography as there is for writing the biography of any clergyman who has pursued his vocation with perfunctory faithfulness, in connection with an avocation which he has thoroughly enjoyed. In Dr. Bachman's vocation there was so little that

was in any way remarkable that the account of this could easily have been compressed into a dozen pages. His ministry was successful in attracting a large congregation, in its encouragement of several young men to enter the Lutheran ministry, and in winning the warm affection of his flock. That a defence of Luther against Roman Catholic aspersions could have been its most brilliant episode, only shows how flat its general level was.

Dr. Bachman's avocation was natural history, on the lines of botany and zoölogy. Ornithology especially attracted him. A list of his publications, given in an appendix, is remarkable for the proportion of scientific to religious matter. Of twenty titles, fifteen are scientific. There is but one sermon—that, happily, against duelling—the only evidence of Dr. Bachman's divergence from the social standards of the community in which he lived. Of his scientific works, the most important was an account in three volumes of the quadrupeds of North America, for which he furnished the text and Audubon the illustrations. His relation to Audubon was, for the reader, the most interesting personal relation of his life. Two of his daughters married Audubon's sons, but died after a brief period. Many of his letters to Audubon are given. They are full of animal spirits, but have more of the boisterous enthusiasm of the amateur than of scientific steadiness and calm. To at least one scientific question—the unity of the human race—he brought a purely theological disposition. He was as firmly convinced as Hugh Miller that the Bible is the final standard by which all scientific statements must be judged; and his conclusions have the value that belongs to such an order of ideas. The judgment of some competent zoölogist and botanist upon his studies and results would have been a valuable addition to the book.

The fact that Dr. Bachman was a resident of Charleston in the stirring times of nullification and secession might lead the reader to expect some interesting disclosures of the inner life of the rebellious little city. But he will find only the most casual mention of those great events. Dr. Bachman, we are told, was "a pronounced Unionist" in the nullification days. But he would not "disgrace his pulpit by preaching a political sermon" when a Fast Day was ordered by the Governor and the other pulpits rang with nullification sermons. He read the Sermon on the Mount! After such an evasion we are not surprised, in December, 1860, when South Carolina passed the Ordinance of Secession, to find him in the Convention, asking the blessing of heaven on the act. Just before, he had preached a sermon on "The Duty of a Christian to his Country," in which "he avoided the questions of the day as much as possible." The doctrine of secession now met with his approval, and there is no sign that slavery ever gave him any trouble. His father had been a slaveholder in New York, and he had carried one of his slaves to Charleston in 1815. When Columbia was burned by our troops in 1865, Dr. Bachman was in the vicinity, and was roughly handled. It was perhaps fortunate for his gray hairs that he was not identified as Chaplain of the Secession Convention. It was a sad wreck of his former congregation that he drew together when the war was over and slavery and secession were as extinct as any of his fossil species of an immemorial past.

BOOKS OF THE WEEK.

Adams, W. H. D. Witch, Warlock, and Magician: Historical Sketches of Magic and Witchcraft in England and Scotland. J. W. Bouton.
Alcott, Louisa M. Lulu's Library. Boston: Roberts Bros. $1.
A Reply to Dr. Lightfoot's Essays. By the Author of 'Supernatural Religion.' Longmans, Green & Co. $2.
Ayres, Anne. The Life and Work of William Augustus Muhlenberg, D.D. 4th ed. Thomas Whittaker. $2.
Bagehot, W. A Plan for Assimilating the English and American Money, as a Step towards a Universal Money. Longmans, Green & Co. 75 cents.
Ballantyne, R. M. Blown to Bits; or, the Lonely Man of Rakata: A Tale of the Malay Archipelago. Thomas Nelson & Sons.
Ballou, M. M. The New Eldorado: A Summer Journey to Alaska. Boston: Houghton, Mifflin & Co. $1.50.
Bancroft, G. Martin Van Buren to the End of his Career. Harper & Bros.
Barr, Amelia E. Feet of Clay. Dodd, Mead & Co. $1.25.
Begy, J. A. Practical Handbook of Toilet Preparations and their Uses. Wm. L. Allison.

VOL. XLIX.—NO. 1269. THURSDAY, OCTOBER 24, 1889. PRICE 10 CENTS.

JUST PUBLISHED:

Paul B. Du Chaillu's Great Work.

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU, author of 'Equatorial Africa,' 'Land of the Midnight Sun,' etc.

With 1,400 Illustrations.....2 vols., 8vo, $7.50

Mr. Du Chaillu's great popular work is the product of eight and a half years of constant labor. It presents a graphic picture of the civilization of the Norsemen, the sources of the author's information being the Sagas and Eddas, and the archæological treasures of the Scandinavian museums. All of these he examined at first hand, and the result is a view, at once comprehensive and accurate, of the laws, customs, habits, industrial skill, and mode of life of the Norsemen. Mr. Du Chaillu's inference from the great mass of evidence thus presented is that ancestors of the English-speaking race were Scandinavian, and not, as is generally held, Germanic in origin. The importance as well as the interest of the work is thus apparent. The volumes are enriched with 1,400 illustrations conveying a vast amount of curious information and adding beauty to a useful holiday volume.

History of the United States,

By Henry Adams.

Vols. I. and II. The First Administration of Thomas Jefferson. 12mo, $4.00.

Mr. Adams's work, the first two volumes of which are now published, will be completed in eight volumes, and will embrace the two administrations of Jefferson, and the two following of Madison, from 1801 to 1817. The author has gone to original sources for his information, to governmental archives in London, Paris, and Madrid, as well as in Washington. The larger part of the documents found abroad had never before been consulted, and the new discoveries found therein greatly increase the importance and interest of the work. The style is fresh and virile, the treatment dignified, scholarly, and essentially popular.

Goodholme's Domestic Cyclopedia

of Practical Information. With nearly 400 illustrations. One volume, over 650 pages; cloth, $5; full sheep, marbled edges, $6.50; half turkey morocco, $8.

Messrs. Charles Scribner's Sons beg to announce that they have assumed the publication of the recently revised edition of this work, the contributing editors to which are Austin Flint, jr., M.D., George E. Waring, jr., William T. Lusk, M.D., Calvert Vaux, Abraham Jacobi, and others. The book is commended by E. C. Stedman, Donald G. Mitchell, Margaret E. Sangster, Catherine Owen, and others.

To All Who May Be Interested in

THE REFORM OF THE TARIFF:

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff; and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose. The first part of this directory, containing particulars of about one hundred organizations, was published October 17. Copies may be had at 3 cents each.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a blank form for filling in the desired information.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

Send for large Circular to the Publishers,

J. B. LIPPINCOTT COMPANY,
PHILADELPHIA.

Wreck of the Greyhound.

Illustrated by M. Johnson. 12mo, 446 pp. Price $1.50.

It is the story of a home-bound Indiaman, in which an English ambassador and his daughter embarked and were wrecked. All but Bob Howland and the passengers were swept overboard. Bob escaped on a raft, leaving the others to perish in the water-logged cabin. Lawrence saved the Earl and Lady Seymour on surf boards. He won the fair lady's love and was knighted by the Queen.

"Dr. Newell is an old sailor, and his descriptions of sea life are as vivid and accurate as any that can be found in American literature."—*Boston Transcript.*

"The author is the most graceful writer of his class, and he has written nothing better than these stories of sailor-love and sailor hardships."—*Rochester Herald.*

"From a literary standpoint they are the best stories of life at sea ever published."—*Chicago Inter-Ocean.*

MACMILLAN & CO.'S NEW BOOKS.

Bishop Lightfoot on 'Supernatural Religion.'

ESSAYS ON THE WORK ENTITLED SUPERNATURAL RELIGION. Reprinted from the *Contemporary Review.* By J. B. Lightfoot, D.D., D.C.L., LL.D., Bishop of Durham. 8vo, $2.50.

"Of the utmost importance to those interested in the great discussions of the age."—*Christian Advocate.*

"A permanent contribution to the most erudite and exact historical criticism."—*Advance.*

"Scholarly and unanswerable criticisms on the anonymous work called 'Supernatural Religion.'"—*Chicago Tribune.*

"It is a great service to the cause of sacred learning which the accomplished Bishop of Durham here renders, and is sure to be appreciated as such in America no less than in his own country."—*Chicago Standard.*

"It may confidently be affirmed that this book is the most notable contribution to the evidences which has been made in the present generation."—*Standard of the Cross.*

"We can almost thank the author of 'Supernatural Revelation,' mischievous as that book is, for provoking this most valuable contribution to the support of the authenticity of the Gospel. . . . A volume that no scholar can afford to do without in his library."—*Living Church.*

A New Story by the Author of 'The Heir of Redclyffe.'

A REPUTED CHANGELING; OR, THREE SEVENTH YEARS, TWO CENTURIES AGO. By Charlotte M. Yonge. 12mo, $1.00.

CHAUCER'S CANTERBURY TALES. Annotated and Accented. With illustrations of English Life in Chaucer's time. By John Saunders. New and revised edition. With illustrations from the Ellesmere MS. 12mo, $1.60.

A New Volume of "Stephen's Dictionary of National Biography."

DICTIONARY OF NATIONAL BIOGRAPHY. Edited by Leslie Stephen. Volume XX. Forrest-Garner. 8vo, $3.75.

A cheap edition of Charles Kingsley's Novels.

WESTWARD HO! By Charles Kingsley. 8vo, paper, 25 cents. Printed by Messrs. R. and R. Clark, on excellent paper.

"A wonderful bargain. . . . Printed with clear type on respectable paper, and is most carefully worked off, so that it will be quite worth binding after it has been read. The publishers deserve great credit for their enterprise and taste."—*London Athenæum.*

The New Library Wordsworth.

THE POETICAL WORKS OF WILLIAM WORDSWORTH.—Chronologically arranged with the author's various readings, and many new MSS. hitherto unpublished. Edited by William Knight, LL.D. Illustrated with etchings by C. O. Murray from original drawings. Eight volumes. 8vo. $25.00.

Also, uniform with the above:

THE LIFE OF WILLIAM WORDSWORTH. By William Knight, LL.D., Professor of Moral Philosophy, St. Andrew's. With which is incorporated the Solitary Canto of the Projected "Recluse," the Fragments of "Michael," the Poem on Nat Well (originally designed as a portion of "The Recluse"), the Alfoxden and Grasmere Journal of Dorothy Wordsworth, Records of Tours, Letters, &c., &c. Illustrated with an Etched Portrait from the picture by Haydon. Three volumes. 8vo. $10.00.

Temple Library. New Volume.

SELECT ESSAYS OF DR. JOHNSON. Edited by Geo. Birkbeck Hill, D.C.L., Pembroke College, Oxford. With six etchings by Herbert Railton. 2 vols. 16mo. $3.75.

"The volumes are illustrated with some charming etchings by Mr. Herbert Railton, and the editor has performed his part of the work extremely well. Every person must sooner or later possess a copy of Johnson's Essays, and it would be difficult to find them in a more attractive form than in the 'Temple Library' edition."—*London Athenæum.*

Stott Library. New Volume.

DE QUINCEY. A selection of his best works. Edited by W. H. Bennett. Vol. I. Confessions of an English Opium Eater, etc. Vol. II. On Murder Considered as One of the Fine Arts, etc. STOTT LIBRARY. 2 vols. 32mo. $1.50.

"A selection from the best works of De Quincey. The size, the exemplary binding, the clear typography of these little books, make them almost ideal pocket companions."—*Nation.*

RECOLLECTIONS OF A NURSE. By E. D. 12mo, 75 cents.

HYDROSTATICS FOR BEGINNERS. By F. W. Sanderson, M.A. 16mo, $1.10.

HANDBOOK OF PRACTICAL BOTANY for the Botanical Laboratory and Private Student. By E. Strasburger, Professor of Botany in the University of Bonn. Edited from the German by W. Hillhouse, M.A., F.L.S. Revised by the author, and with many additional notes by author and editor. Second edition, revised and enlarged. With 116 original and 33 additional illustrations. 8vo, $2.50.

OXFORD CLARENDON PRESS—NEW BOOKS.

CHAUCER. The Prologue; The Knightes Tale; The Nonne Prestes Tale. From the Canterbury Tales. Edited by Rev. Richard Morris, LL.D. A New Edition with Collations and additional Notes by the Rev. Walter W. Skeat, Litt.D. 16mo. 60 cents.

CHAUCER. THE LEGEND OF GOOD WOMEN. Edited by the Rev. Walter W. Skeat, Litt.D. 16mo, $1.50.

"It is only a few months since Prof. Skeat published what is really the only existing critical edition of Chaucer's 'Minor Poems.' He has now performed the like service for the work which, next to the 'Canterbury Tales,' is the latest and ripest fruit of the poet's genius. Often as the 'Legend of Good Women' has been printed, it has never been edited until now. . . . Prof. Skeat's editions of the 'Minor Poems' and the 'Legend' form together a considerable instalment of the long-desired critical edition of Chaucer's poetry."—*London Athenæum.*

CHAUCER. THE MINOR POEMS. Edited by the Rev. Walter W. Skeat, Litt.D., M.A. *Clarendon Press.* 12mo. $2.60.

"Our debt to Prof. Skeat for giving us these poems in so accessible a form, and still more in so pure a text, cannot easily be overestimated."—*Literary World.*

"Prof. Skeat has brought to bear upon the elucidation of the text all the great learning he has accumulated in the preparation of the various works with which his name is now so honorably connected. We have little hesitation in saying that there is no student of Chaucer living to whom this volume will not be an absolute necessity."—*Evening Post.*

BURNS' SELECTED POEMS. Edited with Introduction, Notes, and Glossary. By J. Logie Robertson, M.A. *Clarendon Press Series.* 12mo, $1.50.

WATSON AND BURBURY. The Mathematical Theory of Electricity and Magnetism. By H. W. Watson, D.Sc., F.R.S., and S. H. Burbury, M.A. Vol. 2. Magnetism and Electrodynamics. 8vo, $2.60.

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 24, 1889.

The Week.

By appointing Carroll E. Smith, editor of the Syracuse *Journal*, Postmaster of Syracuse, President Harrison has increased the number of New York editors whom he has subsidized with important public office to six, and the journals which have been muzzled thereby are the New York *Tribune*, the New York *Press*, the Utica *Herald*, the Buffalo *Commercial Advertiser*, the Owego *Times*, and the Syracuse *Journal*. The only member of this list that has objected to the charge of being muzzled is the Buffalo *Commercial Advertiser*, which declared, with much indignation, that the assertion that its conduct as a newspaper had been affected by the appointment of its managing editor as Collector of the Port, was "ridiculous and insulting." Yet we notice that this very paper is effusively warm in approving Mr. Smith's appointment, saying that it is "one of the very best that the Administration has made in the State of New York," and giving this reason for thinking so: "Mr. Smith has rendered long, faithful service as a hard worker in the Republican ranks, and as the editor of one of the most influential journals in the service of the party. *He has always been ready to do the bidding of the Republican party*, and has done so promptly, courageously, efficiently, and unselfishly." Could an editor who *was* muzzled by office write a more servile defence than that of a purely partisan appointment, after a purely partisan removal, by a President who had solemnly pledged himself to consider "fitness and not party service" in making appointments, and to make no removals save "in the interest of the public service"?

Among the things which Mr. Smith has done at the "bidding of the Republican party" has been the writing of its platforms for several years. He was the author of the strong civil-service-reform planks of 1885 and 1887, in which a demand was made for the "enforcement of the civil-service laws of the State and nation by all officials, not only in the letter, but also in the spirit." Yet when he attended "Tom" Platt's Convention last month, he did not scruple to turn his back upon these emphatic and specific utterances, and to write the meaningless demand of the platform for the "purification and elevation of the civil service." He is now purifying and elevating it in person by taking in it a public office as a reward for his own partisan services; for his Buffalo contemporary expressly states that it is in return for these, and not because of his fitness for it, that the position has been conferred upon him.

The appointment of Gen. Green B. Raum as Commissioner of Pensions is a much better one than had been anticipated, in view of the sort of men who have been most talked about for the place. He does not go in as the representative of the Grand Army machine, but as a man who, in the Internal Revenue Bureau years ago, showed himself a capable executive officer. The careful Washington correspondent of the Philadelphia *Ledger* says of him: "He is not only an able lawyer, but a man of excellent judgment and wide experience in the administration of public affairs. He is one of that class of men who don't believe that sentiment should be indulged when it runs counter to law. He is also one of those men who have the capacity to do their own thinking, the industry to perform their own work, the courage to adhere to their convictions, and the persistency to carry them out. There is one class of enterprising citizens with whom Gen. Raum will not be popular, namely, the pension agents, particularly those who have heretofore been potential at the Pension Office. These gentlemen will find that Raum will be Commissioner for the Government and General Agent for the soldiers, and that everything will be done in accordance with the letter and spirit of the law." If Gen. Raum lives up to these promises, he will rescue the Pension Office from the demoralization into which President Harrison threw it last March by the appointment of Tanner. As for Tanner himself, it may be hoped that we have now heard the last of him and his tiresome mouth, from which issued on Sunday two columns and a half of words.

In the recent silver-ore decision, after many months of deliberation, Secretary Windom puts the ruling solely on this ground: "Upon examination I find that the decisions and practice of this Department have been uniform for a number of years." Certainly they have been. But why did you not apply the same rule in the worsted controversy, where you overthrew a "uniform" practice of nearly half a century? The explanation is, that you thought Cleveland's defeat and a Republican House a mandate to rerate pensions and customs-taxes as the beneficiaries asked. But you have discovered that the country will not tolerate the doings of Tanner and Tichenor.

Secretary Noble has given out for publication the text of his first official letter to Tanner, and we trust that he will follow it with such others as he may have. It gives the public a chance to see what Tanner's policy really was, and the revelation is very instructive. Tanner had boldly asserted that he was the Secretary's superior officer, and had marked the letter in which he took this remarkable ground "Unofficial." Mr. Noble declined to treat it in that light, declaring it to be official, and answering it in an official and authoritative manner. He naturally had little difficulty in overthrowing Tanner's claim to official superiority, and, after doing that, he took up the merits and consequences of some of Tanner's official acts. This part of his letter is very interesting. It gives the first complete list of the clerks in Tanner's Bureau who had their pensions rerated. There were ten of these, and they received altogether in back pay $16,735. The Secretary goes over some of the cases, pronounces the reratings of them to be "wholly illegal and unwarranted," and treats them as representative of the whole.

No less interesting is the part of Secretary Noble's letter which refers to the financial consequences of Tanner's course. He says:

> "It may be that this Government is strong and great, and has at its command a surplus that no other nation has ever had; but if sums of money to the amounts above mentioned may be granted without any further consideration of fact or law than seems to have been given in these cases, it will depend solely upon a single officer's disposition whether the resources of the Government shall be sufficient for its maintenance or not. There are more than enough of these applications already in the field and increasing daily to exhaust indeed the surplus, of which so much has been said in connection with this matter, and I am informed that the applications for reratings are greatly on the increase, and now reach the amount of from seven to eight thousand a week."

President Harrison is the man who ought to take that sermon to heart. He, and not Tanner, is the man who is responsible for the extraordinary situation therein described, and he is likely to be the chief victim of it, for the seven or eight thousand veterans who have been petitioning each week for a rerating of their pensions will blame him, and not Tanner, when their petitions are denied.

It is curious and interesting, as a psychological study, to see how closely Mr. Halstead of the Cincinnati *Commercial Gazette* follows the lines of the London *Times* in the Pigott affair in apologizing for the credence he gave to the Campbell forgeries. He towers far above the London *Times* in the manliness and promptness of his apology, but he maintains, as Mr. Macdonald maintained, first, that it was not unnatural he should think the document genuine, because it was just such a document as a man like Campbell might have been expected to sign; secondly, that the offence the signature seemed to prove was just the kind of offence Campbell's party are constantly committing; thirdly, that Campbell must bear part of the blame for not exposing the forgery sooner, just as Parnell was to blame for not bringing an action in a court of law, thus wickedly leading the *Times* to suppose that he had no defence; fourthly, that the forgery is really of no consequence, and leaves the main controversy just as it stood before. In the Parnell case, there was an additional plea, that as Pigott, the forger, was also an Irish Nationalist, his offence should really be charged against the Parnellites as that of one of their own fra-

ternity. So, also, it may come out that the author of the Cincinnati forgeries was an unusually wicked Democrat, and Campbell must be considered a quasi-confederate of his, and morally responsible for him.

The growing prosperity of the South, and the confidence felt by capital in the permanence of that prosperity, are illustrated by the recent success of Gov. Seay of Alabama in placing an issue of new bonds. During the period of carpet-bag rule there were issued in 1873 small bonds to the amount of $1,000,000, which bore 8 per cent. interest and were receivable for State and county taxes, and yet stood at about 30 per cent. below par. Soon after the political overturning and the inauguration of a Democratic Governor in 1874, these bonds began to rise, and before long stood above par. A few years later the Governor was authorized to substitute for them 6 per cent. bonds, and such of these as were not taken in exchange by the holders of the old eights were sold at a premium of 2 per cent. The 6 per cents were retirable at the option of the State after ten years, and, that period having expired, the last Legislature authorized the issue in their stead of 4 per cents, which the Governor has recently placed at a premium of more than 1 per cent. The reduction in interest charge has aided in a reduction of the State tax within a few years from six mills to four, and the financial condition of the State is now in every way most encouraging. And yet Alabama is one of the States which some people have been trying to persuade Congress were so poor that they could not support their own schools.

No more encouraging statement of the progress of popular education in the South has appeared for a long time than an article by Col. James H. Rice, State Superintendent of Education for South Carolina, published in a recent issue of the *South Atlantic*. He says that "there is a more general interest among the people on the subject of common schools than at any previous period," as shown by the erection of modern and costly school-houses in all the chief towns, and the daily improvement of the schools throughout the country districts, where also schoolhouses of modern make are being built. The last Legislature took two steps of great importance to the development of the system, in the appointment of a Committee on Common Schools, and the passage of a bill providing for local taxation for schools to supplement the State fund. "The situation, as I see it," says the Superintendent, "is encouraging in every aspect." Although there is still great ignorance and much poverty, "the State and its communities are on the rising tide," and "our people in the country need and demand at least six-months' terms." The best feature of this statement is the fact that from first to last there is no suggestion of any need for depending upon others to secure the improvements still needed. "The people have at last discovered that they must help themselves," says Superintendent Rice, and he closes with this appeal: "Let the next Legislature provide for and insist upon a six-months' term throughout the State." The ill-informed theorists at the North who are still insisting that the Southern people are unable to support good school systems, should learn something from such a presentation of the facts in the State where the difficulties to overcome were the greatest.

Mr. N. J. Bachelder, the Commissioner of Agriculture and Immigration of New Hampshire, has sent out (under date October 14) a preliminary list of abandoned farms in that State which shows a condition of things closely resembling that of Vermont. The list embraces 115 farms. "These," says the circular, "are unoccupied farms, and have been reported by the Selectmen of the various towns to have fairly comfortable buildings. They comprise but a small part of the abandoned farms of the State." He adds—and this is an important matter—that "in most instances these farms have not been abandoned because the soil has become exhausted, or from a lack of natural fertility, but from various causes appearing in the social and economic history of the State, which will be more fully discussed hereafter." The Commissioner's discussion cannot fail to be interesting. We hope he will show what effect, if any, the tariff legislation of the country has had on farming in New Hampshire during the past quarter of a century; for if it has not had any effect, it has come lamentably short of its promises. If it has had any effect, we should like to know what it is. Meanwhile, we commend again to Mr. Henry George's followers the rare opportunity offered to them to acquire land and "fairly comfortable buildings" on the easiest terms.

In last week's issue of the *Standard*, Mr. Henry George answers the charge of plagiarism recently preferred against him in the *Twentieth Century*. The substance of the charge was, that all the leading and essential ideas of his 'Progress and Poverty' were published in the year 1850 in a book written by Patrick Edward Dove, entitled 'The Theory of Human Progression.' Mr. George says that he never saw Mr. Dove's book until three years after his own was published, that the two books are different in character and scope, that Herbert Spencer's 'Social Statics' bears a closer resemblance to Mr. Dove's book than his own does, but that Mr. Spencer's was published in the form of separate essays before Mr. Dove's, and finally that all of them are antedated by a work of Prof. William Ogilvie of King's College, Aberdeen, published in 1782, in which the single tax was advocated on the ground of the inherent right of every human being to an equal share of property in land. Even Ogilvie was preceded by one Thomas Spence, who held and advocated, and published in 1775, the same doctrine. The substance of Mr. George's defence is that this idea has been floating around the world for centuries as common property, and therefore that no charge of plagiarism can rest against anybody for taking it up and dressing it anew. This is, indeed, the truth, but it will be a new truth to most of Mr. George's followers, and we fancy that few of them would accept it from anybody but himself.

One of the delegation of American mechanics which visited Europe the past summer in connection with the Paris Exhibition, writes to a contemporary that in visiting the "Ashbury" car-shops near Birmingham, he found that establishment engaged in filling a contract for 8,000 journal-boxes for the Pennsylvania Railroad. We think this must be a mistake. It is not possible that protection in the United States is thus being betrayed in the house of its special friends. A meeting of the Home Market Club ought to be called immediately and the subject prayerfully considered.

There is a state of things in Wall Street which might turn out to be extremely grave had not one of our esteemed morning contemporaries visited it with timely exposure. It appears that a certain banking-house, whose head is also Vice-President of the United States, has been lending money at 10 and even 15 per cent. to needy borrowers. The firm has been doing this indiscriminately instead of making out a select list of borrowers, as they might have done, and lending to them at 6 per cent. and letting the rest go begging, which would have been the proper thing to do in a tight money market. That the firm, or at all events other firms, would have followed the latter course but for the Vice-President's intervention, is made tolerably clear by the *Times*, which says that "the highest Federal official from this State is openly accused of tugging at the strings that tighten the purses of the lenders." Such conduct deprives our contemporary of the power of comment. It says:

> "We have no comment to make on such a policy, if he be really following it. Every shrewd man is apt to make the most of the current situation, which, with this country, is a terribly artificial one, but we feel for the *organs*."

These "organs" are not the same kind as those referred to by Sairy Gamp, when she described a man whose lamentations at the birth of his seventh heir were such that the neighborhood "thought his 'owls was horgans"; but we are reminded of that bit of history by the *Times's* editorial paragraph on the money market.

The members of the Ballot-Act League of Massachusetts, who are devoting themselves to the spreading of information concerning the requirements and working methods of the new ballot law, which is to have its first trial next month, say that they find great interest in the law in all parts of the State, and believe there is a determination among a great majority of the people that it shall have a fair trial. There are some indica-

tions that unscrupulous politicians are planning various kinds of evasions, and possibly are seeking to raise complications which may cause confusion and delay in its workings; but these are not at all formidable. There are also indications that the facilities afforded by the law for independent nominations will be used to a considerable extent, chiefly for nominations to the Legislature. Inquiries have come from all parts of the State as to the meaning of certain parts of the law, and as to the best way to help forward its successful use on election day. These are signs of popular interest which are most encouraging for complete success when the trial is made.

The democratic spirit which rates a man according to his ability, instead of the length of his father's purse, has always been strong in American colleges, and it has been a common thing for a poor youth to carry off the highest honor which his classmates have to award in competition with a rival who had all the advantages which wealth and powerful connections can give. Of late years there has been some apprehension lest the growing proportion of rich boys who go to college might develop something in the nature of an aristocracy of wealth, and poverty might prove to be an obstacle in such contests. The choice by the Harvard Seniors as class orator of a man who is not only so poor that he has had to work his own way through college, but who is also a negro and the son of a man who was a slave, indicates that the democratic spirit is still strong in the institution, and is an encouraging sign for the future of the University. Mr. Clement Garnett Morgan, the young man in question, has had a very honorable career in Cambridge, standing well in his class by hard exertion, and particularly excelling in declamation, for which he took the Boylston prize a year ago. His election as orator is said to have been received with very unusual enthusiasm.

The Episcopal Convention proceeds with its work, on the whole, placidly, and very moderately as to pace, though its remaining time is brief. On Monday the Lower House put aside decision of the "color-line" question by a vote so close as to call for a division (on the same day of the news that the Harvard Seniors had chosen a colored man to be class orator, and, more surprising still, that Yale had a colored man on the foot-ball team). The House of Bishops, by an emphatic vote, has struck out of the report of the Joint Committee on Liturgical Revision what has been called familiarly "the pause-rubric," which it was proposed to place immediately after the Prayer for the Church Militant (when the Communion Service was to follow), and which read as follows:

> "Here the Priest shall pause for a space in order that such as are so minded may withdraw."

This is of some importance to Episcopalians from its bearing on the dead-set which has been made of late against "non-communicating attendance," that is, persons remaining through the whole Communion Service who do not partake of the consecrated elements; a movement that has puzzled outsiders, who cannot understand why any solemn religious service should be thought to be not edifying. Apparently the Bishops have no sympathy with the new notion. On the other hand, the House of Deputies has differed with the Bishops on the question of a new rubric in the same Office, in these words: "There shall be no celebration of the Lord's Supper except there be some to communicate with the Priest." This is not surprising, since, so far as we have observed, nobody has pointed out how the Priest may be expected to know whether there be some to communicate with him or not. In fact, the rubric appears to be what we may call in appropriate language "the corrupt following" of the Church of England, which has a rubric substantially the same. But the Church of England provides means for the Priest's knowledge in a companion rubric as follows: "So many as shall intend to be partakers of the Holy Communion shall signify their names to the Curate, at least some time the day before." The two together completely cover the ground, but to impose the prohibition, without the provision, is apparently a *brutum fulmen*, as a reverend deputy entitled it in debate. The Memorials of Deceased Members indicate that the Convention's theology needs revision, since they translated the departed to "glory," to "the Church Triumphant," "to the family of the redeemed in heaven," "to a residence with God," etc., etc. We believe that even the Roman Catholic Church, with all the power of infallibility, never attempts to perform so much as this by mere memorial resolution.

The Convention, in some of its alterations of the Prayer-Book, is illustrating freshly the misfortune of allowing works of literature to be remodelled by a popular debating assembly. The fine deprecation of the Litany, for instance: "From lightning and tempest; from plague, pestilence, and famine; from battle and murder, and from sudden death," has been spoiled by prefixing "From fire and flood," and inserting "earthquake" before "lightning and tempest." This has ruined the delicate rhythm of the passage, to begin with, but, beyond that, the multiplication of particulars has lessened its significance and abased its dignity. The Convention seem not to perceive that the original form was only approximate, and therefore poetic and suggestive, and that by turning it into something like a catalogue they rob it of its beauty. So far as principle is concerned, they might as well go on, after either "flood" or "tempest," to deprecate wetness, chill, and dull skies. In liturgics the boundary between the sublime and the ridiculous is almost certain to be crossed in the descent to small things. Moreover, in this case, apart from all other considerations, the likeness between lightning and fire, and between flood and tempest, supplies sufficient argument against this unhappy innovation.

The trouble in the American Board of Foreign Missions, touching the refusal of the Board to send out missionaries who believe in a period of probation after death, came to a crisis on Thursday. A Committee of Fifteen was appointed last year to ascertain and report the opinions and feelings of the churches and theological seminaries indirectly on this matter, and it made its report on the 16th, but there was for practical purposes nothing in it. It had sent out 1,593 circulars, and had received only 570 answers, and only 325 favored any change in the present mode of constituting the Prudential Committee of the Board—the real bone of contention, as the malcontents who demand freedom in their intercourse with the heathen demand representation on it. The Committee contented itself with reporting the facts—the most significant of which was, that the largest contributors to the funds of the Board were among those who took no notice of the circular. The members expressed no opinions of their own. A motion to continue the Committee, with a view, we presume, of extracting opinions from it, led to some exciting speeches from the opposition before an eager and excited audience, but the party in power cut off debate by making no response whatever. One of the speakers, Dr. Griffis, brought out the fact that not a single Congregational minister in Boston could go abroad as a missionary under the Board, owing to the test of orthodoxy imposed by the Prudential Committee—which seems a curious state of things, and one which would certainly puzzle the heathen a good deal.

The Board closed the "incident," as the French would call it, on Thursday, amid more passionate protests from the malcontents, the voting strength still curiously enough remaining with the conservatives, who seem to treat the minority with what would be called in a secular meeting silent disdain. There are several features in the matter inexplicable to the outside world. One is the refusal of two-thirds of the churches and theological seminaries, and these the largest contributors to the funds, to express any opinion about the policy of the Prudential Committee towards the missionaries. Another is the firm belief of the malcontents, in spite of this fact, that the falling off in the income last year, compelling a draft of $82,000 on a legacy to meet current expenses, is due to the dissatisfaction of the churches with this policy. The third is the absence from the debates of any mention on either side of the morality of presenting to the heathen, whose spiritual welfare is the chief concern of the organization, as Christian doctrine, doctrine which is not held by the whole Christian world, or even by the whole of the denomination which the American Board represents. It must be the duty of somebody to be frank with the heathen about the doctrine of future probation. Whose duty is it? The point may be evaded with the African savages, but cannot be evaded with the acute and civilized Hindus and Japanese.

EDITORS, MUZZLED AND UNMUZZLED.

THE New York *Press*, whose editor was appointed by President Harrison Superintendent of the Census, has done the public a service in showing that any editor who is appointed to office must either "abandon or muzzle his paper." As it is the rule for such editors not to abandon their journals, it follows that those who continue in control must muzzle their papers. The reason why, from the very nature of the case, the editor who is appointed to office must muzzle his paper, was so clearly stated by the *Press*, in its comments on the removal of a Democratic editor from the Syracuse Post-office, that we reprint this judgment of an expert:

"If Northrup had not been the editor of a Democratic paper, it might be said that President Harrison could well have afforded to retain him for his full term, as President Cleveland retained the Republican whom he found in office. But, being the editor of a prominent Democratic paper, Mr. Northrup was responsible for the adverse criticisms which that paper passed upon the Administration. Every one can see the embarrassment of the situation. The Democratic editor ought to have either abandoned or muzzled his paper, or else resigned his post-office."

A close reader of the Republican newspapers of the country during the last few weeks has seen a striking illustration of the way that office-holding muzzles the editor, in the treatment by the muzzled and the unmuzzled of one of the most important matters now pending—the filling of the vacancy on the bench of the United States Supreme Court. It is well known that President Harrison desires to fill this place by the appointment of his old law partner, Attorney-General Miller. It is equally well known that the only thing which will deter him from "pleasing himself" in this matter is the presentation of evidence by the press of his party that such an abuse of power would be scandalous. The exigency demands the most earnest protests against the threatened wrong from every Republican editor who would save the nation from having the highest judicial honor bestowed upon a commonplace Indianapolis lawyer, simply because he happened to become the law partner of General Harrison many years ago.

There are Republican editors who see their duty and discharge it—editors who do not hold office and do not seek it. One such is the editor of the St. Paul *Pioneer-Press*, who says, regarding this matter:

"There is more than one jurist in the Republican ranks whose elevation would be received with universal approval, and whose name would be a tower of strength to the Administration. Such are not the men who are now most frequently mentioned in connection with the place. It ought to be, it probably is, unnecessary to remind the President that this office is not personal; that it is, in the highest sense, national; and that every citizen, and particularly those of the legal profession, has a right to criticise freely. In the light of history, duty demands a careful choosing on the ground of fitness alone. In the lower light of expediency, nothing will more greatly strengthen this Administration than the selection of Supreme Judges who are admitted by universal consent to be worthy of the honor."

Another such editor controls the Minneapolis *Journal*, and, in commenting on the recent report that the Attorney-General was preparing to make Washington his permanent home, the *Journal* said:

"If the Attorney-General proposes to make Washington his permanent home, what bearing does this have on the theory that the President intends to put him on the Supreme Bench? Unfortunately it seems to have a direct bearing, and to indicate that the President's law partner is to be assigned to the vacancy. The President will have no more important nominations to make during his term, and he is not likely to more seriously disappoint the people in any appointment he may make than he will in this instance if an obscure lawyer of Indianapolis, who would never have been heard of if he hadn't been Benjamin Harrison's business partner, is elevated to the Supreme Bench."

A third editor with a mind of his own is at the head of the Milwaukee *Sentinel*. "Should Not be Nominated" is the title of a vigorous leading article which recently appeared in the editorial columns of the *Sentinel*, and which says bluntly:

"There is one very good reason why Mr. Miller should not be nominated by President Harrison for this place. Whatever may be Mr. Miller's fitness, he is known to the country only as President Harrison's law partner. In no other aspect has he been viewed by the people outside of his own State. There was criticism of his appointment to a Cabinet office because, as far as the country could see, he would never have been thought of but for his partnership with Gen. Harrison. Whether it should be true or not that his nomination for the Supreme Bench was due to the President's high estimate of his qualities, the country would certainly, not knowing Mr. Miller's qualifications, take it for granted that the appointment was purely personal. While there might be nothing scandalous in the appointment, there is no doubt that it would tend to damage the Administration, and consequently the Republican party. We doubt if the President has made up his mind to nominate Mr. Miller. But in view of the growing belief that he has, it is time for the Republican press to express its views on the subject."

Of course, it is true that "it is time for the Republican press to express its views on the subject." But unfortunately a large proportion of the leading Republican newspapers cannot express their views, because such expression would involve "adverse criticisms upon the Administration," and it would be unseemly for an editor who is an office-holder under the Administration to make such criticisms, and exceedingly risky for an editor who is seeking office to indulge in them. The result is, that the editors of the chief Republican newspapers—like the New York *Tribune*, the Utica *Herald*, the Burlington (Vt.) *Free Press*, the *Iowa State Register*, and the Burlington (Ia.) *Hawkeye*—are silent upon this subject because they hold office already, while the editors of still others, like the Rochester *Democrat*, are equally silent because they are seeking office and must behave as discreetly as though they had already got it.

There may have been people who thought that the Attorney-General's namesake put it too strongly when he declared, in his inaugural address on the 4th of March, 1841, that "there is no part of the means placed in the hands of the Executive which might be used with greater effect, for unhallowed purposes, than the control of the public press," and affirmed that "golden shackles, by whomsoever or by whatever pretence imposed, are as fatal to the freedom of the press as the iron bonds of despotism." But a few months' experience of such "control of the public press" by the grandson of William Henry Harrison has demonstrated that the old soldier was entirely right. A journal which has itself furnished an office-holder confesses that the editor appointed to office must "muzzle his paper"; and what such muzzling means is apparent when one contrasts the outspoken deliverances of the unmuzzled editors of the St. Paul *Pioneer-Press*, Minneapolis *Journal*, and Milwaukee *Sentinel* with the silence of the office-holding and office-seeking editors in presence of this threatened judicial scandal.

THE LATIN AWAKENING.

M. LEROY-BEAULIEU has called attention, in an interesting article in the last *Économiste Français*, to the important political and social fact that the "Latin races," as they are rather absurdly called—that is, the people who speak languages derived from the Latin—are at last waking up from the lethargy of the last two centuries, and have again begun to emigrate. Ever since the tide of Spanish and Portuguese adventurers ceased to flow to South America and the West Indies, and of French adventurers to Canada, towards the close of the seventeenth century, the Latins have steadfastly clung to their homes, and left to the English the task and opportunity of filling up the vast empty spaces opened up to Europe by the discovery of America and Australasia. France is the only European Power which, during the past hundred years, has shown any uneasiness at the wonderful spectacle of Anglo-Saxon colonization. One of the first things to which the Bourbons addressed themselves when they got back their throne, was to found a colony in Algeria, for the purpose of starting once more the stream of French emigration. It failed almost completely, for reasons which we have no space to enumerate here. It has been demonstrated by fifty years of experiment that Frenchmen will not go abroad to French colonies if they can help it. It is indeed questionable whether France has had since the Revolution any population to spare for emigrating, even if the people had the emigrating spirit. During the last twenty years she has had even to draw heavily on Italy and Belgium to meet the demands for manual labor of her own agriculture and manufactures. Spaniards have practically ceased to emigrate for one hundred and fifty years, so have the Portuguese, while the Italians and Hungarians until now have never emigrated at all in modern times. The result has been that the peopling of all the vacant spaces of the earth to which the Germanic races did not take a fancy literally ceased nearly two centuries ago. South America has remained nearly stationary, while North America and Australasia have been rapidly filling up.

All this seems now likely to change. The conscription for the great continental armies, with the heavy taxation necessary for their maintenance, combined with the wonderful cheapening and quickening of travel and the increased knowledge of foreign countries diffused by the newspapers and by the growth of popular education, is apparently rousing the Latin races into an emigrating activity which promises, if it continues at the present rate, to make a great modification in the relations of the Old World

to the New, and it may be said to have first shown itself since 1880. In that year the whole Latin emigration to all countries was not over 80,000, and most of this went to Anglo-Saxon countries. Since 1885 this has been completely changed. Here are the returns for 1888:

LATIN RACES.	No. of emigrants.
Italy	207,795
France	23,339
Belgium	7,794
Spain	37,202
Portugal	17,518
Total	293,648

GERMAN AND BRITISH.	No. of emigrants.
Germany	98,515
United Kingdom	279,928
Total	378,443

Besides these there were 70,000 to 80,000 Scandinavians, and about 40,000 Austro-Hungarians and 8,000 Swiss. Now where did these go? Not, as in times past, almost all to North America and Australia. Here are the returns of immigration for 1888 to North and South America respectively:

SOUTH AMERICA.	No. of immigrants.
Argentine Republic	155,632
Brazil	131,837
Uruguay	17,407
	304,876

NORTH AMERICA.	No. of immigrants.
United States	525,019

In other words, the stream of immigration into South America is rapidly attaining the same proportions as that into North America. It is not unlikely to equal it between now and 1892. The rate at which the Italian emigration has grown since 1884 is very instructive on this point. It ran in this way: 1884, 59,459; 1885, 78,961; 1886, 87,423, 1887, 133,191; 1888, 207,795. The French within the same period has grown from 6,000 to 23,000, but it has really been larger, as there is a good deal of concealed emigration to escape conscription which finds no place in the Custom house returns. It is not likely to be large in our time, unless some fresh and overwhelming calamity should overtake the country.

The bearing of these figures on the work before the Pan-American Conference hardly needs to be pointed out. The tide of population which is now pouring into South America is settling on a soil even more fertile than our own, and under governments which in economical matters are more enlightened than ours. South American production and consumption are, therefore, likely to grow with extraordinary rapidity. The notion that by some hocus-pocus we can persuade such communities to carry on one-sided trade with us—that is, to buy from us without selling to us—might as well be abandoned at once. If we do not enter into natural business relations with them, either the ties which now bind them to Europe will be strengthened, or they will adopt our notion of being sufficient unto themselves and put up a Chinese wall in the shape of a high tariff. Of the latter we do not believe there is much risk. The former is certain if we persist in the ridiculous and puerile plan of trying to please them with subsidized mail steamers.

"THE GRAND ARMY."

THE sober-minded and self-respecting members of the "Grand Army of the Republic" are placed just now in a very awkward position. If they come out openly against the folly and absurdity of those who are speaking for them with regard to the Pension Office, they will inevitably have the air of reflecting on the patriotism and good sense of their comrades, and of depreciating the services rendered to the country during the war by the surviving veterans. On the other hand, to allow, without a word of protest or explanation, the assault of the pensioners on the Treasury to be carried out on the plan now in operation of treating service in the war as a pecuniary speculation, is to involve all members of the Grand Army, the real fighting men as well as the glib skulkers, in common obloquy and even disgrace. The alternative is a painful one, no doubt, but there are plenty of veterans who could well afford to meet it by stamping with reprobation the attitude towards the country and the Government taken up by Tanner and his followers. Silence is not always golden. There is a time to speak as well as to hold one's tongue, and it seems to the ordinary observer as if a real Grand Army man ought just now to be using his tongue pretty freely in defence of the soldiers of the late war.
